The United States Government is also gratified to note that the Secretary General plans to complete the headquarters construction in 1956 and, in this connection, to erect a memorial plaque for those who have died in the service of the United Nations. We also consider it eminently just and proper for the Fifth Committee to act favorably on the proposal to establish a memorial cemetery in Korea.

I could not close these general remarks without expressing the appreciation of my delegation for the work of the various standing committees which serve the Fifth Committee so faithfully, such as the Advisory Committee, the Contributions Committee, and the Board of Auditors.

My delegation would also like to associate itself with the thanks expressed by the chairman of the Advisory Committee, in the foreword to the committee's first report, to the persons who have contributed to the work of the Advisory Committee. This particularly applies to the valuable assistance rendered by Mr. Watson Sellar, retiring member of the Board of Auditors, and Mr. Hans Christian Andersen, retiring Controller, both of whom have contributed so much to the sound financial management of the United Nations. The Fifth Committee is indebted to Mr. Sellar, who has served since the inception of the United Nations, for his personal contribution to the development of a thoroughgoing audit system and for the enormous assistance rendered by the staff of his Government department. Tribute is also due the Government of Canada, which has made this possible.

If, as on this occasion and others, we feel it necessary to comment critically on certain details of Untied Nations administration, we do so only out of a desire to be helpful and constructive. My delegation is convinced that the United Nations must continue to examine and improve its administrative practices if it is to fulfill the great hopes that we—and I think the whole world—have for its continued growth as an instrument working for peace in this nuclear age. I have no doubt that my colleagues on this committee are as conscious as I am of the great responsibility we bear as overseers of an organization which embodies so much hope and promise. If the United Nations is to play the role expected of it in this disorderly and uncertain world, those who carry out its mandate will have to function with a high sense of duty and teamwork.

Convinced as we are of the challenge and the difficulty which this administrative task places upon the Secretary-General, we stand ready always to cooperate with him. His term of office has been marked by accomplishments and improvements which merit our sincere pride and gratitude.

I am confident that, if properly supported, the United Nations system as it enters its second decade will grow, develop, and increase in influence and effectiveness. We are engaged in waging peace with an intensity and earnestness of purpose never before experienced in the history of the world. In that great effort the United Nations system serves as one of mankind's major instrumentalities. The charter is a living organism and has developed and must continue to develop as a potent instrument for meeting the many complex problems of international character which know no boundary lines. As we try to project the future, we can be certain that, with a concerted effort on the part of all of us, the United Nations system will succeed and help man realize his greatest hope and that a new and peaceful world will emerge through the instrumentality of the U. N. structure. Toward that goal the Administrative and Budgetary Committee, by making possible more efficient use of available funds, can make a major contribution.

Mr. Speaker, there follows the final address delivered by the Honorable CHESTER E. MERROW, while serving as a United States delegate to the 10th General Assembly of the United Nations.

This address was delivered before the General Assembly on December 16, 1955, and gives a thorough review of the United States position on the United Nations budget for 1956 and the need for improved budget procedure and sound fiscal policies in the United Nations. During the 83d Congress, Mr. MERROW had served as chairman of the Foreign Affairs Subcommittee on International Organizations and Movements, and had conducted thorough studies of this subject matter. He thus brought to his U. N. assignment a background of solid and valuable experience.

STATEMENT BY CONGRESSMAN CHESTER E. MERROW, UNITED STATES DELEGATE, IN PLENARY SESSION ON THE UNITED NATIONS BUDGET FOR 1956

My delegation will support in this plenary session the total appropriation for 1956 voted by the Fifth Committee, but it does so with some reservations.

ANALYSIS OF BUDGET INCREASES

With the forewarning which we had received as to the necessity for a large supplemental approrpiation for 1955 to cover such items as the Geneva Conference on the Peaceful Uses of Atomic Energy, it was the expressed hope of my delegation at the outset of the debate in the Fifth Committee that we could keep the 1956 budget to the level recommended by the Advisory Committee, namely, $46,016,000. Instead, the budget approved by the Fifth Committee has reached $48,566,350, an increase of approximately $1,600,000 over the budget which this Assembly approved last year for 1955.

These increases fall largely into four categories of expenditures; i. e., activities related to peaceful uses of atomic energy, technical assistance in the social welfare and human rights field, operation of field offices and special missions, and salary adjustments. My delegation in the budgetary committee supported important program expansion and some increased expenditures in all of these items except the one relating to salary adjustments. We opposed some of the appropriations voted for program expansion, and we opposed the increase in headquarters cost-of-living allowance. We recognized that changing economic conditions and particularly the increase in United States Federal Government salaries necessitated a reappraisal of the adequacy of the total level of United Nations remuneration. We were opposed to the Secretary General's proposal for a cost-of-living adjustment at this time because, on the basis of prevailing standards in United Nations and the specialized agencies, there is no present justification for this kind of a salary increase.

However, we believe that the establishment of a committee composed of governmental experts to review the salary, allowance, and benefit system in 1956, is a welcome development. Such a review should make it possible to achieve two objectives: Namely, (1) to adjust the common remuneration system of the United Nations and the specialized agencies to present-day requirements for attracting and holding a highly qualified multinational staff in positions in all parts of the world, and (2) to make these adjustments in a manner which takes adequate account of the responsibilities and financial resources of international organizations and the standards of remuneration in national public services.

In this connection, Mr. President, may I state that the United States Government is not satisfied with the present level of participation by United States nationals in the various international secretariats and technical assistance programs. We trust the recommendations of the committee will be such as to encourage an increased number of United States nationals to seek international employment, not only at the United Nations headquarters but also at other international agency centers as well.

While a number of the proposals for additional budgetary increases were resisted by the committee, my delegation was disappointed that the proposals for increased expenditures were not offset to a larger extent by compensating economies. We had hoped, for example, to make some savings by altering the regulations for publication of treaties. Likewise, we had hoped to defer less essential items, such as expenditures for improvement of facilities for conferences and meetings in Geneva.

The net result of all of the financial decisions taken by the Fifth Committee is that the expenditures to be assessed in respect of the 1955 supplemental appropriation and the 1956 budget will total $51,830,550, the largest in United Nations history (I might add parenthetically that we hope that this 10th General Assembly will securely hold this dubious distinction unchallenged for many years to come). The amount of these appropriations is due not only to the increase of $1,600,000 in the 1956 budget to which I have already referred, but also to the coincidental occurrence of unusually high supplemental expenditures in respect of 1955, without the offsetting savings that were available last year. The supplemental items for 1955 include $1,400,000 of the total cost of $2,361,000 for the International Scientific Conference on Peaceful Uses of Atomic Energy; $1,630,000 representing the last appropriation for reimbursement of national taxes to staff members; and other unforeseen costs relating to such matters as the disarmament meeting in London, and the Secretary General's successful trip in accordance with the General Assembly's directive to obtain the release of 11 United States prisoners and other personnel of the United Nations Command captured in the Korean war.

BASIS FOR UNITED STATES SUPPORT

Despite its concern over the upturn of United Nations expenditures just at the point when we had anticipated stabilization, the United States will support the appropriation recommended by the Fifth Committee for 1956. We do so in recognition of two facts: (1) That the Secretary General and the General Assembly have, over the past 2 years, made a real effort and considerable progress in reducing the regular budget and (2) that a sizable amount of the increased assessments being voted for 1956 is of a nonrecurring character. My delegation strongly urges, however, that the upward trend of expenditures reflected in the 1956 budgets of not only the United Nations but also the specialized agencies not be considered as establishing a precedent for future years.

In an earlier statement before the Fifth Committee, I expressed the belief that the support of all member governments for the causes served by the programs of the United Nations agencies should be sustained and indeed increased. This should not be interpreted, however, as urging increases in the regular budgets. The avenues by which these causes can be served are many. As I indicated in the Fifth Committee, the form of such support; i. e., whether through the regular budgets of international organizations, through international voluntary programs, or through such other forms of intergovernmental cooperations as bilateral programs, will require a continuing assessment of the following factors, among others:

(a) Whether an international agency can be demonstrated to be the best instrument for meeting the need which are justifiably the concern of the international community;

(b) the degree to which the members of such an agency are willing to bear an equitable share of the financial burdens entailed in assuming such international responsibilities. It is an inescapable fact that, if the brunt of the costs falls upon a relatively few member states, the undertaking is not truly international, and lasting and bitter misunderstandings will surely result; and

(c) whether international assistance will be adequately supported and supplemented by national endeavor.

One further fact that must be continuously borne in mind by member states as well as the Secretariat was pointed out to us by the Secretary-General last year in his annual report. He stated: "That the very nature of the responsibilities that must be assumed by the Secretary-General and his senior staff imposes a limit on the volume of the tasks that can be handled effectively, irrespective of the additional funds, personnel, and facilities that might be placed at their disposal."

All of these factors dictate caution in the expansion by the General Assembly of the permanent establishments and the regular budgets of international organizations. This does not mean that pressing world problems will be neglected by the community of nations represented here and in the specialized agencies; far from it.

Although the sum total of the regular budgets of the United Nations and currently existing specialized agencies for the period 1946 to 1955 inclusive approximates $686 million, an additional amount of more than $1 billion has been contributed to international programs, especially designed to provide relief and rehabilitation for refugees, to give technical assistance for economic and social development, and to promote maternal and child welfare. In addition, very material assistance in promoting economic development is provided through the facilities of the International Bank and Monetary Fund. And augmenting all of these efforts are large national programs of assistance such as the United States technical cooperation plan and regional programs such as the Colombo plan. The value and results which derive from such a flexible, many-pronged approach to these problems cannot be overestimated and should not be jeopardized by premature or unrealistic expansion of the regular budgets and staffs of international organizations.

IMPROVED BUDGET PROCEDURE

In expressing our hopes regarding the budget to be presented next year, I should also like to mention our interest in seeing the Advisory Committee and the Assembly develop a more simplified form of the budget that will enable the financial control exercised by the Assembly and the Secretary-General to be more effective and will, at the same time, reduce administrative redtape.

We welcome, too, the initiative taken by the distinguished delegate of Denmark in the Fifth Committee in calling our attention to the need for improving the organization and scheduling of the Fifth Committee's work. This led to a fruitful discussion on ways and means of eliminating delays and of facilitating, in particular, the review of the budget and decisions relating thereto.

The Assembly will note in the report of the Fifth Committee that the United States suggested that the agenda of the 11th session of the General Assembly might include an item entitled "General Assembly Procedures for Consideration and Adoption of the Budget." We are pleased that the Secretary-General will give this matter his attention during this next year.

While experience, particularly this year, has shown the need for procedural improvements, I should like to testify to the skill of the chairman of the Fifth Committee. With the difficulties we faced, only the di-

rection of a superb chairman could save us. My delegation believes that we, therefore, owe a special debt of gratitude to Ambassador Engen of Norway.

COORDINATION OF U. N. AND AGENCIES

In matters of coordination with the specialized agencies, the decision of the Fifth Committee to support the Secretary-General's request for increases in salaries and in the education allowance was, in our judgment, without sufficient notice to the specialized agencies. This seems a regrettable departure from the repeated emphasis given by the Assembly to the desirability of coordinating administrative policies and practices among the United Nations and the Agencies.

On the other hand, the Fifth Committee did recommend that the United Nations offer its assistance to the International Telecommunications Union and World Meteorological Organization in constructing a headquarters that would permit them to share the facilities of the Palais des Nations with the United Nations and the World Health Organization. We hope that this will eventuate in closer relationships among these organizations and that it will be ultimately possible for them and us to benefit from the greater use of common services that would result from living under the same roof.

Another step that should be conducive to improved coordination of the United Nations and the specialized agencies in the administrative field is the decision of the Advisory Committee to undertake a more intensive review of problems in this area. This will be possible by consultations at the headquarters of several specialized agencies during the coming years. We commend the agencies, the Advisory Committee, and its distinguished chairman, Ambassador Aghnides, on this constructive approach.

To summarize, Mr. President, my delegation will support the recommended appropriation, in spite of its reservations. We believe that, through the exercise of restraint and the constructive application of our joint efforts, the members of the United Nations should be able to regulate better any further budgetary expansion. We are confident that, by following sound fiscal policies and by inaugurating improved methods of budgetary management and control, the United Nations will be greatly strengthened. The budget is, of course, the reflection of the development of the activities of the organization. The appropriations place in practical effect the provisions of the budget. My delegation firmly believes that, by continued pursuance of sound financial principles, the United Nations during its second decade will increase in influence and effectiveness as the greatest force for helping man to realize his hopes for bringing about a peaceful world.

SENATE

THURSDAY, JANUARY 19, 1956

(Legislative day of Monday, January 16, 1956)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

Archbishop John Theodorovich, metropolitan of the Ukrainian Orthodox Church in the United States, offered the following prayer:

In the name of the Father, the Son and the Holy Ghost, let us pray.

Our eternal and Almighty Father: Thou gavest us life. Our destiny is in the mystery of Thy unknown will. Thou leadest us, and givest us Thy gifts on the paths of life: the lamps of the mind; and the light of Thy wisdom.

Bless, Almighty Father, the Senate of our country. Keep its Members in good health, in the full strength of mind, and in the light of Thy law. Direct them in their decisions, and may they be always in Thy will. Bless, Almighty Father, our President of the United States of America, and afford him a full recovery of health.

Pray show us all, in these turbulent times of struggle between the forces of good and evil, that we are our brother's keepers. We now know that none of us can stand alone, no nation, no man, no one. May Thy divine will bring us closer together as brothers in mind and spirit. Give us strength more and more to live the lives of Good Samaritans, to create neighborliness, and common interests between all men.

On this day of Ukrainian independence, let us renew our support for freedom as we are reminded of that country brutally conquered by rule of terror and compulsion.

We pray to Thee, Almighty God, to give us grace to see that the strugglers for freedom everywhere remember enslaved Ukraine, and give her love and moral support, for the hungry desire of freedom that is there.

O, God, be gracious to us all, and keep in Thy grace the Senate of the United States and all its Members.

We earnestly and humbly pray to Thee,

Grant us, Father, our prayers. Amen.

THE JOURNAL

On request of Mr. CLEMENTS, and by unanimous consent, the reading of the Journal of the proceedings of Wednesday, January 18, 1956, was dispensed with.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the Senate by Mr. Miller, one of his secretaries.

REPORT OF COMMODITY CREDIT CORPORATION—MESSAGE FROM THE PRESIDENT

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which was read and, with the accompanying report, referred to the Committee on Agriculture and Forestry:

To the Congress of the United States:

In accordance with the provisions of section 13, Public Law 806, 80th Congress, I transmit herewith for the information of the Congress the report of the Commodity Credit Corporation for the fiscal year ended June 30, 1955.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *January 19, 1956.*

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, its reading clerk, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 6376. An act to provide for the hospitalization and care of the mentally ill of Alaska, and for other purposes; and

H. R. 7871. An act to amend the Small Business Act of 1953.

HOUSE BILLS REFERRED OR PLACED ON CALENDAR

The following bills were each read twice by their titles and referred, or placed on the calendar, as indicated:

H. R. 6376. An act to provide for the hospitalization and care of the mentally ill of Alaska, and for other purposes; to the Committee on Interior and Insular Affairs.

H. R. 7871. An act to amend the Small Business Act of 1953; placed on the calendar.

ORDER FOR TRANSACTION OF ROUTINE BUSINESS

Mr. CLEMENTS. Mr. President, I ask unanimous consent that there may be the usual morning hour for the presentation of petitions and memorials, the introduction of bills, and the transaction of other routine business, and that any statement made in connection therewith be limited to 2 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORT ON MILITARY PRIME CONTRACTS FOR WORK IN THE UNITED STATES

A letter from the Deputy Assistant Secretary of Defense (Supply and Logistics), transmitting, pursuant to law, a report on military prime contracts with business firms for work in the United States, for the period July 1 through November 30, 1955 (with an accompanying report); to the Committee on Banking and Currency.

AUTHORIZATION FOR PERMANENT APPOINTMENTS IN THE ARMED FORCES

A letter from the Director, Legislative Programs, Department of Defense, transmitting a draft of proposed legislation to authorize permanent appointments in the Armed Forces of the United States, and for other purposes (with an accompanying paper); to the Committee on Armed Services.

GRANTING OF APPLICATIONS FOR PERMANENT RESIDENCE TO CERTAIN ALIENS

Two letters from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders granting the applications for permanent residence filed by certain aliens, pursuant to section 6 of the Refugee Relief Act of 1953, and section 4 of the Displaced Persons Act of 1948, as amended, together with a statement of the facts and pertinent provisions of law as to each alien and the reasons for granting such applications (with accompanying papers); to the Committee on the Judiciary.

AMENDMENT OF POLIOMYELITIS VACCINATION ASSISTANCE ACT OF 1955

A letter from the Secretary, Department of Health, Education, and Welfare, transmitting a draft of proposed legislation to extend through June 30, 1957, the duration of the Poliomyelitis Vaccination Assistance Act of 1955 (with an accompanying paper); to the Committee on Labor and Public Welfare.

MINUTES OF CONVENTION OF AMERICAN INSTRUCTORS OF THE DEAF

A letter from the president, Gallaudet College, Washington, D. C., transmitting, pursuant to law, the proceedings of the 37th meeting of that convention, held at the American School for the Deaf, West Hartford, Conn., June 26 to July 1, 1955 (with accompanying papers); to the Committee on Rules and Administration.

DISPOSITION OF EXECUTIVE PAPERS

A letter from the Archivist of the United States, transmitting, pursuant to law, a list of papers and documents on the files of several departments and agencies of the Government which are not needed in the conduct of business and have no permanent value or historical interest, and requesting action looking to their disposition (with accompanying papers); to a Joint Select Committee on the Disposition of Papers in the Executive Departments.

The PRESIDENT pro tempore appointed Mr. JOHNSTON of South Carolina and Mr. CARLSON members of the committee on the part of the Senate.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A resolution adopted by the City Council of the City of Albert Lea, Minn., protesting against the enactment of the bill (S. 1853) to amend the Natural Gas Act, as amended; ordered to lie on the table.

RESOLUTIONS OF MINER FARMERS UNION 1127, MORRISTOWN, S. DAK.

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD resolutions adopted by Miner Farmers Union Local, No. 1127, of Morristown, S. Dak., relating to the wheat program, and so forth.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

I

Whereas the quality wheat program is unworkable and appears to be intended to create confusion in the minds of consumers and producers alike.

Therefore we vigorously condemn any discriminatory "quality" wheat or other commodity programs designed to aid speculators and discredit rigid parity supports or direct production programs.

Quality wheat program is the new sliding scale program in disguise.

II

Whereas the present sliding scale program is not reducing surplus farm production but is eliminating family farmers and small-business men by the thousands: Therefore be it

Resolved, That we, the members of the Miner Farmers Union local, propose that production payments at full parity direct to the farmer, based on a unit per farm system be substituted, in the case of wheat we recommend a limit of 3,000 bushels.

III

Whereas industry has been reimbursed for converting from wartime to peacetime production and was permitted buying surplus war production plants at or below 20 percent of cost.

Therefore we propose that farmers be permitted to buy their surplus crops at or below 20 percent of Government cost provided they plant no crops that are in surplus that crop year.

Passed unanimously the 29th day of December 1955 by the Miner Farmers Union Local, No. 1127.

HENRY HILLINS,
President.
THESLY NIEDEMAN,
Secretary.

RECOMMENDATIONS OF HOOVER COMMISSION—RESOLUTION

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD, and appropriately referred, a resolution adopted by the New Hampshire Junior Chamber of Commerce at a meeting of its board of directors on December 11, 1955.

It endorses and commends the recommendations of the bipartisan Hoover Commission and urges prompt congressional consideration. As a member of this Commission, I concur fully with the purpose of the resolution. The sooner that we can implement these recommendations, the sooner we will have our Federal Government operating with more efficiency and less waste of the taxpayers money.

There being no objection, the resolution was referred to the Committee on Government Operations and ordered to be printed in the RECORD, as follows:

RESOLUTION IN SUPPORT OF THE BIPARTISAN EFFORTS OF THE CITIZENS COMMITTEE FOR THE HOOVER REPORT

Whereas the efficient and economical conduct of governmental affairs is vitally important to the maintenance of our American tradition of self-government; and

Whereas the first bipartisan Commission of Organization of the Executive Branch of the Government (Hoover report) made a study of Government (1947–49) which resulted in many important improvements and economies in Federal operations; and

Whereas the bipartisan new Hoover Commission, created by Congress in 1953, has completed a 2-year study of the Federal Government and has submitted a report containing specific recommendations for reducing waste and duplication, increasing efficiency, and eliminating needless Government competition wtih private business: Now, therefore, be it

Resolved, That we the directors of the New Hampshire Junior Chamber of Commerce assembled this 11th day of December 1955, endorse and commend the objectives of the Hoover Commission and urge the administration and Congress to work together, on a bipartisan basis, toward prompt and full consideration of the recommendations of the Commission.

ONE HUNDRED PERCENT OF PARITY FOR AGRICULTURAL COMMODITIES—RESOLUTION

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD, and appropriately referred, a resolution adopted by the Wells Farmer Union Local, No. 473, of Wells, Minn., endorsing 100 percent of parity for agricultural commodities.

There being no objection, the resolution was referred to the Committee on Agriculture and Forestry and ordered to be printed in the RECORD, as follows:

Whereas farming is the foundation on which all industry and manufacturing is founded and strengthened; and

Whereas the farmer is working on less than 100 percent of parity, while industry and manufacturing is getting from 100 to 150 percent of parity; and

Whereas our form of government cannot prosper under these conditions: Therefore be it

Resolved, That the Wells Farmer Union Local, No. 473, meeting January 9, 1956, goes on record urging our Senators and Congressmen to take this up with the proper committees so this may be corrected; be it further

Resolved, That copies of this resolution be sent by our secretary to our Congressman, O'HARA, and to our Senators, HUMPHREY and THYE, and to the State Farmers Union papers.

Adopted January 9, 1956.

JOHN MOTT,
President.
A. J. PORTER,
Secretary.
DONALD HAUTT,
Legislative Director.

AMENDMENT OF NATURAL GAS ACT, AS AMENDED—RESOLUTIONS, LETTERS, AND TELEGRAM

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD two resolutions adopted by the city councils of Waseca and South St. Paul, Minn., letters, and a telegram from labor unions expressing strong opposition to the Harris bill, H. R. 4560, and the Fulbright bill, S. 1853, which would eliminate regulation of companies carrying natural gas to Minnesota.

There being no objection, the resolutions, letters, and telegram were ordered to be printed in the RECORD, as follows:

CITY OF WASECA, MINN.,
January 12, 1956.

Hon. HUBERT HUMPHREY,
Senate of the United States,
Washington, D. C.

DEAR SIR: We enclose herewith a copy of a resolution passed by the Council of the City of Waseca on January 10, 1956. This resolution, you will note, is in opposition to the Fulbright and Harris bills.

I would appreciate it if you would allow me to convey your thinking on these bills to the city council.

Very truly yours,

JOHN F. CAHILL.

Be it resolved by the Common Council of the City of Waseca, Minn.:

Whereas the Council of the City of Waseca expresses the conclusion that producers of natural gas are entitled to a fair and reasonable rate of return and can secure such return under the proper Federal regulatory authority; and

Whereas, further, the Council of the City of Waseca is firmly of the mind that the proper regulation of natural-gas producers would in no manner defeat any economic or financial incentive which it is asserted is necessary to attract investors and to stimulate discovery and recovery of natural gas; and

Whereas, further, the Fulbright bill (S. 1853) is now on the calendar of the Senate, having been reported out by the Senate Interstate and Foreign Commerce Committee; and

Whereas the said Fulbright bill, while differing in some extent from the provisions of the Harris bill, is similar in import and effect and could lead to only one end result in the consumer market, and that would be an increased rate to be paid by the ultimate consumer of natural gas: Now, therefore, be it

Resolved by the City Council of the City of Waseca, That the Harris and the Fulbright bills, are contrary to the best interests of the whole gas-consuming public in this city; and be it further

Resolved, That the Council of the City of Waseca herein records its full and complete opposition to the Harris bill, as amended, and also to the Fulbright bill, and respectfully requests that the Senate of the United States return said Fulbright bill, as demanded, to the Senate Committee on Interstate and Foreign Commerce for further hearings on said bill and the amendments which have been added to it since the last public hearing thereon. Said referral of the bill back to the Senate Committee on Interstate and Foreign Commerce will, at least, give the public of the United States an opportunity to present its side of the case before the honorable Senate committee; and be it further

Resolved, That the City Council of the City of Waseca hereby again urgently requests the Senators and Congressmen from the State of Minnesota to exercise their utmost efforts to defeat this legislation which is not in the public interest; and be it further

Resolved, That a copy of this resolution be forthwith transmitted to the honorable Senators and Congressmen from the State of Minnesota, to each member of the United States Senate Committee on Interstate and Foreign Commerce, and to the clerk of said committee and the clerk of the Senate of the United States.

Approved this 10th day of January 1956.

L. W. TOBIN,
Mayor.

Attest:

E. J. LORIG,
City Clerk.

SOUTH ST. PAUL, MINN.,
January 13, 1956.

Hon. Senator HUBERT HUMPHREY,
Washington, D. C.

HONORABLE SENATOR HUMPHREY: Enclosed please find a copy of a resolution passed by the city council on January 9, 1956, regarding the Fulbright bill.

Very truly yours,

JOHN F. O'DONNELL,
City Recorder.

Whereas the city of South St. Paul through the city council has at all times heretofore expressed its opposition to the passage of the so-called Harris bill (H. R. 4560) by the House of Representatives of the United States of America, said opposition as expressed by the city council having been based upon conclusions that said legislation would be inimical to the economic welfare and well-being of all of the citizens of the city of South St. Paul who are users of natural gas, in that passage of such legislation could lead to only one result and that would be higher rates for the ultimate consumers of this natural resource; and

Whereas the Council of the City of South St. Paul further expresses the conclusion that producers of natural gas are entitled to a fair and reasonable rate of return and can secure such return under the proper Federal regulatory authority; and

Whereas, further, the Council of the City of South St. Paul is firmly of the mind that the proper regulation of natural-gas producers would in no manner defeat any economic or financial incentive which it is asserted is necessary to attract investors and to stimulate discovery and recovery of natural gas; and

Whereas, further, the Fulbright bill (S. 1853) is now on the Calendar of the Senate, having been reported out by the Senate Interstate and Foreign Committee; and

Whereas the said Fulbright bill, while differing in some extent from the provisions of the Harris bill, is similar in import and effect and could lead to only one end result in the consumer market, and that would be an increased rate to be paid by the ultimate consumer of natural gas: Now, therefore, be it

Resolved by the City Council of the City of South St. Paul, That it reiterates its conclusions, heretofore arrived at, that the Harris and the Fulbright bills, as amended, are contrary to the best interests of the whole gas-consuming public in this city; and be it further

Resolved, That the Council of the City of South St. Paul herein again records its full and complete opposition to the Harris bill, as amended, and also to the Fulbright bill, and respectively requests that the Senate of the United States return said Fulbright bill, as amended, to the Senate Committee on Interstate and Foreign Commerce for further hearings on said bill and the amendments which have been added to it since the last public hearing thereon. Said referral of the bill back to the Senate Committee on Interstate and Foreign Commerce will, at least, give the public of the United States an opportunity to present its side of the case before the honorable Senate committee; and be it further

Resolved, That the City Council of the City of South St. Paul hereby again urgently requests the Senators and Congressmen from our district to exercise their utmost efforts to defeat this legislation which is not in the public interest; and be it further

Resolved, That a copy of this resolution be forthwith transmitted to the honorable Senators from the State of Minnesota and to the Honorable JOSEPH P. O'HARA, Congressman from the Second District to the clerk of the Senate and House Interstate and Foreign Commerce Committees.

Adopted by the city council January 9, 1956.

Approved January 12, 1956.

DAVID G. HARDMAN,
Mayor.

ST. PAUL LOCAL, NO. 264,
PULP, SULPHITE, AND
PAPER MILL WORKERS,
St. Paul, Minn., January 13, 1956.

Hon. HUBERT HUMPHREY,
United States Senate,
Washington, D. C.

DEAR SENATOR HUMPHREY: It has come to the attention of our organization that action will soon be taken in the Senate on the Fulbright bill which provides that primary production of gas would be exempt from regulation by the Federal Power Commission.

Since organized labor has consistently supported the interests of consumers and there is ample evidence that removal of regulation would increase prices to the consumers, we urge you to do everything in your power to defeat the Fulbright bill in the Senate when it comes up for consideration.

Yours very truly,

THE EXECUTIVE BOARD,
St. Paul Local, No. 264,
CARL G. LARSON,
Business Representative.
ELMER P. MEINZ,
International Representative.

ST. PAUL, MINN., *January 14, 1956.*

Senator HUBERT HUMPHREY,
Washington, D. C.

DEAR SENATOR: The membership of local 21, Uniformed Firefighters of St. Paul is of the unanimous opinion that the passage of the Fulbright bill or the companion Harris bill will be economically harmful to this area.

We ask that you continue your efforts to oppose the removal of Federal regulation of natural gas producers.

Respectfully yours,

FRANK E. OBERG,
Secretary, Uniformed Firefighters of St. Paul, local 21.

ST. PAUL, MINN., *January 17, 1956.*

Senator HUBERT H. HUMPHREY,
Washington, D. C.:

We urge you to do everything within your power to assist in defeat of the Fulbright bill.

D. DONALD DALY,
Secretary, St. Paul Printing Pressmen and Assistants Union, No. 29.

RESOLUTION OF CITY COUNCIL OF RENO, NEV., REGARDING RECENT FLOOD DAMAGE

Mr. MALONE. Mr. President, I offer for the RECORD a resolution adopted by the city council of Reno, Nev.

The city of Reno was seriously damaged by recent floods, which affected almost all the area in northwest Nevada, especially on the eastern slope of the Sierra Nevada Mountains.

The resolution has to do with those who were helpful in aiding to lessen the damage caused by the floodwaters.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Resolution 1600, introduced by the Committee of the Whole

Whereas the city of Reno, unfortunately, experienced a disastrous flood on December 23, 1955, when the Truckee River escaped its course and caused severe damage to a considerable portion of the city in close proximity to the Truckee River; and

Whereas the damage caused by said flood was greatly minimized by citizens of the community and representatives of many groups who worked tirelessly and unselfishly in contributing their energies to protect life and property in this area: Now, therefore, be it

Resolved by the City Council of the City of Reno, Nev., That the administration of the city of Reno express its sincere and grateful appreciation to all the many people who aided in lessening the damage recently caused by floodwaters in this city and to the following, in particular: Gov. Charles Russell; Senator George W. Malone; Senator Alan Bible; Congressman Clifton Young; Civil Defense Administrator Val Peterson; Col. Ed Pine, Lt. Col. Claude Hunter, Maj. Harold Nielson, and Maj. Keith Long, of the 365th Engineer Reserve Group; Mr. Eck Holgate, Reno-Sparks-Washoe County civil defense director; Colonel McKenzie, commanding officer of Stead Airbase; Col. Fred White, commander of the Nevada National Guard; Col. Joe Geach, commander of the Nevada National Air Guard; Commander Jones, captain, Fallon Naval Air Station; Col. Tom Wilson, of the Civil Air Patrol; Robert Stoddard, of radio station KATO; and all of the personnel of all radio stations and the Reno newspapers located within the city of Reno; television station KZTV; Associated Press and United Press; the American Red Cross; and the Salvation Army: Be it further

Resolved, That the city clerk be, and he hereby is, authorized and directed to transmit a copy of this resolution to the personnel and organizations named herein.

Approved this 9th day of January 1956.

LEN HAINS,
Mayor of the City of Reno.

Attest:

E. E. GILL,
City Clerk and Clerk of the City Council of the City of Reno, Nev.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. BYRD, from the Committee on Finance, without amendment:

H. R. 7094. A bill to amend section 120 of the Internal Revenue Code of 1939 (relating to unlimited deduction for charitable contributions) (Rept. No. 1403).

By Mr. BYRD, from the Committee on Finance, with amendments:

H. R. 2667. A bill to amend section 208 (b) of the Technical Changes Act of 1953 (Public Law 287, 83d Cong.) (Rept. No. 1401);

H. R. 7054. A bill to amend the Internal Revenue Code of 1939 to provide a credit against the estate tax for Federal estate taxes paid on certain prior transfers (Rept. No. 1402); and

H. R. 7247. A bill to amend the Internal Revenue Code of 1954 with respect to the treatment of gain in certain railroad reorganizations (Rept. No. 1404).

By Mr. SPARKMAN, from the Committee on Banking and Currency, without amendment:

H. R. 6298. A bill to amend section 601 (g) of the act entitled "An act to expedite the provision of housing in connection with national defense, and for other purposes," approved October 14, 1940, as amended, to permit transfer of war housing projects to the city of Moses Lake, Wash., and to other communities similarly situated (Rept. No. 1407); and

S. J. Res. 113. Joint resolution to permit Federal Housing Administration title I repair assistance to new homes damaged by major disasters (Rept. No. 1406).

By Mr. CHAVEZ, from the Committee on Public Works:

S. 1823. A bill to authorize the construction of certain works of improvement in the Niagara River for power and other purposes; with amendments (Rept. No. 1408).

AMENDMENT OF SMALL BUSINESS ACT OF 1953, AS AMENDED, RELATING TO DISASTER LOANS—REPORT OF A COMMITTEE

Mr. MORSE. Mr. President, from the Committee on Banking and Currency, I report favorably the bill (S. 2960) to amend the Small Business Act of 1953, as amended, dealing with the disaster loan issue, and I submit a report (No. 1405) thereon. This report is the unanimous report of the committee. The House passed a similar bill yesterday. It is very important that the Senate consider the Senate bill at the earliest possible hour. We are filing our report today. On behalf of the committee I submit the unanimous request, approved upon motion in the Committee on Banking and Currency, that the bill be taken up promptly by the leadership.

I should like to have the attention of the acting majority leader and the acting minority leader for a moment. We hope that the bill can be taken up not later than tomorrow, because I am satisfied it is a bill which will not be the subject of extended debate. It speaks for itself. The disaster and flood victims are deserving of the legislative action of the Senate at the earliest possible hour.

I now send to the desk the report of the committee, and I accompany it with the request of the Committee on Banking and Currency, unanimously agreed to upon motion this morning, that the leadership will take action to assure early consideration of the bill.

The PRESIDENT pro tempore. The report will be received and printed, and the Senate and House bills will be placed on the calendar.

The bills were placed on the calendar, as follows:

S. 2960. A bill to amend the Small Business Act of 1953, as amended; and

H. R. 7871. A bill to amend the Small Business Act of 1953.

Mr. CLEMENTS. Mr. President, let me say to my friend from Oregon that there certainly will be no disposition on the part of the acting majority leader to delay consideration of this measure. I think it is important that the report be printed and that the membership have an opportunity to read the report, since there is a considerable difference between the Senate bill and the House bill. After the membership has had an opportunity to examine the report, a decision can be reached by the leadership.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. CLEMENTS. I yield.

Mr. CARLSON. I can assure the distinguishing acting majority leader that the acting minority leader and the minority leader concur in the statement he has just made. I am sure there is no disposition on this side to withhold early action.

If I correctly understood the request of the senior Senator from Oregon, it was that the bill be scheduled for action at the earliest opportunity.

Mr. MORSE. That is correct.

Mr. CARLSON. I can assure the acting majority leader and the distinguished Senator from Oregon that we will cooperate in every way.

REPORTS OF COMMITTEES ON PERSONNEL AND FUNDS

Pursuant to Senate Resolution 123, 80th Congress, 1st session, the following reports were received by the Secretary of the Senate:

COMMITTEE ON AGRICULTURE AND FORESTRY

ADDITIONAL CLERICAL ASSISTANTS AND FUNDS FOR COMMITTEE ON GOVERNMENT OPERATIONS—REPORT OF A COMMITTEE

Mr. JACKSON (for Mr. MCCLELLAN), from the Committee on Government Operations, reported an original resolution (S. Res. 188), which was placed on the calendar, as follows:

Resolved, That in holding hearings, reporting such hearings, and making investigations as authorized by section 134 of the Legislative Reorganization Act of 1946, and in accordance with its jurisdictions under rule XXV of the Standing Rules of the Senate, the Committee on Government Operations, or any subcommittee thereof, is authorized from February 1, 1956, through January 31, 1957, (1) to make such expenditures as it deems advisable; (2) to employ upon a temporary basis such technical, clerical, and other assistants and consultants as it deems advisable; and (3) with the consent of the head of the department or agency concerned, to utilize the reimbursable services, information, facilities, and personnel of any of the departments or agencies of the Government.

SEC. 2. The expenses of the committee under this resolution, which shall not exceed $215,000, shall be paid from the contingent fund of the Senate by vouchers approved by the chairman of the committee.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. CARLSON:

S. 2974. A bill for the relief of Col. Brice C. W. Custer; to the Committee on the Judiciary.

By Mr. NEELY (by request):

S. 2975. A bill to authorize the Commissioners of the District of Columbia to designate and regulate holidays for the officers and employees of the government of the District of Columbia for pay and leave purposes; to the Committee on the District of Columbia.

By Mr. LANGER:

S. 2976. A bill to encourage the establishment of voluntary pension plans by individuals;

S. 2977. A bill to encourage the establishment of voluntary pension plans by individuals; and

S. 2978. A bill to increase the annual income limitations governing the payment of pensions to certain veterans and their dependents; to the Committee on Finance.

S. 2979. A bill to prevent the consumption of alcoholic beverage aboard aircraft engaged in the air transportation of passengers; to the Committee on Interstate and Foreign Commerce.

S. 2980. A bill for the relief of Miss Nabiha Elias Audi; to the Committee on the Judiciary.

S. 2981. A bill to amend the first section of the act entitled "An act to prohibit payment of annuities to officers and employees of the United States convicted of certain offenses, and for other purposes," approved September 1, 1954, so as to limit its application to cases involving the national security; to the Committee on Post Office and Civil Service.

By Mr. HUMPHREY:

S. 2982. A bill to establish a program for participation in international affairs; to the Committee on Foreign Relations.

(See the remarks of Mr. HUMPHREY when he introduced the above bill, which appear under a separate heading.)

By Mr. BUSH (for himself and Mr. PURTELL):

S. 2983. A bill to provide for the reconveyance of certain land in Milford, Conn., acquired by the Department of the Army

from the Quinnipiac Council, Boy Scouts of America, Inc.; to the Committee on Armed Services.

By Mr. STENNIS:

S. 2984. A bill for the relief of Col. John A. O'Keefe; to the Committee on the Judiciary.

By Mr. CASE of New Jersey:

S. 2985. A bill to amend title II of the Social Security Act to reduce from 65 to 60 the age at which benefits may become payable to widows thereunder;

S. 2986. A bill to amend section 203 of the Social Security Act to increase the amount of earnings individuals are permitted to earn without suffering deductions from their benefits;

S. 2987. A bill to amend section 203 of the Social Security Act so as to increase from $80 to $100 the rate at which excess earnings are to be charged to months of taxable years in making deductions from benefits on account of excess earnings;

S. 2988. A bill to amend section 203 of the Social Security Act so as to prevent loss of income by beneficiaries because of deductions from benefits on account of the charging of earnings; and

S. 2989. A bill to amend title II of the Social Security Act to provide extra credit for postponed retirement; to the Committee on Finance.

By Mr. HILL (for himself and Mr. SMITH of New Jersey):

S. 2990. A bill to extend through June 30, 1957, the duration of the Poliomyelitis Vaccination Assistance Act of 1955; to the Committee on Labor and Public Welfare.

By Mr. BRIDGES:

S. 2991. A bill to provide for the issuance of a special series of postage stamps in honor of Hannah Dustin; to the Committee on Post Office and Civil Service.

By Mr. NEUBERGER:

S. 2992. A bill to provide for the issuance of a special series of stamps in recognition of the American Red Cross Blood Bank program; to the Committee on Post Office and Civil Service.

By Mr. LANGER:

S. 2993. A bill for the relief of Clement Leopold Perrin; to the Committee on the Judiciary.

PROPOSED PROGRAM FOR PARTICIPATION IN INTERNATIONAL AFFAIRS

Mr. HUMPHREY. Mr. President, I am about to introduce a bill, and I ask unanimous consent that I may speak on it in excess of the 2 minutes allowed under the order which has been entered.

The PRESIDENT pro tempore. Without objection, the Senator from Minnesota may proceed.

Mr. HUMPHREY. Mr. President, I introduce, for appropriate reference, a bill to provide for the establishment of a program for United States participation in international affairs. This is the program that has been carried on for the past 2 years by the President's emergency fund. It has permitted our participation in international trade fairs and other cultural activities and athletic events throughout the world. Through the small amounts of money expended on these activities we have had great success in countering the high-pressure Communist propaganda and participation in international culture, athletic, and commercial activities.

The proposed legislation to establish this as a permanent program is based on the recommendation of the Senate Appropriations Committee last year. In its report on the supplemental appropriation bill for 1956 the Appropriations Committee recommended that the fund should be made a part of the regular budget. Representative FRANK THOMPSON, of New Jersey, has introduced this bill in the House as H. R. 8497. I would like to say that Congressman THOMPSON deserves the major share of the credit for this proposal.

I am glad to see that the President joined in supporting this program on a long-term basis in his budget message to the Congress. He stated to us on Monday:

> In view of the effectiveness of these activities (carried on by the President's emergency fund) legislation will be recommended to authorize them on a continuing basis.

During the period from 1950 to 1955 the Communist nations participated with exhibitions at 122 trade fairs at which the United States was not represented. Finally there was a $5 million fund placed at the disposal of the President to permit American participation in these trade fairs. I think we have all read of the success we have had with our exhibits at the fairs in which we have since participated.

In addition, the United States has also been able to sponsor appearances of our leading American artists and cultural ambassadors in 220 major cities of the world. There is no more telling rebuttal than this to the Communist propaganda that Americans are cultural barbarians. We should continue to answer Communist propaganda and at the same time promote good relations with other peoples of the world through these exchanges.

Finally, at least 12 American athletic teams have been assisted in representing the United States in international games. They have proved to be splendid representatives of the United States abroad.

I am sure that I do not need to stress to my fellow Senators the importance of the programs we have developed under the President's emergency fund. I think we have all read and had other evidence of the success we have achieved with these activities. By continuing them under a long-term program we would insure a sustained counteroffensive against the Soviet cultural and propaganda drive.

Since the conference at the summit, the Soviet leaders have switched to a dramatic new tactic as part of their ultimate strategy toward achieving world domination. They are now emphasizing economic aid, cultural propaganda, and psychological devices in an attempt to win the uncommitted peoples of the world. We have sought to counter them with assistance to other countries and with our United States information programs. In the areas of exchange between nations in cultural, athletic, and commercial activities, we have lagged until recently. Now that we have recognized the importance of this area of the cold war, it is important that we establish the program to carry out these activities in a way that will insure our maximum effectiveness in projecting an accurate image of America abroad.

I am sure that all of my colleagues will find the program provided for in the bill, which I have just introduced, a most effective approach to carrying on the continuing program of cultural, athletic, and commercial activities that will help us successfully counter the new Communist offensive.

I ask unanimous consent that the bill be printed in the RECORD at this point.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2982) to establish a program for participation in international affairs, introduced by Mr. HUMPHREY, was received, read twice by its title, referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD, as follows:

Be it enacted, etc.—

STATEMENT OF FINDINGS

SECTION 1. (a) The Congress hereby finds that the program of building strength should be widened into a more flexible and imaginative strategy in every field and on every front. The Congress further finds that (1) the Communists have taken sports and culture and the impressionable years of youth and transformed them into arenas of the cold war; (2) the Russian athletes are not really amateurs, but are professionals trained under government guidance with government help, bonuses, and money prizes; (3) ballet, the theater, and literature are all shaped toward aiding communism's long-range scheme of world domination, and from Moscow there radiate troupes of athletes and artists, circulating through the Soviet world, the satellites, Red China, India, and the West with their gospel of communism; (4) the Communist countries have participated extensively in international trade fairs as a further means of propagandizing other nations during the cold war, and have had costly and imposing buildings and exhibits at such fairs as propaganda for Communist industry, trade, and working conditions, while the United States, with the greatest industry, the largest volume of trade, and the highest standard of living in the world has until recently been conspicuous by its absence from these fairs; (5) the United States should participate actively in international trade fairs in order to counter Communist propaganda and to impress upon other nations of the world that the great productive capacity of the United States is dedicated to peaceful uses and to the improvement of mankind's standard of living; (6) America is proud not only of its material achievements but also of its athletes and artists and its cultural achievements; (7) the whole global scene should be surveyed and plans developed for getting the peoples of the world on our side through maximum use of sports, the theater, and educational exchanges, and indeed no field should be neglected; and (8) as the danger of atomic warfare recedes it becomes more certain that the ultimate outcome of the struggle between the Communists and the free world will be decided by ideas and ideas alone, and the victory is increasingly likely to go to the side which most successfully projects its ideas and ideals to the rest of the world.

(b) The Congress, approving and endorsing the statements recently made by the President in support of the cultural arts, further finds that (1) in the advancement of the various activities which will make our civilization endure and flourish, the Federal Government should do more to give official recognition to the importance of the arts and other cultural activities; (2) there is an important principle which we should ever keep in mind—the principle that freedom

of the arts is a basic freedom, one of the pillars of liberty in our land; (3) there is no aspiration, no dream on the horizons of man's hopes and beliefs and faith, that is so strong and so vivid as the dream of lasting peace; there are many things that must be understood and many things that must be done if we are to make progress toward the realization of that dream, but there is one thing that educators cannot afford to forget, and that is this element of understanding as opposed to mere knowledge, (4) we must make the effort to understand something of the culture of other peoples—their history, their tribulations, and the trials through which they may have passed—for unless we understand these things we will never comprehend why our motives are so often misunderstood; and (5) peace is not primarily in the hands of elected political leaders; it is in the hands of the family and the home, the church and the school.

STATEMENT OF PURPOSE

SEC. 2. The purpose of this act is—

(1) to strengthen the social and cultural ties which unite us with other nations;

(2) to demonstrate the cultural interests, developments, and achievements of the people of the United States;

(3) to demonstrate the contributions being made by the economic and social system of the United States toward a peaceful, easier, and more fruitful life for our own people and for other people throughout the world; and

(4) thereby to assist in the development of friendly, sympathetic, and peaceful relations between the United States and the other countries of the world.

DEVELOPMENT OF PROGRAMS AND PROJECTS

SEC. 3. (a) The President is authorized to provide for the conduct of tours in other countries by athletes and creative and performing artists and groups from the United States. In the development of projects and the selection of participants for purposes of this act, priority shall be given to (1) individual athletes and groups participating in athletic events, (2) professional and amateur presentations of high-quality dramatic productions, musical comedies, operas, and ballet productions, (3) concert groups, (4) individual singers, dancers, and concert artists, and (5) creative artists working in the fields of writing and composing, poetry, architecture, landscape architecture, city and regional planning, civic art and design, urban renewal and redevelopment, housing, interior design and decoration, motion pictures, still photography, radio and television, hand arts and crafts, painting and sculpture, and the other plastic and graphic arts, including architects, playwrights, producers, and scholars, critics, and historians of art.

(b) The selection of individuals and groups to participate in projects under this act shall be determined by the Secretary of State in consultation with the Advisory Committee on the arts created under section 7 and in consultation with groups of private citizens who are generally recognized by the public as being authoritative in the field concerned.

CULTURAL AND SPORTS PRESENTATIONS; FAIRS AND FESTIVALS

SEC. 4. (a) In carrying out the purpose of this act, the President is authorized to provide for United States representation in artistic, dramatic, musical, sports, and other cultural festivals, competitions, and similar exhibitions abroad.

(b) In carrying out the purpose of this act, the President is also authorized to provide for United States participation in international trade and industrial fairs and other like public or private expositions and demonstrations in foreign countries.

PARTICIPATION BY PRIVATE AGENCIES

SEC. 5. To the maximum extent feasible, (1) private agencies shall be encouraged to participate in carrying out the purpose of this act, and (2) funds appropriated pursuant to section 9 shall be used wherever possible to contribute toward meeting the expenses of activities carried out under this act through normal private channels and by private means.

PUBLICITY

SEC. 6. It is the sense of the Congress that one of the most important features of the program authorized by this act is the psychological impact it will have on the peoples of other nations, and that the projects carried out hereunder should be given maximum publicity under title V of the United States Information and Educational Exchange Act of 1948. Funds appropriated pursuant to section 9 shall be available for suitable promotional activities and publicity in connection with such projects.

ADVISORY COMMITTEE ON THE ARTS

SEC. 7. (a) There is hereby created an Advisory Committee on the Arts (hereinafter in this section referred to as the "Committee"), consisting of a Chairman selected by the United States Advisory Commission on Educational Exchange from among its membership and nine other members appointed by the Secretary of State. In making such appointments the Secretary of State shall give due consideration to the recommendations for nomination submitted by leading national organizations in the major art fields.

(b) The members of the Committee shall be individuals whose knowledge of or experience in, or whose profound interest in, one or more of the arts will enable them to assist the United States Advisory Commission on Educational Exchange, the President, and the Secretary of State in performing the functions described in subsection (c) of this section.

(c) The Committee shall—

(1) advise and assist the United States Advisory Commission on Educational Exchange in the discharge of its responsibilities in the field of international educational exchange under title VI of the United States Information and Educational Exchange Act of 1948, with special reference to the role of the arts in such field;

(2) advise and assist such Commission in the discharge of its responsibilities under the cultural presentations program financed by the President's Emergency Fund for International Affairs, insofar as such program contributes directly or indirectly to the objectives of the United States Information and Educational Exchange Act of 1948;

(3) advise and assist the President and the Secretary of State in the discharge of their responsibilities under the cultural presentations programs authorized by and financed under this Act;

(4) advise the Secretary of State concerning cultural activities whenever the Secretary considers such assistance necessary to enable him to formulate policies for carrying out the purposes of the United States Information and Educational Exchange Act of 1948, coordinating the exercise of its functions under this paragraph with the exercise of its functions under paragraph (1) of this subsection; and

(5) provide such other advice and assistance in carrying out this act as may be necessary or appropriate.

(d) The term of office of each of the members of the Committee appointed by the Secretary of State shall be 2 years; except that the term of office of four of the members first appointed shall be 1 year.

(e) No member of the Committee shall receive any compensation for his services as such; but each such member shall be reimbursed for travel expenses actually incurred, and paid in lieu of subsistence the per diem rates prescribed or established under the Travel Expense Act of 1949, while away from home in attendance at meetings of the Committee or in consultation with officials of the Government in carrying out the duties of the Committee.

(f) Staff and secretarial services for the Committee shall be provided by the departmental staff of the United States Advisory Commission on Educational Exchange, with the assistance of the International Educational Exchange Service.

INTERAGENCY COMMITTEE

SEC. 8. The President is authorized to create such interagency committees as in his judgment may be of assistance in carrying out the purposes of this act. Such committees shall include individuals having special knowledge and experience in the field of the cultural arts as well as individuals whose knowledge and experience in other fields will assist in carrying out the program established by this act. The provision of section 214 of the act of May 3, 1945 (59 Stat. 134; 31 U. S. C. 691), shall be applicable to any interagency committee created pursuant to this section.

APPROPRIATIONS

SEC. 9. There are hereby authorized to be appropriated such sums as may be necessary to carry out the purpose of this act.

JOINT COMMITTEE TO ARRANGE FOR INAUGURATION OF PRESIDENT-ELECT, JANUARY 20, 1957

Mr. GREEN submitted the following concurrent resolution (S. Con. Res. 64), which was referred to the Committee on Rules and Administration:

Resolved by the Senate (the House of Representatives concurring), That a joint committee consisting of 3 Senators and 3 Representatives, to be appointed by the President of the Senate and the Speaker of the House of Representatives, respectively, is authorized to make the necessary arrangements for the inauguration of the President-elect of the United States on the 20th day of January 1957.

ADDITIONAL ASSISTANTS AND FUNDS FOR COMMITTEE ON GOVERNMENT OPERATIONS

Mr. JACKSON (for Mr. MCCLELLAN), from the Committee on Government Operations, reported an original resolution (S. Res. 188) to provide additional assistants and funds for the Committee on Government Operations, which was placed on the calendar.

(The above resolution is printed in full under the heading "Reports of Committees" of Senate proceedings of today.)

AMENDMENT OF TARIFF ACT OF 1930 AND REPEAL OF CERTAIN PROVISIONS OF THE CUSTOMS LAWS—AMENDMENTS

Mr. BYRD (by request) submitted amendments, intended to be proposed by him to the bill (H. R. 6040) to amend certain administrative provisions of the Tariff Act of 1930 and to repeal obsolete provisions of the customs laws, which were referred to the Committee on Finance, and ordered to be printed.

SCHOOL CONSTRUCTION — ADDITIONAL COSPONSORS OF BILL

Mr. SMITH of New Jersey. Mr. President, last Thusday, January 12, I introduced the bill (S. 2905) to authorize a 5-year program of Federal assistance to States and communities to enable them to increase public elementary and secondary school construction. I obtained unanimous consent at that time to leave the bill open for additional cosponsors until the end of business on Wednesday, January 18.

Since yesterday, the junior Senator from Idaho [Mr. WELKER], and the senior Senator from Vermont [Mr. AIKEN] have requested that their names be added as cosponsors. Therefore, I ask unanimous consent that their names be added to the list of cosponsors of the bill the next time it is printed.

The PRESIDENT pro tempore. Without objection, it is so ordered.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that on today, January 19, 1956, he presented to the President of the United States the following enrolled bills:

S. 1689. An act to authorize the Secretary of the Interior to execute a repayment contract with the Yuma Mesa Irrigation and Drainage District, Gila project, Arizona, and for other purposes; and

S. 1745. An act authorizing the Secretary of the Interior to issue a patent in fee to Nellie Ohlerking Archambeau Moran.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. SPARKMAN:

Address delivered by him in Statuary Hall as a part of the ceremonies honoring Gen. Robert E. Lee.

NATIONAL CIVIL SERVICE WEEK

Mr. CARLSON. Mr. President, this is National Civil Service Week, and many important statements have been made regarding the civil service and Federal workers. I ask unanimous consent that certain statements made by members of the Cabinet regarding Federal employees and Civil Service Week, be printed in the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

From Secretary of the Interior Douglas McKay:

"Since coming to Washington as Secretary of the Interior at the beginning of the present administration, I have developed a great appreciation and admiration for Government employees. As a member of the State legislature, and later as Governor in Oregon, I came to know and respect government employees at the State level. As Secretary of the Interior, this respect has been extended in ever-increasing degrees to Federal employees as well.

"I have found that career service people are a dependable, hard-working group who are devoted to their jobs in the service of our Nation and its people. Person for person their loyalty, capability, energy, and integrity are unsurpassed anywhere in private industry. Many of them remain in Federal service at considerable personal sacrifice, steadfast in their dedication as nephews and nieces of Uncle Sam.

"The basic Civil Service Act and its subsequent extensions and refinements form the sound foundation for good government through the building of a splendid competitive career service. May the next 73 years in the history of the civil service be as productive as the past 73."

From Secretary of Defense Charles E. Wilson:

"On the occasion of the 73d anniversary of the passage of the Civil Service Act of 1883 I am pleased to join in paying tribute to the extremely important role which the career civil service plays in our democratic system of government.

"The highly technical nature of the large-scale operations of modern government requires a trained, competent staff of career employees selected solely on the basis of merit. Without the career civil service it would be difficult, if not impossible, for any administration to carry out its governmental programs and responsibilities.

"In my experience in the Federal Government I have been most favorably impressed with both the skill and the devotion to duty of our career employees. The importance of their work and the competence with which the great bulk of them perform it warrants a far greater degree of public appreciation than has yet been accorded them.

"I congratulate your organization on the measures which you are taking to call attention to the dedicated service of these employees."

From Secretary of Health, Education, and Welfare Marion B. Folsom:

"The principle of filling Federal Government positions through open, competitive examinations was established by the Civil Service Act, passed in 1883. The people of this country were thereby assured of having operation of the Nation's business handled by employees who had effectively demonstrated their entitlement to positions in the Federal service. On the other side of the picture, the men and women who entered Government service were assured of obtaining by reason of their own qualifications and of holding through their own efforts the jobs in their chosen career.

"Today—73 years later—the United States civil service has become a model for State and local governments, for industry, for public utilities, and for individual employers. The effectiveness of the merit system has been demonstrated, through the years, in obtaining the highest quality and most efficient employees available to conduct the public business.

"The selection and retention on the basis of merit of these dedicated men and women have proved the worth of the system. It is a pleasure to send my greetings and good wishes to the American Federation of Government Employees as you celebrate Civil Service Week."

From the Postmaster General, Arthur E. Summerfield:

"As you know, President Eisenhower believes in a strong and competent career civil service and considers such a career service essential to the achievement of sound and efficient management in Government. I am sure that the efforts of your organization through the sponsorship of National Civil Service Week will contribute to the accomplishment of this important objective.

"I believe in the merit system. By having a strong civil service based on the merit system we are better able to maintain a stable working body of experienced and trained personnel to carry out the objectives of long-range Government programs.

"During the last 3 years that I have served as Postmaster General, I have observed carefully the services of the employees of the Post Office Department. I can say that as a group they have performed loyally and with true dedication to the postal service. I have seen innumerable examples of this devotion, which certainly could stem only from great pride in the service.

"There could be no more appropriate time to recognize and praise career employees than during National Civil Service Week."

From Secretary of Labor James P. Mitchell:

"Experience over the years has shown the wisdom behind the establishment of the Federal career service. Its efficiency, its morale, its dedication are the very fiber of our Government. The enthusiasm and intelligence of our civil servants and their devotion to the public good are an outstanding testimonial to the merit system.

"It is the duty of everyone to see that the civil service is continually strengthened and improved so as to provide the American people with a strong, stable career force to carry on the essential functions of our Government."

From the Attorney General, Herbert Brownell, Jr.

"It is a privilege to have this opportunity during National Civil Service Week to pay tribute to the many able men and women who comprise the career civil service of our Government. The tremendous responsibility of conducting the public business of Federal Government, rests with the policy and career staff alike. The loyal and faithful contribution of continued devotion to duty and consistent superior quality of performance is of prime importance in the complicated machinery of Government. I have found the Department of Justice employees willing to exert themselves to the utmost to assure a 'good job well done.'

"We had occasion during the recent holidays to recognize a number of outstanding employees for their devotion to duty and the superior manner in which they perform their various tasks. Cash awards were given to 7 of our professional staff and to 9 of the clerical and administrative staff. In addition, honorary awards were presented to 6,486 employees who have completed 10 to 35 years of meritorious service with the Department of Justice. It was a distinct pleasure for me, as well as for each of the Assistant Attorneys General, to recognize the fine work being performed by these loyal employees."

From Secretary of Commerce, Sinclair Weeks:

"Since taking office as Secretary of Commerce in January 1953, I have been very favorably impressed by the efficient service rendered by the career civil service staff of the Department and the dedicated, loyal spirit on which it is based.

"In my opinion the effectiveness of this Department depends in large measure upon a strong career service for positions below the policymaking level, with selection, promotion, and retention on the basis of merit, together with sound vigorous leadership in policymaking and top executive positions.

"This is an indispensable formula for good teamwork in carrying out the programs and policies of the President and for rendering the efficient public service which the voters have a right to expect from us."

From the Secretary of State, John Foster Dulles:

"It gives me great pleasure to join you and your organization in honoring the career civil servants of the United States who carry out so loyally and effectively the complicated functions of our Government at home and abroad. My experiences as Secretary of State have fortified my belief that we, as a Nation,

are indeed fortunate in having so many competent and dedicated men and women in our civil service.

"Now that history has given us a leading role in the free-world partnership, it is more than ever imperative that we maintain the high standards of that Service, and that we make such careers increasingly attractive and rewarding to Americans of the highest caliber. I hope sincerely that the observance of National Civil Service Week in 1956 will help focus the attention of the American people on the value to the Nation of a career civil service, selected and retained on the basis of merit."

From Ezra T. Benson, Secretary of Agriculture:

"The Department's services are performed by well trained and experienced scientific and technical employees, and most of them are career public servants. A large proportion of these employees, located at more than 8,000 places throughout the country, make daily contact with the American people when performing these services. These employees, who have been competitively selected and who have assured tenure, are providing farmers and the rest of the American public with essential assistance. This type of service is made possible and enhanced through the permanent Federal career service started 73 years ago by the passage of the Civil Service Act of 1883."

From Secretary of the Treasury, George M. Humphrey:

"It gives me pleasure to commend the annual observance of National Civil Service Week, calling attention to the dedicated service of career Federal employees.

"I trust that this purpose will be successfully served by the very interesting program of events which has been planned. The banquets, civic observances, proclamations, and editorial discussion will deservedly honor the men and women of the career service for their contribution to the Government's work."

THE NATURAL GAS BILL

Mr. LEHMAN. Mr. President. the New York Times this morning printed a very informative and sound editorial opposing the Fulbright-Harris Natural Gas bill. I am in strong agreement with the position taken by the New York Times in this editorial.

As the Times points out, the Fulbright-Harris bill is of direct practical concern to all persons who own an ordinary household gas appliance. They number about 25 million families, and have an investment, I am told, of about $14 billion. As has been pointed out, even a slight increase of a few cents a thousand cubic feet will cost the consumers of natural gas in this country several hundred million dollars.

I commend this editorial to the notice of all Members of Congress and of the public generally. I ask unanimous consent that it be printed at this point in my remarks in the body of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NATURAL GAS BILL

The debate now proceeding in the Senate on the Fulbright-Harris bill to exempt independent producers of natural gas from Federal regulation as public utilities may sound technical, but it is of direct practical concern to every person who owns or uses an ordinary household gas appliance—and there are an estimated 25 million American families who do. Furthermore, the principles of regulation involved in this dispute affect all citizens. So it is safe to say that the gas issue is not only the first but one of the more important public questions to be decided in the present session of Congress.

This newspaper believes that the Fulbright-Harris bill ought to be defeated. The measure passed the House last year by only a six-vote margin, but it passed. The bill would have the effect of overturning a Supreme Court decision that the prices charged by independent producers of natural gas are subject to regulation by the Federal Power Commission.

While we prefer to see as little governmental price-fixing as possible, there are certain circumstances under which it is essential to protect the interests of the consumer. The distributors' price of natural gas is now regulated by State public utility commissions; the transporters' price of natural gas (through the pipelines that are extending themselves into almost every part of the country) is now regulated by the Federal Power Commission. The producing fields are so closely tied to the pipelines that carry the gas and therefore to the ultimate household and industrial consumer that the very purpose of regulation to protect the latter would be defeated by failure to regulate prices at the source. Your gas stove is in a very real sense connected with a gas well located many hundreds of miles away, and the price at each stage of the process from well to stove obviously has a direct effect on the price at every other stage.

The producers emphatically reject the contention that utility-type regulation is necessary at their end, maintaining that there is great competition among them and therefore the prices in effect regulate themselves. But we have doubts that theirs is a genuinely competitive situation, especially in view of the complicated and elaborate escalation clauses in many contracts under which one producer may profit from another's increase in prices. Furthermore, as Senator PAUL DOUGLAS of Illinois has pointed out in his monumental attack on the Fulbright-Harris bill, the dominant figures in the production of natural gas for interstate commerce are a handful of major oil companies; and it is unrealistic to talk about thousands of small producers as though they had any real effect on the market price.

The Fulbright-Harris bill does not abolish all Federal supervision over proposed rate increases; but the standard of reasonable market price it does establish for the Federal Power Commission is, in the words of a minority House report, "a disguised backdoor surrender of regulatory control to the producers themselves." Even though it is true that costs of production form only a small fraction of what the consumer ultimately pays on his gas bill, a rise of only a few pennies in the price of gas at the wellhead could mean increased costs of hundreds of millions of dollars to consumers in the aggregate, and a corresponding profit of hundreds of millions to the producers. The oil- and gas-producing industry is not exactly in a state of depression, and it already has its own special tax gift in the form of a 27½ percent depletion allowance. We see no sound reason why the regulatory arm should not be extended right down the continuous and indivisible line from distributor all the way back to producer. Other extractive industries stand in a totally different relation to the consumer, who can go to any one of hundreds of suppliers if he chooses. But he can't do that once he is tied to a gas line.

The leaders in the fight for the bill are prominent Democrats from the central Southwest, notably the oil- and gas-producing States of Texas, Arkansas, and Oklahoma. While the measure affects natural resources primarily in private rather than public hands, nevertheless when Democratic politicians in the next few months raise the cry of giveaway against the present administration, as they are sure to do, the words coming from them will to many independent ears have a rather hollow ring if the Fulbright-Harris Act should pass.

Mr. HUMPHREY. Mr. President, I had intended to ask unanimous consent to have printed in the body of the RECORD the editorial appearing in the New York Times of today, January 19, 1956. Inasmuch as the Senator from New York [Mr. LEHMAN] has just had the editorial printed, I shall forego the request. The New York Times believes—as do many of us—that the Harris-Fulbright bill ought to be defeated. The editorial argues very ably that the regulatory authority of the Federal Power Commission over the producers' sale price of natural gas should be retained.

THE IMPORTANCE OF ACCURATE NEWSPAPER REPORTING

Mr. GOLDWATER. Mr. President, Will Rogers expressed the attitude of most Americans toward our press when he said, "All I know is what I read in the papers." Most Americans assume that if a story appears in the news columns of their newspapers, it is factual, honest, and unbiased.

Last week the junior Senator from Oregon [Mr. NEUBERGER] spoke feelingly about freedom of the press—a subject brought into sharp public focus of late by numerous editorials on the subject appearing from coast to coast.

Mr. President, the junior Senator from Arizona feels, with all other Americans, that this freedom is one of our most cherished possessions and one we should all protect assiduously and constantly, but the junior Senator from Arizona feels that the responsibility for the protection of this freedom rests as squarely on the shoulders of the press as it does on all American citizens. Our freedoms, including freedom of the press, were not lightly won, and they can be maintained only by the observance of all the responsibilities that accompany them. The most rigid and the most demanding of these in the instance of the freedom of which we speak is that reporting be honestly and objectively accomplished. When a newsman or a newspaper reports only one side of an argument, then that newsman or that newspaper is guilty of negligence toward a responsibility to freedom, and by such actions public confidence is seriously undermined along with the freedom with which the press should be vitally concerned.

Let me, Mr. President, refer to recent examples of good and bad reporting on a subject which has found a place on the pages of the newspapers of our country. On September 29, 1955, Drew Pearson made charges in his column against Representative HARRIS ELLSWORTH, of Oregon, and Secretary of the Interior Douglas McKay. The Eugene Register-Guard, acting as a newspaper should, assigned a reporter to the task of ferreting out the charges and to determine whether they were true. Here is what the editor of that responsible newspaper said:

If these charges are true, both ELLSWORTH and McKay ought to be run out of public

life. If they are not true, McKay and ELLSWORTH are entitled to protection against a vicious slander. In any case, the people of the Fourth District, especially those who read the Register-Guard, are entitled to every bit of factual information we can get, so that they may judge.

After thorough, complete, and unbiased investigation by the reporter assigned, here is what the editor of that newspaper concluded—and I quote further from the editorial:

In our opinion, no grand jury in the world would indict nor would any trial jury convict on the kind of faulty evidence (inferential hogwash) presented by Columnist Pearson. We have such a distaste for reporters who slant news or distort facts that we do not want to impugn Mr. Pearson's motives.

INJUSTICE IS INJUSTICE HOWEVER INTENDED

We will say that whatever Columnist Pearson's reasons for this assault on ELLSWORTH and McKay, he has done a thoroughly bad job of reporting, and one which works a grave injustice on the people accused.

Mr. President, I do not intend to comment on the customary inaccuracy of Mr. Pearson. In my opinion the Eugene Register-Guard represents the great majority of the press who take their responsibility seriously.

However, I wish to point out an example on the other side of the coin. Recently the Washington Post completed a series of nine articles on the Department of the Interior. The articles were on a serious subject growing out of an unproven charge which has acquired the title of "Giveaway." Mr. President, if these charges are to be investigated by the press, with an idea of presenting an unbiased, factual account to the readers in this area, then it would seem to me that the newspaper should insist on having its reporter get the facts from all parties concerned. I have been advised that this was not done; that the Secretary of the Interior, Mr. McKay, was not interviewed, nor was Mr. D'Ewart, nor was Mr. Davis, nor was Mr. Aandahl. However, I have heard that Mr. Wormser did receive a call on this overall subject. One person, Mr. President, at the top echelon of this important department, against which has been lodged, as I have said, a most serious charge, was interviewed during the preparation of a series of articles purporting to be factual and offered as such to the public.

Mr. President, compare that approach to the responsibility of the press with that of the Oregon Register-Guard. The Washington Post, which has loudly championed freedom of the press, had best begin to practice the responsibility of factuality which the public accepts as a duty of the press.

Let me give one more example from the Washington Post, and then I shall have completed this reminder to the press of the Nation: During the course of the hearings on the Al Sarena case, in Oregon, witnesses have appeared to testify regarding the ability of the A. W. Williams Inspection Co., of Mobile, Ala., to assay gold and silver. Even after the most abusive questioning, nothing has been brought out to give occasion to the following words contained in a Washington Post editorial published on January 12:

The incumbent administration granted the patents on the basis of an assay made by a remote firm unqualified to make it.

Mr. President, that is editorial irresponsibility; and I am surprised that a newspaper of this importance in the Nation's Capital should undertake editorially to prejudge a matter, especially when it has not been decided by the congressional committee now hearing it.

Mr. President, freedom of the press is a necessity to our whole way of life. I suggest that if strict adherence to honest, objective, unbiased reporting is not maintained by the press of the Nation and by those who write the news, then the press itself is guilty of the gravest and most serious threat to this freedom.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD, as a part of my remarks, numerous clippings from the Eugene Register-Guard, of Eugene, Oreg.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Eugene (Oreg.) Register-Guard of October 10, 1954]

REPRESENTATIVE ELLSWORTH RELEASES LETTER ON MINE CASE

(By Dan Wyant)

Congressman HARRIS ELLSWORTH (Republican, Oregon) Saturday made public to the Eugene Register-Guard a copy of a letter he wrote June 1, 1953, to Clarence Davis, Solicitor of the Department of Interior in regard to the Al Sarena Mines, Inc., in southern Oregon.

This is the letter which Columinist Drew Pearson referred to in a recent article labeling the award of patent on the mining claims a "giveaway" of valuable timberland.

It's the letter which ELLSWORTH'S opponent for office, Charles Porter, of Eugene, challenged the Congressman to make public in a speech Porter made in Medford Wednesday night.

The lengthy (six pages, single-spaced) letter charged that data important to the case was missing from the files and that the record "as it stands is a sham and deceit to those who were called upon to pass judgment and is prejudicial to any fair decision as to the rights of the applicant."

The missing data were identified as a number of supplemental assay reports submitted by the mining company to Federal Mineral Examiner Elton M. Hattan, of Portland, as further proof of mineralization of the area.

ELLSWORTH quoted from a letter by Hattan sent to H. P. McDonald Jr., secretary-treasurer of the mining company, acknowledging receipt of some of the assay reports—which he said had arrived too late to be incorporated into the report. "The assay results submitted by you in August and September were incorporated in the report," he added.

REPORTS MISSING

These are the reports which ELLSWORTH said were entirely missing from the Interior Department files when a representative from his office searched the files.

"It is a matter of conjecture whether the decision at any point, regardless of collateral testimony of witnesses and experts, would have been accepted as sufficient in the absence of the applicant's evidence of mineralization, as against the Government's assay reports, all of which are in the file. If not in substance, at least in effect, the result accomplished was essentially in the nature of accepting the evidence of the contestant and suppressing the evidence of the contestee."

ELLSWORTH added that "such action, wilfully done, would constitute fraud and vitiate every action and decision predicated upon the incomplete file. At the very least, however, the lack of this evidence of mineralization in the file deprived the applicant of a substantial legal right to have his evidence considered; and any action taken in the absence of such data cannot result in any semblance of justice."

ASKED DELAY

ELLSWORTH said expenditure in development of the property aggregates more than a quarter of a million dollars, including a mill and machinery, more than a mile of tunnel work and roads.

He then requested the Interior Department to "defer further action and decision on this case until the applicant's evidence of mineralization—whether it be the original of reports filed or whether it be certified copies or next best evidence—is secured."

He concluded: "As to the proposal, for carrying out this recommendation, I have no specific proposal, but trust that some plan may be developed which will not compound the injustice and the cost to the applicant in again producing for the record what he has already produced, and at the same time will enable the Government to fulfill its duty under the mineral law of the United States."

At that time both the Portland Bureau of Land Management and the BLM in Washington had ruled that 15 of the 23 claims did not have sufficient minerals on them to justify granting a patent. The mining company had followed the usual legal proceedings in appealing the decision to the Department of the Interior.

Subsequently, Solicitor Davis agreed to a new mineral examination of the area and a patent was finally issued for all the claims in February of this year.

LETTER SHOWN BY ELLSWORTH

JUNE 1, 1953.

HON. CLARENCE DAVIS,
Solicitor, Department of the Interior,
Washington, D. C.

DEAR MR. DAVIS: This letter is in further reference to the Al Sarena Mines, Inc., case, Oregon No. 0665, now pending in your office on appeal and concerning which I have sent previous communications.

The issue at this point, and actually the basic issue from the beginning in this case, is the question of a valid mineral discovery such as would warrant reasonable prudent mining in developing and extracting the minerals from the deposit. The act of making application, under oath, for patent, creates the presumption that the applicant has made such discovery and stands ready to support such presumption. The Government with its obligation to protect the public domain has the privilege of investigating and determining the validity of the application, the supporting evidence of mineralization, and compliance with the mineral laws of the United States. Obviously, a file for a patent application which is deemed to lack the usually legal sufficient evidence of mineralization creates a duty upon the officials of the Federal Government to take such steps as are necessary to verify the sworn documents of the applicant.

NOT USUAL

It is pertinent in the instant case, in connection with the proceedings heretofore had, that the application involved is not the usual common application for patent covering the area within which is located only a vein or pocket of enriched mineral. In contrast, this application covers what is legally recognized in the courts and the Mineral Division of the Bureau of Land Management as a broad zone claim.

At the request of the regional cadastral engineer, the applicant made an extended survey showing the interior lines of claims which would follow within the exterior boundaries of the broad zone claims. This involved expense beyond that required for survey of a broad zone of contiguous locations and beyond the cost of the lands involved and necessitated nearly a year's delay in time. The record shows that the examiner then used these additional lines, obtained at additional expense to the applicant, to treat the application not as a broad zone claim application as filed, but as an application for 23 separate claims.

SPECIFIC ISSUE

In a broad zone claim the mineralization is widely dispersed rather than concentrated within a pocket or vein. The limited mass of mineralized rock has the required essentially genetic oneness, and has well-defined boundaries closely separating it from the surrounding rock. Some areas within these well-defined boundaries will be substantially richer in mineralization than others, but the general mineral characteristics will persist throughout the broad zone mineralized area. Such a deposit is generally practical of development only as a large volume, low-grade mining operation.

This concept becomes important in this case in understanding the nature of the decisions and contest action, bringing it on to its present status. Turning to the specific issue of proof of mineralization in this case, the applicants, looking toward the development of the deposit for a mass production low-grade mining operation and toward patenting on the basis of a broad zone claim, prepared their initial papers toward this end.

Despite the fact that more than 2,000 assays were on record and pulps available to the department for verification and comparison with assay records, the examiner in the regional office requested that the applicant perform additional sampling and submit assay reports for this report and record, made by impartial laboratories, and in his own specified form.

The file in this case is now devoid of this data showing a precise location of each sample taken and the assay reports showing mineralization, and which evidence is essential to any bona fide adjudication of the application on its merits. These reports are entirely missing.

A search of the file by the Bureau of Land Management personnel and a further search by a representative from my office failed to reveal any of the correspondence between the regional office and the applicant concerning the receipt of any such assay reports on the assay reports themselves which were submitted in further proof of mineralization.

ASSAY RESULTS

To illustrate, I quote from a letter dated January 4, 1950, addressed to Mr. H. P. McDonald, Jr., secretary-treasurer, Al Sarena Mines, Inc., 408 First National Bank Building, Mobile, Ala., and signed by Mr. Elton M. Hattan, mineral examiner for the Bureau of Land Management, region I, Swan Island Station, Portland 18, Oreg. In the second paragraph of the letter, Mr. Hattan states: "My report was completed and submitted last month. The December 27 letter did not reach here in time to include any of the information which was enclosed with it. The assay results submitted by you in August and September were incorporated in the report."

The file does not disclose a single one of the assay reports, receipt of which is acknowledged by Mr. Hattan, and which he stated were incorporated in the report.

In the third paragraph of the same letter, Mr. Hattan stated: "The information supplied as to the exact place of taking the samples last reported by you is not clear. If you will supply more definite information, I shall be glad to incorporate such information in a supplementary report." This is followed by requests for very precise survey descriptive data which would enable a person to locate the precise point from which an assay sample had been cut. The information which was transmitted pursuant to this request is not in the file and contrary to Mr. Hattan's statement, there is no supplementary report in the file carrying such data.

None of the assay reports transmitted on 20 samples, receipt of such reports being acknowledged by Mr. Hattan under date of January 4, 1950, are in the file.

DENIED DISCOVERY

Under date of December 19, 1949, Mr. Hattan transmitted his report to the regional forester, Mr. H. J. Andrews, and to the Interior Department in which he denied mineral discovery on 15 claims. This is apparently the report referred to in his letter mentioned above, and accompanying which none of the evidence furnished by the applicant as to mineralization was transmitted with the record, nor is there at present any supplemental report referred to in Mr. Hattan's letter.

Following this report, the docket sheet shows an entry "Adverse proceedings vacated." Thereafter the lands were placed upon the tax rolls of Jackson County, Oreg., by the Bureau of Land Management Regional Office. Notice of Forest Service contest was thereafter received by the applicant and such action was protested by the applicant who gave notice that all evidence of bona fides, samples and assays were again refiled and resubmitted under oath for the record. The case went on to hearing on a basis of the incomplete file, lacking the applicant's evidence of mineralization. Counsel for the applicant demurred and when the demurrers were overruled, made a formal appeal to the Secretary of Interior which appeal was granted. Within the time limits prescribed by regulation, counsel for the applicant gave notice of refiling all evidence of mineralization for the record for the third time. The record came on to the central office still devoid of this evidence and the decision of Regional Manager Rice, dated December 14, 1950, was transmitted to the Bureau of Land Management denying the validity of 15 claims within the broad zone claim essentially repeating the substance of the previous decision by Mineral Examiner Hattan.

SUBSTANTIAL COST

From this history it is abundantly clear that the applicant was willing and cooperative, and at a very substantial cost to itself endeavored to place in the record evidence of mineralization in support of his application. Although this evidence was acknowledged and received and the applicant was led to rely upon the statements of the agency that such evidence had been or would be placed in the file, these papers either never were placed in the file or were removed thereafter, in consequence, this case went to adjudication and went to hearing without the supporting data as to mineralization, submitted by the applicant.

It is a matter of conjecture whether the decision at any point, regardless of collateral testimony of witnesses and experts, would have been accepted as sufficient in the absence of the applicant's evidence of mineralization, as against the Government's assay reports, all of which are in the file. If not in substance, at least in effect, the results accomplished was essentially in the nature of accepting the evidence of the contestant and suppressing the evidence of the contestee.

Such action, willfully done, would constitute fraud and vitiate every action and decision predicated upon the incomplete file. At the very least, however, the lack of this evidence of mineralization in the file deprived the applicant of a substantial legal right to have his evidence considered; and any action taken in the absence of such data cannot result in any semblance of justice. The action taken in denying patent on the 15 claims is claimed to be justified on the record as it stands; but the record as it stands is a sham and deceit to those who were called upon to pass judgment, and is prejudicial to any fair decision as to the rights of the applicant.

ASSURE EQUITY

A basic function and obligation of government is to administer justice. Wherein the Government or one of its agencies, in the course of such action, finds itself in the combined capacity of a party at interest, prosecutor, judge, and jury, the sovereign is called upon to exercise the highest degree of impartiality and for this reason the burden of proof is placed on the Government to assure fairness and equity to its citizens.

The Government should as quickly assert its powers to remedy any defect prejudicing its citizens as it would insist upon such remedy prejudicing the Government. Accordingly it would appear to be only fair and reasonable in the instant case that this record at this time be made whole by the uncovering of the missing mineralization reports in particular, and other correspondence and papers pertinent to the action in this case which are likewise not present in the file, securing the originals if possible or certified copies where originals are not available, and the record reviewed and considered as it should have been at the time the mineralization showing of the applicant was complete. Had all proofs of mineralization been in the record, it is reasonable to assume the case would never have gone to contest. It is pertinent to note that the report of the mineral examiner who transmitted the Government assay reports but did not transmit those of the applicant, was of such a nature that no other individual studying the report could reasonably reach any other conclusions than that expressed by him. It is little wonder that the decision of the regional director of almost a year later, in December 1950, essentially reiterates the statements of the examining engineer in his earlier report.

UNITED STATES SURVEY

It is in point, I believe, to refer to the United States Geological Survey Bulletin, No. 893, entitled "Metalliferous Mineral Deposits of the Cascade Range in Oregon." This report carries information on an examination made in the early 1930's and published in 1938, carrying exhibits, plates 3, 6, and 22, and reporting on part of the instant property then known as Buzzard's Mine, on pages 131 and 132. Since that date, the development work on the broad zone claims involved in the application and including the Buzzard's Mine operation has been more than doubled.

There are more than a mile of tunnel workings, numerous surface pits, shafts, cuts, and winzes. Roads have been built involving substantial expenditures; geophysical examination has been made as further proof of the existence of the broad zone mineralization and which information the mineral examiner refused to permit in the record. At this time there is in place at this mine a 125-ton capacity mill and machinery for flotation, jigging, tabling, and cyanidation. The expenditure in development of this property aggregates more than a quarter of a million dollars.

PROOF ABSENT

The foregoing facts are easily discernible. Certification of the United States mineral surveyor certifying as to the nature, extent, and value of the work performed on and character of the property, and the further certification by the United States cadastral engineer are present. The applicant's full proof of mineralization is absent. In view of this, it is my desire that this record be made complete. Accordingly, it is my request that the Department defer further

action and decision on this case until the applicants' evidence of mineralization—whether it be the original of reports filed or whether it be certified copies or next best evidence—is secured.

As to the procedure for carrying out this recommendation, I have no specific proposal, but trust that some plan may be developed which will not compound the injustice and the cost to the applicant in again producing for the record what he has already produced, and at the same time will enable the Government to fulfill its duty under the mineral law of the United States:

Sincerely yours,

HARRIS ELLSWORTH.

DREW PEARSON TOUCHED IT OFF—AL SARENA CLAIM BLOOMS AS ISSUE

(By Dan Wyant)

One of the hottest issues of the current Oregon political campaign was focused last week on a remote group of mining claims in the mountains of southern Oregon, about 45 miles north of Medford. This is the property of Al Sarena Mining Co., an Oregon corporation with head offices in Mobile, Ala.

The issue was touched off by columnist Drew Pearson, who charged in his nationally circulated report of September 29 that one of the finest stands of Douglas fir in the Northwest was given away to the Al Sarena Co. for $5 an acre by Secretary of the Interior Douglas McKay.

Pearson further charged that Congressman HARRIS ELLSWORTH, of Oregon, exerted pressure upon Clarence Davis, solicitor for the Department of the Interior, in a series of long, pleading letters on behalf of the mining company.

MADE ADDITIONAL CHARGES

Pearson cited one letter in particular, written on June 1, 1953, which has been released by ELLSWORTH and which appears in its entirety in this edition of the Eugene Register-Guard.

Pearson made further charges in support of the above basic counts. These will be discussed in later articles of this series.

ELLSWORTH'S opponents quickly picked up these charges in their political campaign here in Oregon.

Senator WAYNE MORSE in a speech in Coos Bay on the night the column appeared said he would ask for a full-scale Senate investigation of the charges.

SUGGESTS LEGISLATION

"If half the facts printed in the column are true, then remedial legislation should be passed against those persons responsible," he said.

ELLSWORTH'S opponent for office, Charles Porter, of Eugene, visited the mining claims Wednesday of last week and told a Medford audience that the Al Sarena Mining Co. is mining timber, not minerals. Porter declared that patenting of the Al Sarena claims can only be called a scandal.

He added that the case was a perfect one in point for charge of giveaway against the present administration. This statement was carried in a report of Porter's speech in the Medford Mail-Tribune the following day.

VIEWED THE MINE

Recognizing that the charges against McKay and ELLSWORTH were fast becoming a major issue in the campaign, the Register-Guard last Tuesday sent this reporter to the Medford area with instructions to get as complete a set of facts as possible on the Al Sarena case, in an attempt to "sift fact from fiction."

This reporter viewed the mine installations and the logging operation now going on. He interviewed Jack Wood, supervisor of the Rogue River National Forest, in which the claims were patented, talked at length to Charles and H. P. McDonald, Jr., sons of the president of the Al Sarena Co., and went over many of the records in the case which were in their possession.

H. P. McDonald, Jr., is secretary-treasurer of Al Sarena. His brother Charles, a professional engineer, is not a stockholder in the company, but he has devoted most of his time since his discharge from the United States Navy after World War II to the company's long and bitter battle to secure patent on the claims.

WELCOME A PROBE

The two brothers declared they would welcome an investigation such as Senator MORSE suggested.

They declared that such an inquiry would show that granting of the patents was not a giveaway. Rather, they said, the record would show the case involved a takeaway attempt on the part of the Federal Government before the Republicans came into power.

They charged that the Government refused to grant the patent after the applicants had complied with all the necessary steps set forth by law and even after the Bureau of Land Management had transferred the property into the company's name on the Jackson County tax rolls.

CLAIM RECORDS TAKEN

The McDonalds charged that when the Forest Service contested 15 of the 23 applications for a patent, certain records of the case favorable to the mining company were removed or withheld from the files (as mentioned by ELLSWORTH in his letter to DAVIS), so that subsequent decisions were bound to be unfavorable to the company.

Many of the mining company's charges were set forth in a 58-page complaint in conjunction with a suit filed against the United States and the then Secretary of Interior, Oscar Chapman, in Federal court in Alabama. This was on July 28, 1951.

As to Porter's charge of "timber mining," the two brothers freely told this reporter that they were logging on the claims. They conducted the writer to the logging operation.

LIKE A HOMESTEADER

They pointed out that when a patent is granted they have the same right to the timber as does a homesteader who gets title to public land.

They maintained themselves to be morally justified in selling off part of the timber to regain the extensive legal expenses involved in their fight to get a patent to the claims. The patent, they assert, should have been granted back in 1949, after their application was processed.

At the same time they assert that their primary purpose in seeking the patent to the claims was not to get the timber. They said the record shows that investments in the mining development are beyond the figure at which the Forest Service has estimated the timber to be worth.

THE MAIN ISSUE

The McDonalds pointed out that when the company acquired the claims during the middle and late thirties far better timberland was available in a number of Oregon counties to anyone willing to take it off the tax rolls at $2 an acre. The fee for mining claims is $5 per acre.

This then is the chief political issue:

A charge on one side that valuable timberland was practically given to a private mining company with the help of ELLSWORTH and McKay.

A charge on the other side that the applicant's clear rights to the patents were delayed and denied until the new administration took over and proceeded to see that justice was done.

The first step in discussing those charges will be a look at the history of the claims and the Al Sarena interest in them—a look that includes both the minerals and timber involved. This will be the subject of the next article in this series.

[From the Eugene (Oreg.) Register-Guard of October 14, 1954]

THE AL SARENA MINE CASE—DISPUTED CLAIMS OPENED FIRST BY APPLEGATE CLAN

(By Dan Wyant)

The history of the present Al Sarena mining claims started back in the spring of 1897.

That's when Jackson County's surveyor, a member of the famous Applegate family, stopped to do a little prospecting while surveying in the forest. The stream in which he scooped up some gravel for his gold pan was either Elk Creek or one of its tiny tributaries, northeast of Trail. When he washed away the gravel and sand he found there was gold in the pan.

Applegate worked up the stream to what appeared to be the mother lode, the deposit from which the gold had washed downstream. The first claim on the deposit was recorded at the Jackson County courthouse on May 11, 1897, by Mark Applegate. Peter Applegate and J. L. Grabbe filed two additional claims the next day. Within a month these men and their associates filed six more claims. A tenth claim was filed before the end of the year.

All these original claims later passed into the hands of the Pearl Mining Co. and were purchased by the Al Sarena Mining Co., after it was incorporated in 1935.

H. P. MacDonald, of Mobile, Ala., the president and founder of the Al Sarena Mining Co., first became interested in the possibilities of the area in the 1920's, according to his two sons.

The mining company was incorporated as an Oregon corporation, with head offices in Mobile. In addition to the 10 original claims, the company also bought up 11 other claims from their individual owners during a period up to 1939. In 1939 the company staked out the last two claims—the Oro Rico and Oro Alto.

The details of how the claims were acquired by Al Sarena are shown in the company's patent application of 1948. The date of each original claim is on file at the courthouse in Medford.

IMPORTANT POINT

This is perhaps an important point in the politically contested issue of the Al Serena Mines since the Portland Oregonian, in an editorial earlier this year, declared that the mining company filed the claims in 1948 (at a time when the timber had much more value because of higher market prices than in the middle and late 1930's when the claims actually were filed). The editorial called for the closest possible scrutiny of how the company acquired several hundred acres of rich Oregon timberland.

The Al Sarena claims are located chiefly in Section 29, Township 31S, Range 2E, Willamette Meridian. Small portions of the claims are in the adjoining sections 19, 20, 21, and 28. This is about 18 miles northeast of the point where Highway 62 crosses Elk Creek, 3 miles beyond Trail. The claims are approximately 45 miles north of Medford.

LOW-GRADE ORE

Officers of the company, in addition to the president, are C. C. Huxford, vice president, of Mobile; and H. P. MacDonald, Jr., secretary-treasurer, who has lived on the mining property and at Trail for a number of years. His brother, Charles, has also taken an active part in the mining company, although he says he is not a stockholder.

The two brothers said the company is primarily a family corporation with some close friends also holding an interest in it.

What about the mineral deposits?

Very briefly, the mining company contends the claims contain a vast quantity of chiefly low-grade ore—possibly some 190

million tons—which can be successfully developed for large-scale mining operations. The ores contain gold, silver, and other minerals. Assay reports filed by the company in support of its patent application ranged from 70 cents to $2.56 per ton. The two brothers said the Alaska-Juneau Mining Co. carried out a profitable operation under conditions more difficult than those present on the Al Sarena claim handling ore which averaged some 86 cents a ton.

HOLDINGS DESCRIBED

A detailed description of the company's estimate of its holdings and its plans for developing them was included in the patent application. The mineral character of the ground was described in its technical terms as "one of a large, hydrothermically altered rhyolite intrusion containing essentially uniformly disseminated values throughout, showing enriched areas along the numerous faults, fissures, veins, and slips."

The company said "It is our intention to develop this entire low-grade ore body through a systematic program of geophysical and exploratory work with core drills and such additional tunnels, drifts, shafts, winzes and other openings as may be deemed appropriate and in accordance with further recommendations by eminent mining authorities."

The report explained some of the exploratory work which had been carried out prior to 1935 toward the development of the low-grade ore body and of conferences with various mining engineers including Milnor Roberts, dean of the college of mines, University of Washington, which brought the company to the conclusion that the claims held at that time and the adjoining claims offered promise of "large-scale gold mining operations, on a profitable basis."

The company then purchased the 10 claims held by the Pearl Mining Co. and "immediately thereafter we built a pilot mill and began carrying on exploratory operations aimed to give us some idea of the probable size and content of the ore body, and to learn the most profitable methods of extraction and treatment. By the summer of 1937 we had advanced to the point where we felt justified in calling in outside authorities to check our findings and to advise what further steps to take. Besides the laboratory tests made by Dean Roberts, we had similar tests made by two other specialists. While each expressed different views concerning the treatment phase of the ore, all three agreed that it was easy to treat and lent itself to several methods of recovery."

ENGINEER'S REPORT

One of the engineers called in by the company was D. Ford McCormick, of Medford, who for a number of years was in charge of the Sterling Mine, near Jacksonville. He was identified in the patent application as "a member of the American Institute of Mining and Metallurgical Engineers, graduate of the University of Texas with civil engineer degree, of the Colorado School of Mines with mining engineer degree, and having long experience in important mining activities including full charge and responsibility of the development of the Mata Hombre mine in Cuba."

McCormick's conclusion, in part: "indications are excellent that a large tonnage of low-grade ore may exist within a mass which could be milled at a profit."

In the Drew Pearson column which touched off the controversy over the grant of patents to the company, McCormick was identified by Pearson as a man "who had worked for Al Sarena and the MacDonald family ever since 1937."

NOT ON PAYROLL

The two brothers at Medford said the statement and its implication was unfair, "McCormick worked in the same capacity that a doctor works for you—he is a consulting engineer, available to anyone who hires him," said Charles MacDonald. "At no time was he on the Al Sarena payroll."

The company during World War II put the experimental pilot plant into commercial operation to meet Government quotas for war-scarce lead and zinc. The two brothers said the work was purely experimental and that various processes of reducing the ore were tried out in the test plan. The mill has not been in operation since 1945, according to H. P. MacDonald, Jr. Since then, he said, the company's efforts and finances have been devoted to further exploration of mineral deposits and to the lengthy attempt to secure a patent to the land.

SOUGHT PATENT

The company applied for patent to its lode claims in 1948, under procedures set forth in the basic mining law of 1872. Essential requirements include a proper survey of the land, proof of possessory rights, proof of annual assessment work benefitting the claim to the amount of $500, proof of mineral deposits "in a quantity sufficient to justify a reasonably prudent man in expending further time and effort" in developing a paying mine; and finally, payment of $5 an acre to the Government for the claim. This, of course, is only a sketch of the basic procedure defined by law.

At the time the patent application was filed, the company listed improvements to the claims totaling $79,915, which represented more than 1 mile of tunnels, other mine works, and roads.

OTHER COSTS

That figure did not include the cost of the pilot plant or other buildings on the claims. The two brothers last week declined to say what the pilot plant cost to build and equip. They said the company spent between $50,000 and $100,000 in purchasing the claims from previous owners. Legal and engineering expenses brought about by the contested patent were listed in excess of $50,000, paid or accrued, in a suit filed by the company against the Government. Actual cost of the land from the Government, under the mining law, was $5 an acre—a total of $2,375.

Altogether, the brothers said the company's investment in the property is between $150,000 and $250,000.

Now, what about the timber?

The Forest Service contested 15 of the company's 23 claims, asserting that the minerals were not as valuable as the timber upon the land.

TIMBER ESTIMATED

Jack Wood, supervisor of the Rogue River National Forest, said the "usual procedure" was followed when a Federal mineral examiner recommended that eight of the claims "go patent" and ruled against the others. He said a timber management assistant from his office made an "ocular" estimate of the value of timber on the other 15 claims, comparing it to forest areas in which the timber value had been established. No formal cruise of the timber was made.

Wood said the forester's estimate of the timber value on the contested claims was roughly $100,000. (The figure fixed by the Forest Service, leaving a growing stock still standing, was $77,000 according to a statement by Interior Department Solicitor Clarence Davis).

If timber on the eight uncontested claims is equal to that on those included in the above estimate (all the claims are approximately 20 acres each), the total estimated value would be about $150,000, less growing stock.

At a reporter's questioning, Wood said the timber on the Al Sarena claims probably ranged from 10,000 to 40,000 board feet per acre and probably averaged 20,000 to 25,000 board feet. Asked if he considers that choice timberland, he replied that some blocks of the Rogue River National Forest go as high as 100,000 board feet per acre.

Wood said he would not wish to make any other estimate on the value of the timber than that of the original report. He said he had no idea where columnist Drew Pearson got his information to say that the timber should have brought $170,000.

Wood said emphatically: "I want to make it clear that not a single iota of the information in Drew Pearson's column came from the Rogue River National Forest."

VISITS TO CLAIMS

The two MacDonald brothers said they did not feel qualified to make any other estimate of the timber value than the $77,000 set by the Forest Service in 1948.

To get as many facts as possible in the case, it seemed necessary for a reporter to actually visit the mining claims to view the logging work being carried out by the MacDonalds and to see the mining developments there. That visit will be the subject of the next article in this series.

[From the Eugene (Oreg.) Register-Guard of October 12, 1954]

AL SARENA MINES TOUR BRINGS OUT NEW FACTS

(By Dan Wyant)

An on-the-spot tour of the Al Sarena mining claims discloses several facts important to this investigation:

Logging is going on and the mine is idle. The company maintains that money received from sale of the logs will be used to pay off debts, incurred in its long legal battle to get patent to the claims, and to provide capital to resume development work.

The extensive mining developments to date substantiate the company's claim that it has a sincere interest in mining. The firm is certainly in a different category from persons who in other instances have staked out mining claims in Federal forests and made only token efforts toward mineral development and whose obvious interest is the timber on the land.

LOGGING INVESTMENT

The brothers have invested money in equipment to do the logging rather than selling the stumpage to a logging contractor. For that reason they should realize a higher price for the timber than the $77,000 cited by the Forest Service on the contested claims (based on stumpage price). It is impossible to tell from the records available if this price will approach or exceed the $170,000 figure used by Drew Pearson.

It is ridiculous to describe the timber involved as "one of the finest stands of Douglas-fir in the Northwest"—as Drew Pearson did in the column which touched off the Al Sarena issue. I saw finer stands of timber on Forest Service lands near the claims. Most of the timber which I have seen in the Willamette National Forest here in the Eugene area is better than the overall stand on the Al Sarena claim.

PATENT BASIC STEP

Due to rising markets, the timber was worth considerably more when the company applied for patent to the lands in 1948 than it was when the company acquired the claims in the middle and late 1930's.

To Drew Pearson's charge that the company didn't need a patent to continue mining—and only wanted surface rights for the timber involved—the brothers reply that obtaining patent is the first "basic step" in any large-scale mining operation.

REMOTE FROM HIGHWAY

"We're talking about an operation to handle low-grade ore on a mass-production basis," declared H. P. McDonald Jr. "It's an operation that will require millions of dollars of capital. How can you interest that

kind of capital when your claims are unpatented and the Government is charging that the minerals are worth less than the timber?"

To get to the Al Sarena mining claims, you turn off Highway 62 (the road from Medford to Crater Lake) about 3 miles above Trail and follow a road up Elk Creek. For the first few miles the road is oil-surfaced and winds up a small but lush valley with a number of farms. The next road is a one-lane dirt and gravel Forest Service road, with frequent turn-outs for meeting other vehicles. The final road is one built by miners with picks and shovels, years ago. The claims are about 18 miles in from the highway.

I accompanied Charles McDonald and H. P. (he's called "Smokey" by his friends) McDonald, Jr., both members of the family that is the principal owner of the mining claims.

On the trip into the claims we met several loaded logging trucks—some of them rather abruptly—on the one-lane twisting mountain road. Some of the trucks were from the McDonald's logging operation on title claims; others were hauling for firms which are cutting timber they have bought from the Rogue River National Forest.

LOGGING OPERATION

During the trip in, the two men said that neither of them had any logging experience before this summer.

We made our first stop at the No. 1 portal of the mine, the end of a tunnel which runs through a mountain to the pilot plant on the other side. The timber here, as on the rest of the claims, was mostly Douglas fir, white fir, and pine. There was little commercial timber here. Most of the trees were too small to log even for poles and piling. The brothers pointed out that most of the bigger trees were overripe, as evidenced by dead treetops and lots of conk (tree fungus).

From there, we went to the landing for the logging operation. We arrived as a three-man crew finished loading a log truck, using a cat and boom to hoist the logs. These logs and another turn of logs brought in by a cat while this reporter was present, appeared to be good, sound, and large pine.

The area around the landing had already been logged, with much smaller timber left standing, as seen in the photo in Sunday's Register-Guard.

SUMMARY

The men described their logging operation as "selective cutting on a modest basis." It's what loggers call a "cat show"—that is, the logs are yarded to the landing by a cat, rather than by a high-lead cable or other method using a stationary donkey.

While it's less than half a mile from the landing to the main mining structures, the road leads around a mountain for about 3½ miles, partly on the Al Sarena claims and partly on national forest lands. At 1 stop the 2 men pointed out a slope with a dense stand of small Douglas fir, about 20 acres in size, where considerable cuttings have been made for mine timbers. All the trees were about the size of fence posts.

To sum up: The claims contain some areas of good commercial timber, others in which much of the timber is small or overripe, and at least one slope of no value to a lumber mill.

MAIN PLANT

Now to the mining: The structures on the property include a big log cabin and shed with shake roof, and a more recent dwelling occupied by Fred Altond, who has worked for the company on the claims since 1941. When the mine was in operation he was the mine foreman. At present he serves as caretaker and is doing limited development work.

The older cabin had just been refinished inside with fragrant cedar plank floors and cedar board walls. The brothers have lived there off and on and said they may do so this winter. They recalled times when the snow has been so deep it was necessary to burrow down from above the eaves to get to the cabin door.

The biggest structure is the pilot plant which the company constructed to test methods of treating ore in the mine. It is situated about 200 yards up the hill from the dwellings, close to the mouth of the mine entrance.

The frame building has weathered from the severe winters but the equipment inside appeared fair though the mill has been idle since the war years.

ORE PROCESSING

H. P. McDonald, Jr. and Altond explained what the equipment was for. Briefly, ore is brought from the mine by rail, dumped by size in bins, run through a crusher, then put through a ball mill where big metal balls in a revolving container grind the ore to powder. Reagents necessary to treat the ore are added at this point and other points in the process.

The ground-up ore passes over a jigger which shakes out any free gold. The ore is mechanically divided by its degree of fineness (bits too coarse are automatically returned to the ball mill) and separated for the type of treatment required. Part of the material goes to a cyanide treatment plant, outside the main plant. Part of the ore goes to three long tables where lighter materials are agitated away (tabling process), leaving the minerals. Part of the material goes through a flotation process in which the minerals are floated off in a froth created by the addition of reagents. The final product of all the processes is various mineral concentrates which are sent to a smelter for final processing. Gold, silver, lead, and zinc are among the metals present in the ore.

OTHER INSTALLATIONS

The plant also contains two diesel engines to power the air hammers and other mine equipment and to provide electric power for the mine, mill and camp.

A building at the mine entrance—now used for storage—contains shower and dressing rooms for the miners and space for a blacksmith and machine shop.

The mine works are extensive, including about a mile of tunnel on several levels.

Much more could be said in describing the mining developments on the claims but other points in the involved Al Sarena case also need attention. The Government ruled that evidence favorable to Al Sarena was sufficient to justify patent. What it based the ruling on, the company's counter-charge that evidence favorable to Al Sarena was withheld, and other major points in the complicated patent proceedings will be the subject of the next article in this series.

[From the Eugene (Oreg.) Register-Guard of October 14, 1954]

MINE PATENT CASE STUDIED STEP BY STEP—BLM FILES REVEAL AL SARENA HISTORY

(By Dan Wyant)

Why did the Bureau of Land Management turn down a request for patent on 15 of the 23 lode claims held by Al Sarena Mines, Inc.? And why did the company appeal that decision to the Department of the Interior, which eventually overruled the BLM?

Answers to these two questions are best found in a step-by-step study of the patent application proceedings. Records, chiefly on file at the Bureau of Land Management office in Portland, show as follows:

On October 4, 1948, Al Sarena Mines, Inc., applied for mineral patents to the 23 lode claims which the company had held for a number of years in southern Oregon.

Final proofs in the proceedings were filed with the Oregon District Land Office on January 13, 1949, following official publication in the Medford Mail Tribune for the period prescribed by law. No adverse claims to lands involved were noted in the record during the period of publication. Payment of the purchase price was requested by Carl F. Spaulding, assistant manager of the land office, on February 8, and receipt of a check for $2,375 from the company, covering the purchase price at $5 an acre, was entered in the BLM files on February 17.

On April 6, a final certificate of mineral entry was issued to the mining company. The certificate contained the added typed statement that "Patent will be withheld by the Bureau of Land Management pending a report by the Regional Administrator, region I, upon the bona fides of the claims."

During the summer months of 1949 a BLM mineral examiner, Elton M. Hattan, made three separate trips to the claims to take assay samples. Part of the time he was accompanied by a mining engineer for the United States Forestry Department, William C. Sanborn.

The samples were taken in the presence of either Fred Altond, caretaker at the mining properties, or in the presence of Charles and H. P. McDonald, of the mining company.

Hattan later testified that he took the samples at the point on each claim which the mining company representatives indicated was their point of discovery. He said it was not up to him to make the discovery but rather to get a representative sample of what they felt to be their mineral discovery.

It was at this time, the McDonalds say, that they protested that the samples taken in this way were not adequate and requested permission to take supplementary samples for assay at their own expense. They said Hattan agreed to this, provided they indicated by detailed legal description the exact spot they cut these samples so Hattan could later duplicate them, if necessary.

ASSAY RESULTS

On January 4, 1950, Hattan sent a letter to the mining company's head offices in Mobile, Ala., acknowledging receipt of a letter of December 27, 1949, and a list of assay results from samples taken by the company.

Hattan's letter, still in the possession of the McDonalds, went on to say that "my report was completed and submitted last month. The December 27 letter did not reach here in time to include any of the information which was enclosed with it. The assay results submitted by you in August and September were incorporated in the report."

Hattan then listed some additional information he needed to identify the exact places in which the company had cut the samples referred to above. The company replied immediately that it would supply this information.

On February 10, 1950, Roscoe Bell, associate director of the BLM in Washington, D. C., sent a notice to the manager of the district land office in Portland that adverse proceedings were ordered on 15 of the 23 claims on the grounds the claims were nonmineral in character that minerals were not present in sufficient quantities to constitute a valid discovery; and that expenditures of $500 had not been made as required by law to benefit five of the claims. The decision was apparently based on Hattan's report.

WRONG PROCEDURES

On March 14, 1950, Bell ordered the adverse proceedings dropped, noting this was the wrong procedure "as the land is within a national forest reserve, and adverse proceedings, if any, against the claims will be brought by the Forest Service."

On April 13, 1950, the Portland BLM received notice from H. J. Andrews, regional forester, that patent applications was protested by the Forest Service on the 15 claims. Andrews listed the same grounds for contesting the application as Bell noted, above.

On May 22, 1950, the mining company filed an answer to the Forest Service protest, embodying several demurrers to the charges and a motion that the protest be dismissed and the patent issued.

On September 1, 1950, Pierce M. Rice, manager of the district land office, received a telegram from Senator EUGENE D. MILLIKIN, Republican, of Colorado, requesting "expeditious handling and reply Government collect present status" of the Al Sarena case. The McDonalds said last week that one of their stockholders who lives in Colorado requested MILLIKIN to do what he could to help. Likewise, the record shows that Congressman FRANK BOYKIN of Alabama, where the company's head offices are located, also inquired as to the status of the case.

HEARING ON CLAIMS

The hearing on the Forest Service contest of the 15 claims took place September 13, 1950.

The first six pages of the transcript of the hearing, now on file at the Portland BLM office, are written as a summary of what happened rather than as a direct word-by-word account of what was said.

The proceedings started on a stormy note with the mining company's attorney, W. O. MacHanon, demanding that the demurrers filed previously be ruled upon before the hearing got under way. The demurrers were on several technical grounds.

Rice, who was conducting the hearing, treated the demurrers as motions and denied them. The company's lawyer protested, then noted an appeal to the solicitor of the Department of Interior. Further legal sparring took place and the Al Sarena representatives walked out.

"At this point," the transcript notes, "counsel for the contestant requested a temporary recess to avoid noises and interference occasioned by the departure of the contestee in order that the hearing might proceed by the examination of the Forest Service witness. The manager allowed a temporary recess and the contestee departed, after which the hearing was resumed."

The McDonalds were later to say it was their understanding that the hearing was closed at this point.

FIRST WITNESS

G. Robert Leavengood, of the Forest Service, was the first witness when the hearing resumed. (From this point in the transcript, the record is a word-by-word account of what was said by the witnesses, attorney for the Forest Service, and the examiner.)

Leavengood described the timber on the contested claims. He said the older timber is "very old and mature and roughly averages around 25,000 merchantable board feet per acre." He said a newer understand of young timber was very good. "I don't think we have anywhere else that I can think of as nice a stand as this is," he declared, referring to the younger trees. He said the value of the timber which could now be cut on the 15 contested claims was about $77,000, allowing for growing stock left standing.

Mineral Examiner Hattan was the next witness. The crux of his testimony was that the 15 contested claims showed no valid mineral discovery. He said assays had been made from samples on all the claims on two occasions and on part of the claims a third time. Assay work was done by Annes Engineering Co., of Grants Pass, Abbot A. Hanks, Inc., in San Francisco, and by the Bureau of Mines at Albany.

Hattan discussed the assay results on samples from each of the contested claims. In all but one case the assays showed only a trace of gold and in all but one case either only a trace or no silver present. The 2 exceptions were 1 assay on 1 claim showing gold worth 35 cents per ton and on another claim showing silver at 12 cents a ton of ore.

CHECKED POINTS

On several occasions Hattan referred to the fact that he had checked points where the company had said it had taken samples which showed much higher assays—$1.75 for the gold, for example, where Hattan's assay showed only a trace.

Hattan explained how he had gone back to the claims for a third time to cut more samples at the indicated spot after the company sent him supplementary assays showing significant amounts of gold.

He said seven samples taken in this manner were sent to the Bureau of Mines at Albany for assay. The result of the assay was only a trace of gold, he said.

Hattan mentioned some of the company's supplimentary assay values in his discussion above but at no time did he enter the complete list of the supplimentary assays into the record.

Hattan concluded his testimony with his observation that the 15 contested claims failed to show sufficient evidence of mineralization to warrant granting a patent. The 8 uncontested claims, he said at 1 point, did appear to have evidence of mineral deposits and for that reason he had recommended that the patents be granted on them.

SAME TESTIMONY

The Forest Service's mining engineer, Sanborn, testified along the same lines as Hattan.

Next in the files at Portland is a teletype message dated October 13, 1950, from J. A. DeLang, acting chief, Branch of Minerals, Division of Adjudication, Department of the Interior. It was sent to the land office manager, at Portland. It read: "Subject: Call for missing papers. Request that be transmitted copies of answer, demurrer and motions filed in defendant's behalf in this case and other papers in your files that may be of assistance in rendering a decision in this matter."

On October 16, 1950, DeLang received a letter from the mining firm's attorney, MacHanon, charging that the "record" (the quotes are MacHanon's) of the hearing held in Portland was "incorrect, incomplete, and irregular." He said his firm would be bound only by a tape recording which it had made of the hearing (up to the point the Al Sarena representatives left).

On November 24, 1950, the director of the Bureau of Land Management in Washington, D. C., returned the records of the Al Sarena case to Rice, in Portland, instructing him to give a decision on the case rather than a recommendation.

ADVERSE RULING

On December 14, 1950, Rice entered his decision. He ruled that patents should not be granted on the 15 contested claims. Rice said testimony and Hattan's assay reports showing only traces of gold and silver upheld the Forest Service contention that timber upon the land was more valuable than the minerals, and that no valid mineral discovery had been made.

On April 27, 1951, the adverse decision against Al Sarena was upheld by William Zimmerman, Jr., assistant director, Bureau of Land Management, in Washington, D. C.

In his decision, Zimmerman said that the Al Sarena attempt to appeal the case from the hearing on its demurrers, if successful, would have done away with further considering of the basic issue in the contest hearing: that of whether each of the claims had a valid mineral discovery and the proper $500 assessment work.

CASE APPEALED

Al Sarena Mines, Inc., took its next legal steps by appealing the case to the Department of the Interior. The company charged a number of irregularities in the way of patent application was processed and in the hearing, itself. It charged that evidence favorable to its case (the supplementary assay reports) was not in the record upon which both adverse decisions were based.

The handling of the case from this point on is where Columnist Drew Pearson leveled most of his charges of "giveaway" which touched off the current political controversy over the Al Sarena case. What the record shows on this phase of the proceedings, leading up to the eventual grant of patent on all 23 claims, will be the subject of the next of this series of articles.

[From the Eugene (Oreg.) Register-Guard of October 15, 1954]

ELLSWORTH'S PART IN PATENT CASE DESCRIBED—AL SARENA FIRM SOUGHT HIS ADVICE

(By Dan Wyant)

Congressman HARRIS ELLSWORTH was first approached about June 1, 1951, by two members of the McDonald family—Charles and H. P. McDonald, Jr., who sought his advice in connection with the family's Al Sarena Mines, Inc., disputed patent application.

That was about 1 month after the Bureau of Land Management in Washington, D. C., made an adverse ruling against 15 of the company's 23 lode claims. The company had appealed that ruling to the Interior Department—the agency which has the final ruling on such matters.

"We went to Congressman ELLSWORTH in the same way that any other constituent goes to his Congressman," the two brothers said last week.

Although the firm's head office is in Mobile, Ala., it is an Oregon corporation. H. P. McDonald, Jr., had then spent about 16 years working at the mining property, near Trail. Charles had spent most of his time since 1936 at the mine, except while in college, in defense work, and in military service during World War II.

Said ELLSWORTH: "My connection with the Al Sarena Mines case has been in full accord with my conception of the responsibility and duty of a Member of Congress serving the people of his district. Ours is a Government of laws not of men. When the rights of citizens are prejudiced by officials who set themselves above the law or who, by intent or gross carelessness, place the rights of citizens in jeopardy, there is no remedy open to the injured citizen except through the courts or through the legislative branch of the Government."

ELLSWORTH said he went over the facts of the case with the brothers, found that substantial expenditures had been made on the mines by the company, and compliance with the mining laws demonstrated. He said the record showed that the company had made their payment for the lands, following completion of the final patent proceedings.

"I was informed that thereafter officials of both the Bureau of Land Management and the Forest Service had taken action for the purpose of contesting and invalidating the transfer of the property, payment for which had been received by the Government from the applicants.

"Because of numerous bureaucratic acts, the applicants had brought an appeal to the Department of the Interior. The appeal, requesting the grant of the patents, was then pending before the office of the solicitor."

FINAL DECISION

"The McDonald brothers asked what suggestion I might have, if any, to bring about a final decision on the facts of record in the case."

ELLSWORTH said he found some interesting parallels between the Al Sarena case and some mining claims which were the subject of investigation before a Senate committee in 1949.

"I expressed the opinion that the most expeditious means of bringing the case to a conclusion would be through filing suit in the United States district court."

The company took his advice. The suit was filed July 28, 1951, against The United States of America and/or Oscar Chapman, Secretary of the Interior, in United States District Court, in the southern district of Alabama.

The suit asked that the Government turn over the patents on the mining claims to the Al Sarena Mines, Inc.

In a 58-page complaint the company listed numerous allegations and cited a number of previous court cases to support its basic charge that the Government's conduct of the case had been illegal and that the company had the legal right to the patents.

CRITICAL OF HEARING

The complaint was especially critical of the conduct of the contest hearing in Portland. It alleged that the record of the hearing contained so much severe and material falsification that the hearing's stenographer had refused to certify the portions of the record which described the events leading up to when the company left the hearing. (This is the portion of the transcript which was written summary style rather than in the usual word-by-word account of what was said by each party.)

This suit was followed up with a "motion for summary judgment" in which the company included a letter from Mastin G. White, the Interior Department's solicitor, dated August 3, 1954, in which he acknowledged that "it appears * * * that the reporter failed to obtain a complete transcript of the earlier portions of the proceedings * * * If you desire a further opportunity to submit evidence bearing on the question of whether valuable mineral deposits have been discovered on the claims involved in your appeal, it would be appropriate to remand the case for a supplemental hearing with respect to that issue."

The company said in its motion that the letter was proof of their charge that the record of the case was at fault. The firm declined to have the case remanded for the supplemental hearing and sought, instead, to continue its legal action.

SUIT DELAYED

That was the status of the case when the Republican administration took over in 1952–53. The suit in Federal court was delayed by various Government legal moves and no decision was made on the appeal to the Interior Department.

The McDonald brothers came to ELLSWORTH again "on or about March 29, 1953," according to ELLSWORTH, after Clarence Davis had been named the solicitor of the Department of Interior by the new administration.

ELLSWORTH said he arranged a conference with Davis and accompanied the brothers for a discussion of the case. It was then that Davis said he would make a "careful review of the case to determine its merits," ELLSworth said.

On June 1, 1953, ELLSWORTH wrote his lengthy letter to Davis which was reprinted in last Sunday's issue of the Register-Guard, pointing out that papers important to the mining company's interest were not in the record and asking that they be restored.

On June 4, in agreement with Davis, ELLSWORTH wrote to several mining engineers who had some knowledge of the claims involved for their opinion of the claims' value. He forwarded to Davis the replies he received, arguing they showed "that there is no reasonable question as to the bona fide nature of the mineral discovery and compliance with the mining law by the applicant for patent."

The engineers included J. E. Morrison, Oregon mining engineer identified as resident engineer at Al Sarena mine at the time of application for patent (and at the time the letter was written a colonel in the United States Air Force); J. Cleveland Taylor, Sacramento mining engineer who surveyed the claims for Al Sarena; D. Ford McCormick, Oregon engineer now living at Eagle Point, who was a consultant at various times for Al Sarena; Alan Kissock, of New York, who said he visited the property in October 1945, to see if he might be interested in it; and Fay Libbey, head of the Oregon Department of Geology and Mineral Industries, who reported he could give no opinion of the mineral value of the particular claims.

None of the engineers' opinions made any distinction between the 15 contested claims and the 8 claims which the Government had not challenged, according to A. Robert Smith, the Register-Guard's Washington correspondent who spent several days investigating records in the Nation's capital.

On September 3, 1953, Davis sent a memo to the Bureau of Mines, requesting that new samples and assays be obtained upon which no doubts will be harbored by anybody.

NEW ASSAYS

He added: "The decision on the application for patent should be considerably easier after we have the new assays. * * * My principal concern is to have a qualified Government representative present to see that the assay samples are fairly taken from each claim and then delivered to a competent assayer."

On the same day, he wrote to McCormick, whom the company had suggested as its representative, that "in an effort to determine the matter fairly, I have agreed with Congressman ELLSWORTH, who has interceded on behalf of the company, to ask you and Mr. Valin of the Bureau of Mines, Spokane, or his substitute to procure personally sufficient samples of the deposits on each claim to afford adequate assays on which the Secretary can base his decision on the validity of the discoveries."

Selection of R. N. Appling of the Bureau of Mines office in Grants Pass, as the one to take the samples for the Bureau of Mines was later made in the field. He had a team of three men with him to help prepare the samples for assay, that is, crush the ore.

McCormick accompanied Appling and his team to the claims and watched Appling cut the various samples. All the samples were taken from "ore, in place," McCormack said, some from exposed rock outcroppings, some from the bottom of cuts where bulldozers had scooped the earth down to bedrock.

SAMPLES NUMBERED

Each of the samples was numbered and one-fourth of each sample was turned over to the Oregon Department of Geology office in Grants Pass to hold as an "umpire."

McCormick said this was done in case the samples shipped to the assayer became lost, or if any question arose in regard to any of the individual samples. The purpose, he said, was to avoid the necessity of going back to the claims for more samples, if any were lost or questioned during the assay process.

On November 17, 1953, the samples were shipped by railway express to the A. W. Williams Inspection Co., in Mobile, Ala., to be assayed at the expense of the Al Sarena Co.

The Mobile testing firm was chosen by the company. It is located in the same city as Al Sarena's head office and had done assay work for Al Sarena before. It was one which the Government agreed was an "acceptable laboratory for analysis." (In Washington, A. Robert Smith said it is on the Government's list of accredited testing labs.)

On December 17, 1953, the Williams firm sent its assay certificates on the samples to Al Sarena's Mobile office. These were forwarded to the Bureau of Mines man, Appling, who matched up the numbers of the samples with the assay results and prepared his report.

ENCLOSED FINDINGS

In his report he described how the samples were taken and enclosed the assay findings of the Williams Co.—but not, according to the file in Washington, D. C., the assay certificates.

For each sample, the new assay reports showed much greater mineral value than BLM Mineral Examiner Elton Hattan reported from his 3 assay tests of the 15 contested claims (almost all of which showed only traces of gold or silver). It was Hattan's assay reports upon which the two previous adverse decisions to the company had been decided.

The lowest of the new assays for gold was 70 cents (per ton of ore); 7 assays ranged from $1.05 to $1.40; 9 were reported at $1.75; 7 ranged between $2 and $3; 1 was for $3.50 and the high was $4.20. Assays for silver were also significantly higher than Hattan's samples assayed in almost every case. The new figures included at least two samples on each contested claim.

Appling submitted his report to Washington on January 2, 1954. Four days later, on January 6, Solicitor Davis announced his decision. It overruled the 2 adverse decisions of the Bureau of Land Management and awarded the patents to the company on all 23 claims. Davis based his decision on the new assay findings.

(A further look at Solicitor Davis' decision—and some more light on the reexamination of the claims which led to his decision—will be the subject of the next article in this series.)

[From the Eugene (Oreg.) Register-Guard of October 16, 1954]

PATENT DECISION ARRIVED AT AFTER LENGTHY REVIEW

(By Dan Wyant)

The first 13 pages of Solicitor Clarence Davis' decision on the Al Sarena case are devoted to a review of the facts which brought the case up to appeal in the Department of Interior.

He notes that in its appeal the company made 18 assignments of error, contending it was entitled to a patent prior to the filing of a protest against 15 of the claims by the Forest Service, and contending that there were certain irregularities in the protest and in the manner in which the hearing upon the protest was held.

Davis cited a number of court decisions to support his finding that most of the company's contentions were untenable.

"The fact that the appellant had paid the purchase price, submitted its proofs, and received a final certificate does not detract from this Department's authority to inquire into the merits of the claims," he wrote. "Unless there has been a discovery of valuable minerals within the limits of the claims, there have been no valid locations and the claims cannot go to patent."

CHARGES UNJUSTIFIED

Davis added that most of the charges of irregularities in the handling of the case were unjustified. However, he noted that the company's reports of assays on the various claims were not included in the file when it reached his office. He said that although copies of these reports were later supplied, it appeared best to require new assays to be submitted to review the case.

Davis said these new samples were taken by a Bureau of Mines team and a registered mining engineer (D. Ford McCormick), representing the appellant. Davis said the samples were sent to an acceptable laboratory for analysis. (The A. W. Williams Inspecting Co., in Mobile, Ala.)

"The resulting assay reports submitted and now on file show that the samples contained silver and gold of sufficient value to justify a person of ordinary prudence in further expending his time and money in an effort to develop a paying mine."

Davis then quoted a portion of the testimony which BLM Mineral Examiner Elton

Hattan gave at the Portland hearing describing the "central mass" of the deposit and saying that possibilities are good that the whole mass could be developed, mined, and milled at a profit.

HOPE OF SUCCESS

Davis said this "would seem to confirm that by careful and prudent operation the appellants may continue to develop the property with reasonable hope of success."

(A check of Hattan's testimony, however, indicated that when he was discussing the "central mass" and its possibilities of further operations he was referring primarily to the portion of the deposit which lies on the eight claims which were not contested by the Government. On the other hand, the mining firm had insisted all through the proceedings that it was interested in a large-scale operation which would include all the mineralized deposits—not just the richest ones.)

Davis continued: "The assays, therefore, showing mineralization in paying quantities on all of the claims, and the cadastral engineer (whose job it is to check patent qualifications) on September 27, 1948, having certified that more than $500 has been expended in developing and improvements on each claim, the requirements of the statute seem to be met."

(The cadastral engineer's certification that $500 assessment work had been carried out on each claim had been challenged by the BLM and Forest Service on five of the contested claims. There is nothing in the decision written by Davis or in the Washington files to indicate that any further efforts to determine the value of assessment work on the five claims had been made after the case came to Davis' attention.)

TIMBER NOT A FACTOR

Davis concluded with the observation that the mining company had spent amounts estimated from $150,000 to $200,000 on developing the claims—an amount which he said was 2 to 3 times the estimated value of the timber on the claims. This, he said, "would seem to negative the suggestion • • • that the appellants are more interested in the timber than in the mine."

(Davis here was using the figure given on the estimated value of timber on the 15 claims which were contested. The estimated figure for marketable timber on all 23 claims is probably closer to $150,000, less allowance for growing stock, according to the Rogue River National Forest.)

The solicitor then concluded his decision by ordering the case "remanded to the Bureau of Land Management with instructions to process the application for patent."

That, then, brings this series of articles through the major steps of the Al Sarena case, as shown in the record. Several points remain:

Columnist Drew Pearson, who touched off the current political charges against the handling of the Al Sarena case, was critical of the fact that Solicitor Davis let "disinterested, independent" (the quotes are Pearson's) Ford McCormick become one of the engineers who helped take the new samples on the claims.

FIRM REPRESENTATIVE

The record shows that McCormick was chosen, not as a disinterested engineer, but rather as a representative of the Al Sarena Co. to accompany the Bureau of Mines team.

McCormick was independent in the sense that he is a consulting engineer. He had been hired by the company on previous occasions for specific jobs in the capacity of a consulting engineer. McCormick says that the charge that he helped "build" the mine plant, made by Ellsworth's opponent, Charles Porter, is false. He said that on one occasion he had worked for several months at the mining property when it was under lease to another party.

McCormick was described this week by Faye Libbey, director of the Oregon Department of Geology and Mineral Industries at Portland as a man of "absolute integrity."

Pearson termed it "amazing" that the ore samples were shipped "all the way across the United States to Mobile, Ala., hometown of the McDonald family." He added: "There the ore was assayed by the A. W. Williams Inspection Co., located in an area which has little experience in assaying gold and silver ore."

Records show that the Williams Co. is accredited by the Government for testing work, and was agreed upon as "acceptable" by the Government to make the tests. The McDonalds argue that since they were paying for the assays, they directed them sent to a firm with which they had done business before.

STANDARD METHODS

A Williams Co. letterhead which the Register-Guard's Washington correspondent, A. Robert Smith, observed, indicated the firm tests primarily various construction materials. However geologists such as Libbey say that methods of conducting gold and silver assay tests are so standard that there is no question but that any organized laboratory could conduct them accurately.

The most puzzling question, of course, is why were Williams' assay results from the samples taken by the Bureau of Mines so drastically superior to those taken on three different occasions by the BLM mineral examiner, Hattan?

The Geologist Libbey declined to speculate.

McCormick, himself, said only that the Bureau of Mines man, R. N. Appling, was very conscientious in cutting the samples. McCormick added that samples cut within a range of 10 feet on the various claims might range from values which were negligible to values of several dollars per ton of ore.

The record shows that Hattan took the samples at spots indicated by Al Sarena representatives and took them on several occasions. His qualifications to do such work were read into the record and showed years of experience in that field. It might be fair to add that at the time Hattan took the samples, the mining company protested the samples might not be fair to the company and requested permission to submit supplementary samples—the one is which later turned up missing in the files.

STATE AN UMPIRE

At the time the final samples were taken, a portion of ore from each sample was turned over to the Oregon Department of Geology office at Grants Pass as an umpire.

McCormick explained that this was done to guard against the need of taking further samples in case some of those sent to the assay lab became lost en route or were questioned in any way.

Davis' whole decision turned on the results of the Mobile assay. For that reason it would be reasonable to assume that any further investigation into the Al Sarena case, such as Senator WAYNE MORSE had declared he will call for, should start with those umpire samples.

And here is the most disappointing part of this reporter's investigation of the Al Sarena case:

Once the assay certificates were returned from Mobile, the samples matched up with the assay numbers, and the report sent in by Appling to Washington, D. C., there appeared to be no further need to save the "umpire samples," according to McCormick.

SAMPLES DUMPED

Where are those umpire samples now?

Somewhere in the bottom of the Rogue River near Grants Pass where they were dumped by Appling and McCormick after the report was sent in.

(A final article in this series will discuss what Secretary of Interior Douglas McKay has described as a basic conflict between timber and mining, and what legislation has been considered to supplement the basic mining law of 1872.)

[From the Eugene (Oreg.) Register-Guard of October 17, 1954]

IN THOSE DAYS TIMBER WASN'T WORTH MUCH, NOW IT IS—AL SARENA MINING CONFLICT STEMS FROM OLD LAW DATING TO 1872

(By Dan Wyant)

When the Nation's basic mining law was written back in 1872, there was, of course, little thought given to timber which might be present upon mining claims staked out under the law's provisions.

In earlier days the West had looked largely to mineral deposits for its development. The original law was designed to encourage that development. Timber resources seemed unlimited.

NO CHANGES

Through the years there has been no change in the basic provisions of the law. Any person may still stake out a mining claim upon public land. If he does assessment work benefiting the claim to the amount of $500, and if he proves minerals are present under the broad terms of the law, he is entitled to have the claim patented. With the patent, under present law, goes all surface rights to the claim. That includes the timber which is upon it.

And this points up the basic conflict between forestry and mining interests.

This conflict involving the application and/or misuse of the mining law has contributed much to the controversy around the Al Sarena mines of southern Oregon, described in earlier articles.

TIMBER MINES

Timber is worth a lot more now than it was in 1872. It's worth enough that many mining claims have been staked out, forestry officials say, obviously for the timber that is on them.

More than 7 billion board feet of the public's timber is tied up on mining claims of the 12 Western States, a staff writer for the Denver Post concluded in a 1951 series of articles on this problem.

In Oregon and Washington somewhere around 200,000 acres of forest land has been tied up by mining claims. Some of these claims are no doubt legitimate—but forestry officials question many of them.

DISPUTED CLAIMS

Claims which have attracted the most attention are some 300 mining claims embracing about 50,000 acres of forest land in the Union Creek basin of the Rogue River National Forest.

So many inquiries have been directed to the forestry headquarters that Supervisor Jack Wood has prepared a mimeographed fact sheet on the claims.

The claims, he said, "support an estimated stand of mature and high quality timber totaling 1,800,00 feet. Another 1,700,000 feet of timber lying behind the claims is effectively blocked off by claimants who deny access across their claims. Total volume of timber involved is 3½ billion board feet. A conservative estimate of timber value on the stump is $35 million."

MINERALS LACKING

Wood said most of the claims are filed in the name of one man and his associates. He said repeated mineral examinations have shown there are no valuable minerals in commercial quantity on the claims.

Closer to home, in the Willamette and Umpqua National Forests near Eugene, a number of mining claims exist on forest lands. It would be unfair to question all

the claims, but some of them bear investigation.

The fact that the claims have been filed doesn't mean that the timber is lost to the public. Until the claims are patented, the claimants have no rights to timber other than that needed for mine supports, or possibly, dwellings on the claim.

SALE PREVENTED

But the timber is effectively tied up from public sale by the Forest Service. The claims in many cases also bar access to other valuable stands of timber that would otherwise be put up for sale.

The actual number of patents granted on mining claims during the postwar years in Oregon and Washington totals less than 40 on less than 800 acres of Forest Service land.

Because of the value of the timber involved in many cases, the Forest Service has been vigorous in contesting many patent applications. This is where the conflict between forestry and mining is most apparent.

DELAY CHARGED

Mining spokesmen say that the procedures involved in contesting the claims go beyond the basic mining law to make it equally hard for a legitimate miner to get patent to his claim. They charge that delay has been one of the Government's chief tactics.

Certainly it would seem that some method should be found to effectively prevent the filing of mining claims for valuable timberland and at the same time not penalize legitimate miners who find worthwhile deposits of minerals which will be subject to contest just because they are on timberland.

REVISION OVERDUE

Secretary of Interior Douglas McKay has said: "Revision of the mining laws which would define the surface rights vested in the locator of a mining claim is long overdue."

Legislation has been introduced in Congress to bring the basic mining law up to date.

Principal attention was directed to a bill introduced by Representative CLIFF HOPE, of Kansas, which would have retained the Government's possessory rights on the timber involved in a claim.

The Government would sell the timber off the claims, under sustained yield management plans. The miner who acquired patent on the claim would be given a 3-year period in which to purchase all the timber at fair market price, if he wished. The miner would be permitted to use what timber was necessary in his mine work—and if all the timber was sold off his claim, be given a chance to get timber off other Government holdings for his mine.

BILL WAS DEFEATED

The bill had a further provision which drew objections from mining interests: That surface uses of the claim would be under national forest rules and regulations. That provision, mining spokesmen complained, would make a miner's operation subject to the authority of forestry people who had no particular knowledge or interest in mining practices.

The Hope bill did not pass.

Representative HARRIS ELLSWORTH was at one time prepared to introduce a bill which he felt would solve the problem and then found that Representative D'Ewart, of Montana, had prepared a measure similar to his.

This bill, which also never was passed, would, in ELLSWORTH's words "allow a person who files a mining claim practically no benefits whatever unless, and until, he actually develops a mine."

[From the Eugene (Oreg.) Register-Guard of October 20, 1954]

DREW PEARSON'S AL SARENA ALLEGATIONS FOUND LOADED WITH FACTUAL ERROR

On September 29, when Drew Pearson, nationally famous columnist, launched his Al Sarena mine charge against Congressman HARRIS ELLSWORTH and Interior Secretary Douglas McKay, we recognized them as so serious that we said to our staff:

"If these charges are true, both ELLSWORTH and McKay ought to be run out of public life. If they are not true, McKay and ELLSWORTH are entitled to protection against a vicious slander. In any case, the people of the Fourth District, especially those who read the Register-Guard are entitled to every bit of factual information we can get so that they may judge."

Accordingly Reporter Dan Wyant was dispatched to Jackson County to go over the ground, take pictures of the timber and of the mining properties involved, inspect every available record, interview every available person known to have had any connection with this dispute. Our Washington correspondent, A. Robert Smith, had similar assignments at his end.

Mr. Wyant's reports have been published in a series of six articles, all starting on page 1, concluding last Saturday. Each reader will, of course, make his own conclusions. Quite apart from any recommendations which we may make in the current congressional race, we believe we should offer our findings in this Al Sarena matter.

NOT A TRACE OF ACTUAL CORRUPTION IN EVIDENCE

At the risk of oversimplifying, this we believe to be a fair summary of the allegations of Columnist Pearson:

1. That a certain McDonald family, of Mobile, Ala., had acquired mining claims (gold and silver) in the Rogue River National Forest, and that under pretext of mining they sought to "patent" their claims (a patent gives clear title).

2. That for 6 years, the McDonalds had been unsuccessful because of alert opposition in the then Democrat administration at Washington.

3. That when McKay came to power things changed; ELLSWORTH became a special pleader for the Alabamians.

4. That under these pressures, the McDonald matter was reopened by Solicitor Clarence Davis, that he went through the motions of considering "disinterested" reports from engineers who turned out to have been employees of the McDonalds.

5. That finally new ore samples were taken but they were sent to an assayer in Mobile, Ala., not to professionals on the Pacific Coast, and on the new assays, the patents were granted.

6. That shortly after all this, Solicitor Davis was made Under Secretary of the Interior, next to McKay himself.

In our opinion, such charges cannot be "laughed off." The only answer is in facts. There were 23 paragraphs in Pearson's story. Our Mr. Wyant's factual studies reveal misstatements in 13 paragraphs plus 1 paragraph which he classifies as true as far as it goes, plus 4 paragraphs which contain unsupported assertions, plus 1 paragraph on which he has not been able to throw any light. Only four paragraphs are accepted as substantially correct.

These substantially correct paragraphs are the statement that the McDonalds could have mined without patenting their land; that the McDonalds wanted the above-ground timber rights as well as mining rights (although the McDonalds say they needed the timber sales to raise mining capital); that when the case was reopened, the McDonalds insisted on ore samples being sent to the assayer in Mobile; that the Mobile reports were much more favorable than the preceding reports.

HOW WOULD A JURY LOK AT A MESS LIKE THIS?

Many important facts were brought out in the Wyant reports which were not in Pearson's blast:

The timber on the McDonald claims is not one of the finest stands of Douglas fir in the Northwest, but relatively poor stuff.

At least two of the McDonalds are longtime residents of Oregon, and their company is an Oregon corporation although its main office is in Alabama.

The McDonalds acquired their mining claims in the mid-thirties, long before the timber boom began, when they could have had all the choice timber they wanted for a few dollars an acre, if that had been their object.

That the McDonalds are in fact primarily in the mining business, not in lumber, and that they have extensive tunnels and equipment for mining on their properties.

That a substantial portion of their mining claims were accepted as sufficient for patenting even under the Democrats, and that Oregan State geological reports are favorable on the area.

That since 1948 the McDonalds had been subjected to costly delays and they even allege bureaucratic suppression of some of their important evidence.

That Congressman ELLSWORTH, in interceding for the McDonalds did not actually plead their case but argued only that they be given fair and prompt rehearing.

That there was nothing secret about the rehearing and the McDonald engineer was not palmed off as an "impartial" expert but stood as the accredited representative of his clients.

In our opinion, no grand jury in the world would indict nor would any trial jury convict on the kind of faulty evidence (inferential hogwash) presented by Columnist Pearson. We have such a distaste for reporters who slant news or distort facts that we do not want to impugn Mr. Pearson's motives.

INJUSTICE IS INJUSTICE HOWEVER INTENDED

We will say that whatever Columnist Pearson's reasons for this assault on ELLSWORTH and McKay he has done a thoroughly bad job of reporting and one which works a grave injustice on the people accused.

The real trouble is rooted in mining laws which go back 80 years. They were intended to help prospectors then. They offer an opportunity for cheaters now. As far back as 1947, the Register-Guard was running articles on this problem as it is shown in the Bohemia district near Cottage Grove. It is reasonable to ask:

"Why did not these virtuous Democrats who kept the McDonalds from patenting their claims get a decent law passed?"

In the last session there have been two such measures—the Hope bill (which Pearson mentions), H. R. 5358 which would relate only to mining lands within national forests and the D'Ewart bill, H. R. 4983, which would apply to mining claims on all public lands. There is also S. 783 by DWORSHAK of Idaho and ANDERSON of New Mexico on which hearings were held May 22. This seeks to redefine and limit all surface rights.

(The Hope bill is supported by the Department of Agriculture; the D'Ewart bill by the Department of Interior. The Dworshak-Anderson measure seems to have considerable support from mining people.)

At least the Republican Congress seems to be making a try to cure the troubles. We do not accept as sufficient the ELLSWORTH and McKay statements that so long as the obsolete laws are on the book they have no other choice than to comply with them.

The only thing of importance that has come out of all this hubbub is the necessity

for mining laws which will conform to present day conditions. Our foresters here tell us they are being deviled by three classes of people under the present statutes:

1. Genuine mining men who seek timber rights only to finance themselves.

2. Timber hogs who buy up or stake out mining claims for timber rights only.

3. Out and out highbinders who are staking out phony claims in the way of roads, rock pits—all kinds of business operations just to see if they can extract a few dollars. (We have heard of two State highway cases where the State had to pay rather than endure the long process of proving the mining claims phony.)

WHOSE BRINK OF WAR?—EDITORIAL FROM THE BOSTON HERALD

Mr. SALTONSTALL. Mr. President, I should like to read a brief editorial published on January 17 in the Boston Herald. The editorial, entitled "Whose Brink of War?" is as follows:

WHOSE BRINK OF WAR?

Whatever anyone says publicly, the United States can have no foreign policy at all unless it is willing to go to the brink of war.

Secretary Dulles' brink-of-war statement in Life magazine could have been put better, or even better omitted. The whole article could have been more successfully adapted to its ends if it had been less painfully adulatory. But in all the controversy over it, we ought not to forget that peace can be had today only by a willingness to look at war square in its evil visage.

Adlai Stevenson calls it Russian roulette, as if Dulles was playfully twisting the cylinder of a revolver placed at his country's head and gambling always on an empty chamber. But if what Dulles is doing is Russian roulette, then that is what Secretary Acheson did before him.

The Berlin airlift, the Truman policy of containment, military aid to Greece and Turkey, the establishment of NATO against explicit Russian threats, the refusal to withdraw American troops from Trieste at Soviet demand, the decision to commit American forces in the Korean war, these were all steps to the brink of war, and, in one case, beyond.

Whatever you call it, brink or roulette, it is the realistic and inescapable situation in which we are today, and no Secretary of State of either party is going to pursue any other course as long as the Soviet stands ready to exploit any weakness of ours in arms or resolution.

Secretary Dulles is taking a more severe beating for his observation than he deserves. Yet even his closest friends could wish he had said it better.

His exclusive emphasis on the readiness to fight as an instrument of foreign policy ignores the far more difficult problems of foreign aid, of German reunification within the Western sphere, of subversion in the still free areas of Asia, of incendiarism in the Middle East, of Japanese economic dislocations, and a score of other issues.

None of these issues would remain of the slightest concern did we not have our brink-of-war strategy, for there would then be no more free world to worry about. But the brink-of-war strategy will not solve these issues either. Dulles has unintentionally given the impression that the brink strategy is a panacea.

In doing so he has sounded like the proponents of the crash policy against the Communists—bomb Manchuria, unleash Chiang, blockade China, even fight a preventive war. Yet, that isn't what he meant. What he meant was to warn the Reds that we are not bluffing about retaliation. (With perhaps a side glance at the coming election and a placatory gesture to the Knowland wing of the party.)

He did it ineptly. But that does not denigrate his foreign policy. Fortunately, Mr. Dulles does better than he talks.

Mr. MORSE. Mr. President, the comments of the Senator from Massachusetts [Mr. SALTONSTALL] cause me to make a brief comment on the Dulles brink-of-war episode. This will be probably the shortest speech I have ever made in the Senate.

First, many of the Dulles representations in the Life magazine article, in my judgment, are false representations and cannot be squared with the official record. Second, even if they could be squared with the record, it was very unwise and undiplomatic for Dulles in this critical time to make such war threats. Third, I think the lack of diplomacy shown by Secretary Dulles in this instance and oft repeated in similar ones, demonstrates the need for a new Secretary of State.

PROPOSED FARM LEGISLATION

Mr. HUMPHREY. Mr. President, yesterday, in the Committee on Agriculture and Forestry, I brought to the attention of the committee a section in the administration's farm bill which I believe deserves very careful examination. At that time I said there was a joker in the deck of the administration's widely publicized new program for solving the farmers' plight. I pointed out what that joker was. The joker is the proposal in the bill to use surpluses to liquidate surpluses.

After a careful examination, Mr. President, I find that that proposal would result in lower farm prices, in excess surpluses, and would later drive the farmers off the land. The proposal would result in permitting the supplies held by the Commodity Credit Corporation to be sold in the open market at market prices to redeem the certificates which the farmers would be given for nonproduction. As a result, the market cash prices would go down and down as the surpluses were moved into the market.

Furthermore, it would result in the farmer taking all his new production under the crop loans and putting it all back into the Government warehouse bins, at the expense of the Government. In turn, the Government would take out the new commodity and sell it at lower prices in the market, and in that way continue to drive down prices.

The grain trade yesterday suffered a very severe blow and a very unhappy experience. Trading was at a very low ebb, because grain traders were uncertain over pending farm legislation.

Mr. President, rather than take further time of the Senate, I ask unanimous consent to have printed in the body of the RECORD, at this point a statement which I have prepared, and two articles published in the Wall Street Journal of January 19, 1956, bearing on this subject.

In one of the articles, for example, the Wall Street Journal states:

Much attention continued to be focused on a proposal in the proposed new farm legislation which would permit the Department of Agriculture to sell part of its surpluses at market price. If this legislation is adopted the sales would be made below levels at which they can now be sold.

The article goes on to point out that it would result in a further depressed market.

I ask that the statement and articles be printed in the RECORD so that other Senators may have more information on this subject and may have my point of view on it. I believe the comments of the Wall Street Journal indicate the validity of the analysis which I have made.

There being no objection, the statement and articles were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HUMPHREY

JOKER IN IKE'S FARM BILL WOULD DRIVE FARM PRICES DOWN, HUMPHREY SAYS

There is a joker in the deck of the administration's widely-publicized "new program" for solving the farmer's plight, Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, charged today.

"Instead of helping to bolster farm income and farm prices, all it is designed to do is to unload Government holdings of farm commodities at distressed prices on the domestic market in direct competition with the farmer already struggling for a better break on that market," Senator HUMPHREY said.

"Because they have run into too many obstacles against disrupting foreign markets by 'dumping' these products abroad, they now propose 'dumping' them at home—underselling other products farmers have to sell, and underselling their own support program.

"The entire farce is exposed in language of the administration's own farm bill introduced in the Senate yesterday—the fine print in the insurance policy that belies all the glowing promises made by the salesmen in the President's farm message and in the Secretary of Agriculture's testimony before the agricultural committee.

"It is a provision permitting the Government to sell surplus commodities into our domestic markets at the market price, regardless of support levels, to pay off the certificates given farmers in return for voluntarily cutting back their production beyond the allotments to which they would be entitled under law.

"Neither the President's message nor the Secretary's testimony revealed this fact. Both indicated that the program would be financed out of the existing stocks, but neither revealed that their intent was to 'dump' these commodities at any prices they would bring regardless of how much they depressed the existing market.

"It becomes apparent that they are more concerned about getting rid of Government holdings than they are about what happens to the farmer.

"Anybody in the commodity trade will tell you that this single action will be the greatest price depressant for prices of basic farm commodities yet invented. If such a measure is pressed further and enacted, you can expect sharply lower prices for major grains.

"The sad part about it is that this administration brainchild would in the long run increase rather than decrease Government holdings.

"If the Government intends to sell its present holdings at lower than support prices, it only means that it will capture all the market from farmers and in turn have to take possession of all the farmers' commodities placed under loan at higher levels. It would just be a vicious circle, of everything having to go through Government hands to be sold back cheaper to the trade. I doubt very much if any buyer would be foolish enough to buy at higher prices from

the farmer if he knows he only has to wait to get the same commodities at the administration's 'fire-sale' bargain counter."

Senator HUMPHREY explained that the present law prevents the Commodity Credit Corporation from selling its stocks at less than 5 percent above the support level, plus interest, unless they are in danger of deteriorating. The Administration bill provides for removing that 5 percent restriction, but then goes even further to exempt from any limitation the sale of any amount of commodities necessary to pay off the "soil bank" certificates, he added. It is the latter proposal that Senator HUMPHREY vigorously protested as "sabotage" of the entire farm program price-support loan concept.

"Every action this administration has taken since it has been in office has tended to depress farm prices, and thereby drive more stocks into Government hands. It was too good to believe that the bold, new program would be any different—and now the truth is exposed. Once again, the administration is embarked on driving farm prices still further downward. The only difference is that the former objective was supposed to have been to force some farmers out of business. Now, the objective is just getting rid of stocks in the Government's hands—regardless of the consequences upon farmers.

"Strangely enough, it is entirely contrary to everything this administration has preached about 100 percent of parity in the market place. Now, apparently, they want to determine themselves just what the farmer should get in administered prices and drive the market place down still further.

"When they talk so glibly about paying for removing the surplus with the surplus itself, what they are really saying is that they want to pay for it out of the pockets of farmers—out of their already depressed income, by driving it down still further.

"After having lowered farm prices, increased surpluses, and driven thousands of farmers off the land, the administration now proposes that the farmers still remaining pay the bill for the failure of its farm program and its administrative bungling.

"This new formula will result in crippling the free market, lowering farm prices, and lowering the boom on the Nation's farmers," Senator HUMPHREY said.

[From the Wall Street Journal of January 19, 1956]

SKEPTICAL FARMERS—IKE'S PROGRAM STIRS LITTLE JOY, MUCH DOUBT AMONG FARM MANAGERS—MR. ADAMS FRETS OVER CORN; A TEXAN BEEFS ABOUT RICE—MR. GOWLAND IS CONFUSED—SPADING ABOUT THE SOIL BANK

(By John S. Cooper)

CHICAGO.—"I've spent the past week trying to figure out this 'soil bank' plan but, darn it, I still can't get the scheme to look good to me."

This cheerless comment on the chief proposal in President Eisenhower's new farm program comes from the manager of a string of several dozen Midwestern farms. He's frankly dubious the Government will pay him enough to take a chunk of his land out of production.

Among professional farm operators, this skepticism over the soil bank plan is widespread. These "pros" are paid for getting the highest possible dollar return from their clients' farmlands. Their opinions are apt to be more cold-blooded and less politically slanted than those of the average farmer.

Their attitude, and the reasons for it, may be a tipoff on how successful this latest plan in the Government's efforts to deal with towering crop surpluses will work out. As ticketed, the soil bank scheme would cost taxpayers a whopping $3 billion over the next three years.

CASH AND CROPS

Under the proposal, farmers would be paid—in cash or in surplus commodities—for voluntarily reducing their acreage of wheat, cotton, corn and rice below Government-imposed allotments, or for shifting acreage to soil-building grasses. The aim, of course, is to cut output of surplus crops and beef up farmers' incomes at the same time.

[The administration's plan to sell some Government-owned commodities at reduced prices to help finance the soil bank program came under heavy attack yesterday from farm State Senators. (See story below.)]

Although the soil-bank idea has stirred up the greatest reaction in farm areas, some other parts of Eisenhower's program also have caused storms in some sections. A Texas rice farmer, for example, claims the proposal to limit the amount of dollars any one farm can get in price-support help from the Government would be disastrous. He's joined by a big California cotton grower. In addition, some livestock producers cry they've been overlooked by Washington.

But the loudest argument in the farm country since Eisenhower sent his program to Congress a week ago has spun about the soil-bank project and its effects on farmers' fortunes.

"Most of the hollering about the farm problem has come from western Iowa and Nebraska," notes Bruce Russell, general manager of the Farmers National Co. of Omaha, which manages 1,850 farms covering 450,000 acres in the two States.

"In these areas," says Mr. Russell, "farmers are short of both cash and feed because of last year's drought. Naturally they're going to raise all they can. There'll be a lot of resistance to taking any land out of production there."

PAYMENTS NOT SET

What the Government will pay to entice farmers to idle their land hasn't been announced. But farm operators are openly skeptical Agriculture Secretary Benson will go high enough to make it worth their while.

Their reasoning: If the per-acre payments are attractive enough to win over farmers, the $1 billion a year earmarked for the program won't cover enough acres to make a real dent in the mountainous surpluses; conversely, if the program does cover enough acres to matter, the $1 billion would be spread far too thin.

Farm managers estimate payments would have to run to perhaps $20 or $30 an acre in Nebraska and Iowa to get farmers to "deposit" their land. Even then, they believe, only the poorer, low-productive lands would be taken out of cultivation.

"The inducements are likely to be too small to have much effect in our State," declares H. E. Stalcup, president of Stalcup Agricultural Service of Storm Lake, Iowa, which manages 35 farms. He calculates it would take $20 to $25 an acre to get land out of cultivation.

In unveiling his program, Mr. Eisenhower promised incentives would be "sufficiently high to assure success of the program." He said the project might cut wheat acreage this year by 12 million acres below the 55 million-acre allotment and cotton acreage by 3 million acres below the 17-million-acre ration. In addition, an estimated 25 million acres would be shifted from such crops as soybeans, oats, and sorghums to grasses and trees.

BANKING POOR LAND

One farm manager who thinks he may put some of his poorer land in Mr. Benson's soil bank—provided the Government's price is right—is Edward McNaughton, president of the McNaughton Loan & Investment Co., of Hutchinson, Kans. His firm controls about 7,000 acres of Kansas wheatland. He doubts, however, much top producing wheatland will be placed in the plan.

"So far it's such a bedlam you don't really know what to make of it," comments R. W. Gowland of the Gowland Farm Service of Minneapolis, which manages 50 farms, mostly in dairying. "From the principle of the thing," he adds, "I can't see that it's going to help much."

Under the Administration's proposal, farmers need not take payment in cash in return for cutting back acreage in price-supported crops. Instead, they could get Government certificates good for an equivalent amount of these crops from surplus stocks.

This certificate idea, borrowed by Mr. Benson almost intact from a recommendation by the American Farm Bureau Federation, has become a target for criticism by some farmers. Critics contend the plan might lead to a two-price system for crops, particularly cotton, if mills begin buying the certificates from farmers.

Possible side effects of the Government's soil bank experiment worry some farmers. Suppose the plan does work out, asks Mr. Gowland. It certainly isn't going to help dairy farmers who will have to pay more for the grain they buy for feed. "I've talked to quite a few dairymen," adds Mr. Gowland, "and they just seem to want to be let alone for a while."

Makers of farm equipment see no boon in the bank plan, either, if farmers go for it in sizable numbers.

"Farmers just won't need as much equipment as they ordinarily would," notes an official of big International Harvester Co. "This effect," he adds, "probably won't be felt for about a year. But eventually there will be a drop in demand for harvesting equipment. There will be a lesser effect on ploughs, discs, fertilizer equipment, harrows, and mowing machines," he predicts.

Fertilizer manufacturers believe the soil scheme will have little or no impact on their industry.

"Most of the land that's taken out of cultivation will be the lowest productive land. The farmer will use his remaining land to the fullest advantage; this means more fertilizer," observes Z. W. Beers, of the Middle West Soil Improvement Association, a fertilizer trade association. More intensive fertilization and cultivation of remaining land, of course, may partly offset the production cutbacks obtained by taking some parcels out of cultivation under the soil bank project.

Though the soil-bank plan appears to be the most controversial proposal made by Eisenhower, some farm folk have singled out other points for attack. One: The proposal to permit the sale of some low-quality wheat by the Government for livestock feed.

Karl F. Adams, president of the Bloomington Farm Management Service of Bloomington, Ill., argues this release of wheat will "seriously hurt" corn growers by tending to drag down the price of corn. Most corn grown in the Bloomington area is sold to farmers in corn-short States for feed.

"The more feed grain that's available and the cheaper it is, the harder it is for us to sell a balanced ration," complains Edward Glennon, executive secretary of the American Feed Manufacturers Association. "The feed industry, I'm afraid, will just have to sell harder next year."

One Eisenhower proposal that farm managers in the central West apparently are not too concerned about is the plan to limit the amount one farm or farmer can get from the Government in price support help. But agriculturists in the South and Far West, where some farms cover thousands of acres, take a dim view of the idea.

Says Marcus Mauritz, who operates about 9,000 acres of riceland near Ganado, Tex.: "With a crop such as rice, which requires the use of heavy and expensive machines, it is impossible to operate a small farm and make money any more." "Ike's proposal to limit price-support aid," maintains Mr. Mauritz, "would be disastrous to us now."

The President's message set no specific figure on the dollar amounts that could be advanced to any one farm but Federal farm officials are talking in terms of a $25,000 ceiling for each commodity raised. Last year, many large farm operators drew several hundred thousand dollars each in Federal loan aid for their crops. One got more than a million.

Most farm managers believe the President's program overlooks the livestock producer and feeder. The Federal meat-purchase programs to date, claims Mr. Stalcup, "have been only a rain drop in the ocean." Says he: "Benson made his booboo last year when he announced he was going to spend $85 million on pork buying. That was so small the market discounted it from the start."

FINANCING PLAN ASSAILED

WASHINGTON.—An administration proposal to sell considerable quantities of Government-owned commodities at reduced prices to help finance the soil-bank program drew angry disapproval among Senators from farm States.

The proposal was contained in the administration's farm bill introduced in Congress Tuesday. It would let the Agriculture Department steal at market prices enough Federal commodities to raise cash to pay farmers for underplanting acreage allotments of major crops.

At present the Department can't sell Government-owned products for less than 105 percent of the support rate for a commodity, plus carrying charges. This minimum is above market prices for most farm items.

Senator YOUNG, Republican, of North Dakota, one of the sponsors of the administration bill, said he would withdraw his name from the measure if the provision were not removed immediately. He said he missed the 7-line proposal in his first reading of the 18-page draft of the bill.

Added Senator HUMPHREY, Democrat, of Minnesota: "The administration's proposal could raise havoc with markets."

He said when he read the proposal for lower prices in the farm bill Tuesday night he was "quite concerned." He said he consulted a top economist, who confirmed his fears that the move "could be a price-lowering device." As a result, the Senator said he couldn't sleep.

The statements from the two lawmakers came at a Senate Agriculture Committee hearing on new farm legislation. Chairman ELLENDER, Democrat, of Louisiana, also appeared disturbed. He directed committee staff members to see if the provision of the administration bill, which is designed to implement the President's farm program, was mentioned in the Chief Executive's special farm message to Congress last week.

COMMODITY INDEXES

GRAINS CLOSED IRREGULAR

Rye was firm, but other cereals failed to move far from Tuesday's closing levels. Dealers said lack of interest in the market was due to uncertainty over pending farm legislation. Much attention continued to be focused on a proposal in the proposed new farm legislation which would permit the Department of Agriculture to sell part of its surpluses at market prices. If this legislation is adopted the sales would be made below levels at which they can now be sold. Exporters reported that Formosa shortly would be in the market for 1,500,000 bushels of United States soybeans for shipment during May through September. Japan bought 1,200,000 bushels of United States barley, 440,000 bushels of Canadian barley and 360,000 bushels of Canadian wheat. Western Germany bought 1,900,000 bushels of United States barley and 200,000 bushels of United States grain sorghums. Brazil received a grant for $18,384,000 to buy United States wheat and flour: This sum is sufficient to buy around 9 million bushels of wheat. Egypt asked exporters to make offerings on 3 million bushels of United States wheat. Further snow was reported over parts of the southwestern winter Wheat Belt, and the daily weather forecast promised additional moisture. The moisture is needed for most of the crop. Buying of rye futures at Chicago was stimulated by strength at Winnipeg where exporters supported the market.

THE ADMINISTRATION'S PORK-BUYING PROGRAM

Mr. HUMPHREY. Mr. President, I wish to call to the attention of the Senate a matter which I believe to be of the utmost importance. It is the so-called surplus pork-buying program in which the Secretary of Agriculture is engaged. It is a program to purchase surplus pork supplies.

The Secretary explained to the Committee on Agriculture and Forestry that pork products were being purchased as rapidly as possible and distributed as soon as the supplies were obtained.

I find that that is not the case. I find that that is not what is being done. I find that the program is not under way, as it should be. I find, for example, that relief agencies, which are eligible to receive the pork under existing law, are having their requests turned down, and are being told that the pork will not be available until April.

I find further that the prices which the Government is paying for pork products are going up for each purchase the Government is making. At the same time the Government is paying more to the packers, the farmer is getting less for his hogs. That is what the relief program for farmers amounts to. It is a pork-price stimulation program for packers and a pork-price depressing program for farmers.

I have asked the staff of the Committee on Agriculture and Forestry this morning to make an independent examination, and I have the facts to support my statement that the pork-purchase program today is being mismanaged. The Secretary of Agriculture said in the beginning that he did not believe it would work. He literally had to be shoved into it. He said about 4 days ago that he did not think the soil-bank program would work, either. What an enthusiast for the great, bold, new, constructive agricultural program.

Mr. President, I sympathize with the President; I really do. I think the President would like to have some of this program work. The trouble is, he has a slow starter in the Department of Agriculture, a sort of reluctant dragon who does not want to place the full emphasis of his office behind the program.

Mr. President, representatives of the relief agencies of Buck County, Idaho, came to see me. I happen to know some of those gentlemen. One of the officers of the welfare board said they went to see the Secretary of Agriculture, and were told that there was not enough pork on hand to take care of the school lunch program, let alone the relief agencies, and that it would be unlikely that any more would be available until April.

We see stockyards overloaded with hogs, and packers with pork running out of their ears, so to speak, but the Department does not have enough for the relief agencies and cannot take on any new and additional outlets.

Something should be done about it, instead of letting the prices go down and down as they are now doing.

Mr. President, I ask unanimous consent to have an additional 10 minutes.

The PRESIDING OFFICER. Without objection, the Senator from Minnesota may proceed.

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD at this point a copy of the statement which I made today on the pork-buying program failure.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SECRETARY BENSON CALLED TO TASK ON PORK BUYING PROGRAM FAILURE

Secretary of Agriculture Benson was called upon today to explain why relief agencies seeking surplus pork were being turned down at the very time he was assuring the Senate Committee on Agriculture such products were being distributed as rapidly as outlets could be obtained.

Senator HUBERT H. HUMPHREY (Democrat, Minnesota), member of the Senate Committee on Agriculture, asked the committee chairman to instruct his staff to get "some better explanation" from Secretary Benson as to what was really going on in the pork-purchase program.

"Secretary Benson assured our committee that he was vigorously pushing this pork-buying and distribution program, and that it was being stepped up as fast as outlets could be obtained," Senator HUMPHREY said.

"Yet I am reliably informed relief agencies eligible to receive the pork under existing law are having requests turned down, and being informed that none will be available until April.

"I want to know if Secretary Benson is really concerned about helping the hog market now, or is holding back his available funds to step up purchases closer to the election.

"And while I am at it I want to know why prices the administration is paying to packers have been going up while prices received by farmers from the packers have still been going down.

"I want to know whether this is a 'pork lift' program or a 'packers lift' program."

Senator HUMPHREY asked the committee staff to seek a full report from the Department of Agriculture on dates of purchases, prices paid to packers, and prices being received by farmers on the same dates.

Senator HUMPHREY said he had been informed that Polk County, Iowa, had formally asked for pork to distribute among 20,000 relief clients, but had been informed none was available—that not enough was on hand to take care of the school-lunch program, let alone any relief agencies and that it would be unlikely any would be available until at least April.

"Along with a group of other Senators, I called upon Secretary Benson at the year end to expand his livestock purchases to help our distresssed cattle and hog producers, but to do it in a way that would help farmers instead of packers by requiring suppliers to certify in their offers to the Government that they have paid fair prices to farmers," Senator HUMPHREY said.

Both the President's message and Secretary Benson's testimony agreed on expanding purchases, but neither gave any assurance to

farmers that they are going to benefit instead of packers. Once again, I insist that Secretary Benson change his pork-buying program to prevent it from being just a Government benefit program to meat packers, and that he acts now on buying beef as well before cattle prices fall any lower.

Mr. HUMPHREY. Mr. President, I hope my colleagues will direct their attention to the Secretary and address to him letters and communications suggesting that he take action. The hog-purchase program has been authorized and there is plenty of money to carry it on, but I regret to say that no matter what kind of a law we have, if the will to administer it is not present it will not work. We can write new farm legislation which would be almost perfection and which would meet the most utopian standards, but if we continue to have an Agricultural Department managed by a Secretary who does not want the program to do what it is supposed to do, no law can be effective.

Mr. President, I now desire to refer to another subject.

The PRESIDING OFFICER. Under the unanimous consent agreement, the Senator from Minnesota may proceed.

ABUSES OF FARMER-COMMITTEE SYSTEM

Mr. HUMPHREY. Mr. President, I feel compelled to call the attention of this body to a deplorable situation that exists in operations of the State agricultural and conservation committee in the State of Missouri, and the failure of the Department of Agriculture to do anything about it.

As chairman of the Senate subcommittee which recently conducted field hearings in Jefferson City on this Missouri situation and still has it under investigation, I am shocked by the affrontery of the Department of Agriculture in reappointing the State Chairman under investigation after grave charges and evidence of abuse of his authority and violation of Department regulations had been called to the attention of the Secretary of Agriculture.

Mr. President, I ask unanimous consent to have printed in the body of the RECORD a letter I sent to Secretary Benson on December 22, 1955, calling his attention to the sworn evidence against Mr. Colbert.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DECEMBER 22, 1955.

The Honorable EZRA TAFT BENSON,
Secretary of Agriculture,
Washington, D. C.

DEAR MR. SECRETARY: On behalf of the Senate Committee on Agriculture and Forestry, on November 14 and 15, the Subcommittee on Farmer-elected Committees, of which I am chairman, conducted hearings in Jefferson City, Mo., involving the administration of the farm program by the farmer committee system in that State. The hearings were a continuation of early hearings conducted by my subcommittee in Washington on June 13 and 14, during which officials of your Department participated.

Quite frankly, Mr. Secretary, I am shocked by the conditions we found in Missouri. Under separate cover I am forwarding to you a transcript of that hearing—220,000 words of testimony, most of which was taken under oath. I respectfully request that it be carefully studied. It is the intention of the subcommittee to conduct further hearings and to ask you and other members of the Department, at a secretarial level, to participate in these hearings. There are a number of questions which need to be answered.

Furthermore, the subcommittee will need the guidance of the Department in an attempt to reconcile what appears to be conflicting points of view between the Department's testimony in June of this year and the statements of the Missouri State committee officials in their hearings in Jefferson City. As I review the record thus far, there are completely conflicting views on interpretation of regulations and statutes that have been given to us by the department witnesses and your officials in Missouri. The Missouri State committee officials insisted time after time that they were acting in accord with the policy of the Department of Agriculture and the rules and regulations as prescribed by the Department. It is apparent that someone is wrong. Something must be done about it.

I am confident that once you have had an opportunity to study the testimony, you will recognize that this is a matter of such grave concern that it requires your personal attention. I am led to believe that there are open violations of law, particularly insofar as maintaining county managers on the Federal payroll despite the fact that these managers have been dismissed by the county committees.

I did everything in my power to conduct a fair and objective hearing. I am sure that a review of the press reports in the State of Missouri will indicate to you that the situation in the farmer committee program in that State is one that does not reflect credit upon the Department. I regret that my request for an official from the Department to attend those hearings was denied. It would have been most helpful to the subcommittee if someone of departmental status could have been with us. Many questions could have been answered on the spot, and the testimony would have been much more meaningful and the hearings much more helpful.

In order to be of help to you in studying the RECORD, I call to your attention the unresolved questions raised in the course of the hearings on which further information is desired from your Department. A summary of these questions, with page citations in the hearing, is provided for your convenience (see attached). It would be most helpful to the subcommittee if the answers to these questions could be provided as soon as possible.

Senator SCHOEPPEL, of Kansas participated with me in conducting the hearings. You will note from studying the transcript that he too expressed deep concern over some of the conflicting testimony. Possibly you will want to discuss this matter with him.

I shall await with interest a personal reply setting forth your views on the issues raised in the hearings. Furthermore, we will need specific information as requested in the attachments referring to the hearings transcript. The integrity of the farmer-elected committee system, as an effective part of our farm program, is at stake.

Sincerely yours,

HUBERT H. HUMPHREY.

Mr. HUMPHREY. Mr. President, I also ask unanimous consent to have printed in the body of the RECORD at this point an editorial from the November 17 issue of the Independent Republican, of Springfield, Mo., on the subject of the Missouri situation, entitled "Political Connivery," along with an article from the November 17 issue of a newspaper at Salem, Mo., summarizing the hearings conducted by my committee.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Springfield (Mo.) Press of November 17, 1955]

POLITICAL CONNIVERY

One fact appeared obvious at the Senate subcommittee's 2-day hearings into the operations of the Missouri Agricultural Stabilization and Conservation program; politicians are trying to take it over.

True enough, ASC's genesis was in politics. It was born in a Democratic administration years ago. Probably at State levels and above it has always been quite political. But at local levels, partisanship has tended to fade through the years, at least in Missouri, until a Republican county may have a Democratic ASC committee, or vice versa.

Usually the men who serve are farmers, and usually members are kept in office for years, regardless of partisanship. They are elected by farmers and are presumed to reflect the local agricultural point of view.

Unquestionably, the Republicans considered the ASC part of the political spoils won when they finally overthrew a 20-year Democratic national regime. But in Missouri, it seems, they overstepped the bounds tradition has laid out for the ASC.

One of the wedges for political entry into ASC administration within the counties was the establishment of a new job, an office manager in each county. The State committee must approve the county committees' selections for the job, on the basis of qualifications. And one of the qualifications, implied if not stipulated by law, was that the appointee be a Republican.

It could be that politics began to boil at local levels in this case for not all county committees were willing to go along with partisan selection. And that is where the trouble arose; if the county committee objected, the State committee immediately fired it and appointed a more pliable, usually Republican, successor. And in at least one case when the new committee disagreed, it too was fired.

Now those committeemen so summarily dismissed were elected by the farmers and replaced by men who, in many cases, couldn't even be reelected to a second, full term.

In all the 48 States last year there were but 191 ASC men removed from office, and 49 of those were in Missouri. That, in itself, is a tipoff on the political pushing within the State committee.

Another fact that showed up badly for the Missouri ASC committee at the hearings was the fact that all too often it had either refused to let the county committee dismiss an office manager, or it had delayed such dismissal for months at a time. Yet, under the rules governing ASC administration it is clearly specified that the county committee has the sole right to remove that appointee at its own discretion.

Too, the State committee, bewailing the investigation as pure politics, had great difficulty explaining to probing Senators why there were just as many embroilments in purely Republican counties as there were in predominantly Democratic counties. Yet that was the case.

State Chairman Murray Colbert admitted he "didn't have the authority" to threaten county committees with firings when he stipulated they should hire GOP office managers. But he admitted that he did threaten and that he did fire on those grounds.

The State committee's actions hit close to home in the Ozarks. In Texas County, two committees were fired, and newsmen were barred from the office despite the request of the county chairman for their admission. In Barton County, the county committee tried to fire an office manager because it

alleged he was alienating farmers from the program. But, though the rules clearly give the committee that privilege, the State committee kept its man in office for a long time before finally consenting to his dismissal last week. Greene County felt the State committee's iron hand, so did Newton and Wright Counties.

We said, months ago, that Colbert had outgrown his political britches. The evidence is now before the people of the State to judge, not only for Colbert but for the whole State committee.

It could be that there will be some tailoring in the next Congress—some britches seams taken in, for example. It's about time.

[From the Salem (Mo.) Post of November 17, 1955]

SMALL TOWN TALK

Two Dent County ASC committeemen and a former ASC county chairman Tuesday heard an amazing indictment of State ASC committee procedure in Missouri.

Everett Kunkel and Clark Plank, present county committeemen, and Howard Chrisco, former county committee chairman, were not called on to testify about their past difficulties with the State ASC committee despite an invitation to appear at the United States Senate subcommittee hearing instituted by Missouri's Senators SYMINGTON and HENNINGS. But they did hear a tremendous amount of testimony as to ASC State committee activity as presented by members of their county committees. Most of this testimony was of the same pattern as that which would have been given by the Dent countians had there been time for them to present their case against Murray Colbert and his fellows on the State committee.

Most of the county committeemen who testified had been through the same experience, that of having been summarily fired for refusing to obey State committee orders in regard to the hiring and firing of office managers. These orders, at least to a layman, seem to be illegal, particularly those forbidding county committeemen the right to fire an unsatisfactory office manager. But, even though, all of them had been through the same experience, they seemed amazed that high officials such as the State ASC committeemen could show a flagrant disregard for simple regulations which county committeemen had enterpreted with ease. Those conducting the hearing, even the Republican sitting on the subcommittee, were in complete agreement with the county committeemen on this point.

United States Senator SCHOEPPEL, Republican, of Kansas, at first appeared inclined to defend the Republican appointees in the Missouri State ASC office, but by the end of the hearing the Kansas Senator seemed almost in league with his Democratic colleagues, Senators HUMPHREY, of Minnesota, and Missouri's great Senator SYMINGTON.

Senator SCHOEPPEL found it impossible to stomach the actions of a committee which seemingly has disregarded all the rules and regulations of their organization in an effort to enforce the appointment and retention of office managers who were not wanted by duly-elected county committees. The State committee, in instance after instance, has fired ASC committeemen on flimsily supported charges after county committees have failed to knuckle under and obey the illegal dictates of the State committeemen.

Senator SCHOEPPEL, in Monday's hearing, took Murray Colbert to task for the firing of a committeeman who had dared write Senator SYMINGTON of his grievances and had refused to obey Colbert's order to refute the statements he had to the Senator. SCHOEPPEL is quoted as telling Colbert, as he shook his finger at him, the committeeman "has a perfect right to his opinion * * * and he has a perfect right to write his Senator * * * You'll keep out of a lot of trouble if you select these people on merit alone.

It may be said, in fairness to the Kansas Senator, that he, as well as HUMPHREY and SYMINGTON, tried to keep the hearing on a fair and impartial basis and to keep the hearing from developing into a political sideshow with the majority Democrats using the hearing as a whipping post for the minority. As the hearing developed it became so evident that Colbert and his companions were so bent on putting Republicans into office manager jobs with authority to employ the rest of the office help, that politics could not be excluded.

It went far enough for one witness to testify that he thought Murray Colbert could do a good job of administering the farm program if he were his own boss. Pressed for an answer as to who was bossing Colbert, he asserted that everyone in central Missouri knew that Perry Compton, Republican State chairman, was directing the activities of the State ASC office.

Both Senators HUMPHREY and SCHOEPPEL perked up their ears at this information, and the Republican from Kansas declared with emphasis that if this charge "is true, I have faith in my Republican Party to clean up a sorry mess that should be cleaned up."

The evidence against the ASC State committee was so repetitious and convincing that it became apparent that the policy of the committee to put Republican office managers into every county ASC office in Missouri is inflexible and ruthless.

The result has been that some fifty-five Missourians, leaders in their communities, have been fired from elective offices, most of them on charges that did not actually exist or on trivial technicalities. The real reason for their dismissal was that they fought for the rights granted them under ASC regulations. As a consequence, for their willingness to stand up for the rights given them under ASC regulations, they have been fired and they will be forever barred from holding an ASC position, no matter how small.

The honor and integrity of these men, their competence and their ability, has been impugned with a ruthlessness that is reminiscent of dictatorship in its worst form. The Senate investigation started in Washington, transferred to Missouri, and to be continued in Washington and elsewhere, can result in no less than clarification of any ambiguous regulations, some of which the Missouri ASC committee is hiding behind. It may result in more strenuous measures, the least of which might be a general housecleaning in the State office of ASC for the hearing Tuesday revealed that ASC in Missouri, on the State level, is being mishandled.

Senator HUMPHREY did not need to be a prophet when he warned those attending the hearing that if this mess is not cleaned up, Missouri's county committee system will break down completely and as the county committee system is the basis of the farm program, "you will have no farm program and no farm price supports of any kind."

The conduct of both HUMPHREY and SYMINGTON, in our opinion, was exemplary. It is true both of them took occasion to wade into the State ASC chairman, but on every occasion they had ample evidence, usually unrefuted by State committeemen who constantly tried to evade rather than to deny.

Woe be unto Missouri farmers unless the ASC floors are scrubbed clean of the mess that now creates a stench that has been smelled all over the land.

Mr. HUMPHREY. Mr. President, I wish the RECORD to show that on January 4—after the Department had access to the sworn testimony supporting the charges in these news articles and the charges made by two Senators—the St. Louis Post-Dispatch reported that Mr. Murray Colbert had been reappointed State ASC chairman.

Mr. President, I want this body to know the type of nonpartisanship being shown in the administration of this ASC program in Missouri.

Mr. President, I ask unanimous consent to have printed at this point in the body of the RECORD an article from the December issue of the Maryville Daily Forum, announcing that this same Mr. Colbert is to be the main speaker at a "Salute-to-Ike" Republican fund-raising banquet tomorrow night, January 20.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MURRAY COLBERT TO SPEAK HERE IN SALUTE TO IKE

Murray Colbert, head of the Missouri Agriculture Stabilization Committee, will be the main speaker at the January 20 "Salute to Ike" Republican fund-raising banquet here, Henderson Tonnies and Leigh Wilson announced today.

The $10-per-plate campaign fund drive is being sponsored by the Nodaway Young Republican Club of which Tonnies is presently chairman. Wilson is chairman of the Nodaway County Republican Central Committee. Reservations will be limited to 200 and may be made with either Tonnies or Wilson.

The dinner will be held at the new Micky's Restaurant here. It also is expected that Republicans from Atchison, Holt, Gentry, and Worth will attend.

Colbert and his State ASC committee were under fire here December 3 when Senator STUART SYMINGTON spoke here at a district Democratic meeting.

The "Salute to Ike" dinners will be held throughout the Nation January 20. St. Louis and Kansas City will hold $100-per-plate fund-raising dinners.

It is understood that the only other one to be held in this area will be held in St. Joseph.

Mr. HUMPHREY. Mr. President, I have seldom encountered such outright disdain for evidence gathered by a subcommittee of this body as has been exhibited by Secretary of Agriculture Benson.

I now ask unanimous consent to have inserted at this point in my remarks a letter which I have sent to Mr. H. L. Manwaring, Deputy Administrator of the Commodity Stabilization Service in the Department of Agriculture, who made the reappointment of Mr. Colbert in the face of the serious charges against him.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JANUARY 12, 1956.

Mr. H. L. MANWARING,
Deputy Administrator, Production Adjustment, Commodity Stabilization Service, Department of Agriculture, Washington, D. C.

DEAR MR. MANWARING: Recently I submitted to the Secretary of Agriculture a report on the hearings held by the Subcommittee of the Senate Agriculture and Forestry Committee on the farmer-elected committee system in Jefferson City, Mo. You will recall, I am sure, that both Senator SYMINGTON and Senator HENNINGS during the past year have brought complaints to the Senate concerning the operation of the ASC committee program in Missouri. Along with my letter to the Secretary, I attached excerpts from the testimony taken at those hearings under oath. I also submitted a

number of questions. Up to this time I have had no reply.

I must say, Mr. Manwaring, that the circumstances surrounding the operation of the State and county ASC committes in Missouri are nothing short of deplorable. As chairman of the subcommittee, entrusted with the responsibility of conducting an inquiry into the ASC committee program, I have attempted to understand and know the rules and regulations prescribed by the Department relating to this committee structure. It is my opinion that those rules and regulations have been flagrantly violated in the State of Missouri.

Furthermore, there is outright political manipulation and open partisan politics on the part of the State chairman of the agriculture stabilization program in Missouri, Mr. Murray C. Colbert. Attached is a photostatic copy of a news item from the Maryville Daily Forum of Maryville, Mo. It speaks for itself. I read in the St. Louis Post Dispatch of January 4 that Mr. Murray Colbert had been reappointed as the State chairman. This reappointment has come about at a time when his office is under investigation by a duly established subcommittee of the Senate. The charges that have been brought against Mr. Colbert by the two United States Senators from his State, along with many elected county committeemen, remain unanswered. In light of these circumstances, I feel compelled to vigorously protest Mr. Colbert's reappointment. More important, I am constrained to say that neither you nor the Secretary of Agriculture have made satisfactory reply to any of the charges or to any of the inquiries submitted by the subcommittee.

I wish to now inform you that you will be asked to testify before our subcommittee and be asked to answer the questions placed before the Secretary. I respectfuly suggest that the appropriate Department officials study the testimony taken at the Jefferson City hearings, carefully analyze and study the questions submitted to the Secretary and respond in written statement immediately.

I have had little or no cooperation from the Department of Agriculture on this subject. I asked that the Department have one of its representatives attend the hearings. The request was rejected. I asked for other information, which finally came to me on the day before the hearings, despite the fact that the request was made 6 weeks prior to the scheduled hearings. There is no plausible excuse for this sort of indifference and lack of cooperation. It can only be interpreted to indicate disrespect and disdain for an official subcommittee of the Senate.

The Secretary of Agriculture in his testimony before the Senate Committee on Agriculture and Forestry, on Thursday, January 12, stated that the soil bank program would be administered by the ASC committee structure. It is imperative, therefore, that the farmer-elected committee system be removed from partisan politics and be free of official coercion and intimidation—both of these unfortunate and regrettable conditions exist in Missouri. There are reports that indicate that similar conditions prevail elsewhere. You, sir, as the Deputy Administrator of the Commodity Stabilization Service, entrusted with the responsibility for the ASC program, have the duty under law and regulations to administer this program in an efficient and nonpartisan manner. I respectfully request that this be done.

Sincerely yours,

HUBERT H. HUMPHREY.

Mr. HUMPHREY. Mr. President, I wish to conclude my statement with reference to the Missouri situation with these remarks:

Last September I asked the cooperation of the Department of Agriculture in conducting hearings. As the Senator delegated by the chairman of the committee to conduct the hearings, I asked the Secretary of Agriculture to help us by assigning at least one member of his legal staff to our subcommittee so that we might really weigh the charges as they were being brought to our attention. I received no cooperation whatsoever. I did not even receive a reply to my letter until about 3 days before the hearings. Almost 2 months elapsed before a reply was forthcoming.

Furthermore, I asked for certain information relating to charges which had been brought by the State chairman against the county officials and against township committeemen, and the replies which had been received. But, Mr. President, I did not receive that information until about 3 or 4 days before the hearings started.

It is exceedingly difficult to do a creditable job when one receives little or no cooperation. I suppose one could tolerate that kind of indifference about maladministration, but, Mr. President, I do not tolerate flagrant violation of the law by a Cabinet official. I charge on this floor that the Secretary of Agriculture and his deputy, Mr. Manwaring, for whom I have had great respect throughout the years, are guilty of violations of law. I charge, furthermore, Mr. President, that they have ignored or, at least, have shown callous indifference to sworn testimony taken at the hearings.

I should like to ask the Secretary how it happens that he can still employ people on the Federal payroll who have been dismissed for a month or 2 months but are still receiving Federal checks.

I want to know whether or not the provisions of the Hatch Act applied to those appointees in the State ASC program; and if they did not, when they were repealed. Furthermore, I want to know if those in authority in the Department of Agriculture put roadblocks in the way of a duly selected and authorized subcommittee which was carrying out a formal request for a formal inquiry or investigation into a matter of great public importance.

Mr. President, there will be more about this. The hearing is not completed as yet.

I did not quite believe the charges which were brought at the time they were presented by the two Senators from Missouri. I thought they must have been very much exaggerated. I thought possibly they might relate to some local political issue. But as I went into the hearing, Mr. President, and witnessed what was going on, and heard the sworn testimony of dozens and dozens of fine farm people, I must say that the two Senators from Missouri were modest, were temperate, and indeed were most fair and considerate. I know that they will be here to give further information as to what has happened.

So without any further ado, I assure the Members of the Senate that the whole subject matter will be thoroughly investigated and aired. I, for one, do not feel that a soil-bank program which will be administered through State ASC committees will be a very good program if this kind of situation continues. If we cannot trust the local county committees, the State committees, and the State chairmen with the program, it will not be possible to make the soil-bank program work.

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded, and the Chair lays before the Senate the unfinished business.

AMENDMENT OF THE NATURAL GAS ACT, AS AMENDED

The Senate resumed the consideration of the bill (S. 1853) to amend the Natural Gas Act, as amended.

Mr. POTTER. Mr. President, as I was on my way to the Senate today to participate in the discussion on the natural gas bill, I was searching my mind for a word which would most aptly describe the situation in which we find ourselves. After much thought, the only word I could think of which truly fits the situation today is the word "ironic."

Yes, indeed, it is ironic that the natural gas bill should be the first major bill scheduled for debate.

I shall explain my reasons for feeling that it is ironic.

For a good many months there has been a considerable amount of attention given to the plight of our farmers, for instance, and of the crying need for immediate action to alleviate their situation, just as soon as Congress reconvened.

If ever there has been general agreement on both sides of the aisle on the need for legislation to correct any given situation, I think certainly there was the agreement that our farmers' condition needed our attention.

I certainly will grant that the means to achieve this end were decidedly different on opposite sides of the aisle, but the end to be achieved was in general agreement—and, of all things, there was agreement on the need that it be done quickly.

I do not believe there is any question that there was also a large area of agreement on the necessity of action in this Chamber on the situation today with respect to our schools.

The overcrowding of existing classrooms, which has been bad in the past, is even worse now and promises to get increasingly critical with each successive month—yes, each week. This issue, too, needs our immediate and undivided attention, if a most deplorable state of affairs is not to be reached.

Here again there is agreement, not just on both sides of the aisle of this Chamber, but also among huge segments of our society.

Millions of our people agree on the need for immediate action to overcome the overcrowding of our schools.

In other words, a very sizable proportion of our total population is asking us to get busy on that job.

And—as if these two issues which I have already mentioned were not sufficient—let us turn also to the pressing highway problem.

Here we have a problem, which not only involves, again, millions of our citizens and major segments of our economy,

but is a problem which involves the very lifeblood of our national transportation system, and perhaps even more importantly our very own national defense.

Although we are at peace today, and the indications are that through the enlightened and progressive leadership of the Eisenhower administration we will be at peace for many years to come, still, can you imagine, Mr. President, what a critical situation we would be in should a national emergency arise?

How tragic it would be if lives were lost because of inadequate transportation facilities, inadequate roads with which to empty the cities of their citizens, inadequate roads to bring food and medical supplies in and out of emergency areas, inadequate roads to move the necessary men and materiel to carry on the defense of our country.

How sad all this would be if we found ourselves confronted with some sort of a war situation or national emergency and then realized that we were not prepared because when things were rosy we relaxed and took it easy and did not prepare for the eventualities of the future.

Again I am sure there would be a great deal of agreement on both sides of the aisle in this Chamber, and across the country, if we were to say that there are many other issues which demand our attention.

The situation of our aged and aging citizens is one which is coming to affect a larger and larger group of people each day.

It, too, is a problem which involves millions of people. It is a problem which demands our attention without unnecessary delay.

We will all agree, I feel sure, that there is a need for adjustments in our social security provisions in order to take care of those who are now inadequately cared for.

We should give our attention to the need for expanding our medical research programs, so as to safeguard and improve the health and welfare of our entire Nation.

Mr. President, I am sure I could name many more issues which are of extreme importance, and I know that my colleagues could name many other issues, as well, all of which demand immediate attention and all of which affect many many people.

And now the second session of the 84th Congress is underway. For only a few days have we been together, and one of the first things brought to our attention is a bill which would amend the Natural Gas Act in such a way as effectively to destroy any control over the price regulation of natural gas.

This bill is brought first to our attention to consider; and if passed, it would be to the great benefit of the natural gas producers.

According to testimony presented to the Committee on Interstate and Foreign Commerce, of which I am a member, the passage of the bill would be to the benefit, at the most, of roughly some 8,000 gas producers altogether.

The point which it is so important to make at this time is that with such a small segment of our population benefitting, it is indeed ironical that the Senate should be considering the natural gas bill at this time.

Is it right that we now say to the farmers, "We are putting you on the back shelf for the time being"?

Is it right that we should say to all the parents and educators, and all others concerned in the improving of our school situation, "We are putting you on the back shelf for the time being"?

Is it right that we should say to those who are so vitally concerned with our highways—our aged and aging people and all others who are interested in major issues at this time—is it right that we should say to all of them, "We are putting you on the back shelf right now so that we can consider a bill which will be of great benefit to a handful of major natural gas producers"?

We are putting millions of people on the back shelf so that we can consider an issue which involves, at the very most, a mere handful of persons or corporations who produce natural gas.

For many weeks I participated as a member of the subcommittee of the Committee on Interstate and Foreign Commerce in the hearings held on this bill. During this time witnesses representing all facets of this problem appeared before the committee to present their testimony.

Not one single producer—I should like to emphasize that—not one single producer afforded himself of the ample opportunity to plead his financial distress.

Not one single producer appeared before the committee to show us the records, to give us his figures, to point out in what way he was suffering financially from the present regulatory situation.

If their situation is as bad as they would like to have us think, why did they not appear to testify? There is a good reason, and I think that reason is quite apparent.

The natural-gas producers feared to appear, to open their books, and present exact figures, because to do so would be to open a Pandora's box of questions, the answers to which would have been embarrassing to their cause, to say the least.

I believe their answers would have disclosed that they are neither poor nor distressed.

I believe their answers would have served only to substantiate the existing evidence that they do not suffer under the existing regulation.

Even if the pending measure had merit, now is not the time to consider it.

I say it is not the interest of our people at large that we are serving when we put all the others on the back shelf and give special treatment to special interests.

How unfortunate it will be if the Members of this Congress place themselves in a position where the people can say we took time out from the needs of the people to give special treatment to special interests. Yes, ironic is the word for it—ironic indeed.

By the way, I think it would be timely to set the record straight on one particular point which has been of considerable personal irritation to me. For several years now it has been a national pastime for a good many members of the Democrat Party to openly accuse the members of the Republican Party of representing the interests of big business, or infer that they do.

The fallacy of such an accusation is readily apparent to anyone, and yet today we are presented with a bill, sponsored by my distinguished colleagues on the Democrat side of the aisle, which does nothing but give special treatment to a special segment of big business.

This must be, indeed, an awkward and uncomfortable posture for them to assume and to maintain.

Let us examine the record and trace the historical background of the natural-gas industry.

In 1938, because of a positive need, the Natural Gas Act was enacted and the Federal Power Commission was given the jurisdiction to regulate the rates charged by companies who were defined as natural gas companies because their sale or transportation of natural gas in interstate commerce was affected with the public interest. These rates were applied to all sales of natural gas for resale.

At the time of the passage of the Natural Gas Act some natural gas was moving into the streams of interstate commerce; but it was never dreamed or ever visualized that in 17 years tens of thousands of miles of pipeline highways would be constructed to every section of the United States.

No segment of American industry would have prophesied that in the same 17-year period $6 billion would have been invested by the distributing companies and municipalities in gas systems to serve a factory worker, a housewife, or an industry, wherever it might be located.

A man would have been called a ridiculous dreamer if he had stated in 1938 that by 1955 $4 billion would have been invested in pipelines to transport such volumes of natural gas that it has become basic fuel in every segment of our American economy.

In 1938, natural gas, by and large, was a wasted byproduct in the search for oil.

It was burned at the wellhead because it had no utility to the producer except in such local uses where it was economic to construct pipelines for limited consumption.

Purchase contracts could be made for unlimited supplies at ridiculously low figures, with the only obligation on the purchaser to find some means of transporting it from the wellhead to the user at a cost by which he could make a reasonable return. Even the most fantastic prophet never dreamed that in 17 years over 29 million families in the United States would be depending upon gas in the same way and to the same extent that they depend upon electricity, telephone, water, and public transportation systems for their economic welfare.

As I have stated, the Natural Gas Act of 1938 was enacted because of a positive need. The demand for Federal regulation of interstate movements of natural gas came principally from States and cities—basically the consumers.

They found that their efforts to control rates were often thwarted by lack of authority over companies transport-

ing gas from other States or over the basic rates charged for such gas applied on local distribution.

Only the Federal Government could reach into these interstate transactions in which companies controlling a large proportion of the gas supply escaped regulation.

The Natural Gas Act was designed to close that gap, and in general it confers upon the Federal Power Commission the same regulatory powers over natural gas in interstate commerce that it was already exercising over interstate movements of electricity.

Mr. President, as we have seen, the Natural Gas Act of 1938 was enacted at a time when the volume of interstate gas was fairly negligible as compared with the tremendous volume of natural gas flowing in interstate commerce as of today. Above and beyond the gigantic rise in the amounts of natural gas being transported in interstate commerce today, there are other compelling reasons why all segments of the natural gas industry should come under the regulatory activities of the Federal Power Commission.

In the past 10 years, or more, a number of insidious practices have been initiated with respect to contracts drawn up between the pipeline companies and the producers which have had a most adverse effect pricewise upon the consumer. In this respect, I refer specifically to the widespread use of escalation clauses in the contracts for sale of gas to the pipeline companies. These clauses are designed to produce automatic price increases—some of them several times their original starting rate.

There are other types of clauses which are most insidious, for example, the two-party favored-nation clause. Under this clause, the specified price in a long-term, fixed contract is increased in the event the buying pipeline company shall pay a higher price to another producer for gas in the same field or in any area specified in the contract.

Let me now describe the third party favored-nation clause, which is also highly questionable. Under this clause, the price is increased in the event an unrelated third party shall pay a higher price to another producer for gas in the same field or in an area specified in the contract.

Mr. President, I think that we must all agree that the poor consumer is in a most precarious situation when the acts of a second or a third unrelated party can so materially affect the price of natural gas.

If the regulation of natural gas was necessary in 1938, it is mandatory today.

Who gains from the bill? When there is introduced a bill of this character, which upsets the historic methods by which the rates of public utilities are determined, we may well assume that someone stands to gain by such a radical change. And it certainly follows logically that someone will lose by such a radical change.

It seems to me that it has been made abundantly clear, by the testimony before the Committee on Interstate and Foreign Commerce, as to who will gain from the passage of the pending bill, and it seems to me abundantly clear that the evidence shows that substantial increases in the price of natural gas are inevitable if the bill is passed.

Let us now examine the facts. First of all, just how much of this natural gas do we have?

How great is this recoverable reserve of natural gas, that we are told is apt to dry up and not be available for interstate commerce if this bill is not passed? The proven recoverable reserve of natural gas is presently estimated at 211 trillion cubic feet; and it is estimated that on the basis of the present rate of consumption, these reserves have a 23 year life. Think of it! 211 trillion cubic feet of gas now available—enough gas to last for 23 years if not another single cubic foot of gas were discovered. These are accepted facts which we set forth in our minority views, in connection with the report of the Committee on Interstate and Foreign Commerce, printed last July.

We have already stated that there is no question in our mind but that natural gas prices will increase as a result of the enactment of this bill, if it is enacted. It is axiomatic that continued increases in the wellhead price will result in increasing the value of the reserves of natural gas. Now we are getting close to the answer to the question as to just who will be benefited by the price increases resulting from the passage of this bill.

Some very interesting figures were revealed in the hearings on this bill. These figures show that two companies lead all other producers in the estimated reserves of natural gas.

One company possesses estimated reserves of 16 trillion cubic feet. A second company possesses reserves etsimated at 13 trillion cubic feet. The two companies together thereby control an estimated 29 trillion cubic feet—or approximately one-seventh of the total natural gas reserves of the entire United States.

Anyone who is familiar with the transcript of the hearings before committee will clearly recall that various witnesses testified that the price of natural gas would increase anywhere from the price of 20 cents per thousand cubic feet to 30 cents per thousand cubic feet. As we pointed out in our minority views, the principal economic witness for the producers themselves expressed the opinion that natural gas at double the 1953 price of about 10 cents per thousand cubic feet was a bargain.

All right, then; let us take them at their own figures. Or let us be more than conservative, and see what would happen with an increase of only 5 cents per thousand cubic feet. Take, for instance, the reserves controlled by the two major companies of which we have already spoken, the two companies which control approximately one-seventh of the total natural gas reserves of the entire United States. Each 5 cents per thousand cubic feet added to field prices will increase the value of the combined reserves of these two companies by $1,450,000,000. Think of it; $1,450,000,000 as a result of a price increase of just 5 cents per thousand cubic feet added to the field prices.

Carried a step further, if the Fulbright bill creates a situation in which prices are increased by 15 cents per thousand cubic feet, these two companies alone stand to profit by $4,350,000,000.

Lest anyone think we are singling out two specific producers for unfair consideration, let us broaden our investigation just a little.

A study by the Federal Power Commission itself shows that only 29 major producers sold approximately 63 percent of the interstate gas purchased in the field by pipeline companies in 1953. So, by and large, we are not talking about the approximately 8,000 producers which the proponents of the bill would indicate are in need of help. We are really talking about the 29 producers who sold approximately 63 percent of the interstate gas purchased in the field by the pipeline companies in 1953.

But throw them all in together—even the 8,000 producers; balance that, if you will, Mr. President, against the millions of consumers in this country whose interests need protection.

We have been talking about 2 major producers, and also about 29 of the major producers. We have also talked about the total of approximately 8,000 producers. Now let us look at the other side of the coin. When someone gains, someone else loses. Who is going to lose?

Any price increase in the cost of natural gas will inevitably follow the gas right up the pipeline, until finally the extra charge comes out of the consumer's pocket. The consumer himself will soon realize who is the loser. He will see it clearly spelled out for him in black and white on the gas bill he receives each month.

Mr. Charles S. Rhyne, general counsel of the National Institute of Municipal Law Officers, stated in an article which appeared in the Alabama Municipal Journal for October 1955, that if Congress passes the Fulbright bill the estimated increased cost to each consumer, as computed by informed experts, will be from $40 to $50 or more a year. Mr. Rhyne stated further:

> The Natural Gas Act grew out of an investigation by the Federal Trade Commission which revealed price gouging and exploitation of consumers by sellers of natural gas in interstate commerce. The Supreme Court of the United States had previously held that neither the State of origin nor the State of destination could stop this gouging and exploitation by controlling the rates charged by these sellers in interstate commerce.
>
> The Court held that under the Constitution the Federal Government has exclusive jurisdiction in this field. The act was thus adopted to bridge this gap or hiatus in Federal-State jurisdiction by providing Federal protection for consumers which the States may not constitutionally provide.

Mr. Rhyne continued:

> The Harris-Fulbright bill removes the jurisdiction of the Federal Power Commission over these sales for resale by independent producers, effectively scuttles the Natural Gas Act and returns consumers to the very uncontrolled price gouging and exploitation which the Natural Gas Act was adopted to end.

Mr. Rhyne pointed out:

> It is a basic tenet of our free-enterprise system that the helpless little fellow must

be protected from those in a position to exploit him. We have antitrust laws, laws requiring fair and truthful advertising, a minimum wage law, and a whole series of other regulatory acts designed for this express purpose. The Natural Gas Act, with its primary aim of preventing exploitation of consumers fits clearly within the basic tenets of our free-enterprise system and should not be changed so as to place these helpless little people at the mercy of sellers of natural gas in interstate commerce. It must be kept in mind that this is regulation of an essential public service and not an unreasonable interference with private business or private ownership of business.

One of the reasons why I am so vitally interested in this matter is that my own State of Michigan is one of the leading consumers of natural gas. In 1953, the helpless gas consumers, who are tied to the interstate pipelines by bonds of steel pipe, and are captives of those who supply them with this essential fuel, purchased some 167 billion cubic feet.

Taking into consideration all the States in this country who are concerned, we find that this 5-cent increase in the price per thousand cubic feet of gas at the wellhead would result in an annual cost to the people of the United States of nearly $269 million.

At this time, I should like to have the complete compilation of these figures, which were provided by the Federal Power Commission, printed in the RECORD.

There being no objection, the recapitulation was ordered to be printed in the RECORD, as follows:

Effect of increased field prices by States based on 1953 utility sales of natural gas [1]

	Total sales (thousand cubic feet)	Annual cost of field price increases per thousand cubic feet		
		5 cents	10 cents	15 cents
Connecticut	4, 260, 000	$213, 000	$426, 000	$639, 000
Massachusetts	15, 660, 000	783, 000	1, 566, 000	2, 349, 000
New Hampshire	850, 000	42, 500	85, 000	127, 500
Rhode Island	580, 000	29, 000	58, 000	87, 000
New Jersey	13, 900, 000	695, 000	1, 390, 000	2, 085, 000
New York	116, 750, 000	5, 837, 500	11, 675, 000	17, 512, 500
Pennsylvania	275, 340, 000	13, 767, 000	27, 534, 000	41, 301, 000
Illinois	232, 890, 000	11, 644, 500	23, 289, 000	34, 933, 500
Indiana	69, 350, 000	3, 467, 500	6, 935, 000	10, 402, 500
Michigan	167, 460, 000	8, 373, 000	16, 746, 000	25, 119, 000
Ohio	431, 890, 000	21, 594, 500	43, 189, 000	64, 783, 500
Wisconsin	34, 410, 000	1, 720, 500	3, 441, 000	5, 161, 500
Iowa	71, 820, 000	3, 591, 000	7, 182, 000	10, 773, 000
Kansas	222, 240, 000	11, 112, 000	22, 224, 000	33, 336, 000
Minnesota	91, 220, 000	4, 561, 000	9, 122, 000	13, 683, 000
Missouri	170, 500, 000	8, 525, 000	17, 050, 000	25, 575, 000
Nebraska	78, 330, 000	3, 916, 500	7, 833, 000	11, 749, 500
North Dakota	3, 650, 000	182, 500	365, 000	547, 500
South Dakota	14, 070, 000	703, 500	1, 407, 000	2, 110, 500
District of Columbia	13, 460, 000	673, 000	1, 346, 000	2, 019, 000
Florida	19, 190, 000	959, 500	1, 919, 000	2, 878, 500
Georgia	119, 440, 000	5, 972, 000	11, 944, 000	17, 916, 000
Maryland	29, 850, 000	1, 492, 500	2, 985, 000	4, 477, 500
North Carolina	4, 390, 000	219, 500	439, 000	658, 500
South Carolina	7, 790, 000	389, 500	779, 000	1, 168, 500
Virginia	28, 620, 000	1, 431, 000	2, 862, 000	4, 293, 000
West Virginia	105, 970, 000	5, 298, 500	10, 597, 000	15, 895, 500
Alabama	131, 920, 000	6, 596, 000	13, 192, 000	19, 788, 000
Kentucky	69, 510, 000	3, 475, 500	6, 951, 000	10, 426, 500
Mississippi	94, 780, 000	4, 739, 000	9, 478, 000	14. 217, 000
Tennessee	101, 750, 000	5, 087, 500	10, 175, 000	15, 262, 500
Arkansas	145, 750, 000	7, 287, 500	14, 575, 000	21, 862, 500
Louisiana	364, 530, 000	18, 226, 500	36, 453, 000	54, 679, 500
Oklahoma	173, 820, 000	8, 691, 000	17, 382, 000	26, 073, 000
Texas	890, 990, 000	44, 549, 500	89, 099, 000	133, 648, 500
Arizona	63, 810, 000	3, 190, 500	6, 381, 000	9, 571, 500
Colorado	109, 500, 000	5, 475, 000	10, 950, 000	16, 425, 000
Montana	36, 330, 000	1, 816, 500	3, 633, 000	5, 449, 500
New Mexico	63, 800, 000	3, 190, 000	6, 380, 000	9, 570, 000
Utah	36, 050, 000	1, 802, 500	3, 605, 000	5, 407, 500
Wyoming	20, 270, 000	1, 013, 500	2, 027, 000	3, 040, 500
California	672, 740, 000	33, 637, 000	67, 274, 000	100, 911, 000
United States	5, 376, 670, 000	268, 833, 500	537, 667, 000	806, 500, 500

[1] The following States had no utility natural gas sales in 1953: Maine, Vermont, Delaware, Idaho, Nevada, Oregon, Washington.

Source: Federal Power Commission.

Mr. POTTER. In 1954 there were in Michigan 1,229,000 consumers of natural and mixed natural and manufactured gas.

They consumed a total of 186,571,000,000 cubic feet of natural gas.

Each 1 cent of increase in producer prices would cost them a total of $1,867,500.

The producers have been saying that 25 cents per 1,000 cubic feet is the price they are heading for.

This is to be compared with a present average price of 10 cents.

The producers are well on the way to realize their goal—as the new contracts are being written with prices of 21 cents and 22 cents per 1,000 cubic feet.

When the 25-cent level is reached, and spreads, by reason of the escalation clause, to become the average price, this 15-cent increase will cost the consumers of Michigan a total of $28,012,000.

Some further very interesting statistics have been provided for us by Mr. James H. Lee, assistant corporation counsel of the city of Detroit, Mich., in charge of public-utility matters, who appeared before the Interstate and Foreign Commerce Committee. Mr. Lee is also chairman of the Committee on Electric, Gas, and Telephone Rates of the National Institute of Municipal Law Officers.

Mr. Lee cites these reasons for opposing the Fulbright bill:

1. The Fulbright bill in effect takes an estimated $200 to $800 million per year out of the pockets of approximately 60 million consumers and funnels these millions chiefly into the coffers of approximately 100 big oil and gas companies.

This would be a congressional giveaway, not of public funds but of gas consumers' money. Oil and gas companies are not here pleading need, or lack of profits, under the existing provisions of the Natural Gas Act. They are rich and growing richer, in part due to their congressionally granted 27½-percent depletion tax exemption. The additional exemption or windfall proposed by the Fulbright bill at consumer expense is inequitable, unjust, and not in the public interest.

2. Natural gas customers are captive customers. The producer, transporter, distributor, and ultimate customer are physically linked together. Natural gas is unique in that it can only be transported economically through a pipeline. The freedom of action, or choice of several suppliers, found in the buying and selling of commodities and goods in the open market is not found in the sale of natural gas in the field, at the city gate, or at the consumer's meter. All other captive customers like telephone users, electric consumers, water consumers, etc., are under our system protected against price gouging. The statutory provisions which the Fulbright bill scuttles are the only provisions that can protect the captive gas consumer.

3. Natural gas consumers are helpless from an economic standpoint to protect themselves against price exploitation by the giant oil and gas companies who dominate the natural gas market—too few control too much of the market for it to be competitive—and the Supreme Court of the United States has found that the primary purpose of the Natural Gas Act is "to protect consumers against exploitation at the hands of natural gas companies." When properly interpreted and administered, this act has provided just and reasonable rates and Congress should not now change the act as Senator FULBRIGHT proposes to allow such exploitation.

4. If the Fulbright bill is adopted, prices will be raised to exorbitant levels by use of escalator clauses, most-favored nation clauses, spiral clauses, and unjust and unreasonable field-price formulas. And no effective power to protect the public interest will exist.

5. The Fulbright bill recreates the very evils—the exploitation of consumers—which the present act is intended to eliminate, as it allows big oil and gas companies who so dominate the field as to have monopoly powers, to extort unreasonable and exorbitant prices for an essential public service by revoking the power under the Natural Gas Act to require "just and reasonable" prices.

6. Under the Natural Gas Act the industry has prospered greatly, is now gigantic in size, serving millions of consumers in several hundred cities. The effect of natural gas on the national economy is tremendous. The unique characteristics of the business, the scarcity and monopoly of supply, along with monopoly of transportation and absolute dependence of consumers upon one source, cause the natural-gas industry to be affected with a compelling public interest which Federal regulation must protect or no protection exists. The few-pennies-for-producers argument advanced by proponents of the Fulbright bill is unsound, illogical, and contrary to every basic principle of regulation of business affected with a public interest under our system of free enterprise.

7. The Natural Gas Act was passed to close, and did, in fact, close, the constitutional regulatory gap which denied the

States the right to regulate sales of natural gas when made in interstate commerce. No one can dispute that such sales will continue to be interstate sales. And it is unchallengeable that such sales can only be regulated under the Federal Constitution by the Federal Government. Should the Fulbright bill be passed, no regulation of such sales will exist, this gap will be reopened, and a twilight zone recreated wherein consumers will be at the mercy of unregulated producers with runaway, uncheckable prices certain to result. The continuous pipeline chain from producer to captive consumer can be no stronger than its weakest link—if control over producer sales is ended, the whole consumer protection chain is effectively broken forever.

8. Emasculation of the Natural Gas Act as provided by the Fulbright bill thus means no effective protection at all for natural-gas consumers as the States are constitutionally prohibited from protecting consumers on interstate sales prices and intrastate controls are impractical—ineffective and futile as the States must force onto consumers without question every producer price increase no matter how exorbitant and unreasonable it may be.

9. Due to the lack of producer competition in the field, there is a monopoly "sellers" market, competition is only between buyers—not sellers with buyers outbidding each other for this scarce and much needed produce. As illustrative of what the elimination of the "just and reasonable" rate requirement of the Natural Gas Act by the Fulbright bill means, one need only consider the tremendous increase in producer prices which has occurred in recent years while the Federal Power Commission has stood idly by, under its selfdenial of jurisdiction which the Phillips decision reversed. The producer price to pipelines has increased an average of 84 percent since 1947 with some recent contracts jumping from 200 to 300 percent in the past two years—about 5 cents in 1947–49, 9 cents in 1953, and recently 20 cents in Louisiana. As another example, one pipeline under the "field price" formula espoused by the Fulbright bill has "written up" the value of its natural-gas reserves fifteen thousand percent. Power to call a halt to this tremendous upward price spiral simply must exist rather than be destroyed as the Fulbright bill proposes.

10. The Natural Gas Act's provisions requiring the Federal Power Commission to fix "just and reasonable rates" is fair to both producer and consumer and should not be eliminated so as to permit producers and gatherers to charge unjust and unreasonable prices.

11. Consumers relying upon the congressional promise contained in the Natural Gas Act of 1938 of "just and reasonable" rates have spent approximately $10 billion for gas-burning equipment, thus supporting the nationwide expansion of the natural-gas industry in recent years. Now that consumers have acted in reliance upon this congressional promise, it would be highly inequitable for the Congress to withdraw that promise by adopting the Fulbright bill, thus causing millions of dollars of producer rate increases to descend upon them and destroy this consumer investment if forced to turn to other fuels. Natural gas is an essential public service—not a luxury as Senator FULBRIGHT contends. If the consumer protections are thus scuttled by the Congress, no effective regulation will exist and producer price increases—already totaling millions—will "automatically" go into effect and disaster to his pocketbook will be the consumer's lot.

Mr. PURTELL. Mr. President, will the Senator yield for a question?

Mr. POTTER. I would prefer not to yield at this time. I shall be glad to yield after I have concluded my statement.

At this juncture I should like to read a portion of the statement made by Mr. Dale H. Fillmore, corporation counsel for the city of Dearborn, Mich., before our Committee on Interstate and Foreign Commerce in opposition to the bill at hand. He said:

In support of and as reasons for such opposition, I will set forth the following:

Approximately 120,000 small consumers of natural gas in our city will be at the mercy of the large producers of natural gas to charge whatever the market will bear if the proposed legislation is adopted. The control by the Federal Power Commission of the price of gas at the wellhead will be wiped out, and gas will cost any sum the buyers agree to pay for it. This cost will be included as an operating expense in the price to the ultimate consumer.

Such increased prices will mean windfall profits to the producers, resulting in a huge giveaway by the Congress, not of public money but of the consumers' money. Such profits have been conservatively estimated to be between $200 million to $800 million annually, depending on how much the wellhead price is raised.

While there are somewhere between 4,000 and 8,000 small independent producers of natural gas which enters interstate carriers, approximately four-fifths of the gas in interstate commerce is produced by the so-called independent producers who would be exempt from regulation, if the Fulbright bill is made law. Of this number 7 producers sell one-third of the total and approximately 100 producers sell more than 85 percent of the total. A few large producers, mostly major oil companies, make most of the sales to pipeline companies.

Ultimate consumers of natural gas will not be protected against price increases by the so-called long-term arm's-length contracts between the pipeline companies and the independent producers because most of such contracts contain various kinds of escalator clauses as well as providing for renegotiation. Unless such price increases are based on a reasonable cost price with regulation by the Federal Power Commission, the consumers will have to pay whatever the traffic will bear.

During the last 3 or 4 years, the Federal Power Commission has had a great many applications by pipeline companies filed with it for increase in their rates at what they call the fair field price. These increases have substantially all been based on the fair field price of gas as compared with the reasonable cost thereof.

Federal regulation at the wellhead is necessary because natural gas is a commodity different than any other commodity in interstate commerce, it can be transported practically only through pipelines which are constructed at great expense to the pipeline companies. The result is virtually a monopoly existing in the pipeline companies which requires reasonable regulation. Natural gas in that respect differs from coal, oil, grain, and almost any other commodity handled in commerce.

Mr. President, I certainly would not want anyone to labor under the impression that the proposed term "reasonable market price" carries any real meaning. Actually, it is meaningless. It has no defined limits. It is as wide open as "all out doors." Now let me explain the bill.

The pending bill provides that if a pipeline seeks a rate increase because of any new or renegotiated gas purchase contract from a person other than an affiliate, the pipeline may include as part of its cost of service, that is, the pipeline may pass along to the consumers, only such part of the contract price as does not exceed the "reasonable market price" of the gas.

While there is no definition of "reasonable market price," the bill says that the Commission should consider among other things whether the price has been competitively arrived at, the effect of the contract upon the assurance of supply, "and the reasonableness of the provisions of the contract as they relate to existing or future prices."

This provision may sound plausible, but when examined in light of the facts of the gas business, it will be seen to give no protection whatsoever to the public.

Take first a new contract.

The standard of reasonable market price is novel in the law, has no historical background, and is not supported in the bill by any positive set of criteria.

Mr. President, it seems to mean whatever the traffic will bear, which is a shocking standard to use in fixing a price for 29 million gas consumers.

All the pipeline would have to show would be that the initial price to be paid under the contract would be the going price for recent gas sales contracts.

The standard of reasonable market price is, therefore, a rubber yardstick, continuously being stretched through the close control exercised by the major producers.

The notion that the contract is made at arm's length bargaining is a mistaken one, because one party to the contract—the pipeline—is simply a middleman who will pass the price along to the distributing companies and they to the ultimate customers.

If it is arm's length bargaining, one side, the consumer, is represented by somebody else's arms.

Furthermore, this provision gives the public no protection against profiteering by the gas producers.

As to renegotiated contracts, this usually refers to the situation where the producer will sell a larger quantity of gas to the pipeline only if the supposedly firm price on gas already under contract is increased.

The provision, as applied to renegotiated contracts, is subject to all the objections as in the case of new contracts, and to the additional objection that renegotiated contracts should be treated the same as escalation clauses.

As we stated in the minority views:

In place of the simple direct language of section 2 exempting production from regulation, section 3, which purports to protect the consumer, is complicated and indefinite.

It provides a new and untried set of vague standards for the fixing of the price of natural gas at the source.

These standards are in addition to—and in conflict with—existing regulatory provisions of the act, which this proposed legislation does not change.

Their legal meaning and interpretation are in doubt, and it will be many years before the courts have settled the many questions that are bound to arise as to the meaning and effect of the proposed legislation.

Section 3 does not provide any effective criteria, and such semblance of protection as it may purport to give to the consumer will not stop the sharp increases in the price of natural gas at the wellhead.

Section 3 of the bill provides an indirect procedure whereby producers are wholly relieved of any responsibility with respect to the fixing of a just and reasonable price.

In fact, they are legislatively given a "hunting license" to seek the highest price the market will bear.

The section sets up a "reasonable market price" standard as the measure of cost which a pipeline company may charge in fixing its rate for the resale of natural gas.

In determining the reasonable market price, the Commission is to consider, "among other things," whether such price has been competitively arrived at, the effect of the contract upon the assurance of supply, and the reasonableness of the provisions as they relate to existing or future prices.

Another provision of the bill would empower the Commission to give an advance opinion as to whether the prices under a new gas purchase contract are the "reasonable market prices." After such determination the pipeline would be able to pass along to the consumers only such part of the contract price as did not exceed the reasonable market price.

Aside from the fact that this section would greatly delay the decisions of the Federal Power Commission in both certificate and rate cases, both the new subsection (b) and subsection (c) raise a difficult constitutional question:

In the unlikely event that these sections would actually operate in a particular case so as to permit the pipeline to pass along to the consumers only a portion of the price paid to the producer, the pipeline would have to absorb some of its actual costs of purchased gas.

It is doubtful that the Congress could constitutionally so require, as a utility must be able to recoup its legitimate costs if it is to be able to stay in business and not have its property confiscated.

Under another provision of the bill when the Commission has fixed the reasonable market price—under the new subsection (d)—the natural-gas company shall be obligated to pay to the producer only such part of the increase as does not exceed the reasonable market price.

The use of the rubber yardstick of "reasonable market price" as a supposed brake on the operation of escalation clauses makes these provisions subject to the same objection as in the case of new and renegotiated contracts.

All the pipeline company would have to show would be that the escalated price was the going price currently being paid.

But since the prices currently being paid by others are the events which touch off these escalation clauses, it is practically an automatic result that the escalated price is the "reasonable market price."

Therefore, while this bill gives an impression of consumer protection, actually this is a clever fiction and there is no protection whatsoever.

As stated in the minority views, the sponsors of the proposed legislation refer to the reasonable market price as the field price; in other words, the best price obtainable in the field where the gas is produced.

They defend the term on the ground that there is a balanced competitive market in natural gas fields which in the absence of regulation will provide reasonable and stable prices.

This thesis presupposes a price controlled by the supply-demand relationship.

It completely ignores the seller's market which has been developing during the past several years as pipeline companies in their search for natural gas have bid up the price.

The resource is exhaustible.

The demand is increasing.

New discoveries for 1954 did not keep pace with annual consumption.

The picture for the future is clouded. There is no evidence whatsoever that this seller's market will improve.

Under these conditions it is evident the criteria of competition in the field furnishes an illusory standard as a basis for regulating prices.

The other two criteria, namely, assurance of supply and reasonableness of the provisions of the contract, cannot be construed to put a brake on the upward trend of field prices set in a seller's market.

On the contrary these criteria, properly considered, actually give legislative sanction to the acceleration of the present rate of increase which characterizes the market.

A pertinent example of the total lack of competition is afforded by the experience of the Iroquois Gas Corp. negotiating for additional supplies in the Sheridan field in Texas in November 1954.

As shown by the record in Docket No. G-1969 before the Federal Power Commission, the producers refused to quote prices and demanded that Iroquois, together with other customers, submit blind bids.

In order to get the gas, Iroquois bid 16.5 cents per thousand cubic feet—a price then substantially above the market.

The shift to a seller's market was stressed by many industry witnesses engaged in the local distribution of gas.

In the past several of them had supported legislation exempting producers because of the existence of real competition in the field.

Under the present noncompetitive conditions the same experts oppose the instant legislation because it does not provide reasonable standards that will operate to fix a fair price for natural gas.

The majority report in analyzing the criteria of subsection (b) of section 3 and other comparable provisions to be considered in fixing the reasonable market price, attempts to accord to the phrase "among other things" a specific definitive status that would protect the consumer. All the factors the majority take into consideration relate to the quality of the gas, the character of the field in which produced, the historic trend of prices, and incentives for exploration.

The term as defined by the majority in their report does not expressly or inferentially authorize the Commission to take into account the factors necessary properly to arrive at a just and reasonable price or to fix even the maximum price in the various fields—authority which it now has under the Natural Gas Act.

The standard of "reasonable market price" is inflationary by definition.

Mr. President, the trend of prices in new gas-purchase contracts has been sharply upward all over the United States.

Consequently, new contracts are constantly being entered into at price levels substantially greater than prevailed 5 or 10 years ago.

If the escalation clause in an old contract is brought before the Federal Power Commission for review as provided for in subsection (d) and (e) of section 3, the Commission would approve the step-up in price in the great majority of cases.

This is because the old contract price, even as increased by escalation, would still be equal to, or less than, the current prices in new contracts.

To say the least, it would be very difficult for the Commission to prove that a new price, escalated up to the level of the most recent price contracts negotiated in the field, is not a reasonable market price.

Thus, the vaunted protection for consumers against the operation of the malignant favored-nations escalation clauses in existing contracts becomes totally illusory.

The fact is that the bill legislatively sanctions the use of all types of escalation clauses.

None of them are prohibited.

Under this bill the Commission would have no direct authority over them. Its power is limited solely to an advisory finding that the escalated price does not exceed the reasonable market price.

Certainly if the sponsors of this bill desire to protect the consumer against these pernicious clauses, it would seem logical for them to so draft the law as to effectively prohibit the use of escalator clauses—clauses which the majority report recognizes must be effectively controlled if the consumer is to be protected against unreasonable increases in pipeline rates as a result of the price increases due to the automatic operation of escalation clauses.

As we have demonstrated, the present bill does not offer the consumer even the minimum of protection to which the majority say he is entitled.

Another contention of the proponents of this bill is that regulation under the existing law will tend to kill the incentive for the discovery of gas and thus diminish our reserves.

Most dire predictions have been made. They claim diminished reserves will result in higher prices to the consumer.

The plain truth is—and it is a matter of common knowledge—that few producers go looking for natural gas; most natural gas is found incidental to the search for oil.

The hearings on the bill will show that General Thompson, of the Texas Railroad Commission, in testifying in support of the bill, stated:

Nearly all gas discoveries, in my experience, have been found incident to the search for oil.

The search for oil will continue simply because of the profits to be made in the business.

Above and beyond this is the fact that the Federal Power Commission historically has always exercised its regulatory power toward the end that a fair and equitable return will be made on an investment.

Regulation under the existing law does not contemplate in any manner a hardship upon the natural-gas producer.

As a matter of fact, the law as it now exists is a safeguard to the producers and, at the same time, to the consumers.

The proponents of the bill have stated emphatically that it is not a decontrol measure. I must take issue with them on that contention.

The effect of the bill will be to rob the Federal Power Commission of any real regulatory power in the interests of the consumer.

However, I am happy to find that the advocates of the bill recognize and do not deny the constitutional authority of the Federal Government to regulate interstate commerce.

Actually what the bill does is to seem to offer protection to the consumer, whereas, in fact, no such protection is to be found.

The bill is nothing more than a gimmick to substitute ineffective regulatory authority, not in the interests of the consumer, in the place of effective regulatory power, which we now have, and which is in the best interests of the consumer.

Historically, the gas-distributing companies have been regulated in the public interest by State and city regulatory bodies.

Pipeline companies which transmit the natural gas to the consuming areas are regulated under the Natural Gas Act of 1938. Under existing law the producers of natural gas flowing in interstate commerce are subject to the regulation of the Federal Power Commission.

In the interest of the public, regulation of all three segments of the industry is necessary and, in fact, mandatory.

Should the Fulbright bill be passed, one segment of the natural-gas industry would be removed from the regulatory power of the Federal Power Commission.

Under these circumstances, to what avail would be the regulation exercised by the various State public service commissions? To what avail would be regulation by the FPC of the pipeline companies?

The answer is indeed obvious: Such regulation would be to no avail, because the remaining segment of the industry would not be subject to any effective regulation.

It is like plugging two holes in a dike and leaving the third open. What a dangerous thing to do.

Mr. President, I have paid careful attention to the arguments of the proponents of the bill, and I must say that I do not find the arguments persuasive.

There is one argument in particular which is made by the proponents. Although it starts from a sound basic premise, which I heartily support, it applies that premise backward and leads to a false conclusion.

I am referring to the argument that the great principle of free enterprise, which we support, would somehow be served by the passage of the bill.

I believe this argument will not stand up under fair analysis. Indeed, it is invalid

In the first place, there is a false notion that the principles of free enterprise are inconsistent with the regulation of a business which is affected with a public interest.

The representatives of the $25 billion electric utility business would be very much surprised to hear that they are not engaged in free private enterprise.

So would the representatives of the $15 billion gas utility industry.

So would the million and a quarter stockholders of the American Telephone & Telegraph Co., a $12 billion system that is regulated in both its State and Federal aspects, and yet certainly regards itself as engaged in free private enterprise.

So the first point I want to make—and it seems obvious when one stops to think about it—is that the mere fact that a business so affects the public interest that a degree of governmental regulation is needed does not mean that that business is lost to the cause of free enterprise.

"Free" enterprise does not mean "hog-wild," irresponsible enterprise.

The second point I wish to make is that I believe I detect an incorrect notion as to the basis for the regulation of a business.

It seems to be implied by some of the proponents of the bill that only monopolies may properly be regulated. This suggestion is historically incorrect. It does not reflect good law or good government, and it is not good public policy.

In my opinion, Mr. President, the real basis for regulation of a business is the public interest.

It is true that when that business is a monopoly there is generally a valid reason why some of its practices should be regulated in the public interest.

It is true that when there is a monopoly, regulation is generally needed to prevent the business from determining the prices at which it sells its product to the public, for the forces of competition are not operating to protect the public. But it is simply not true that only a monopoly requires public regulation.

The real test is whether the industry, even though not a monopoly, is so close to the necessities of the public and is engaging in practices which are potentially so harmful to the public that the public interest requires regulation.

I believe in having a minimum of regulation.

I do not believe in regulation for its own sake. But when I am convinced that the public interest warrants regulation I believe that it is my duty to put the interests of the public first. This is free enterprise's best protection.

Let me give some examples of industries that are not monopolies, but which have required a substantial degree of regulation because of the public interest.

One such industry is the trucking industry.

inter-state trucking is far from being Interstate Commerce Commission, under the Motor Carriers Act, although interestate trucking is far from being a monopoly.

Intra-state trucking is regulated by the various States, although it is far from being a monopoly.

Still another example will be found in the milk business. Despite the considerable competition at all levels of that industry, the public interest has been found to require its regulation.

Mr. President, the first point I made was that free enterprise is not threatened merely because regulation of some of its practices is found necessary.

The second point was that the basis for regulation is not the absence of competition or the presence of a monopoly, but rather the requirements of the public interest.

My third point is that there is no substance to the argument that regulation may be proper respecting a service to the public, but not with respect to a natural resource that is sold to the public.

What would the proponents of the bill say about the water utility business? That industry, like the gas industry, sells its product to the public at regulated rates. Also, like the gas industry, it transports its product under regulation. Also, like the gas industry, it obtains its product from the earth.

Water, like natural gas, is one of our natural resources—whether it be taken from a well, or a stream, or a lake.

Hydroelectric power is another natural resource that is sold to the public and is regulated right back to the value of the falling water and of the dams containing it.

Thus it is not true that there is anything novel about the regulation of the business of extracting a natural resource from the earth for transmission and sale to the public.

If any further example were needed, one could refer to the natural gas producing industry itself.

Regulation of natural gas production by the States, before the passage of the Natural Gas Act, goes back several generations—confined, of course, to the intrastate natural gas business.

For the reasons I have stated, Mr. President, I ask two questions in arriving at a point of view on this bill. The first question is: Does the business deal with a public necessity?

And the answer is clearly "Yes."

The second question is: Do the practices engaged in by this business threaten the public interest? Although I am reluctant to conclude that the practices of any American industry threaten the public interest, I think that the record made before our committee forces me to come to that conclusion.

Mr. President, I conclude with a final word on the subject of free enterprise.

I believe that where the public interest requires regulation, if we are foolish enough not to have regulation we are laying the groundwork for loss of our free-enterprise system. Sound regulation of a business affected with a public interest is our best bulwark against such a loss.

The proponents of the bill contend that regulation of the natural-gas industry as now carried out by the Federal

Power Commission, under existing law, will have the effect of driving high-cost natural gas into interstate commerce and the lower cost gas into the intrastate market—thereby making higher prices for the interstate consumer. Nothing is further from the truth.

Their contention is based on the mistaken notion that the Federal Power Commission would allow a producer who engages in foolish and irresponsible practices to be, in effect, subsidized; that if he drilled 99 dry holes in his search for oil and discovered gas in the 100th well, the entire cost thereof would be the basis for establishing the price of the gas from the one well. Such a contention is patently ridiculous.

While it is true that the Federal Power Commission may grant a certificate to a producer who may experience bad luck in drilling, it is certainly not true that the FPC would approve a contract of a gas producer whose gas price is not just and reasonable and not in the public interest, that is, not in the interest of the consumer.

We must keep in mind that the FPC, under the present law, in determining a just and reasonable rate in addition to cost, must and does take other factors into consideration. Among these factors are the following:

First. The interests of the consumer.

Second. The assurance of the supply.

Third. Other similar prices for like amounts and qualities in the same area.

So if a producer drilled many dry wells, which would force up his cost of operation, he could pass that expense on to the consumer, with the Federal Power Commission determining the rates, because the Federal Power Commission is charged with the responsibility of looking after the interest of the consumer. The producer would have to meet the qualification of "other similar prices for like amounts and qualities in the same area."

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. POTTER. I prefer to conclude my statement before I yield.

In order that everyone who is following the progress of this discussion and is interested in the issue of proper regulation of this public utility may be informed, I am compelled to say a few words about the Hollywood style promotion of the pending bill by those who favor its passage.

When a good deal of effort is put into any particular program, I assume that it must be extremely worthwhile to those who are expending the effort. I have to point out that I have served some 8 years in the Congress, and never before have I seen such a well-organized and such a complete and exhaustive job of promotion in favor of a bill as I have seen in the promotion of the Fulbright bill. Almost everyone I know has been contacted and urged to contact me. Anyone who has a political interest, a legislative interest, or an economic interest, or might just happen to be a personal friend of mine, has been contacted. I am informed that the intensive promotion for the bill has even reached the point where vocabularies have been supplied to newspaper and magazine editors to guide them in writing about the issue. These learned men, who are already experts in their fields of writing and reporting, are being told exactly what words to use and in what way to use them, in order that the bill will appear in its proper light, according to the word of those who support it.

When such programs are being conducted on a professional and highly organized basis, I think it is only fair to point it out, and I repeat that it is my firm conviction that there is a great financial stake involved in the passage of the bill, or it would not be economically possible to stage a giant, professional promotion in favor of it. Never in my years of experience in the Congress have I seen anything to equal it.

Mr. President, I should like to reaffirm my interest in maintaining the integrity of free enterprise.

I always have fought, and always will fight, to protect free enterprise. It is the keystone of the very life and success of our Nation.

I believe the passage of the pending bill would constitute a threat to free enterprise.

I certainly believe that all the producers of natural gas, both large and small, are entitled to and should receive a fair and equitable return on their investment, and I further believe that this is assured under the present law.

As we know, the Supreme Court decision in the Phillips case was rendered in June of 1954. No evidence has been presented to substantiate the allegation that the producers have been harmed by the implementation of the law. On the contrary, they have prospered.

I think it is most unwise to try to change a law which has not been given a fair chance, particularly when the law is in the public interest.

Mr. LONG. Mr. President, will the Senator yield for a question?

Mr. POTTER. I promised to yield first to the Senator from Vermont [Mr. FLANDERS].

Mr. FLANDERS. Mr. President, I have been very much interested in the strength of the arguments presented by the Senator from Michigan. It seems to me he has his subject well in hand, is clearly and deeply concerned, and has made an excellent statement of the reasons for his objection to the pending bill.

I should like to question the Senator on what may be considered as a minor point, but which I am quite sure, so far as my own constituents are concerned, is, in principle, a major point. There are both principles and objectives concerned in this question.

I was interested in the reference of the Senator from Michigan to the extent of the area in which Government controls can properly be applied. He mentioned, among others, the interstate trucking industry. Most of the folk in my part of the country feel that is an area in which regulation has gone wild. For instance, I have a constituent who owns 3 tractors and 4 or 5 trailers; but he can not engage in the trucking business across the State line. He must remain in Vermont, despite the fact that his market for trucking extends only 40 or 50 miles across the State line into New York. For the life of me, I cannot understand what business the Interstate Commerce Commission has in dealing with that situation. In the absence of better information, I am "agin" it. The same doubt extends to some of the other instances cited by the junior Senator from Michigan. However, in this case my doubt arises because there are different kinds of situations.

The Senator from Michigan spoke of water companies.

Mr. POTTER. Does the Senator from Vermont realize that the regulation of the trucking industry in interstate commerce is a result of the Motor Carriers Act, passed by Congress?

Mr. FLANDERS. Yes.

Mr. POTTER. I am not here to defend the Interstate Commerce Commission's action in complying with the regulatory duty imposed upon it by the Congress, by means of that act. My point is that it is not novel; there is nothing novel about having the Federal Government use its power of regulation when the public interest is affected. The point I wish to make is that a company does not have to be a monopoly in order to affect the public interest.

Mr. FLANDERS. That is an important statement. I wish to say that today and during the remainder of this debate we shall be deciding whether the regulatory power has been, or is likely to be, extended beyond its proper sphere—as was done, I believe, in the case of interstate trucking. So, to say that already, by act of Congress, interstate trucking is included, does not answer my question. The question is whether it should have been included.

Mr. POTTER. The Supreme Court has made the interpretation that, under the Natural Gas Act, as passed by Congress, sales of natural gas in interstate commerce do affect the public interest, and therefore such sales should be regulated. Natural gas is a commodity somewhat different from others. The very fact that it is different bolsters my reason for agreeing that the Federal Government does have responsibility in these areas. Congress has imposed upon the Federal Power Commission the duty of regulating the rates charged by the pipelines. Every State has a public utilities commission of some kind to regulate the price of natural gas sold by distributing companies. In connection with the distribution of natural gas, a steel pipe hooks together all parties in that situation, beginning at the wellhead and extending to the consumer. The consumer in that situation is a captive, and the distributing company is a captive. All of them are hooked together by the steel pipe.

If the Senator from Vermont can tell me how that situation can properly be handled without having Federal regulation of the price at the wellhead, in the case of gas sold in interstate commerce, without affecting the public interest, I should like to know it.

Mr. FLANDERS. I am still concerned at this time about the principle, rather than the objectives sought. The Senator from Michigan used the phrase "affected with a public interest," as designating the area in which Govern-

ment regulation should be allowed. I am not a lawyer, and, as I recall, neither is the Senator from Michigan.

Mr. POTTER. No; I am not, either. We shall call on our legal friends.

Mr. FLANDERS. Yes. I wonder whether there is a legal definition of the phrase "affected with a public interest" which limits the application of that phrase in some way, because the price of cheese is affected with a public interest, and so is the price of shoes; in fact, in the business world there is nothing that is not in a broad sense affected with a public interest.

If, in this instance, that term is to be applied in a special, limited way, that would appeal to me more than to have the phrase as it is found in the dictionary applied.

Mr. POTTER. It is my understanding that the definition of "public utility"—a definition which has been established and has commonly been accepted for many years—is so widely accepted that the phrase "affecting the public interest" is well defined. However, I should be very happy to have one of my lawyer friends elucidate further on that matter.

On the other hand, it is not novel or new; the public utility concept is, I believe, the strength of the free-enterprise system. Under that concept, whatever is a public utility or a controlled monopoly is regulated, in order to protect the public interest. If competitive industry operates freely, that process will assure the public of a reasonable price.

Mr. FLANDERS. Now the Senator from Michigan has used another phrase which seems to me more clearly to define the area in which Government regulation should apply; he referred to "a controlled monopoly."

Mr. POTTER. The reason for controlling monopoly is the effect it has on the public interest.

Mr. FLANDERS. Yes; but that does not mean that everything affected with a public interest should be controlled.

Now we have narrowed the term "affected with a public interest" in such a way as to begin to become comprehensible.

Mr. POTTER. In this case we have a captive consumer, who has invested perhaps $400 or $500 in gas appliances. If he does not like the price that is being charged him for natural gas, he cannot say, "I will buy from another company," because no other company is available to him in that area.

Mr. FLANDERS. That is true. So we have concluded that the gas company and the pipelines belonging to it are a controlled monopoly.

We have yet to decide, on the basis of our discussion, whether the source at the wellhead is a controlled monopoly. I think that is the point of the discussion.

I might mention one of the other companies referred to by the Senator from Michigan—namely, as I recall, the American Telephone & Telegraph Co., which is a controlled monopoly. It is true it is a private enterprise, but it is a completely controlled monopoly. The same is true of water companies, and the same is true of the distribution end, at least, of hydroelectric companies.

So companies in those areas are private enterprise. However, since they are controlled monopolies, they are subject to Government control.

Mr. POTTER. Does the Senator from Vermont favor doing away with the Motor Carriers Act, so as to remove the jurisdiction of the Interstate Commerce Commission from interstate trucking?

Mr. FLANDERS. I would remove that which prevents private enterprise from going into that business. It may be necessary to control the rate; that matter is open to debate.

Mr. POTTER. What about the safety factor?

Mr. FLANDERS. Yes; also as to safety. If my constituent's vehicles are unsafe, he should not operate them on the road. Furthermore, there should be regulations as to weight and other factors which affect the durability of the roads. But as for telling him that he cannot go into business, that is something else.

Mr. FULBRIGHT. Mr. President, will the Senator yield for a question?

Mr. POTTER. I yield.

Mr. FULBRIGHT. I have one question about the formula which the Senator suggested with regard to price. If I correctly understood him, he said that if a producer drilled too many dry holes the Federal Power Commission would not allow that expense to be included in his rate base. Is that what the Senator believes?

Mr. POTTER. I said that there are other factors which the Federal Power Commission must consider in determining the price. Cost is one factor. It is not the only factor. If the producer's cost is too high, certainly the consumer is not being protected. That is one of the factors which must be considered. The interest of the consumer is an important factor.

Mr. FULBRIGHT. That is correct. Am I to understand the Senator to mean that if a particular producer's costs are a little higher than the average, or higher than what the Federal Power Commission thinks they should be, the Commission will not allow such costs as a part of the producer's rate base?

Mr. POTTER. I say that the rate must be just and reasonable. In determining a just and reasonable rate, there are some pretty clear-cut criteria as to what allowances may be made. I do not believe the Federal Power Commission would ever allow a producer to include unreasonable costs. Either the Senator from Arkansas or some other Senator spoke of a producer who might drill many dry holes, and charge up all the dry holes to the interstate gas sales, keeping the producing wells on a one-shot basis for intrastate sales. While the cost is one of the factors which the Federal Power Commission must consider, it is not the only factor. If it would not be in the interest of the consumer to allow certain costs, the Commission certainly would not allow them. If such costs were not just and reasonable they would not be allowed.

Mr. FULBRIGHT. Do I correctly understand the Senator's position to be as follows: That if the costs of a particular producer were higher than the Power Commission believed they should be, the Commission would not allow that part of the costs which was in excess of what the Commission believed to be reasonable?

Mr. POTTER. If the costs were unreasonable or unjust, I do not think the Federal Power Commission would allow them.

Mr. FULBRIGHT. Would the Senator say that if a particular producer's costs were above the average in the industry, they would be unreasonable?

Mr. POTTER. I think the criterion is whether the rate is just and reasonable. There are certain definite factors to consider. I do not know whether the criterion would be the average cost, the minimum cost, or the maximum cost. Of course, cost is one of the factors to be considered, but the main criterion is whether the rate is just and reasonable.

Mr. FULBRIGHT. Let me put it a little differently. The Senator is familiar with the procedure for establishing rates for electricity in the city of Washington. Is it not true that all the costs of operation of the Potomac Electric Power Co. are included in the rate base, and that the company is allowed a 6-percent return on its invested capital?

Mr. POTTER. I assume it is.

Mr. FULBRIGHT. Does not the Senator know whether that is true or not?

Mr. POTTER. The criteria for determining rates in the city of Washington for electric power are not comparable to what we are talking about. We are talking about the Federal Power Commission establishing rates for gas producers. One of the major criteria considered by the Federal Power Commission in determining whether the rate is just and reasonable is the interest of the consumer. Another is the cost of production and operation.

An additional factor to be considered is the assurance of supply. I do not believe a producer could gain the approval of the Federal Power Commission by meeting only one qualifiction. He must meet them all in order to obtain a favorable decision from the Federal Power Commission. All the factors must be considered. If, for example, a company tried to charge all of its dry holes to the interstate part of its business, I am sure the Federal Power Commission—at least I hope it would—would say, "That is not a fair price. It is not just and reasonable. It is not in the interest of the consumer." That is one of the criteria.

Mr. FULBRIGHT. Then, as I understand, he would not necessarily get 6 percent, or a reasonable rate, on his invested capital. Is that correct?

Mr. POTTER. He would get a reasonable rate, but he would not get an unreasonable rate.

Mr. FULBRIGHT. Would all his costs be included? That is the point I am trying to make.

Mr. POTTER. Yes, if they were just and reasonable.

Mr. FULBRIGHT. How much would the Senator say would be just and reasonable?

Mr. POTTER. That is the responsibility of the Federal Power Commission. They have criteria by which to determine that question.

Mr. DOUGLAS, Mr. PURTELL, and Mr. THYE addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Michigan yield, and if so, to whom?

Mr. POTTER. I yield first to the Senator from Illinois.

Mr. DOUGLAS. Mr. President, is not the Senator from Arkansas getting this subject much more confused that it should be? Is not the issue in this industry simply this: When there are a number of drillings, what normally happens is that some are dry holes. Some produce oil, and a few produce gas. The original point which the Senator from Arkansas made in his main speech was that, since oil is unregulated, if gas were regulated, the cost of the dry holes would be charged against the gas. As a practical matter, could we not allocate the portion of the cost of the dry holes to be charged to gas in accordance with the relative yield of oil and gas? This subject is not so complicated as the Senator from Arkansas is trying to make out. It is a simple matter.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. POTTER. I yield.

Mr. FULBRIGHT. Only a third of the gas is produced in conjunction with oil. What is to be done about the two-thirds which does not come from a well which produces oil?

Mr. PURTELL. Mr. President, will the Senator yield?

Mr. POTTER. I yield.

Mr. PURTELL. I have just listened to a colloquy having to do with the cost of electric power. Certainly the Senator will agree with me that if coal is available — and it is, from many sources—and a power company should pay twice as much for coal as the same coal could be obtained for elsewhere, obviously the Federal Power Commission would have a right—and would probably exercise that right—to say that the full cost shall not be borne by the consumer.

Let us go back to the basic principle of the act which we are discussing. We are confusing the issue. We are restricting our discussion to the term "fair and reasonable." What does the bill call for? It calls for the fair-market price. What does "fair market price" mean? According to Webster's dictionary, it is a price established when the law of supply and demand operates normally.

Let us discuss the bill. The bill calls for the fair-market price.

Mr. THYE. Mr. President, will the Senator yield?

Mr. POTTER. I yield.

Mr. THYE. I should like to ask the distinguished Senator from Michigan if it is not true that we must trust the judgment and the justice of the individual members of the various regulatory bodies which govern many utilities by establishing rates for such utilities in municipalities. Must we not trust the various Federal agencies to establish rates and charges with respect to many functions? If we trust them with one phase, is it not reasonable to trust them with the responsibility of fixing a just and fair rate for natural gas at the wellhead, when the situation is entirely monopolistic? Once the gas is gathered and placed in the pipeline, the pipeline is the only means of delivering that fuel to a city. After the city has completely converted to natural gas, it cannot go to fuel oil. It cannot go to coal. It cannot go to the natural fuel resources of a particular area, such as wood. It must rely upon natural gas. Therefore, with respect to that natural gas, a virtual monopoly exists.

Mr. POTTER. The Senator is correct. The principle of a just and reasonable price is applied by the Federal Power Commission according to a well-established formula. It uses well-defined criteria for determining the price of gas, or of any other product it regulates. However, a so-called reasonable market price, which is provided for in the Fulbright bill, would be an entirely new concept for the Federal Power Commission. I do not know what the Commission would consider in that connection.

Mr. GOLDWATER. Mr. President, will the Senator yield for a question?

Mr. POTTER. I yield.

Mr. GOLDWATER. I should like to ask the distinguished Senator from Michigan a question about an entirely different phase of the subject we are discussing. I should like the Senator from Michigan to consider what I believe to be the basic issue before us. It involves what the Senator mentioned in his discussion. Free enterprise is one of our basic freedoms. It is freedom to engage in business with a minimum of Federal control, or even a complete absence of Federal control.

If the Senator from Michigan pursues his argument to its ultimate and logical conclusion, would he not arrive at the point where he would be in favor of Federal regulation of telephones, of power, or of domestic water obtained from interstate streams?

I have heard certain figures used. I believe it has been stated that the wellhead ratio to the consumer price is roughly 10 to 1. That is the average. It may go to 15 to 1 or 5 to 1.

Let us take electricity. Electricity is purchased at the bus bar at from 3 to 6 mills. That electricity is sold, on the average, for from 3 to 5 cents.

The ratio is 10 to 1 on 1 of the basic resources of this country. It is developed cheaply by private enterprise. Therefore, I ask the Senator whether he would extend his argument to the point where he would feel that the Federal Government should control also other basic parts of our economic life?

Mr. POTTER. Mr. President, when a power company sells power in interstate commerce, the power is controlled by the Federal Power Commission.

Mr. GOLDWATER. If it is a federally controlled dam or a federally controlled project, that is true at the bus bar, but it is not true at the bus bar if the project is privately operated and the power is fed into a grid.

Mr. POTTER. It is my understanding that when power is sold across State lines, it comes under the jurisdiction of the Federal Power Commission. I do not know what other regulation the Senator has in mind.

Mr. GOLDWATER. It seems to me we tend to get away from the basic issue before us. I wonder whether we are not actually arguing for the eventual socialization of all our business and industry. I know the Senator, indeed, I have known him for many years, and am sure he does not hold to that idea for even so much as a second. However, I suggest that he reason his argument through to what I believe the ultimate conclusion would have to be.

Mr. POTTER. I am sure the Senator agrees with me that one of the greatest strengths of our free enterprise system is found in our determination to keep a public utility business a public utility. When our competitive forces are allowed to operate, there is no danger of socialism. There is nothing new or socialistic about a public utility. I say the greatest dangers to free enterprise arise from the failure of the Government to protect the public interest.

Mr. GOLDWATER. If the Senator's argument is carried through to what I claim is its logical conclusion, we should have Federal control of everything which affects the lives of our people.

Mr. POTTER. I am not saying that; neither do I believe that.

Mr. GOLDWATER. If the Senator's argument is correct, it can be extended to iron ore, which is used extensively in Michigan, and to copper, which is an important commodity of my State.

Mr. POTTER. Of course the Senator from Arizona is completely unrealistic in what he says.

Mr. GOLDWATER. I do not know why I am unrealistic. Both products come out of the ground. The Senator is talking about gas, and I am talking about copper.

Mr. POTTER. The Senator in his example does not speak of a captive consumer. It is possible to buy iron ore at several places and to ship it by rail. Mills can buy it from various sources. It can be fabricated into many products. Natural gas is piped directly to the consumer. The consumer or the distributing company cannot go around the country to select supplies of natural gas.

Mr. GOLDWATER. Who creates the captive consumer? Is it the gas company or the public utility that says to the producer, "Sell me your gas, because I want to establish a gas business"?

Mr. POTTER. I assume the captive customer is created by the oil producers, who originally started the pipeline companies in order to get rid of a product which was considered a byproduct of the main operation.

Mr. GOLDWATER. The Senator's argument would eventually lead us back to State regulation, it seems to me.

Mr. POTTER. A State cannot regulate interstate commerce shipments.

Mr. GOLDWATER. But a State can regulate telephone rates and other rates. My State regulates the gas rate.

Mr. POTTER. Under the Constitution, a State cannot regulate the interstate movement of natural gas, or of anything else moving in interstate commerce.

Mr. GOLDWATER. It can determine the rate at which it may be sold in a community, however.

Mr. PURTELL. Mr. President, will the Senator from Michigan yield?

Mr. POTTER. I yield.

Mr. PURTELL. I have heard a great deal of discussion about private enterprise. It seems to me that is a screen which is being thrown up in this debate. It seems to me there is an attempt to clothe the bill in the mantle of free enterprise. Why do we not describe the bill as it is, and say what we mean by free enterprise. Free enterprise is free competitive enterprise. There is no freedom in the bill. There is no competition in the use of the gas. There is no free enterprise in the bill.

Mr. President, I wish to compliment the distinguished Senator from Michigan on his well-prepared address, which he has brilliantly presented in opposition to the pending legislation.

Let me say that what we must particularly look for in considering bills of this type is what their passage would do to the competitive capitalistic system. It is abuses practiced under our system of capitalism which will bring about its ruin, if the system shall ever be ruined. It may also bring about its restriction, if we permit such practices to be exercised.

Mr. THYE. Mr. President, will the Senator yield?

Mr. POTTER. I yield.

Mr. THYE. I wish to commend the distinguished Senator from Michigan for presenting a very intelligent, realistic, and well-reasoned argument in behalf of protection for the consumer. Once a city or a private home has converted to the use of natural gas, it cannot change to other fuels, but must continue to use natural gas until another conversion takes place. Whether it is a university, a municipality, or a private homeowner, once a user has converted to natural gas, he must depend upon that source of supply. That supply comes out of a pipeline, and the pipeline may extend across several States.

Therefore, a State has no jurisdiction over the supply of gas, or the cost of it. Once the gas has been assembled and put into the pipeline, the pipeline has the right to charge the cost involved in acquiring the raw product and the expense of piping it to the consumer.

I am willing to stand in complete support of the position taken by the distinguished Senator from Arizona [Mr. GOLDWATER], that a State or municipality should have the right to control its own affairs. However, natural gas is assembled in a pipeline in two or three States in the South or in the Southwest, and it is piped across several States to the ultimate consumer, whether he be located in my State or in a New England State.

It may be that a competitive field will be developed in the Northwest, for instance in Canada or the Dakotas, which will supply Minnesota. It is said that natural gas will not be found in Minnesota. Therefore, we must depend on a pipeline either from the Northwest, the South, or the Southwest. If we cannot control the gas because it is produced outside the boundaries of our own State, we must make certain that we do not set aside the decision of the United States Supreme Court on the question and throw the consumer, who is dependent upon the product of the pipeline, to the mercy of those in the gas field where the gas is extracted from the bowels of the earth. For that reason, I wish to commend the Senator from Arizona. It is not a matter of free enterprise. In this instance, it is beyond the control of either the municipal or State authorities, because it is outside their jurisdiction.

Mr. GOLDWATER. I should like to say to the distinguished Senator from Minnesota that I have been unable to find in the history of this country one instance when the Federal Government came into the picture that the ultimate cost to the consumer did not increase. It happened during the war, under controls, and it has happened in the entire history of the world in every instance in which government stepped in and took over control.

I might remind the Senator from Minnesota that the able junior Senator from Oklahoma [Mr. MONRONEY] presented some interesting facts with reference to the price of the wellhead gas. It is very small. The actual trouble, if the consumers in other States are in difficulty because of high rates as compared with the rates in Arizona, is not brought about by the price of the wellhead gas, but by the poor regulations within the cities in allowing profits which might well be questioned. The wellhead gas has nothing to do with it. It amounts to only ten cents or twelve cents.

Mr. POTTER. But, of course, as the Senator knows, the distributing company is the company which renders the service. State regulatory bodies are helpless to do anything other than to consider the cost of the gas furnished by the pipeline company to the distributing company. The cost can only be passed on to the consumer. State regulatory bodies are helpless to affect the cost of the gas at the wellhead.

Mr. PASTORE. Mr. President, will the Senator from Michigan yield?

Mr. POTTER. I yield.

Mr. PASTORE. I think the junior Senator from Arizona [Mr. GOLDWATER] actually put his finger on the point involved in the position of the proponents of the bill. His argument is that every time the Government begins to regulate it ruins the business. Then he ends up by saying that the rates are higher in New England because they are not regulated enough or because of poor regulation.

Mr. GOLDWATER. That is correct.

Mr. PASTORE. In other words, poor regulation is not regulation enough. Or is the Senator suggesting that we have no regulation at all, but that we have a free-for-all?

Mr. GOLDWATER. The Senator from Rhode Island has, in his very clever way, attempted to misconstrue my remarks. I am arguing that the attempt to control gas prices by controlling the wellhead prices under the Federal Government is not the solution to the high prices existing in various cities in this country.

Mr. PASTORE. Mr. President, will the Senator from Michigan yield further on that point?

Mr. POTTER. I yield.

Mr. PASTORE. Is it not obvious that the only motive behind the bill is to raise the gas rates and allow the producers and the gatherers to collect more money? It was reported in the Wall Street Journal of January 9, that the Federal Power Commission now has before it petitions involving millions and millions of dollars because of exorbitant rates. I ask the distinguished Senator from Michigan, what will become of those petitions the day after this bill shall pass. The rates which have been applied for will become the rates imposed upon the consumers. That is the reason why the bill was introduced—to allow the producers and the gatherers not to lower their prices, but to raise them. The "gripe" the producers and the gatherers have is that they are not charging enough and not receiving enough. It does not help the poor consumer to enrich the producer and the gatherer.

Mr. PURTELL. Mr. President, will the Senator from Michigan yield?

Mr. POTTER. I yield.

Mr. PURTELL. I should like to ask the distinguished Senator from Michigan how much protection the consumer could expect in the light of what we found existing in the prices set in the field, with escalator clauses, spiral clauses, favored-nation clauses, and so forth. The proponents of the measure recognize that these are abuses imposed upon the consumer, so they say, "You found it out, so we are ready to do something about cleaning it up."

Is it not a fact that these various abuses would continue to be perpetrated upon the people of it were not brought to their attention by the opponents of the proposed legislation? It proves conclusively the need for protection of the consumer who is without defense if he does not get it in this body and in the House across the way.

Mr. DOUGLAS. Mr. President, will the Senator from Michigan yield?

Mr. POTTER. I yield.

Mr. DOUGLAS. I, too, wish to join my colleagues in congratulating the Senator from Michigan for his very able and very public-spirited address. We in this body have learned to respect and admire and have a deep affection for the Senator for his record before he came to the Senate and since he has been a member of it, and our esteem and affection have increased during the period in which he has been engaged on this bill.

Mr. POTTER. I thank the Senator from Illinois.

Mr. LONG. Mr. President, will the Senator from Michigan yield?

Mr. POTTER. I yield.

Mr. LONG. Do I correctly understand the Senator's argument to be that there is no competition in the gas business? Is it the argument on behalf of

those opposing the measure that there is no effective competition in the business?

Mr. POTTER. My argument is that gas is in a seller's market and there is no prospect of anything other than a seller's market. It is not a true competitive situation.

Mr. LONG. Would the Senator be curious to find out that there are many locations in this country where there is no sale of gas, and it is still being flared because there is no sale?

Mr. POTTER. I think that is probably true. I believe that in Pennsylvania there are some gas wells which could be capped but which have not been, for lack of a pipeline. I say the competitive factor is negligible.

Mr. LONG. Does not the Senator realize that the producer has to sign a contract to sell the gas to a pipeline company, or, otherwise, the company will not lay the pipeline? Those who argue that the buyer is at a disadvantage are actually arguing contrary to the facts. It is the producer who is at a disadvantage. That is why gas is being flared.

The producer is unable to raise funds to lay pipes to get the gas to a market, and there is no sale for the gas. Surely the Senator realizes that the seller is in no position to bargain with 6, 8, or 10 of his buyers. He is lucky to have 1, 2, or 3 lines of pipe to his wells.

Mr. POTTER. What has happened in the industry has been that an element which once was a waste byproduct for which a market was found in interstate commerce. That is the real market for natural gas.

Pipelines, when they were first introduced, were mostly a means for producers to dispose of the natural gas in interstate commerce. I will grant that today there are many pipelines which are not owned by the producers.

But the fact remains that one of the interesting developments of the natural-gas industry has been the various favored-nation clauses and escalation clauses. If a producer had a 20-year contract, it meant very little so far as the price of gas was concerned. If John Doe could be persuaded to pay a few cents more under his contract with the pipeline, the price to everybody else then went up to the same level. If someone else could obtain a few more cents than was paid by John Doe, immediately the price went up to the new level. Actually, if one had a 20-year contract, it did not mean that he had a fixed price for 20 years.

Mr. LONG. Mr. President, will the Senator yield?

Mr. POTTER. I yield.

Mr. LONG. Does not the Senator realize that good commonsense and logic are behind the idea of escalator clauses in a 20-year contract? Does he not realize, in the first place, that the producer does not care to sell his gas at a fixed price for 20 years or under a life-of-the-field contract? He signs a contract under such a condition simply because he is compelled to do so; otherwise he could not persuade anyone to lay pipe to his well and to purchase his gas at all.

Another reason is that those who want to build pipelines must get financing to build them. They must show that there will be enough gas available over a long period of time so as to amortize the construction contract. Therefore, they insist that the producer sign a contract for a much longer period of time.

The producer, on the other hand, tries to get some adjustment in the price of his gas over a period of time, because of the fact that the prices of other producers will perhaps rise.

There is nothing unusual about that. The CIO–AFL has been able to get that type of stipulation in its wage contracts. As the cost of living goes up, the unions get an increase in wages. They include a stipulation in their contracts that even though they may not bargain in the following year, they will still receive periodic increases in wages, in some instances.

If it is desirable for the CIO–AFL unions to sign wage contracts with industry, and if industry thinks such contracts are satisfactory, then what is so wrong about the natural-gas producers having the same kind of contract?

Mr. POTTER. The Senator from Louisiana realizes that we are speaking about the unpredictable escalator clauses. I am certain the Senator will agree that the escalator clauses in many of the contracts are not to the benefit of the public.

I do not believe the Senator would even go so far as to say that we should accept all the favored-nation contracts; that we should accept 2-party and 3-party favored-nation clause.

Mr. LONG. Does not this make much sense: That if the Senator from Michigan had a product for sale, and someone tried to make him sign a contract to sell his production over a period of 20 years—let us assume it was automobiles—the Senator would be within his rights to say, "If you should pay someone else a better price than you are agreeing to pay me, let us include in the contract a provision that when you begin to pay someone else a better price, you will pay me a better price, too." Does not that make sense?

Mr. PASTORE. Mr. President, will the Senator from Michigan yield to me on that point?

Mr. POTTER. I yield.

Mr. PASTORE. Is the distinguished Senator from Louisiana familiar with the fact that under the third-party escalation clause, which he is defending so vehemently, if a pipeline company which serves the city of Boston is paying 10 cents a thousand cubic feet for gas, and it has a third-party escalation clause in the contract, if a pipeline company serving Los Angeles, Calif., agrees to pay 15 cents, then automatically the people in Boston must pay 5 cents more? Does the Senator from Louisiana think that is fair?

Mr. LONG. Is the Senator from Rhode Island familiar with the terms of the bill which stipulate that in order for such a clause to become effective, the Federal Power Commision would have to agree that that was the fair market price for the gas?

Mr. PASTORE. Not in future contracts. They can pay any price they want. One does not say to a producer, in making a future contract, that if the price he is charging is more than a reasonable price, he can take it or leave it. That is the gimmick in the bill.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Miller, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The PRESIDING OFFICER (Mr. McNAMARA in the chair) laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

AWARD TO SENATOR SMITH OF MAINE AS THE WOMAN OF THE YEAR

Mr. WELKER. Mr. President, on Tuesday, January 17, 1956, one of our most distinguished Members, the senior Senator from Maine [Mrs. SMITH] received a most significant award and a very great honor. On that day our charming and able colleague received the award of woman of the year from the National Ladies' Auxiliary, Jewish War Veterans, at a luncheon held at the Statler Hotel, Washington, D. C. The award was presented to Senator SMITH by Mrs. Jacob M. Bramnick of Philadelphia, the national president of the auxiliary, for her—this is the basis of the award—"outstanding contributions to the furtherment of humanitarian concepts and world progress."

As we all know the distinguished Senator from Maine would have done, she responded by saying that she was "embarrassed" to be named for the award, since "there are so many other women of greater prominence" than herself.

I may say our dear colleague's statement was a great understatement of fact.

The Senator from Maine said she hoped that her efforts to influence congressional associates and the American public to a "greater awareness and appreciation of the dignity of the human being" made her worthy of the honor.

I am certain that I am joined by all of my colleagues not only in congratulating the National Ladies' Auxiliary, Jewish War Veterans, upon their selection of the beneficiary of the award, but also in congratulating our able colleague from Maine. This is an award that is highly deserved, so well done has been her work, so great a credit has she been to her great State of Maine, so great a credit has her service been to the Senate of the United States and to our great country which she knows and loves so profoundly.

May you, Senator SMITH, keep this illustrious award forever as a token of the esteem you have earned and for which we love and respect you.

THE COLLAPSE OF AMERICAN FOREIGN POLICY

Mr. JENNER. Mr. President, it is our solemn duty, as Members of the Senate of the United States, to face honestly the total collapse of our foreign policy.

The Soviet Union has entered upon a new and most insidious campaign to subvert the nations not yet within its power.

Never has our country faced so ominous a future.

Our minds refuse to believe the evidence of our country's peril.

To see it, we might compare our Nation with a citadel set on a high hill.

Its policies have been so wise no decent men ever wished to injure it.

Its walls are so strong that no evil men dared try.

Today, this happy community is confronted with a new enemy, who has no intention of testing his strength against the walls.

Instead, this enemy has trained armies of miners and sappers, who, under its control, are digging tunnels below the walls.

Through these tunnels the enemy sends its shock troops deep into the heart of the city.

Its troops are not dressed in uniform.

They carry no weapons.

They are disguised as peaceful civilians, and their task is to render the citizens helpless with sleeping drugs. As soon as the sleeping pills have overcome the defenders, the enemy will storm the walls and level the citadel to the ground.

Some people see what is happening, but, as in a nightmare, they cannot warn their friends.

A nation's foreign policy is its national defense program in the diplomatic contest, as armies, navies, and air armadas are its defense against the threat of force. Failure in foreign policy is as disastrous to our country as is defeat in war.

The survival of our Nation against threats from without, depends either on a successful foreign policy or on victory in a bloody war. Because I do not want our country involved in another unnecessary war, I have no choice but to speak with absolute frankness.

The approach of national elections is no reason for failing to speak frankly. I recognize no slightest obligation to support a catastrophic foreign policy because my party is in power.

Foreign policy must be above party. But this does not mean that foreign policy must be above criticism. It means that the party out of power may not seek to reap party advantage by weakening our foreign policy. But it follows with equal force that the party in power dare not try to hold party advantage by refusing to face the truth, at so dangerous a moment. The issue—the only issue—is the safety of our Nation.

We know from bitter experience that the Soviet Union always prepares skillfully to advance its conquests in the 4-year intervals when we are involved in presidential and congressional elections.

In 1948, Soviet leaders prepared the way for their final conquest of China.

In 1952, through the United Nations, they converted the Korean cease-fire agreements, made by our military at Panmunjom, into a pro-Communist agreement, with a neutral nations team installed to make new attempts to force the prisoners of war in our custody who wanted freedom to return to Communist rule.

In 1944, the Soviet leaders, with the help of Alger Hiss, worked out the essential steps for their eventual control of Europe, and the organization of the United Nations in a form most useful to Soviet designs.

As the minority leader indicated recently, the Soviet Union is again ready to seek new triumphs in an election year, at a time when its leaders hope our minds will be wholly on domestic issues.

Let me state the situation which we in Congress must face. The position of the United States before the world is in every respect far worse than it was 3 years ago, when the American people in their wrath voted overwhelmingly to end the catastrophic foreign and military policies of Dean Acheson.

Where have we failed in the last 3 years so that we are brought to this dangerous pass?

In 1953 we made peace in Korea, but it was a Communist peace—and even that has not been lived up to.

In 1954 we consented, like Pontius Pilate washing his hands, to the partition of Vietnam. We abandoned half a free nation to Communist rule and left Laos, Cambodia, and Thailand in deadly peril of infiltration from new Communist beachheads.

At Berlin and Geneva in 1954 we laid down the pattern for making Austria into a helpless "neutralist" state, a state which will have no arms to defend itself when the Soviet legions are given their orders to march.

We boxed Nationalist China into a so-called security treaty which bars her from invading the mainland, while Red China is making the coast opposite Formosa into a staging area for massive military attack.

We have refused to train the armies of free Asia on a scale comparable with the Communist nations' open preparation for war.

We have refused to give the free nations, which are willing to fight, the weapons with which to counterattack if the Communist serpent strikes.

Meanwhile, we have poured 65 billions down the drain for foreign aid, most of it to nations which cannot, or will not, uproot the fifth column, which is part of the Soviet Government operating on their soil.

Known Communists in Britain, like Burgess and MacLean, were protected by men close to the top, as Alger Hiss and his coworkers were protected in our country.

It is absurd to believe civil servants are powerful enough to carry on treasonable activities without political protection. The nations of the West have not yet had the intestinal fortitude to destroy communism in high places—the only places where it counts.

On the continent, we have airbases in countries where one-third of the voters choose the Communist ticket. Does anyone today believe the myth that Communist political power is receding in France and Italy? For the first time, men of all shades of opinion are saying openly that we can never depend on Britain, France, or Italy to help stem the advancing tide of communism.

But what are we doing for the firm anti-Communist nations of Europe? We are needling Turkey about balancing its budget, while the Communists are wooing them with smiles. We drag our feet on the completion of airbases in Spain, although bases behind the barriers of the Pyrenees are as important militarily as they are politically. We talk glibly of the rearming of Germany as the anchor of Western defense, but we know what has been accomplished. We are shocked because the Soviet Union will not surrender East Germany to a rearmed Germany allied with us. We are surprised about that. But why? I ask you, Mr. President, if a high-school student could not have foreseen their refusal. He might also have foreseen the simple alternative—namely, to put first things first, instead of last.

We should have let West Germany rearm for her own defense, first. Then an armed Germany could have dealt with the Soviet Union on reunification. Finally, a united Germany could have made her own decision about participation in NATO.

As I have had to point out so often, such obvious mistakes in international relations are not stupidity.

We put West Germany into a legal straitjacket, called the West European Union, where the neutralist governments of Western Europe will decide how many troops and planes and ships and guns the sovereign republic of Germany may or may not have. The United States was not a party to this part of the assembly line construction of West European defense, and so the treaty did not come before the Senate. But by another carefully contrived part of the design, the Western European union is meshed into NATO. So we are involved in all the commitments.

The Geneva conferences of 1955 distracted our minds while a far greater collapse of our strength was going on.

We closed the ring about the Soviet Union by formation of the Baghdad pact, but our policymakers ignored the simple fact that the Soviet Union might outflank us by hopping over the ring to the Near East. While Czechoslovakia supplied arms to keep the Near East in turmoil, we steadfastly refused to sell arms to Egypt. We have the word of Prime Minister Nasser that he tried for months to obtain arms from us, but the State Department would not let Egypt have arms. The fact of the Czechoslovak offer was duly reported by our representatives in Egypt, but the Secretary of State would not hear the ominous warning. Again we were so surprised when Egypt bought the arms she wanted from the Soviet orbit. But purchase of arms means the purchase of parts and replacements for years to come. It means the hiring of technicians and instructors. The Soviet

Union uses all such openings to bring in her political invaders. We have helped to strengthen the fifth column in Egypt, but we shall be so surprised a few years from now when we discover the obvious.

We have been more interested in giving millions for DDT in Thailand, or in insisting on a Hollywood-type motion picture industry in Pakistan, when the Pakistani prefer cheaper moving picture equipment scaled to their simple needs. You remember, Mr. President, that we had a project for setting up public baths in Egypt, and teaching the Egyptian people the importance of bathing. American arms, intended for NATO defense against communism, are used to settle political issues in Morocco. Then we are surprised that the Arabs in the Near East and Asia, whose co-religionists were killed by American guns, are seduced by Communist offers of guns and tanks.

We wonder why the Communist visitors in south Asia make headway with arguments against colonialism. Our Government could not get interested in the anti-Communist Afghans. We are always so cautious about the money we give anti-Communist nations. We forgot our Kipling—that England and Russia fought a duel over Afghanistan for over 100 years. Afghanistan was the historic invasion route to India in the days of Alexander the Great. With the Communists already in possession of Tibet, our experts ignored the possibility that the Reds might be interested in any other state bordering India.

While the wall of anti-Communist defense was crumbling, our eyes were diverted by the Hollywood spectacle of the Geneva Conferences.

The Geneva Conferences were a motion picture or a television drama. The scenario was written to bedazzle the people. Behind the curtain the real managers of our Government were prepared to grant the Soviet Union everything it desired.

We committed ourselves to what was called a security pact for Europe. But what kind of security would a pact with Moscow mean for Poland or Czechoslovakia, Hungary, or Rumania? The people of the captive nations understood. We were telling them we were ready to defend the hated status quo, which means defending Soviet enslavement of the free nations of Central Europe.

We were ready to agree to progressive disarmament of the West, if the Communists reduced their troops in Europe. But did we ask where those extra forces would have gone? Would they be less dangerous across the Urals, in Siberia or in Outer Mongolia?

We were ready to increase trade with the Soviet octopus, so she could get machine tools to expand her war industries, and ships which she, herself, could not build, because Russian shipyards are building submarines.

We talked of German unification as if we were boys in prep school talking of a problem in trigonometry. But Germany is the key to the defense of anti-Communist Europe. We mumbled about voting, as if ballot boxes were magic. We did not give one word or moral support to Germany in her pitiful efforts to free a few of the thousands of prisoners held for 10 years in Soviet slave-labor camps. We failed to insist firmly on withdrawal of Soviet power from all Germany.

The full diplomatic power of the three Western Powers should have been used to tell the Soviet Union, "Open the borders of East Germany and the captive European nations, and set them free." England, France, and the United States were morally obligated to end this new slavery, imposed in violation of the Soviet Union's solemn agreement with us. The three allies should have withdrawn diplomatic recognition and trade privileges until the Soviet Union complied with its agreement. To put upon the unarmed Bonn Republic the practical responsibility for telling the Soviet Union to give up East Germany, was to tell the Germans to make a surrender pact with Moscow.

If the Germans go neutralist, let us have no hypocrisy about our share of the blame.

Instead of securing the withdrawal of Soviet influence over East German territory, the American Government representatives at Geneva invited the head of the opposition party of the Bonn Republic to come to Geneva for conference. I have not even read this in the press. It is as though Chancellor Adenauer should invite Mr. Stevenson to come to Paris and tell him about United States foreign policy.

I said recently in New York that the Geneva Conferences were much more than a softening up of our foreign policy—they were also abandonment of our military policy.

At Geneva we made a commitment that we would not use nuclear weapons in the struggle with communism.

The Acheson policy of the Korean war was generalized and made our basic policy.

The Soviet Union has, since 1945, worked unceasingly to trick us into giving up our advantage in nuclear weapons. Vishinsky sneeringly called it "devaluing the atom bomb."

Now, pro-Soviet partisans spread the word that the world has reached an "atomic stalemate," in which our larger stockpile of bombs will no longer give the advantage to the West, because the Soviet Union has bombs destructive enough to end the contest with the first blow.

We have agreed to peaceful coexistence because the Soviet propagandists and their fifth columns in the free countries have softened up our public opinion, but public opinion is the fountainhead of military strength. By their propaganda skill, the Communists have won an overwhelming military triumph.

Let us be honest. When we agreed at Geneva to an atomic cease-fire, we told the Soviet leaders that they could subvert or attack small nations with impunity.

Let no one believe that the people of Europe and Asia cannot read the handwriting that spells their doom.

The simple fact underlying the recent victories of the Communists in anti-Communist nations is their skill in dramatizing our surrender at Geneva before the watchful nations of Europe and Asia. They have made the United States look like a great pillar of strength with a widening crack at the base.

They have made the pro-American leaders in all anti-Communist nations lose face, lose influence, and even to fear for their personal safety, but that means the anti-Communist nations are falling apart.

I ask Senators to recall how clearly the Soviet leaders convinced the Nationalist Chinese, after the war, that they could not rely on the United States. The Nationalist Republic had always been deeply pro-American. It was created by Sun Yat-sen with money, training, and moral support from the United States. When they were ready to destroy our influence, the Soviet leaders barred the Chinese from Yalta.

At San Francisco, T. V. Soong tried to find out if the Yalta agreements contained any clauses about China, and received official assurance that they did not, from Mr. Dulles himself.

What happened to the pro-American leaders in China, when the Yalta agreements on Manchuria and Dairen were published?

What happened to the pro-American leaders in China when the President's emissary arrived with instructions that the Nationalists must join a "united front" government with Communist guerrillas, or we would give them no money?

What happened to faith in pro-American leaders in the Kuomintang when our officials carried on a series of conferences with the rebel Communist leaders, when they persuaded Chiang to scatter his best troops to their homes, while the Communists were being armed with Japanese arms by the Soviet Union?

The decisive Communist victory in China was the weakening of the pro-American leadership among the Chinese. Their followers were confused and heartbroken. Military collapse was inevitable. Confused by the propaganda at home, we did not know how to help our friends while the fifth column in our Government was undermining them in our name. The collapse of the anti-Communist pro-American leadership leaves anti-Communist nations like a house whose beams have been eaten by termites, still firm on the outside but ready to collapse at a touch.

I say that the major achievement of the Communists at Geneva was to tell the anti-Communist leaders in Western Europe, in the captive nations, in Asia, and Africa, that they could not trust America—exactly as the Soviet plotters told the Chinese in the 1940's, and for exactly the same reason.

Having achieved what they believe is virtual conquest, the Communists are now stepping up their timetable all over the world. We pay a high price for the confusion of American public opinion by propaganda at home. Foreign nations see, more clearly than we do, that we are entangled in a web of subversion. They have ringside seats at the spectacles where we give up all our advantage. Then, at the low point of their confusion and disheartenment, the Communists begin their smiling offensive.

Of course, the free nations, pressed from within, without hope from us,

threaten to give way. But when the Soviet Union has neutralized the intervening countries, against whom will her total attacking power be directed?

The Communists are building dams, setting up water systems, selling arms to anti-Communist states, all for one purpose, to get their political shock troops firmly entrenched in the weakened countries of Asia, Europe, Africa, and South America. They are pouring gasoline on the tinder of the Arab world. They are sending out iridescent clouds of propaganda to fool the ignorant and innocent, while despair destroys the brave and the wise. They are reviving the "united front" to step up their political attack, in every country that is now partly under their control.

We admit that the German Republic is sinking into the Communist trap. Austria is hog-tied by neutralism. The French elections show the fruit of Communist penetration into the Government where they made the constitution over to help the fifth column.

The British economy has a momentary respite from the havoc wrought by the Labor government's welfarism.

What is the outlook for Europe?

In Asia we now hear the attack on Quemoy and Matsu is set for spring.

I am reluctantly obliged to agree that, when the moment of decision comes, our Navy and Air Force will be ordered not to help the Chinese.

Recently, our officials browbeat the U. N. representative of free China, who dared to use the veto against the "package deal" to admit 4 European satellites and Outer Mongolia as the blackmailer's price for admission of 13 independent nations.

Is obedience to Soviet demands, our price for a seat on the Security Council?

Have we made a deal to admit the Red Chinese when the election in the United States is conveniently out of the way?

In the U. N. meetings we also agreed to decide by a "straw vote"—they will be pitching pennies soon—the vacancy in the Security Council.

We were committed to the Philippines.

Asia was entitled to more recognition.

But General Romulo had taken a prominent part in the Bandung Conference where the anti-Communist nations of Asia and Africa spoke out brilliantly against the new colonialism on which the sun never rises.

The Soviet Union could not tolerate so insolent an opponent in the Security Council, so they demanded the seat for Yugoslavia.

Who retreated, and who held firm?

Senators know the answer.

So does all Asia.

The anti-Communist nations of Asia have been making spectacular progress.

Vietnam has achieved a success in establishing order which no one dreamed possible, even a year ago.

The divided conservative parties of Japan have united to form one conservative party.

The strong Communist elements in Malaya have been pushed back.

But have we heard a word from the United States in praise of the Bandung Conference, or any other anti-Communist achievements in Asia?

If free China is defeated, and Korea falls into an economic morass, by our inaction, all the valiant struggles of anti-Communist Asia will be wasted.

Is someone in our Government planning it that way?

It is said, "All this is known. Why take our time to repeat the obvious?"

The American people are sick with a pernicious sleeping sickness.

Our press has reported with splendid clarity each of the separate disasters which has overtaken our foreign policy.

But it still reports international meetings and press conferences in the language of the State Department, where disaster is a glorious victory, and the abandonment of stanch friends is the triumph of leadership.

The simple fact is the Communists are engaged in the most dangerous campaign yet devised against the outposts of freedom, and the United States Government is totally ineffective in meeting this new threat.

The junior Senator from Georgia [Mr. RUSSELL] has warned us that the State Department's only answer to the Russian advance is to ask for more money.

What of the homefront?

I warned, in 1951, in the course of the great debate on troops for Europe, that the artificial buildup of our military expenditures, all over the world, might well be the work of the fifth column, to get us committed to huge Government spending.

Then the Soviet Union could pull the rug out from under us by a carefully timed peace move.

Thus they could bring about the recession of the American economy on which they count for their final triumph.

It looks as if this may be the moment.

The pro-Communists will soon propose to cut defense expenditures, by trumpeting a campaign for arms limitations, now that "peace" is with us.

Then we will have to choose between a depression, with the political disorder the Soviet plotters love, or vast expenditures on a grandiose point 4 for all the world, including huge loans to the Soviet Union.

But this is exactly where the Soviet leaders planned to put us in 1945, when pro-Communists like Harry White and blind partisans like Henry Wallace, were urging vast "reconstruction loans" so we could rebuild the Soviet Union and impoverish ourselves. Do Senators remember that?

What can we do to restore our country's ability to defend itself against this insidious attack?

Who is in charge of this disastrous foreign policy?

The answer is the Secretary of State.

I have made a careful examination of the record of the present Secretary of State, insofar as it is available.

I assure the Senate my conclusions are based on study of every pertinent fact which I could discover.

The present Secretary of State is, I believe, unable to direct the rebuilding of American diplomatic defenses for four decisive reasons.

First, he was a continuous participant in the making of the war and postwar policy of Dean Acheson.

Second, he admits he helped lead Mr. Dewey and the Republican Party to "me-too" republicanism, when honest dissent might have saved our country the tragedy we face today.

Third, Mr. Dulles, like Mr. Acheson, is a believer in a super-national sovereignty by which the United States would become a political, economic and military province in a one-world state.

Fourth, Mr. Dulles, like Mr. Acheson, is a believer in the cult of the elite, who know they know what is good for the American people, whether the people know it or not, and who are determined to make America over, regardless of the wishes of the people or the barriers set up in the Constitution.

Mr. Dulles is Mr. Acheson's identical twin.

Mr. Dulles' policy is and must be a continuation of the "soft" policy toward Soviet expansion which characterized the war years and the postwar decade.

There is no possibility that Mr. Dulles can make the complete reconstruction of American foreign policy, on new intellectual supports, which is our only hope.

I will mention a few examples of the evidence.

Mr. Dulles was a delegate to the San Francisco Conference, to all succeeding regular sessions of the U. N. Assembly, and to meetings of the Council of Foreign Ministers.

He was Mr. Acheson's choice to represent the State Department in preparing the Japanese Peace Treaty.

That treaty, among other things, locked Japan firmly into the U. N., though it is not yet a member.

Mr. Dulles thus made it certain that if the United States should attempt any military move in Asia, not approved by the Security Council, that is, by the Soviet Union, Japan could not legally permit us to use her ports or have access to our bases on her soil.

Nowhere has Mr. Dulles made a firm record of opposing the policies of the Acheson State Department, and Mr. Acheson has made it abundantly clear that he would have no one working with him who would not agree completely with his policies.

Mr. Dulles is one of the architects of the so-called bipartisan foreign policy.

Mr. Dulles was a principal adviser to Mr. Dewey, and urged Mr. Dewey to "go along with" the foreign policy of the New Dealers in 1944 and 1948, instead of giving voice to the rising protest from the people.

Public distrust of Mr. Dulles contributed to Republican loss of the Presidency in 1948, and perhaps in 1944.

But it is the loss to our country which concerns us today.

In 1944, the foreign policymakers were laying the groundwork for their collectivist one-world program, with its marked favoritism to Soviet Russia.

The opposition party, in 1944, was the only hope of true American resistance to the international policies of Acheson and Hiss.

In 1948 the opposition party was the only hope for true Americans to stop the Soviet offensive in Asia.

In 1944 and 1948, the opposition party was given the greatest opportunity ever given a political party, to safeguard America against planned erosion of her strength.

The national leaders of the party threw away that opportunity, on the advice of Mr. Dulles.

Mr. Dulles was appointed to the Senate by Governor Dewey, but in 1950 his policies were repudiated by the voters of New York.

Promptly, Mr. Dulles was appointed to the State Department as the Republican spokesman for the bipartisan foreign policy.

His appointment served also, to give support to Mr. Acheson at the time when Acheson said he would not turn his back on Alger Hiss.

Mr. Dulles had, Senators will remember, arranged for Alger Hiss's appointment as president of the Carnegie Endowment for International Peace, as a successor to Nicholas Murray Butler, although Dulles had been warned by at least two prominent individuals that they had proof Hiss was a Communist agent.

We know from sworn statements by Igor Bogolepov that while he was in the Soviet foreign office he saw many reports from the Soviet Ambassador in Washington, telling of what people the Embassy staff had met in the foundations, and what assignments the Soviet officials had given them.

Mr. Dulles helped, also, in organizing the so-called bipartisan foreign policy in Congress.

I can describe this bipartisan policy in a few words.

It was never a joint Democrat-Republican policy.

It was a policy devised to unite the internationalists in the Democratic Party with the internationalists in the Republican Party for the simple purpose of silencing the opposition.

The majority of the voters in both the Democratic and the Republican Parties were, I believe, wholly opposed to any surrender of American sovereignty to a collectivist one-world, but they were silenced by the clever manipulation of the two-party system, for which Mr. Dulles must take his full responsibility.

My third point is that Mr. Dulles' policy is to make sure the United States is kept entangled in a collectivist one world, where Mr. Acheson put it.

In December 1940, the Federal Council of Churches established a commission on a just and durable peace, of which Mr. Dulles was chairman.

In 1942 the council called a meeting of 375 delegates to hear the report of the commission.

I have the highest regard for any study of the moral issues involved in establishing a just and durable peace, but the commission's report dealt not with moral or spiritual remedies, but with a political program.

We cannot solve the difficult political problems of our time until we have strengthened the moral and spiritual energies of our people.

I cannot, however, accept the belief that we strengthen our spiritual foundations by covering with the mantle of Christian morality a purely partisan program for a collectivist one-world.

The program adopted by this meeting included, among other things:

First. A world government of delegated powers.

Second. Strong immediate limitations on national sovereignty.

Third. International control of all armies and navies.

Fourth. Worldwide freedom of immigration.

Fifth. A democratically controlled international bank.

The conference stated that a new order of economic life is both immediate and imperative.

An English visitor, co-secretary of the World Council of Churches, told the delegates:

> Collectivism is coming whether we like it or not.

Individual nations, the meeting said, must give up their armed forces.

Many duties currently performed by local and national governments could, they said, be effectively carried out only by international authority.

Members of the conference were—like members of the White House Conference on Education—to carry the recommendations to every local parish in the United States, and "create a public opinion which will insure that the United States shall play its full part."

We understand a great deal better today, than in 1942, how opinions may be propagandized to a vast public by the method of the general conference where delegates are filled with enthusiasm, then sent home to spread the word of the bold new program, to the "grassroots."

It is 13 years since Mr. Dulles planted his mustard seed of world government in the minds of delegates from 375 religious groups, reaching every part of the United States.

He admits that it helped change the Atlantic Charter into what became the United Nations, including an international agency to control human rights.

In an article in the New York Times magazine, for October 24, 1948, Mr. Dulles said:

> One of the major matters before this session of the Assembly is the approval of the proposed International Declaration of Human Rights.

Senators will remember that the U. N. Declaration on Human Rights is based on the Soviet doctrine that the rights of the people emanate from the state.

It is in total contrast with the American doctrine that people are endowed by their Creator with rights which governments cannot touch.

Mr. Dulles says:

> I hope and believe this Assembly will endorse this declaration.
>
> But if the Assembly is to seek practical results, and not be satisfied with words alone, it should then go on to promote a covenant which will seek to translate human rights into law.

Lest Senators should be in doubt how far this would take us, Mr. Dulles continued:

> The General Assembly is under a mandate to develop and codify international law * * * Eventually, it can be hoped, agreement will be reached with respect to many economic, political, and security matters.
>
> As such agreements are reached, they become embodied in treaties or arrangements which add to the body of international law.
>
> Then, enforcement by the Security Council can be made more of an automatic process, with no nation having the power to veto action.

It will be noted that this enforcement is to be under the Security Council, which has just elected Yugoslavia as a member.

The Security Council is likewise to control all U. N. military power.

It will be noted also that this body of law can be made by a majority, with a legal tradition entirely different from our own, since we shall have surrendered the right of veto.

What does Mr. Dulles mean by "an automatic process" for enforcing laws which are made by 60-odd nations, most of which have no interest in our constitutional principles?

We know from Mr. Dulles' own statements that he believes treaties, superseding our Constitution, can take away from our people rights guaranteed by the Bill of Rights.

We know that under existing court interpretation of the treaty clause, the executive branch is attempting, by executive agreements with other nations, to make unlimited changes in our Constitution, and neither the people, the Congress, nor the courts have the power to intervene.

We have already learned that U. N. civil servants are to be loyal to the U. N. alone.

A. U. N. police force would also be barred from loyalty to anything but U. N.

The U. N. police force will have a monopoly of the atom and hydrogen bombs, to support its orders.

The nations will be required to give up nationalist armed forces, as we did temporarily, in the "dress rehearsal" for a world military force, in the Korean war.

I state, without reservation, that the policy of converting the United States into a province of a centralist world state has never been openly submitted to the Congress, has never been honestly debated in the press, and has never been put—as it must legally be put—to the States in the form of a constitutional amendment.

The policy is in operation, but every step taken to put it into operation is unconstitutional.

I have referred also to Mr. Dulles' adherence to the doctrine of the elite that they alone know what this country's policies should be, and that they are free either to keep the people confused or to give them information that misleads.

On July 12, 1949, Mr. Dulles said on the floor of the Senate:

> At Paris last month there was some discussion as to whether to accept at all the Soviet

proffered truce and to resume, even on a tentative basis, four-power consultations.

The reason was that some feared any relaxation of East-West tension would bring a corresponding relaxation on the part of the American people, and, therefore, they needed to be kept artificially alarmed.

What do Senators think of that?

On July 15, 1949, I commented in the Senate:

The distinguished Senator from New York said that during the recent conference in Paris a discussion was had as to whether the American people should be told the truth.

Thank God, they decided for once to tell them the truth.

But was that not a strange debate, as to whether or not artificially to stimulate tension between the East and West, in order to work the American people into a feeling of crisis so the old lend-lease Burma road could be continued in operation?

In his book War and Peace, published in 1950, Mr. Dulles expressed his belief in suppressing political dissent.

He said:

If the leaders of the opposition party refuse at this critical time, as a matter of partisan advantage, to accept a bona fide offer to make foreign policies cooperatively, so that these policies can command unity at home and attract adherence abroad, then those who take that position ought to be repudiated at the polls.

I add, Mr. Dulles, that regardless of that belief, the American people are entitled to hear both sides of questions that may affect their survival.

I said in the Senate on April 26, 1950:

I am proud I have the privilege to fight for those whose allegiance to America still remains their primary duty and concern.

I am also willing, Mr. President, to pay whatever price is necessary to continue to represent these folks, even to the extent of being purged by Mr. Dulles.

And, I might add, by any of his kind. I said:

Think of it, Mr. President; think of the utter hypocrisy of Mr. Dulles, who was repudiated at the polls, double-crossed by his so-called bipartisan partners, who has been appointed as a policymaker in the State Department without any need of confirmation by the Senate, and who now orders from his ivory tower a purge of the opposition.

Mr. President, is this not sufficient proof to shock the American people into a realization of the fact that this last-ditch bipartisan appeal of desperation is designed to cover up all that has happened to America and to force us into line as goose steppers in thought and practice, behind the procession of international schemes that are leading us to suicide.

Mr. Dulles' purpose has been carefully analyzed in recent articles by Mr. Joseph Harsch in the Christian Science Monitor.

When I have finished with these remarks I shall ask that Mr. Harsch's articles be printed in the RECORD for all Senators to read and examine.

Instead of going "to the brink," we have a new rule. Mr. Dulles will not deny the "brink," and he has not denied what is contained in these articles, so I do not know where he stands. I am going to quote from Mr. Harsch's article. He says Mr. Dulles' achievement has been:

To "disengage" the forces of the United States from the mainland of Asia and from as many other points of contact as developing events would permit.

Such a policy bears a marked resemblance to the way in which Mr. Acheson used to draw defense lines for the United States and leave Formosa and Korea outside.

This planned contraction of the frontiers of freedom coincides strangely with the Soviet policy of expanding its circles of "neutralized states," carved, like Austria, out of the free area. Soon the Communists will say they need to be protected by a new belt of "neutralized states," carved out of the remaining area of freedom.

Then will we, the acknowledged leaders of the anti-Communist world, retreat still further? How far are we to continue this policy of moving ever backward from our last line of retreat?

Dulles' policy has been called an application of the Kennan doctrine that "it is unnecessary, unwise, and self-defeating to engage the forces of communism directly and constantly on the front lines of the great circle of contest around the Soviet world."

Since we are not to engage the Communists at the center by using our atomic bombs, and we are not to engage them at the periphery because "time is on our side," evidently we are committed not to engage them at all.

Do you see, Mr. President, why Khrushchev and Bulganin are so confident?

When did the Congress approve such a policy? When was it discussed in the press and among the voters? Or did Mr. Dulles proclaim this policy himself, to himself, without the need of our consent?

We first met this enticing word, "disengagement" in the Institute of Pacific Relations hearings when Mr. Harold Stassen reported on a "briefing session" at the State Department, at which "molders of public opinion" were brought together to be given the party line on Asia.

Our policy, according to Mr. Owen Lattimore and other prominent members of the IPR inner circle, was to disengage ourselves from Chiang Kai-shek and the Nationalists.

This term has essentially the same meaning as the more famous phrase by Lattimore, to let Korea fall, but not let it appear that we pushed her.

Mr. Joseph Harsch says Mr. Dulles' foreign policy "has had at its center an effort to demilitarize 'containment'."

What that means, if I understand English, is that the Soviet Union is to be contained by words, sweet or harsh, by economic manna poured on its neighboring countries, by increased trade, and by everything except a frank warning that expansion will be met by force.

This is identical with the doctrine underlying the Marshall plan, by which Acheson effectively demilitarized the Truman-Forrestal doctrine of military aid to stop communism in Turkey and Greece.

The Dulles policy has been compared with the policies of Mr. George Kennan.

Kennan says that if our leadership and the tone of our national life were what they should be, and here I quote his own words:

They would radiate themselves to the world at large, and the warmth of that radiation would not only represent the best means of frustrating the design for further Soviet expansion, it would also be the best means of helping the peoples behind the Iron Curtain to recover their freedom.

I hope no prisoner in a Soviet concentration camp, or a pitiful Polish or Rumanian youth fleeing to the forests to escape conscription into the Red armies, ever hears that an American State Department expert promises to free him by the radiation from the tone of our national life, which will melt, in its warm rays, the violence and cruelty and the hard steel weapons of their Russian or Chinese masters.

According to Mr. Harsch, Mr. Dulles began planning his private foreign policy of "disengaging" us from possible war with the Communist world early in 1954, long before the Formosa resolution of February 9, 1955, which seemed to forecast such a war, well before the Dien Bien Phu crisis.

This interpretation would make very interesting the rereading of Mr. Dulles' statements at the hearings on the Formosa Resolution, and in connection with Dien Bien Phu.

We are told that Mr. Dulles is also contemplating "disengagement" from the policy of arming Germany. That, I submit, was obvious to anyone who read carefully the dispatches from various international conferences and who understands "double-speak," but it has never been put into such plain English.

At another point, Mr. Harsch says:

On the surface, Mr. Dulles has been going around the world patching together new military alliances (SEATO and the "Northern Tier") holding out to the Communists "instant retaliation" and to the allies "united action" and "agonizing reappraisal."

I, myself, have been long convinced that SEATO and other so-called defense treaties were very close to a fraud, but here is confirmation from an unexpected source.

As the correspondent of the Monitor says, Dulles' "instant retaliation" did not save Indochina.

The "unleashing" of Chiang Kai-shek was followed by the withdrawal from the Tachen Islands, and the Formosa treaty, which tied President Chiang tighter than ever to his island fortress.

Talk of "liberation" was followed by acceptance at Geneva of the status quo in Eastern Europe, and the "roll-back" policy of the 1952 campaign became the "coexistence" of Geneva.

This illustrates what I have said before.

The anti-Communist group in our Government is permitted to win the verbal victories, but the collectivist "apparat" quickly recaptures the power.

The correspondent does not call these promises lies. He calls them "interim setbacks which can be immaterial and irrelevant in terms of the long haul."

You can take your choice, Mr. President.

This article takes for granted the doctrine that the elite do not need to tell the people what they intend doing.

When the press of the world was assuming, the writer says:

That Mr. Dulles favored using the armed forces of the United States to put Chiang Kai-shek back in control of China. Mr. Dulles started planning the steps which led to the evacuation of the Tachen Islands, and the regular meeting of the United States and Chinese Communist ambassadors in Geneva.

He continues:

Mr. Dulles' record in office has been a difficult one to follow.

He has seemed so often to be trying to lead us toward war when we know now that he actually was maneuvering all the time to try to disengage the United States.

That is the "brink of war" business we have been hearing about, through the article in Life magazine. I should like to have these articles discussed before the public.

I read further:

From the day he took office his steps have been pointed toward the relaxation of Geneva. * * *

He has often presented to the public the appearance of a man marching off to battle, with at least the Chinese Communists, when all the while he actually was marching toward Geneva.

It is obvious that no one should ever again charge Mr. Dulles with any honest intention to achieve instant retaliation, defense of free China, freedom for the enslaved people of the satellite countries, or a reputation for America that it keeps its solemn commitments to other nations.

If this major series of articles did not correctly describe Mr. Dulles' policies, I am sure he or the State Department's publicity staff would have said so publicly.

Mr. President, I shall place every one of the articles into the RECORD, for Members of the Senate to study. The future of our country depends upon the proper conduct of our foreign relations. If we cannot win the diplomatic war, we are lost; it is just as important as anything else.

Even so, Mr. President, I should hesitate to quote so extensively from one article, even a friendly one, except for one point.

The people of Europe and Asia can read, and will read the Monitor articles, in search of clues to the intentions of our Secretary of State.

In order that Members of the Senate can conveniently read them, I am asking to have the entire series of articles printed in the RECORD at the end of my remarks.

The most important fact in our international relations today is that the leaders of foreign nations who love liberty see clearly every step in our submission to Moscow, and know someone planned it that way.

Look at the curious constancy with which the Secretary of State has insulted one after another of our good friends. For example, the recent unnecessary statement about Goa, and the public humiliation of the new president of Brazil. Occasional blunders obey the laws of chance; consistent blunders are not blunders, but policy.

Mr. Dulles is not crude; instead, he is extremely subtle. Mr. Dulles is far too clever to insult anyone unintentionally. It must be his intention, then, to insult our friends.

Apparently, Mr. Dulles, who told Congress and the people nothing of his inner thoughts, confided to the embassies of foreign powers that when he was talking about "instant retaliation," he had no intention of carrying it out.

Perhaps this is the way Mr. Acheson's office conveyed to the foreign embassies the news that the American State Department would not permit American troops to reap the fruits of their victory in Korea.

Mr. Dulles apparently indicated to the embassies of foreign governments that these "surface postures" of anticommunism were unfortunate, but were unavoidable concessions to reactionaries at home. The foreign embassies knew, says Mr. Harsch, that Mr. Dulles has been "contemplating diplomatic relations with Communist China, from early 1954."

The policy of disengagement could be carried out only because of President Eisenhower's great popularity.

Again I am quoting Mr. Harsch:

In theory, Mr. Dulles took office committed to a forward strategy against the Soviet bloc.

He was supposed to push them harder, not seek to withdraw the United States from the front lines.

The "theory" referred to here is the promise made by the Republican Party in the platform of 1952. The people were fooled, the Allies were reassured, and Republicans who wanted to keep their commitments were silenced, by "the protecting shadow of Eisenhower prestige." Was President Eisenhower informed that his protecting shadow was being used to cover up a complete abandonment of the Republican platform? I do not believe so.

Mr. Eisenhower's recent vigorous reassertion that freedom for the satellites is still American policy, is evidence that Mr. Eisenhower bears no responsibility for this policy of deceit. It is part of the doctrine of the elite that they need not be hamstrung by such old-fashioned scruples as loyalty. The President's statement will help reassure the defenders of freedom in other nations, but we must remember the axiom of the elite that there is no harm in letting the pro-Americans win verbal victories while the collectivists set to work, secretly, to recapture any ground they have lost.

Congress cannot remove members of the Cabinet. That is the prerogative of the President—unless the issues become important enough for impeachment.

Our concern is with the duty of Congress. The President is responsible for carrying out foreign policy, but deciding on objectives in foreign policy is a legislative duty. The Congress is responsible for foreign policymaking, through the legislative power, the power of the purse, the power to raise and support armies, and the power to declare war.

In addition, the Senate has the task of giving advice and consent to treaties, and approving or disapproving major appointments.

The Congress must take up its burden. Because part of the executive branch has been captured by the internationalists, Congress alone can reorient our foreign policy to meet the challenge of the cold war.

I have reviewed Mr. Dulles' record in detail because of his vast powers, but this is not a personal issue.

As I have said before, we gain nothing by criticism of Dean Acheson as an individual. We had the same policy before Acheson, under Harry Hopkins, and the same policy after Acheson, under Mr. Dulles.

We are fighting, not persons, but forces.

We must discover the engineering principles, so to speak, on which the collectivist internationalists operate, and how they gain so much hidden power. Only then can we end the policies.

In a speech on the Bricker amendment, I said that the collectivists in our Government were carrying on a revolution by "interchangeable parts," to be assembled later, according to a fixed plan.

I reminded the Members of this body of the story from Nazi Germany of how easily the assembly line which appeared to be designed for baby carriages could be converted to making machineguns, though it was impossible to notice the difference from the parts alone.

We know that mass-production by means of interchangeable parts is not possible unless each of the parts is machined to a perfect fit with all the other parts, though they may be made in factories hundreds of miles distant.

This machining, in turn, is not possible unless all the innocent-appearing parts are made exactly according to designs prepared in advance in the minute detail by a team of planning "engineers."

Once the designs have been completed by this small inner group, the parts can be made by many different people, in many different places, who may never know what the design is for.

I shall merely list, at this point, what I believe to be currently the most important parts in the grand design—already far along toward completion—to mesh our Government, our political, our economic, and our intellectual life into a materialist world state, governed by an elite responsible to no one.

It is extremly difficult to tell what separate policies are, in reality, the carefully machined parts of the design for assembly line revolution.

Among those potentially disastrous steps in American policy which may really be machined parts ready to be assembled into the yoke of world government, I ask Congress to look carefully at—

Disarmament of the United States through the United Nations.

The giveaway of our nuclear advantage through the U. N.

All regional pacts, which make changes in the sovereign control of our Armed Forces.

Point 4, which could dissipate our economic advantages in a global boondoggle.

I include, also, policies from earlier years which meshed us into the United Nations—the Declaration of Human Rights, the Genocide Treaty, GATT, and the rest.

I have spoken today to make one point clear. Only Congress can deal with the collapse of our foreign policy under the

guidance of the internationalist bloc which occupies key positions in our Government.

I have said at Dallas, Minneapolis, and here in Washington, that the United States today has a dual government. The internationalists are not scattered individuals who are trying to influence national policies. They are a junta or cabal, whose members work together secretly, to operate as much of our Government as they can control to serve their hidden ends.

The executive branch cannot cleanse itself of this rival power. As I said at a meeting of the Magna Charta Dames in April 1955, the principal burden of dismantling the elite, and their colossus on the Potomac, falls on Congress.

I said:

Congress must take back the money it has given the elite to consolidate its influence.

Congress must take back the loose powers which it has carelessly surrendered.

Congress must rescind any legislation which commits us to the collectivist one-world supergovernment which is so rapidly taking over the world.

Congress must strengthen every official and every sector of our Government which operates under the Constitution and adheres to the ideals of the founders of our Nation.

We must plainly tell other countries that if they do not wish to get rid of their own collectivist elite we are through.

I said "through."

We cannot give economic aid or military aid to nations governed by a collectivist elite friendly to communism.

We must build American policy on firm agreements with nations which have cleaned their own house.

I hope to see a complete reexamination not only of the bipartisan foreign policy of the internationalists, but of the revolution by interchangeable parts which makes victory of the internationalists so nearly inevitable.

Only after we have studied both their policy and their method of operations can we hope to put into effect a truly American foreign policy made by the constitutionalists in both parties.

I hope to see the Senate stage another great debate, like that which told our people of the dangerous sellout to the Communists in the Korean war.

This new debate should be concerned, not so much with policies to deal with the new Communist threat, but with the prior question—what are the powers, the lines of communication, the ability to reward and punish, by which the internationalist bloc is carrying on its secret foreign policy, which will mean the certain distruction of our country?

I said in Dallas that every loyal pro-American member of our executive branch works under constant harassment by the members of this invisible government.

Recently, Maj. Gen. Arthur G. Trudeau, Director of Military Intelligence, delivered a paper on the new warfare, political, psychological and economic, as well as military, which was praised as one of the best statements of twentieth century political-economic warfare.

Not long afterward, General Trudeau was removed from the Office of Director of Military Intelligence, and sent to routine duty in the Far East.

Why? We need a full congressional investigation of the persistent reports that General Trudeau observed the work of the Central Intelligence Agency and decided it was of no help in safeguarding America against commmunism. His transfer was insisted on, we are told, by Allen Dulles.

If this is another General MacArthur case, I hope the Chairman of the Committee on Armed Services will make an investigation as impartial as the investigation made, under his chairmanship, of the dismissal of General MacArthur.

I mention, in passing, the experience of two State Department employes with long and honorable records, Mr. Donald Dozer and Mr. Bryton Barron, who were summarily removed from their Government positions after they insisted on full publication of all documents relating to the Yalta hearings, in accordance with the mandate of Congress.

Every man in our Government who attempts to make a policy to safeguard America, and support the nations which wish to remain free, will encounter the unforgiving enmity of the group in high places who are determined to carry on, by revolution by assembly line, the slow, but unceasing, construction of the world collectivist state.

Congress has a simple choice.

Its first obligation is to safeguard our country.

If anything conflicts with that responsibility, then it must take second place.

We are close, Mr. President, to the days of final decision.

The Communists cannot make many more gains.

We cannot give them many more golden opportunities.

We cannot break the hearts of many more staunch anti-Communists who love America.

Congress must reestablish the firm base, the unshakeable pivot of American life, on the rock of the Constitution.

Then it must ruthlessly cut off the public payroll, every activity which serves to build the collectivist one world.

It must restore Government agencies with limited powers in the hands of men who prefer limited powers because they revere our Constitution.

If Congress does its real duty, I have no doubt, whatever, that we shall find plenty of Americans who have the ability needed to roll back the Communist tide and give the world the hope of a new dawn of liberty.

Mr. President, I ask unanimous consent to have reprinted in the RECORD the following newspaper clippings from the Christian Science Monitor, entitled "Mr. Dulles' Stewardship," November 30, 1955, through December 14, 1955, by Joseph C. Harsch.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of November 30, 1955]

MR. DULLES' STEWARDSHIP—I

(By Joseph C. Harsch)

WASHINGTON.—John Foster Dulles has presided over the foreign affairs of the United States for 3 years. As a corollary of this fact he has also been the ex officio policy leader of the western alliance for the same period of time.

The opposition party in the United States has elected to open its 12-month campaign for recapture of control of the United States Government with a frontal assault on Mr. Dulles' stewardship, despite the nonpartisan foreign policy statements of Senator WALTER F. GEORGE and the moderation position of Adlai E. Stevenson. Mr. Dulles' is the most responsible single post of command on the western side in the power struggle of our times.

Perhaps this should not have come as a surprise. The main Republican attack in 1952 was on the foreign-policy front. The human inclination to retaliate in kind is strong and must have been a factor in impelling the Democrats to the strategy they have elected. It is also true that they have concluded that the Dulles stewardship is open to valid criticism, that the Republican administration is vulnerable on this front.

Since the Dulles record is to be a main battleground in the United States elections, let us examine this record at length in this and subsequent articles in this space and attempt to arrive at a balanced appraisal of Mr. Dulles' 3 years in an office which might best be described as that of chairman of the joint chiefs of political staff of the western alliance.

The plan for the study is to begin where we were 3 years ago, proceed to where we stand today, then examine the story of the 3 years which led up to 1952, and conclude with a critique.

When Mr. Dulles took over the secretaryship of state from Dean Acheson in January 1952 the United States was the central and guiding force in an armed alliance. The alliance possessed a unified military force under a unified command. This never had been achieved before in time of peace. The alliance also possessed an agreed body of policy and purpose. The leadership of the United States was not in question, nor were the major policy purposes.

This alliance was so influential beyond the boundaries of its own territories that it had been able to induce a majority support in the United Nations for the war it was still waging in Korea, in fact was allowed to fly the U. N. flag over its armies, although these armies were always in truth armies of the western alliance, not of the U. N.

The influence and prestige of the alliance under United States leadership was also measured by the fact that it retained good relations with India, although the official policy of India was to be a neutral between the western alliance and the Soviet Union and Communist China.

The principal agreed purpose of the alliance was to make headway in the world against the rival purposes of the Soviet Union without precipitating a major war and the destructiveness of atomic weapons in such a war.

Considerable headway was being made against the purposes of the Soviet Union.

In Europe, Soviet momentum had been checked, brought to a standstill, and even had been pushed back in places. Stanchly anti-Communist governments had been set up in France and Italy. Berlin had been saved and West Germany drawn into the western orbit economically, politically, and emotionally.

Finland, although held in a Soviet military grip, had rejoined the West in every other respect. All Europe was recovering economically, financially, and spiritually.

In southeastern Europe, Soviet control of Yugoslavia, penetration of Greece, and attempted blackmail of Turkey had been converted into an alliance of those three states which put the impressive total of 60 divisions of troops into the western order of battle.

In Asia, China had been lost. American public opinion was very troubled over the way the Korean war had been conducted. There was still outward momentum in the

Communist movement, but it had been stopped in Korea where a military truce existed in fact, although it was still to be formalized.

The American people considered themselves heavily and dangerously involved in Korea and were very responsive to President-elect Eisenhower's commitment to extricate them. Japan had been converted from a conquered country into an ally of the United States, though with uneasy undercurrents. Communist China had still to be contained on its southern flank and there were obvious and ominous signs of pressures to come in that direction. The lines had not been stabilized to the point where a political counteroffensive could be contemplated.

In the process there had been dangers of major war—particularly as an outgrowth of the Korean war. However, the alliance was operating within the framework of its major agreed purpose of making headway without getting caught in such a war. It was in forward motion.

[From the Christian Science Monitor of December 1, 1955]

MR. DULLES' STEWARDSHIP—II

(By Joseph C. Harsch)

WASHINGTON.—The only major political force in the world which is in perceptible forward motion today is the Soviet Union. Having changed its tactics, it is not at the moment openly threatening anyone with its military power. It is not placing major emphasis on the weapon of attempted subversion, but it is using classic instruments of power politics in what can only be defined as a new offensive.

This offensive is not as alarming on the surface as the earlier ones, which used more obviously dangerous weapons. However, territory and nations can be won by the subtler and more orthodox methods of power politics, and a world can just as easily be lost in a contest of this kind.

The major feature of the new Soviet offensive is an effort to improve Soviet political and economic relations with as many countries in the world as possible. The end purpose would appear to be the isolation of the Western alliance from the rest of the world and ultimately the breaking up of the alliance.

The operation has enjoyed a considerable measure of interim success. The success is to be measured by the fact that there is no evidence of any widespread feeling around the world that the Soviets did behave badly at the second Geneva conference. Western strategy at this conference was to nail the responsibility on Moscow for the inability of that conference to make progress toward settlements.

While there is considerable awareness of the Soviet unwillingness to negotiate and agree as the major cause for the conference failure, the conference would have been a success, in terms of the Western purpose, if the end result had been a massive revulsion of world public opinion against Moscow. There is no evidence of any such revulsion.

Even in Germany, the principal victim of nonagreement at Geneva, the net effect apparently has been to increase the inclination to deal directly with Moscow rather than to increase resentment against Moscow. In the United States itself there is no appearance of a widespread public-opinion protest against Moscow intransigeance.

What Moscow did at Geneva was officially labeled by Mr. Dulles and his partners as being shocking. They professed to be shocked. But Messrs. Bulganin and Krushchev immediately thereafter took off for an unshocked India, while Kremlin guest suites were being put in order for a fresh series of visits from other unshocked people, including Marshal Tito, of Yugoslavia.

In the meantime, Moscow has been swift to capitalize on the rift between the United States and Egypt which followed after the conclusion of the northern tier alliance of Iraq, Turkey, Iran, and Pakistan. Moscow influence already has penetrated Egypt seriously and the Kremlin has obvious hopes of using Egypt as a base for further operations both in the Middle East and in Africa behind the "northern tier."

Meanwhile there is a weakening of the once-sturdy alliance between Turkey, Greece, and Yugoslavia. Turkey is in a parlous internal condition of economic trouble and political unrest. Greece is furious at London over the Cyprus affair and at Washington over the latter's failure to reproach Turkey for the damage done to Greeks in the Istanbul riots. Yugoslavia is grinning happily on the fence between East and West. The southern anchor of the Western front in Europe is slipping.

The northern flank of that front in Scandinavia has been eroded as well. It cost Moscow nothing to give up the Finnish fortress of Porkaala, but Swedes, Danes, and Norwegians were vastly relieved.

The center of the front is in Germany, and here the erosion is more dangerous than anywhere else. To many German eyes the Western alliance is beginning to look like a relic of the past, not like a useful means toward the primary German purpose of unity.

Even at the heart of the alliance there is discontent. France feels that it has not had the support it could expect from allies in its trouble in Africa. Britain has been distressed over nonimplementation of the trade-not-aid program.

In Asia, Chinese Communist pressures continue to mount to the southward, several of Chiang Kai-shek's generals on Formosa have defected, Britain is launching a desperate attempt to push back the rising Communist tide in Malaya, and Japan is practicing a passiveness about the Western cause which is a source of gnawing anxiety in Washington.

This is not the whole picture. The true proportion of events is probably very much less to the disadvantage of the West than these present facts would appear to indicate. The other side of the coin will be treated carefully in a later installment in this series.

By contrast with Moscow's current forward motion, the ship of the Western alliance appears to be becalmed and motionless. The only project being pushed forward at the moment is the northern tier in the Middle East. But this ceases to have much value if it is outflanked in Egypt.

Mr. Dulles is still chairman of the joint chiefs of political staff of the Western alliance, but the institution appears almost to be dormant. It cannot be said that at this time the foreign policies of the Western alliance are in forward motion. Moscow is.

[From the Christian Science Monitor of December 2, 1955]

MR. DULLES' STEWARDSHIP—III

(By Joseph C. Harsch)

WASHINGTON.—Any fair evaluation of the 3-year stewardship of United States foreign policy by Mr. Dulles must take into account the widely unappreciated fact that he has had to try to do the same things his predecessor, Dean Acheson did, but do them with fewer and weaker instruments of foreign policy.

The great general purpose of United States operations in the world did not change when Mr. Dulles took over from Mr. Acheson. The purpose was then, and the purpose is now, to make headway in the world against the rival purposes of the Soviet Union without precipitating a major war and the destructiveness of atomic weapons in such a war.

The advantages Mr. Acheson enjoyed over his successor, Mr. Dulles, have been obscured, particularly in the United States, by the political controversy which swirled about Mr. Acheson. He was the principal target of Republican political action most of his term of office, and he presided over United States foreign policy during the most unpopular war the United States ever fought—the Korean war. These two circumstances combined to produce widespread public distrust of him and of the policies over which he presided. He was presumed by many of his fellow citizens to be an unsuccessful, even a dangerous, steward of United States foreign policy.

Yet when Mr. Acheson left his native shores to negotiate overseas with his allies and to plan and execute with them ways and means of carrying forward the agreed policies of the Western alliance, he moved at once from a political ambiance in which he was widely distrusted and largely devoid of political influence into one in which he was greatly trusted and in which he exercised enormous influence. Seldom in history has a foreign minister of a great power been so distrusted and weak at home and so trusted and influential overseas.

Consider the instruments which Mr. Acheson possessed in those days for the furtherance of United States policies and purposes:

1. The United States still possessed a commanding lead in atomic military power in the world. Thus his words were always backed and given extra weight by the physical power which lay behind them.

2. Beginning with the Korean war, the Congress insisted consistently on voting more money for the Armed Forces of the United States than the Chiefs of those Armed Forces requested or could spend. Mr. Acheson's words were backed by a rising level of United States military power.

3. With equal consistency and liberalness the Congress, year after year, voted massive appropriations for foreign economic aid.

4. Beginning from long before the Korean war, the Congress consistently voted for all the political projects which Mr. Acheson asked it to approve. From Greek-Turkish aid down through the NATO alliance Congress always approved Acheson policies even though condemning the man Acheson.

Consider now what has happened to these four major instruments of policy since Mr. Dulles took over from Mr. Acheson.

The first has disappeared entirely. The United States lost its commanding lead in atomic military power when the Soviets achieved jet-propelled intercontinental bombers to twin with their atomic and hydrogen bombs. The first Geneva Conference was a formal renunciation of an instrument of influence and power which already had been nullified by events.

The second and third instruments of policy enjoyed by Mr. Acheson have been steadily curtailed during Mr. Dulles' 3 years in office. The military budget has been reduced substantially each year. Foreign-aid appropriations have been cut even more radically.

The only 1 of the 4 instruments which has continued substantially unreduced has been the disposition of Congress to approve political policies—i. e., ratify treaties.

Perhaps a fifth factor should be added to this comparison of assets enjoyed by Messrs. Acheson and Dulles. During the Acheson period the Soviet Union was ruled by Joseph Stalin, a man so widely feared throughout the world that Western countries were acutely aware of their dangers and willing to accept heavy burdens for the sake of their security.

Almost since the beginning of the Dulles period Moscow has been ruled by a collective group of less ominous appearing men. It is merely a fact of the times that the West, including United States public opinion, is less in awe of the new leaders of the Soviet state and therefore less willing to accept burdens involved in the process of trying to thwart and frustrate the rival purpose of the Soviet state in the world.

The only real advantage Mr. Dulles has possessed over his predecessor is that he has enjoyed a greater freedom from public criticism and suspicion at home. This is, however, a small advantage for a foreign minister of a world power. What counts really in such cases is influence abroad, for it is the foreign world, not the domestic scene, which it is his function to influence.

The net of the matter is that Mr. Dulles has had to manage the foreign affairs of the United States with fewer and weaker tools than his predecessor possessed. It is due to circumstances largely beyond his control that the alliance is weaker, that the opponent is bolder, that the influence of the United States is less today than it was when Mr. Dulles took over from Mr. Acheson 3 years ago.

[From the Christian Science Monitor of December 6, 1955]

MR. DULLES' STEWARDSHIP—IV

(By Joseph C. Harsch)

WASHINGTON.—The true story of United States foreign policy over the past 3 years has been obscured and understanding of it made extraordinarily difficult by a body of public folklore dating well back in postwar history and by a fondness of public opinion in modern democracies for a weekly diet of "successes."

Had John Foster Dulles been able and willing to clear away the cobwebs of folklore at the outset of the Eisenhower administration and resist the temptation to feed the public desire for successes, he and his record would not be as politically vulnerable as they are today. On the other hand, he might not still be Secretary of State of the United States of America.

The end result is that the Dulles stewardship is being, and undoubtedly will continue to be, attacked with much political success for the wrong reasons, because it too easily can be made to appear to be what in reality it has not been—which is precisely what happened to his predecessor, Dean Acheson.

The irony of the matter is that Mr. Dulles is in large measure the victim of public misunderstanding of the true role of his predecessor and that his own role cannot be untangled from present false appearances without a prior untangling of the Acheson record from the false appearances of an earlier time.

The key to the untangling of both records lies in a fact largely unknown to the public generally, although widely known and appreciated in the foreign ministries of the world.

That key is that George F. Kennan, one of the most fertile and influential minds brought to bear on Western foreign policy over the past decade, was separated from an active role in the formulation of United States policy in fact back in 1949 when Mr. Acheson was Secretary of State, although he was not separated officially until Mr. Dulles took over in 1953.

Mr. Kennan is known publicly as the originator and the philosopher of what is called the "containment" policy toward the Soviet Union. Mr. Acheson was attacked heavily in his time for having presumably pursued the "containment" policy—Mr. Dulles himself being among the attackers. Since then Mr. Dulles has been widely criticized for allegedly trying to go over from "containment" to a more aggressive policy toward Moscow. But if you read the real record of Eisenhower-Dulles policy of the last 3 years against Mr. Kennan's writings, the fact emerges that in major matters it has been a Kennan policy—much more so than Acheson policy ever was.

The misfortune of Mr. Dulles is that he is being judged by his political opposition now on the basis of an immediate situation which on the surface looks unproductive, whereas the real judgment on him and on the Kennan theory can only be rendered by the future.

The essence of Kennan doctrine is that time is on the side of the West in the power struggle, and that if we of the West play for the long haul, and do not waste our resources in an effort to obtain quick results, or squander our credit in the world by betraying our Western heritage, then we ultimately win.

You will find the "long haul" concept written all through Mr. Dulles' writings, particularly in his speech of January 12, 1954, to the Council on Foreign Relations. You will find it written even more clearly in the record of the last 3 years.

Mr. Kennan wrote:

"The geographic overextension of Soviet power is a serious and unhealthy anomaly, and needs desperately to be remedied, but there is no sudden and drastic and direct way of seeking to remedy it that would not draw down upon us all, friends, enemies, and Americans alike, new miseries and confusions far worse than those we would be concerned to overcome."

Mr. Dulles said:

"If we can deter such aggression as would mean general war, and that is our confident resolve, then we can let time and fundamentals work for us."

Messrs. Acheson and Kennan broke over what Walter Lippmann calls "overmilitarization" of the "containment" policy. If the Eisenhower administration had not launched its foreign policy in the "unleashing" of Chiang Kai-shek, and if Vice President RICHARD M. NIXON had not claimed that Mr. Dulles had "seized the initiative," and if Mr. Dulles' own public relations enthusiasts had not too often claimed successes which turned out to be setbacks, it would be easier to see that Eisenhower-Dulles foreign policy has had at its center an effort to demilitarize "containment," and that, in fact, they have launched a long-term effort based precisely on the Kennan theory that time and fundamentals can work for the West even though there may be interim "setbacks to the cause of freedom" (Dulles, January 12, 1954).

[From the Christian Science Monitor of December 7, 1955]

MR. DULLES' STEWARDSHIP—V

(By Joseph C. Harsch)

WASHINGTON.—What has really happened in the world during the 3 years of Eisenhower-Dulles foreign-policy management?

Are the proportions of events to be measured by the present motion and boldness and technical virtuosity of Soviet policy and the contrasting appearance of western immobility?

Or are the real proportions measured by the fact that western economies, released of part of their arms burden by budget cuts and of fear of atomic war by the "meeting at the summit," have surged ahead in an unprecedented prosperity and expansiveness?

There is no sure answer at this time, nor will a sure answer be available before the United States electorate goes to the polls on next election day.

The principal criticism of Mr. Dulles and his policies has been, and continues to be, that there is a conflict between his words and his deeds.

If he is to be judged by this conflict, then he is in serious trouble, for the charge can be well documented that his precepts and his practices are different things. He is accused of a policy of "bluff and bluster," of trying to deter communism by slogans. He is open to this criticism, for "instant retaliation" did not save Indochina, and the "unleashing" of Chiang Kai-shek was followed by the withdrawal from the Tachen Islands and the Formosa treaty which tied President Chiang tighter than ever to his island kingdom, and "liberation" was followed by acceptance at Geneva of the status quo in Eastern Europe, and the rollback policy of the 1952 campaign became the coexistence of Geneva.

Mr. Dulles, pursuing a long-haul policy, has invited judgment on the basis of interim setbacks which can be immaterial and irrelevant in terms of the long haul. They make him politically vulnerable only because he and others in his behalf have claimed interim successes which are just as immaterial and irrelevant as the setbacks if he is correct about the major premises of his policies.

We can see now, from the perspective of 3 years, that real Eisenhower-Dulles foreign policy has been grounded from the very start on the Kennan theory that it is unnecessary, unwise, and self-defeating to engage the forces of communism directly and constantly on the front lines of the great circle of contest around the Soviet world.

The first important and revealing move of the administration in foreign affairs was not the "unleashing" of President Chiang, but the reduction of United States forces in the Far East. The true policy from the outset was not to seek more areas of engagement with communism, but to disengage the forces of the United States from the mainland of Asia and from as many other points of contact as developing events would permit.

It has not been easy to see the evolution of a disengagement policy, because it has been obscured by many an act which conflicts with it, sometimes only in appearance, sometimes in fact. On the surface Mr. Dulles has been going around the world patching together new military alliances (SEATO and the "northern tier"), holding out to the Communists "instant retaliation" and to the Allies "united action" and "agonizing reappraisal."

But he has steadily and progressively disengaged the real power of the United States from the front lines of conflict. East and west no longer rub elbows at as close range at so many points around the circle. The interlocking alliances, although more numerous, are less meaningful. The United States military budget has been progressively reduced, not after the Soviets agreed to do the same, but regardless of their actions.

Time alone can decide whether disengagement is a safe and successful policy, but for those who wish to grasp the real inclination of sage from George F. Kennan's book "The Realities of American Foreign Policy" (1954):

"The greatest danger presented to us by Soviet policy is still its attempt to promote internecine divisions and conflict within our system of alliances and within our body politic. But this is something we have it in our power to counteract by the quality of our leadership and the tone of our national life generally. If these were what they should be, they would radiate themselves to the world at large, and the warmth of that radiation would not only represent the best means of frustrating the design for further Soviet expansion—it would also be the best means of helping the peoples behind the Iron Curtain to recover their freedom. For you will recall the Aesopian fable about the competition between the sun and the north wind to see which of them would make the traveler remove his cloak. Well, the traveler is the phenomenon of Soviet power. The cloak is that zone of inordinate power and influence in Eastern Europe and elsewhere with which it has tried to shelter its own inner sanctum. And you will all recall that it was not by the huffing and puffing of the north wind, but by the gentle indirection of the sun that the stubborn traveler was at last induced to remove his cloak."

MR. DULLES' STEWARDSHIP—VI

(By Joseph C. Harsch)

It may come as a surprise to most who read this study of John Foster Dulles' 3 years as

Secretary of State of the United States, but it is true and it will appear when the records are published, that early in 1954 he began planning the disengagement of the United States from the possibility of war with Communist China.

This was long before the Formosa Resolution of February 9, 1955, which seemed to forecast such a war, well before the Dien Bien Phu crisis, and also before the September 12, 1954, meeting of the National Security Council in Denver at which he was incorrectly reported to have voted for war if the Chinese Communists attacked Quemoy and Matsu or Formosa.

At a time when the press of the world was assuming that Mr. Dulles favored using the Armed Forces of the United States to put Chiang Kai-shek back in control of China, Mr. Dulles started planning the steps which led to the evacuation of the Tachen Islands and the regular meeting of United States and Chinese Communist Ambassadors in Geneva.

There is a widespread assumption that President Eisenhower has been the restraining and peacemaking element in United States foreign policy, frequently overriding the more warlike inclinations of his Secretary of State.

The truth of the matter is that the vast prestige of Mr. Eisenhower was the indispensible element for the execution of the disengagement policy which Mr. Dulles has been trying to execute since he took office. There were two great dangers in such a policy. One was that the Soviets would take any sign of disengagement as a sign of weakness and push all the harder against the West. The other was that domestic American political opinion, particularly from the Republican right (with its devotion to Chiang Kai-shek), would block such a policy.

Had there been no Eisenhower, Mr. Dulles never would have been able even to begin such a policy of disengagement. In theory, he took office committed to a "forward strategy" against the Soviet bloc. He was supposed to push them harder, not seek to withdraw the United States from the front lines in order that East and West would no longer be rubbing elbows at many points around the circle of Soviet power.

The protecting shadow of Eisenhower prestige has made it possible for Mr. Dulles to move slowly, and at most times obscurely, along his chosen road. The Republican right did not dare to break completely with an Eisenhower policy. The Allies were reassured during the various twists and turns of policy by the presence of the man who had led the Allied armies to victory in the war. The Soviets were respectful of the same man for the same reasons.

In foreign policy, as in war, a policy of disengagement is exceedingly difficult and dangerous. The importance of the Eisenhower role in the operation is attested by the fact that until the date of his illness the Soviets had not attempted to take bold advantage of the fact that the United States was being everywhere less active in the front lines, and was, in fact, pulling back its power toward its home bases.

It remains to be seen whether the disengagement policy can succeed with, or without, the factor of Eisenhower prestige. It is already apparent that it is more difficult without; for since the President's illness Moscow's boldness has jeopardized the policy. But there is no doubt that Mr. Dulles, in spite of all his belligerent-sounding slogans, has in fact been consistently trying to substitute a disengagement policy for the situations of strength policy of his predecessor, Dean Acheson.

One of the more interesting and little-known features of the Dulles record is that the principal Allied embassies in Washington have never shared the popular alarums about Dulles policy which have been so often demonstrated in their public opinions back at home, and even shared by their governments.

The embassies did not share the alarums, because they speak directly and in private with Mr. Dulles. They have been informed in advance of his purposes. They have not always been able to convince their home governments that matters were other than they appeared to be. It was difficult to convince even prime ministers that the United States was not intending war with China, or with the Soviet Union, when Mr. Dulles was talking about instant retaliation, and when preventive war was being advocated by high figures at the Pentagon.

But the embassies spoke with Mr. Dulles and knew from him that he regarded the surface postures as being unfortunate but unavoidable concessions to domestic political opinion, or as maneuvers required for strategic reasons bearing on Moscow and Peking. They knew that he was contemplating diplomatic relations with Communist China from early in 1954, and looking forward from an earlier date to relations with Moscow in a less brittle and more flexible context.

MR. DULLES' STEWARDSHIP—VII

(By Joseph C. Harsch)

WASHINGTON.—The more one tries to find the accurate context of the United States foreign-policy record under John Foster Dulles, the more one finds himself forced to go back to the year 1949 as the starting point. That year was the nemesis of Dean Acheson. It also bred the conditions which have been most troublesome for Mr. Dulles.

It was in 1949 that communism captured China and the Soviet Union set off its first atomic device. Those two simultaneous events did, in fact, upset the power balance in the world, and the United States has been striving ever since to restore a balance in which peace could be maintained on a tolerable basis.

One can only speculate on what might have been the story since then if Mr. Acheson had prevailed in the councils of Washington in the gloom of late 1949 when all of China had fallen under Moscow's shadow and the American monopoly of atomic weapons had been broken.

In those grim days of physical and mental winter Mr. Acheson and his advisers conceived and started preaching their situations of strength policy inside the administration. But it came up against a commitment of the Truman administration to balance the Federal budget. Economy was the official watchword of the day. Secretary of Defense Louis A. Johnson was cutting the fat out of the United States Military Establishment (he said he was not touching the muscle) up to the day the Korean war broke out in the spring. It was in that January of 1950 that Mr. Acheson drew the United States defense line around Japan, but not around Korea.

The reason for that action is important to the events of today. The United States Army, on reduced appropriation, decided that it had to cut its commitments and withdraw from at least one of its advanced positions. Mr. Acheson argued against the withdrawal from Korea, but when the choice was Korea or Germany, he gave in.

Had there been no United States military withdrawal from Korea imposed by the Army cuts, and had there been an upward revision of the whole United States military force instead of a further downward revision after the events of the summer of 1949, it is quite possible that there would never have been a Korean war.

But the sequence of events was not broken. A United States still in the process of disarming woke up to find itself in the Korean war. The shock to the United States, and to its policies, was profound. The reverberations are still felt.

That shock of the Korean war produced massive United States rearmament. It did more than that. It raised taxes, precipitately. It inflated the NATO alliance from an original plan for a United States-Canada-Britain alliance into a great, unwieldy structure which took in Norway over the protests of Sweden on one flank and the bitter hostilities of Greece and Italy on the other. It launched a military-aid program for anyone who would take United States arms. It inaugurated the rearmament of Germany policy.

By election day of 1952 the inevitable reaction to so many situations of strength at such cost had set in. Preventive war had become a rising theme in Washington. The phenomenon called McCarthyism had startled the alliance. American public opinion seemed to want an end to the cost either by atomic war or by withdrawal to Herbert Hoover's Fortress America. The alliance was threatened not by American strength, which was welcomed, but by what seemed to be a rising disposition to use that strength radically.

In January of 1953, the Eisenhower-Dulles team inherited a thoroughly explosive situation. It was under enormous pressures to end the existing situation by some means, almost by any means. It was an imperative for the team either to cut the burdens and costs of the old policies, or attempt to force a settlement at the threat of atomic war. The country was impatient of a condition which promised no end to the costs and no visible resolution of the war.

Mr. Dulles must wish as profoundly today as Mr. Acheson ever did that the budget cuts of 1949 had not caused the Army to insist on the withdrawal of United States troops from Korea. The problem for statesmen is always to find the golden mean. The valid criticism of Truman-Acheson policy after 1950 was that it overcompensated for the shock of the Korean war. The criticism which history may find valid against Mr. Dulles is that he had subsequently overcompensated for Truman-Acheson policy. If the one went too expensively far toward situations of strength, the other may be moving faster toward disengagement than is safe under the circumstances. Behind both is the same primary cause—the shock of the Korean war.

[From the Christian Science Monitor of December 13, 1955]

MR. DULLES' STEWARDSHIP—VIII

(By Joseph C. Harsch)

WASHINGTON.—One event stands out above all others in the record of the 3 years of Eisenhower-Dulles conduct of United States foreign policy. That one event is, of course, the "meeting at the summit" in July of this year.

Views about its merits and demerits are many and varied. It seemed to be a happy event when it took place. Governor Harriman of New York has since said that it cleared the way for a "breakthrough" of Soviet policy.

This much can be said about it without being controversial. It produced a sense of relaxation in the world.

Mr. Dulles did not want the meeting to come when it did. From his point of view, it was premature. He was driven to agreement by many factors, including the onrush of a political election in Britain for which the Conservative government thought it needed proof of its interest in peace.

The prematurity of the "meeting at the summit" was confirmed in one respect by the sterility of the subsequent second Geneva conference. The atmosphere had been relaxed before the experts of East and West had been able to discover even a useful approach to the problem of Germany.

In retrospect, we can see now that pressures of public opinion have imposed un-

fortunate timing on more than one such event. The popularity of budget economy in 1949 prevented the rearmament of the United States from being launched until after the Korean war broke out. It was planned and approved by President Truman in February. But it was not implemented until after the war started, and after its possible deterrent effect was gone. Had it been launched earlier, Moscow might not have thought it saw a green light flashing in Korea. Next, the public-opinion pressures of the Korean war imposed the tragic "march to the Yalu," and also the policy of rearming Germany.

Mr. Dulles' disegagement policy has been plagued more by that policy of rearming Germany than by any one other thing. Had he been free to disengage from the German policy before the "meeting at the summit," the sequel to the summit might well have been agreement on Germany. It is merely a fact, repeated a thousand times by all the statesmen of the world, East as well as West, that there can be no real settlement in Europe so long as Germany is divided.

Again we see the nemesis quality of the year 1949 still at work. In 1949 Moscow was not committed irrevocably to perpetuation of the division of Germany. Nor was the United States committed to the military integration of Germany into the Western alliance, nor to the military "forward strategy" which has since become so much a part of established United States military doctrine that the Pentagon can hardly think yet in terms of an alternative.

The disengagement policy of Mr. Dulles cannot succeed unless both the West and Moscow are willing and able to disengage from the German policies they both inherited from the Korean war. It is merely a fact that they were not able to do so this October, in spite of the relaxation produced in July. It is also a fact that since the summit conference and even more markedly since President Eisenhower's illness, the Soviets seem to be taking a degree of advantage of the disengagement policy which threatens its ultimate success. This might well not be the case if Mr. Dulles had been able to pick the time of the summit conference to his liking.

His great risk, all along, was that Moscow would take his policy as a sign of weakness, and take undue advantage of it. This is precisely the mistake the Soviet leaders made in the spring of 1949 when they assumed that the United States military withdrawal from Korea meant that it was safe for them to move in.

What Mr. Dulles has been trying to do ever since "the summit" has been to rescue his basic policy of disengagement from the prematurity of that first Geneva conference. He can only hope that Moscow will not overplay its hand now, as it did in June of 1950, and thus put him in the same position Mr. Acheson was put then.

The trouble about a foreign-policy issue in the 1956 campaign is that the individual voter has no way of knowing which point of view is fundamentally the more sound. The Democrats can contend that if Mr. Dulles had stayed with the Acheson "situations of strength" policy, the West would be better off today. No one can prove them wrong.

The Republicans can contend that Mr. Dulles' policy of disengagement will eventually win us through to the day of George F. Kennan's Aesopian fable when "the gentle indirection of the sun" will cause the stubborn Moscow traveler to shed the cloak of his "tone of inordinate power and influence." No one can prove them wrong.

But that day cannot very well come by next election day. Mr. Dulles is playing, for a long-term result, years away. Inevitably, he will be judged on the basis of individual guesses about the future results.

[From the Christian Science Monitor of December 14, 1955]

MR. DULLES' STEWARDSHIP—CONCLUSION

(By Joseph C. Harsch)

WASHINGTON.—An individual statesman is far less able than we usually assume to change the direction of events.

If the men of Moscow take undue advantage of the atmosphere of relaxation produced at "the summit" and plunge the world at least into a renewal of the worst days of the so-called cold war, the man whom public opinion generally will blame will be John Foster Dulles.

Right now he has to take the blame for the fact that the Soviets are taking a dangerous degree of advantage both of the relaxation of Geneva and of President Eisenhower's illness.

But Mr. Dulles was rushed by events into agreeing to the summit conference before he thought the time was really ripe for it.

We might well have been spared all of this if Winston Churchill had been heeded during the closing days of World War II. We can see now how profoundly right he was in recognizing that the onrushing defeat of Nazi Germany had made the Soviet Union the new danger to the West.

But even if President Roosevelt in the weariness of his last days and President Truman in his early inexperience had been able to grasp the soundness of the Churchill views, they would have been powerless to act upon them. Western public opinion, British as well as American, would have been incapable of accepting a turn of policy which would have called for renewed efforts just as the old war was ending.

We can see now in retrospect that if there were any one single cause of the Korean war it was the military budget cuts in the United States in 1949 which forced the withdrawal of United States troops from Korea at a time when the Communists were overrunning China and Moscow was setting off its first atomic bomb. But budget cutting was popular in 1949, and so, too, were lower taxes. It is easy to blame President Truman for deferring action on the then-pending rearmament program until the day after the Korean war broke, but few men in his position would have done otherwise. Not until the Korean war actually started was the United States taxpayer persuaded of the magnitude of the new dangers which arose out of the summer of 1949.

Mr. Dulles' record in office has been a difficult one to follow. He has seemed so often to be trying to lead us toward war when we know now that he actually was maneuvering all the time to try to disengage the United States from direct contact with both the Soviet and Chinese Communists. From the day he took office his steps have been pointed toward the relaxation of Geneva.

Perhaps his own personal nemesis has been the fate of his predecessor, Dean Acheson. He is said to have resolved that he never would expose himself to the punishment Mr. Acheson took in Congress. Thus he has often presented to the public the appearance of a man marching off to battle with at least the Chinese Communists, when all the while he actually was marching toward Geneva.

He has tried to avoid any open breaks with the Congress while doing things which many a Congressman would have felt impelled to denounce in public had they become public knowledge. This has led him to such devices as exchanging ambassadors with Communist China in Geneva. The substance of recognition is granted without the appearance.

This is a transparent device for doing something without appearing to do it. Mr. Dulles has resorted to many such devices. But, then, who in his position, having watched his predecessor become a household word of reproach throughout the land, would have been able to resist the employment of such devices? Politics, after all, is defined as the art of the possible.

And if "instant retaliation" was a bluff that was called by the Communists who walked through it to victory at Dien Bien Phu, it was imposed, in part at least, by a shortage of other deterrents which had, in turn, been imposed by public revulsion against the high taxes of the Korean war.

The Acheson policy was designed to achieve the containment of the Soviet Union by building "situations of strength," which seemed the wise thing to do after the Korean war broke out.

The Dulles policy is designed to achieve the containment of the Soviet Union by emphasizing strength and prosperity at the economic center of the Western alliance while disengaging militarily around the periphery of the power struggle. That seemed the wise thing to do after the revulsion of United States opinion to the costs of "situations of strength."

If the end result, years ahead, is Soviet relaxation to the point where the world is safe again, it may be that both "situations of strength" and relaxation made their necessary and useful contributions. But both were very largely imposed on the men identified with them by circumstances beyond their control.

History inevitably will judge both Mr. Acheson and Mr. Dulles differently than the politicians do today.

Mr. LANGER. Mr. President, I am very happy that, temporarily occupying the seat of the minority leader, I was present in the Chamber when the distinguished Senator from Indiana delivered his speech. He is not a member of the Committee on Foreign Relations. If he were, and if he had seen the Secretary of State when he appeared before our committee and heard his frank answers, I am sure he would have been impressed, as I have been, with his fearless honesty in giving reasons for acting the way he did under certain situations.

As Senators know, I am a member of the Abraham Lincoln-Theodore Roosevelt-Robert La Follette, Sr.-George Norris branch of the Republican Party. All Senators know that I voted against the United Nations and against all giveaway programs.

I wish to say, however, that the foreign policy of our country is, under our Constitution, in the hands of Dwight D. Eisenhower, the President of the United States. That the President is as popular as he is today attests to the fact that the people believe he has been doing a very good job in dealing with the complex problems that arise in that field.

The President chose John Foster Dulles to be his Secretary of State; and the Senate, as I recall, unanimously, including, I believe, the Senator from Indiana, confirmed the nomination.

Sitting as a member of the Foreign Relations Committee, and being able to ask Mr. Dulles any questions I wish to ask of him, I have always been impressed by the fact that John Foster Dulles is, above everything else, not a hypocrite.

John Foster Dulles has the courage of his convictions. He has the great courage and integrity to change his mind from time to time as rapidly changing conditions appear. I am impressed by one other fact. It is that with John Foster Dulles as his Secretary of State, Dwight Eisenhower and Mr. Dulles have

taken charge of the foreign relations of the United States Government, and, although cooperating with other countries, have not allowed England, France, or any other country to dictate to the United States of America.

As a member of the Republican Party, I am proud of the record Dwight D. Eisenhower has made in conducting the foreign affairs of the United States.

It is so easy to go back over a period of years and criticize. It is so easy to go back a few years and, out of context, read what was said by the distinguished Secretary of State. It is such a simple matter to quote from what he may have said in a speech a few years ago. I think most public men are vulnerable on that score.

The great fact that appeals to the men and women of America, Mr. President, is that Dwight Eisenhower and John Foster Dulles have kept our country out of war. All over the country there is a feeling of security that so long as Dwight D. Eisenhower is in the White House the United States will not become involved in a war, even though the Secretary of State may have taken us to the brink three times. That very fact may have kept us out of war on all occasions and likely did—and Mr. Dulles is entitled to that credit.

So far as I am concerned, occupying temporarily the chair of the minority leader, I say that, in contrast to what was done during the past 20 years by the party whose representatives sit across the aisle, the record of Dwight D. Eisenhower stands out remarkably well.

Mr. President, I could not let the occasion pass without saying what I have said, in view of the speech which has just been made.

If the distinguished Senator from Indiana were a member of the Committee on Foreign Relations and had attended the meetings of that committee when John Foster Dulles appeared there, and saw his almost unbelievable frankness, and realized what a great job that man has been doing and is trying to do for America, I believe in my heart, knowing the distinguished Senator from Indiana as I do, that he would not have made the speech he has made today.

Of course, as I said before, it is easy to criticize. However, as a member of the Committee on Foreign Relations, I am satisfied of the honesty, ability, and integrity of John Foster Dulles. Mistakes he may have made. However, if so, they have been mistakes of the head, not of the heart. I say in all sincerity that, in my opinion, John Foster Dulles has been unrelentingly fighting for the interests of the rank and file of the people of the United States. I say that even though I do not agree with him on many things he has done.

As I said, I could not help make my statement, occupying, as I do, for the moment, the position as minority leader because I feel the Secretary of State is entitled to this consideration—and I am delighted to have the opportunity frankly to state the truth upon the Senate floor.

PRESERVATION OF NATURAL RESOURCES

Mr. NEUBERGER. Mr. President, the unanimity of opinion which exists in the United States over the need for conserving natural resources is something of a phenomenon in a nation of such diverse economic interests, political affiliations, and social viewpoints. This phenomenal solidarity is a reflection of the desire of Americans to foster and preserve our heritage of scenic values, of mountain vistas, of timbered slopes, of surging waterways—and the birds, animals, and water life which inhabit them.

One would imagine that because of the number and single-minded purposefulness of those Americans dedicated to natural resource conservation, no public official would have the temerity to undertake action which would threaten the cause around which so many millions of our citizens have rallied. Yet, in the past 3 years, there has occurred a rising crescendo of protest against the administrative policies of the Department of the Interior toward national parks, forests, wildlife refuges, and water resources. The supporters of the present Secretary of the Interior, Douglas McKay, have attempted to minimize the criticism of his policies by claiming the protests are inspired by political partisanship. It is my belief that such is not a true evaluation of the origin and extent of opposition to many Interior Department policies. The fact is that adherents of sound conservation policy are among the members of both political parties. Neither the Democratic nor Republican Party can lay sole claim to this large segment of the American population.

Because administration apologists have tried to pin the label of partisanship to the critics of Secretary McKay, I believe it is noteworthy that one of the strongest protests against his actions was recently made by a group of New York State conservation leaders, who, in a copy of a telegram given to me, willingly identified themselves as Republicans. The telegram left no doubt as to their desire for Secretary McKay's immediate dismissal, nor their intentions to mobilize political action if the administration fails to accept their suggestion.

Mr. President, I ask for consent to include in the RECORD a copy of the telegram, dated January 9, 1956, which was sent to President Eisenhower, asking for the dismissal of the Secretary of the Interior.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

SYRACUSE, N. Y., *January 9, 1956.*

President DWIGHT D. EISENHOWER,
The White House,
Washington, D. C.:

Although we are confident that this message will never reach you (others have been diverted), we are addressing it to you because of the importance which we attach to the subject; and because you are undoubtedly the only person who can possibly curb the efforts of the Republican Party as represented by Secretary McKay in his persistent efforts to foster the exploitation and destruction of our national parks, forests, and wildlife refuges by commercial interests and by the Armed Forces of the United States.

Moreover, the latest of these acts by the custodian of our public lands, whom you appointed, namely, the leasing of the wildlife refuges to oil and gas interests, specifically violates Mineral Leasing Act, Public Law 585, section 10 of the United States Congress which states clearly that these lands can be leased for other purposes only in time of national emergency and then only by Presidential order.

Such an emergency does not exist (oil and gas reserve ratios to use have never been greater) and therefore, the Secretary has disregarded and usurped both Presidential and congressional authority and the demonstrated wishes of the public. During his 3 years in tenure, Secretary McKay has abundantly demonstrated his unfitness for administering the great public trust which you have placed upon him.

We request his immediate removal from office for the good of the Nation and to make it unnecessary for us to apprise the public of the facts and to bring about the defeat of the Republican Party, regardless of candidate, at the forthcoming national election.

If you question our ability to muster votes for conservation, witness the defeat of amendment 7 in New York States last November by a majority of over 2 to 1, despite the efforts of politicians and selfish interests over a period of 30 years. It took us only 6 weeks to do that—we have 36 weeks to organize the 40 million purchasers of hunting and fishing licenses in the United States.

It is with regret that we as Republicans find it necessary to make such a request.

RICHARD CASE,
Director, New York Conservation Council and Chairman, State Waterfowl Committee, Kirkville, N. Y.

ROBERT BAGBY,
Chairman, Sportsmen's Round Table Association, Rural Route 2, Cazenovia, N. Y.

A. B. HATCH,
Chairman, Game Committee, Twin Falls, Fayetteville, N. Y.

HARRY WHITFORD,
Retiring Director, New York State Conservation Council, Syracuse, N. Y.

ORDER FOR RECESS

Mr. LONG. Mr. President, I ask unanimous consent that when the Senate has concluded its business today it stand in recess until 12 o'clock noon tomorrow.

Mr. LANGER. Mr. President, reserving the right to object—and I shall not object—I cannot let this opportunity pass without saying that this is the first occasion I have ever occupied the seat of the minority leader at a time when the seat of the majority leader was occupied by my great friend the Senator from Louisiana [Mr. LONG]. It is a great occasion, because he is one of my very best friends. He is a Democrat and I am a Republican, but he went to North Dakota and won the love, admiration, and respect, as a man of integrity, of the people of North Dakota. His father was there on several occasions. I congratulate the Senator upon the great father he had. I know he is an able son of Huey Long, who was my friend. This is the first occasion I have had to be in close proximity to the distinguished Senator when he and I are temporarily occupying these positions.

Mr. LONG. I thank the Senator very much for his kind remarks. The Senator from North Dakota has been an able

public servant throughout his entire life. He has devoted himself to the best interests of the citizens of the Nation, and I am extremely glad to be one of his friends. It has been one of the gratifying things of my life that my father shared the Senator's friendship. I believe the Senator from North Dakota is one of the most devoted friends I have ever known.

Mr. President, has there been a ruling on my unanimous-consent request?

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF DEBATE TOMORROW

Mr. LONG. Mr. President, I ask unanimous consent that at the end of the morning business tomorrow the Senator from Illinois [Mr. DOUGLAS] be recognized.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG. Mr. President, I further ask unanimous consent that the Senator from Illinois [Mr. DOUGLAS] be permitted to yield to the Senator from Montana [Mr. MANSFIELD] for 30 minutes before the Senator from Illinois proceeds.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. LONG. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF THE NATURAL GAS ACT, AS AMENDED

The Senate resumed the consideration of the bill (S. 1853) to amend the Natural Gas Act, as amended.

Mr. DOUGLAS. Mr. President, I should like to make some preparatory comments this afternoon. It is my understanding that the acting majority leader will then move that the Senate take a recess until tomorrow.

Mr. President, this has been a somewhat extraordinary debate thus far. On the one hand, the very eminent Senator from Arkansas [Mr. FULBRIGHT], whom I count as a real personal friend, made an eloquent argument that his bill is designed primarily to protect the consumer. He virtually gave assurances that there would be no increase in prices if the bill were to be passed.

Another eminent Senator, the junior Senator from Oklahoma [Mr. MONRONEY], whom I also count as a personal friend, implied that any increases which came about would be perhaps not more than half a cent or 1 cent a thousand cubic feet.

I am sure those Senators made their statements in perfect sincerity. They are very fine men, and I am sure they meant what they said. But it is very interesting that in the areas where the gas is produced, in Texas, Oklahoma, and Louisiana, the people who are really behind the proposed legislation do not regard it primarily for the protection of the consumer, as the Senator from Arkansas tried to assure us, but as a means to give the producers a very large increase in the price of natural gas at the wellhead. This illustrates the extraordinary dual nature of the discussion which has been carried on here. On the one hand, verbal assurances are given to the consumers of the North that there will be no real increase in price and that the control imposed will be more effective than under the present law; on the other hand, propaganda has been going on for months in the Southwest that this is a decontrol measure designed to take the reins off the industry and allow it to get all it can for the sale of gas at the wellhead.

Mr. President, the Fulbright bill cannot be both of these things; it must be one or the other. And there is no doubt what the bill really will do. It will greatly increase the cost of natural gas to the consumer, particularly the householders and families of America.

Mr. LONG. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I shall be glad to yield to another good friend of mine. It is strange to see how many personally fine Senators are on the wrong side of this issue.

Mr. LONG. Is it not entirely within the realm of possibility that the price of gas will be fixed by competitive conditions as is the price of any other commodity?

Mr. DOUGLAS. I would say the price of gas in the field is fixed by quasi-monopolistic conditions in a seller's market in which the buyers do not have adequate protection.

Mr. LONG. Why does the Senator feel that there is no adequate competition in the gas business? I am sure the Senator would not want to have the average American enterprise placed under Federal price control. Why does the Senator feel that the gas business is any less subject to competitive factors than is the automobile business, the steel industry, the coal industry, and many other industries?

Mr. DOUGLAS. Let me say to my good friend from Louisiana who has just returned victorious from the political wars of his State, that if he will listen carefully to the arguments which I shall unfold, a portion of which I hold in my hand, I hope he will be converted, because he is a very openminded man, and I hope he will recognize that the production of gas is very different from the production of automobiles, steel, or any other commodity.

Mr. LONG. I hope the Senator is prepared to make a different argument than he made several years ago when he failed to persuade me.

Mr. DOUGLAS. I know you are an honest man but it is hard to persuade Senators from great gas producing and exporting States. I can understand and fully appreciate the position of Senators from such States who feel they must represent the interests of their State. But what puzzles me is how any Senator from a consuming State can be for this bill.

Mr. LONG. Being firmly convinced that prices should actually be fixed by competitive conditions, the Senator from Louisiana might say that he would still be of that opinion after he has heard the arguments.

Mr. DOUGLAS. I hope the Senator from Louisiana will listen to me.

I may say that we who fought the Kerr bill did not do so badly the last time in 1950 so far as the Senate was concerned. We received 38 votes on the floor, when at the beginning it was said we had only 26; and the public was educated to such a degree that the President of the United States, in his wisdom and courage, vetoed the bill.

RECESS

Mr. LONG. Mr. President, I believe the Senator from Illinois would perhaps desire to defer until tomorrow the address on which he has made much preparation, as can be seen. I believe he would prefer to speak to a more full attendance of the Senate at that time.

If the Senator from Illinois does not object, I now move that, pursuant to the order previously entered, the Senate stand in recess until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 4 o'clock and 51 minutes p. m.) the Senate took a recess, the recess being under the order previously entered, until tomorrow, Friday, January 20, 1956, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate January 19 (legislative day of January 16), 1956:

SECURITIES AND EXCHANGE COMMISSION

Earl Freeman Hastings, of Arizona, to be a member of the Securities and Exchange Commission for the remainder of the term expiring June 5, 1959, vice A. Jackson Goodwin, Jr., resigned.

MUNICIPAL COURT OF APPEALS FOR THE DISTRICT OF COLUMBIA

Leo A. Rover, of the District of Columbia, to be chief judge of the Municipal Court of Appeals for the District of Columbia for a term of 10 years, vice Nathan Cayton, retiring.

UNITED STATES MARSHAL

Lyle F. Milligan, of Wisconsin, to be United States marshal for the eastern district of Wisconsin, for a term of 4 years, vice Clemens F. Michalski, resigned.

COAST AND GEODETIC SURVEY

Subject to qualifications provided by law, the following for permanent appointment to the grade indicated in the Coast and Geodetic Survey:

To be commissioned captain

Ira T. Sanders, effective January 1, 1956.

Edward R. McCarthy, effective January 1, 1956.

Clarence A. Burmister, effective January 1, 1956.

Francis B. Quinn, effective January 1, 1956.

UNITED STATES PUBLIC HEALTH SERVICE

The following candidates for personnel action in the Regular Corps of the Public Health Service:

I. FOR APPOINTMENT, EFFECTIVE DATE OF ACCEPTANCE

To be senior surgeons

John C. Hume

Emanuel E. Mandel

To be senior assistant surgeons

Joseph H. Davis	Henry V. Belcher
Carl S. Shultz	Donald A. Carlyle
Robert B. Mellins	Frederick Stohlman, Jr.
Arnold S. Morel	Roy J. Thurn
Jack Richard	John E. Sonneland
Preston L. Leslie, Jr.	Edward B. Cross
James H. McGee	Warren P. Jurgensen
Hildegard M. Leslie	

To be assistant surgeons

Neely E. Pardee	John G. Mahaney
Gordon S. Siegel	Ted L. Flickinger
John S. Murray, Jr.	Donald J. Murray
Gabriel M. Mulcahy	James T. Worlton, Jr.
Raph J. Zecca	

To be assistant dental surgeons

Robert A. Hesse
E. Duane Oakes

To be senior assistant nurse officers

Katherine W. Kendall	Lydia K. Oustalan
Marcella R. Hayes	Catherine M. Thompson
Josephine I. O'Callaghan	Mary G. Eastlake
Margurite M. Albrecht	Lillian M. Kennedy
Ruth P. Tweedale	Hazel F. Kandler
Elizabeth B. Uroda	Esther C. Gilbertson

To be assistant nurse officers

B. Octavia Heistad	Dorothy C. Calafiore
Evelyn H. Krueger	Catherine M. Atwater

II. FOR CONFIRMATION OF RECESS APPOINTMENTS

To be senior surgeon, effective date indicated

James D. Wharton, December 28, 1955.

To be surgeon, effective date indicated

I. Ray Howard, September 22, 1955.

To be senior assistant surgeons, effective date indicated

Nicholas P. Sinaly, September 26, 1955.
Paul Ortega, Jr., October 3, 1955.
Jesse L. Steinfield, October 3, 1955.
Robert Y. Katase, October 4, 1955.
Thomas L. Gorsuch, October 5, 1955.
Seymour Dubroff, October 5, 1955.
David J. Crosby, October 10, 1955.
Fred J. Payne, October 14, 1955.
Symon Satow, November 16, 1955.
M. Walter Johnson, November 26, 1955.
Edward F. Blasser, November 30, 1955.
Bernard J. Eggertsen, December 3, 1955.
Agamemnon Despopoulos, December 6, 1955.
Murray Goldstein, December 6, 1955.
Leo Nakayama, December 6, 1955.
Dewey C. MacKay, Jr., December 8, 1955.
Frank R. Mark, December 13, 1955.
Eugene T. van der Smissen, December 19, 1955.

To be assistant surgeons, effective date indicated

C. Lowell Edwards, September 7, 1955.
Roy E. Tolls, September 7, 1955.
Ernest E. Musgrave, September 7, 1955.
Michael W. Justice, November 28, 1955.
David H. Loof, December 7, 1955.
John R. Trautman, December 9, 1955.
Irvin B. Kaplan, December 14, 1955.
Thomas E. Kiester, December 19, 1955.

To be senior assistant dental surgeons, effective date indicated

Paul H. Keyes, September 22, 1955.
Harry M. Bohannan, September 23, 1955.
Alfred Popper, October 1, 1955.
Edgar M. Benjamin, October 3, 1955.
Marvin S. Burstone, October 3, 1955.
Edward J. McCarten, October 26, 1955.
Neville A. Booth, November 7, 1955.
Winston W. Frenzel, November 12, 1955.
Joseph Abramowitz, November 20, 1955.

To be assistant dental surgeons, effective date indicated

Robert R. Kelley, November 4, 1955.
Calvin M. Reed, November 16, 1955.
Winston D. Bowman, November 21, 1955.
W. Frederick Schmidt, November 25, 1955.
Stanley D. Sherriff, November 29, 1955.
Bernard A. Yenne, December 9, 1955.
James R. Dow, December 13, 1955.
William D. Bowker, December 19, 1955.
Harry H. Hatasaka, December 23, 1955.
Leonard Iverson, December 29, 1955.
Howard B. Hancock, December 29, 1955.
Ivan T. Shaurette, December 30, 1955.

To be senior scientist, effective date indicated

Louis Block, November 14, 1955.

To be senior assistant nurse officers, effective date indicated

Lucille T. Fallon, November 30, 1955.
Evelyn A. Eckberg, December 7, 1955.
Antoinette M. Antetomaso, December 8, 1955.
Elizabeth A. Mullen, December 8, 1955.
Helen Troxell, December 8, 1955.

To be assistant nurse officer, effective date indicated

Alice M. Haggerty, December 12, 1955.

To be junior assistant nurse officer, effective date indicated

Cecil F. Mills, December 12, 1955.

To be senior assistant sanitarian, effective date indicated

Viola L. Ziemer, October 18, 1955.

To be assistant sanitarians, effective date indicated

Grace M. Littlejohn, October 24, 1955.
Paul Blank, December 14, 1955.
Richard A. Steinmetz, December 14, 1955.

III. FOR CONFIRMATION OF RECESS PERMANENT PROMOTION

To be senior assistant surgeons, effective date indicated

Malvern C. Holland, July 1, 1954.
Charles C. Elliott, July 1, 1955.
Charles A. Davis, July 1, 1955.
Robert W. Jones, July 1, 1955.
Cuvier D. McClure, July 1, 1955.
William B. Gaynor, July 1, 1955.
Leslie R. Schroeder, July 1, 1955.
Alan S. Rabson, July 4, 1955.

HOUSE OF REPRESENTATIVES

THURSDAY, JANUARY 19, 1956

The House met at 12 o'clock noon.

Msgr. Nicholas Babak, vice president, St. Basil's College, Stamford, Conn., offered the following prayer:

In the name of the Father, and of the Son, and of the Holy Ghost. Amen.

O generous and loving God, we humbly thank Thee for the inestimable blessings which Thou hast bestowed upon our land and its people, among whom are those who have fled from the inhuman tyranny of the colonialism of imperialistic Russian communism, and who have now regained the blessings of liberty. In this land of abundance Thou hast permitted men of all races, speaking many tongues, to live together under one flag.

Enlighten and guide, O wise and Almighty God, our devoted patriots, our leaders, the Members of Congress, and the President of the United States in restored health, and enable them to fulfill the grave obligations of their respective positions with honesty and ability. For their work fill them with zeal; always to put welfare of our country and welfare of humanity over self. May they hasten to secure that universal peace which respects life, liberty, and the pursuit of happiness—freedom of religion, freedom of the press, and freedom of lawful assembly.

With Thy help, O Lord, may they bring new life to the once free Ukrainians and all enslaved people—people who now helplessly cry out from vast prisons behind barbed wire to men of freedom everywhere.

Fill the hearts of these American patriots with such compassion and determination that they may help to secure for all men, governments which derive their just powers from the consent of the governed.

Give them fearlessness and courage to protect the God-given rights of their fellow men.

In the name of the Father, and of the Son, and of the Holy Ghost. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Tribbe, one of his secretaries.

RESIGNATION AS MEMBER OF THE COMMITTEE ON BANKING AND CURRENCY

The SPEAKER laid before the House the following communication:

JANUARY 19, 1956.

The Honorable SAM RAYBURN,
Speaker of the House of Representatives.

MY DEAR MR. SPEAKER: I hereby tender my resignation as a member of the Committee on Banking and Currency of the House of Representatives.

Sincerely yours,

IRWIN D. DAVIDSON,
Member of Congress.

The SPEAKER. Without objection, the resignation will be accepted.

There was no objection.

ELECTION OF MEMBER TO COMMITTEE ON HOUSE ADMINISTRATION

Mr. COOPER. Mr. Speaker, I offer a privileged resolution (H. Res. 381) and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That WATKINS M. ABBITT, of Virginia, be, and he is hereby, elected a member of the standing Committee of the House of Representatives on House Administration.

The resolution was agreed to.

ELECTION OF MEMBER TO COMMITTEE ON THE JUDICIARY

Mr. COOPER. Mr. Speaker, I offer a privileged resolution (H. Res. 382) and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That IRWIN D. DAVIDSON, of New York, be, and he is hereby, elected a member of the standing Committee of the House of Representatives on the Judiciary.

The resolution was agreed to.

ELECTION OF MEMBER TO COMMITTEE ON MERCHANT MARINE AND FISHERIES

Mr. COOPER. Mr. Speaker, I offer a privileged resolution (H. Res. 383) and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That JOHN D. DINGELL, of Michigan, be, and he is hereby, elected a member of the standing Committee of the House of Representatives on Merchant Marine and Fisheries.

The resolution was agreed to.

ELECTION OF MEMBER TO COMMITTEE ON PUBLIC WORKS

Mr. COOPER. Mr. Speaker, I offer a privileged resolution (H. Res. 384) and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That JOHN D. DINGELL, of Michigan, be, and he is hereby, elected a member of the standing Committee of the House of Representatives on Public Works.

The resolution was agreed to.

COMMODITY CREDIT CORPORATION—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States, which was read and, together with the accompanying papers, referred to the Committee on Banking and Currency:

To the Congress of the United States:

In accordance with the provisions of section 13, Public Law 806, 80th Congress, I transmit herewith for the information of the Congress the report of the Commodity Credit Corporation for the fiscal year ended June 30, 1955.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE,
January 19, 1956.

ADJOURNMENT OVER AND PROGRAM FOR NEXT WEEK

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. MARTIN. Mr. Speaker, I would like to inquire if the gentleman from Massachusetts could advise us at this time as to the program for next week.

Mr. McCORMACK. I am glad my friend asked that. I have no program to announce yet for next week. The Committee on Rules meets on Tuesday next. There will be no program for Monday or Tuesday, and I announce this so that the Members may govern themselves accordingly. After the Committee on Rules meets on Tuesday, I may have some program to announce for the remainder of the week, but for Monday and Tuesday the Members will understand there is no legislative program.

Mr. MARTIN. I thank the gentleman.

THE BIRTHDAY OF ROBERT E. LEE

Mr. JENSEN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. JENSEN. Mr. Speaker, 12 States—one quarter of our great Republic—have honored the memory of Robert E. Lee by setting aside his birthday, January 19, as a legal holiday.

The glory of Robert E. Lee has expanded with the years. The example of his wisdom, his unselfishness, his dedication to duty is a high heritage of every American.

I might pay tribute to his courage. This home of the brave has produced none more brave than he.

I might pay tribute to his accomplishments as an engineer. He led the way in that profession.

I might pay tribute to his ability as an educator. He has had few equals in that field.

I do pay tribute to these noble qualities of character.

But, even more highly than these I honor the deep Christian strength of Robert E. Lee's soul which steeled him to face alike—with dignity and understanding—the sweetness of triumph and the bitterness of disaster.

His was the deep Christian strength of soul which all of us in 1956 need so desperately.

All honor, then—Mr. Speaker—to a man who held honor above all.

THE LATE HONORABLE JERRY J. O'CONNELL

Mr. METCALF. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Montana?

There was no objection.

Mr. METCALF. Mr. Speaker, it is my sad duty to notify the House of the death of a former Member of this body, the Honorable Jerry J. O'Connell, who represented the First District of Montana in the 75th Congress.

Born in Butte, Mont., on June 14, 1909, Mr. O'Connell attended parochial schools and Butte Central High School. He was graduated from Carroll College at Helena, Mont., in 1931, and from Georgetown University in 1934.

In 1930, at the age of 21, he was elected as a representative from Silver Bow County to the Montana Legislature and reelected in 1932. Following his legislative service he was elected as the youngest member ever to serve on the railroad and public service commission. Two years later he came to Congress.

Jerry O'Connell won the Democratic nomination for Congress in 1938 and 1940 but lost in the general election of both years.

Mr. O'Connell moved to Seattle in 1944, was executive secretary of the Washington State Democratic Central Committee from December of that year until early 1947.

He returned to Montana, took the Montana bar examination and was admitted to the bar of my State in 1948. He practiced law at Great Falls, Mont., until his death following a heart attack on January 16 of this year.

He is survived by his wife, Maizie, and a 9-year-old son, Jerry J. O'Connell, Jr. Mrs. Metcalf joins me in a heartfelt sympathy to both.

RECOGNITION OF OUTSTANDING SERVICES OF HON. JOHN E. FOGARTY, OF RHODE ISLAND

Mr. FORAND. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Rhode Island?

There was no objection.

Mr. FORAND. Mr. Speaker, I have asked for this time to invite the attention of all Members of the House to the fact that numerous honors are coming to one of our outstanding Members. I refer to my colleague, JOHN FOGARTY, of Rhode Island, who by now has become widely recognized as the champion of better health for the Nation.

Many of us recall his valiant efforts a couple of years ago on the floor of this House for an increase in the appropriation for medical research. We also recall the fact that he had to be hospitalized only a few days later when he suffered a heart attack, which many of us feel was brought on as the result of overwork in the field of public-health legislation. We are happy that he has fully recovered from that attack and that he is able once again to lead the fight for more research in the field of medicine which, we hope, will in the not too distant future result in finding the weapons to destroy our worst enemy, chronic diseases.

We are happy to note that JOHN FOGARTY's work is being widely recognized, and we congratulate him on the awards that he has received. On last Saturday, January 14, JOHN FOGARTY was awarded the United Cerebral Palsy Distinguished Service Award for outstanding service in the cause of America's cerebral palsied children and adults.

On Tuesday, January 17, he was awarded a medal and a scroll by the Rhode Island Dental Society for his contribution to the health services of this country.

In 1952, JOHN FOGARTY was honored by the American Cancer Society when he was presented with its national distinguished service award for leadership in the Congress of the United States in the enactment of cancer control legislation.

Only recently, he was given a plaque by the New England Cerebral Palsy Conference in recognition of his work in the interest of the victims of cerebral palsy.

During the recess of Congress this last summer, JOHN FOGARTY went to Europe at the invitation of the Pasteur Institute to observe the research development of

that outstanding institution. Last but not least, let me say that the lion's share of the credit for the growth of the National Institutes of Health here in Washington belongs to JOHN FOGARTY.

We salute him.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. FORAND. I am glad to yield to the gentleman from Massachusetts.

Mr. McCORMACK. I am very glad to join with my friend from Rhode Island [Mr. FORAND] in the remarks he has just made about our distinguished friend and colleague the gentleman from Rhode Island [Mr. FOGARTY]. There is no one who more richly deserves the honors that have recently been conferred upon him, and the honors which were conferred upon him heretofore, and which will probably be conferred upon him in the future for his efforts in bettering the health of the people of America than our dear friend from Rhode Island [Mr. FOGARTY].

Mr. FORAND. I thank the gentleman for his contribution.

BIRTHDAY OF GEN. ROBERT E. LEE

Mr. FLYNT. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

Mr. FLYNT. Mr. Speaker, today marks the 149th anniversary of the birth of one of the greatest Americans of all time, Gen. Robert E. Lee. General Lee's life and his works are a monument to devotion to duty which shall survive as long as the English language is spoken by American citizens and their descendants.

I concur with every word of praise of Robert E. Lee just spoken by the distinguished gentleman from Iowa [Mr. JENSEN].

General Lee has been described as being perhaps the only American who achieved worldwide fame, whose entire life and character did not bear one blemish or one stain. His life, his heart, his theory, and his spirit shall ever be an example which all Americans, young and old, may seek to emulate. One statement made by him for which he will always be remembered was:

> Duty is the most sublime word in the English language—a man cannot do more, he should never be satisfied to do less.

It is well known to every person who has ever read the first page of American history that at the outbreak of the War Between the States, then Col. Robert E. Lee was offered the position of Commander in Chief of the Union forces. There was no doubt in the minds of military experts, both past and present, that he was the ablest and best qualified officer of the United States Army at that particular time. Had he so accepted command of the Union forces, there is practically no doubt that upon the successful termination of the war by the forces which he commanded that he would have been offered the Presidency of the United States, which position he could have probably held for the balance of his natural life. This was a decision which would have tempted a less true patriot, a man less dedicated and devoted to his duty as God gave him the light to see that duty. Instead of accepting the command of the Union forces and the armies of the United States, he elected to cast his lot with his beloved State, the Commonwealth of Virginia. For 4 long bitter years he led the Army of Northern Virginia and the entire military forces of the Confederate States of America and finally he surrendered them at Appomattox on April 9, 1865. Never was there a man more splendid nor more magnificent in victory than was General Lee in defeat on the day he surrendered his sword and by that gesture laid down the army and the military forces of the Confederate States.

Immediately thereafter, he returned to the war-wrecked and devastated Commonwealth of Virginia, in which his heart and soul were both wrapped. He turned down offers which would have guaranteed him financial wealth and independent security for the remainder of his life, and instead of accepting any one or all of these offers, he chose to assume the presidency of Washington College at Lexington, Va., which is now known as Washington and Lee University, where he felt he could best serve the youth of Virginia.

Today the citizens of at least 11 States have set aside this day as a State and legal holiday to honor this great American. We in the Congress of the United States join with the 11 States in paying a justly deserved tribute to the memory of a man about whom it can be truthfully said, "He was perhaps the greatest American of all times."

THE POWER OF THE BUREAU OF THE BUDGET

Mr. EDMONDSON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. EDMONDSON. Mr. Speaker, in a very short time a group of Members from the State of Arkansas and the State of Oklahoma will be asking the Committee on Appropriations to pass once again on a question that apparently is a time-honored one and may bring to the floor of Congress the same question. That question is this: Does the power of veto over legislative acts signed by the President of the United States rest in the Bureau of the Budget, and can the Bureau of the Budget ignore and disregard a legislative mandate of this body that has been signed by the President of the United States? Is the Bureau of the Budget some kind of supergovernment here in our Capital which has the right of saying, "You shall not build a dam or a series of dams" after this Congress has directed that those dams be built and has appropriated money to start construction of them?

That is the question which is imbedded deep in principle and important to this body. I think the time is going to come when this Congress is going to have to assert emphatically and definitely that the Bureau of the Budget is not some kind of supergovernment high in the clouds over Washington that can direct the Army engineers to ignore legislative mandates.

Mr. Speaker, in the coming days this House will be hearing more about this matter, which strikes directly at basic constitutional questions of vital concern to the legislative arm of our Government.

I do not believe that any executive agency can set itself above the law.

I do not believe that any executive agency can substitute its judgment as to the need for a project, or the practicality of a project, once it has been authorized by Congress, and had money appropriated for its construction.

I do not believe the Congress will accept any such usurpation of power by the Bureau of the Budget, or by any agency subordinate to it.

I earnestly hope that we will speedily receive assurances that the Bureau of the Budget does not aspire to such power over matters of constitutional legislative jurisdiction.

H. R. 8585

Mr. LESINSKI. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. LESINSKI. Mr. Speaker, it is evident to almost everyone that there is a great need for action to be taken to give assistance to schools of our country. I need hardly repeat the comments we have been hearing over and over again on this subject. We are very much aware of the crisis facing the schools. I along with others have been studying ways and means of lending such assistance. Many proposals have been offered to help alleviate the situation and I have yesterday offered a bill, H. R. 8585, proposing an amendment to an existing law that will help some of the more hard-pressed school districts.

As you may know, Public Law 815 of the 81st Congress, as amended, gave recognition to the impact that certain Federal activities have on school construction needs in areas where Federal activities have been or are being carried on. The law provided for the payment of the cost of constructing school facilities in such areas. Under the law, affected school districts were to submit applications upon which the Commissioner of Education based a decision on the amounts to which the districts would be entitled according to the provisions of the law.

In many instances, either through oversight in completing applications or for other reasons, school districts did not receive the full amounts to which they were entitled under the provisions of the law. As of October 3, 1955, there were approximately 400 school districts

throughout the United States and its Territories that, for one reason or another, did not receive the full amount of Federal funds for which they were qualified under Public Law 815, as amended, before the final cut-off date. The total unpaid entitlements in these cases amount to approximately $75,500,000.

Additionally, there are school districts that had gone ahead and constructed facilities in federally affected areas prior to enactment of Public Law 815. Some of these received a percentage reimbursement under the original law, but others did not receive any reimbursements under later amendments to the law.

The bill that I introduced today will permit those schools with unpaid entitlements to apply for the remainder or a portion thereof providing they show need and will permit payment of heretofore unpaid reimbursements for minimum school facilities.

The need for school facilities in these areas has already been established, as has the Federal Government's obligation. It seems only proper that measures be taken to complete the original intent of Congress in enacting Public Law 815. I believe my bill, H. R. 8585, will carry this intent through.

NAVAL PERSONNEL

Mr. BEAMER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. BEAMER. Mr. Speaker, I have introduced a bill in the House today that will validate certain payments of seaduty pay made to naval personnel serving on board vessels in the Great Lakes during the period November 1, 1950 to October 31, 1953.

The purpose of this bill is to correct administrative errors by the Navy during this period in granting seaduty pay to men serving aboard certain vessels in the Great Lakes.

As a result of this apparent administrative error and a ruling by the Comptroller General of the United States that efforts must be made to collect this overpayment a great number of servicemen now on active duty and former servicemen are faced with a hardship if they are forced to refund this money.

These payments were made in good faith in accordance with the determination of competent authority and, in view of this fact, I sincerely hope the House will act favorably to relieve the servicemen now on active duty and veterans from the liability imposed through administrative error.

Undoubtedly many other Members have received letters from constituents who, through no fault of their own, now are asked to refund moneys received while in service or are finding deductions made each month if they still are in the service. This is a very worthy measure which I hope the proper committee and House membership will approve favorably and promptly.

INCOME TAX RELIEF FOR FARMERS

Mr. DOLIVER. Mr. Speaker, I ask unanimous consent to adress the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. DOLLIVER. Mr. Speaker, I have just introduced a bill which gives income tax relief to farmers who suffer a net loss from the operation of their farms. It will permit a farmer who has such a net operating loss to carry back that loss to the 5 prior taxable years. For example, a farmer who has a net loss from farming in 1956 would be able to apply the loss as a deduction against any income which he reported as far back as 1951. In this way, he would be entitled to a refund for all or part of the income taxes he had previously paid. My bill is retroactive to 1954, so that any farmer who had a loss in that year would be entitled to a carryback as far as 1949.

Obviously, my bill is not intended as a solution to the overall farm problem. That problem has many aspects, all of which will have to be attacked if a permanent answer is to be found. Nevertheless, I am convinced that we must not overlook any opportunity to bring about an improvement in the situation. My bill represents one such opportunity, and I shall press for its early consideration by the Congress.

Under the somewhat technical provision of the present tax law, any taxpayer, including a farmer, can carry back a loss to the 2 preceding taxable years and carry it forward for 5 years. My bill does not disturb this basic provision but simply extends to farmers alone a special 5-year carryback.

The present farm situation makes this special treatment logical and desirable. Farm income has been going through a period of decline. As a result, a carryforward is relatively meaningless insofar as many farm operators are concerned because they have little or no immediate prospect of getting any tax benefit from such a carryforward. My bill provides a far more realistic treatment and, in my opinion, will result in substantial relief for many hard-pressed farmers.

Under my bill, a farmer is defined as any taxpayer whose gross income from farming in the taxable year represents at least two-thirds of his total gross income. This is the same definition used elsewhere in the tax laws.

THE LATE JAMES McLAUGHLIN

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include a newspaper article.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, in the constant flow of life, the mystery of death, which we must all experience, always seems just a little beyond our comprehension. Particularly is this emphasized when the experience of death comes to one very close to us, when it comes to a friend, a dear relative, a mother, father, or someone very dear.

It is with a very sad heart and with a great effort to understand that I take this moment to bring to the attention of the Congress the passing of a very great friend, Mr. James McLaughlin, of Woburn, Mass., a longtime friend of my husband's, the Honorable John Jacob Rogers, who was a Member of Congress for many years, and an equally loyal and devoted friend of mine through all my years of public service. It is difficult for me to comprehend the great work of representing my Fifth District of Massachusetts in the Congress without his devoted friendship, wise counsel, and constant help.

Mr. James McLaughlin possessed an eminently respected character. He was loved by all, regardless of their station in life. He was a friend who could be depended upon for help wherever and whenever help was necessary. He was interested in the welfare of and improvement of his city. He was devoted to doing good for the Commonwealth of Massachusetts. He was a strong and loyal American patriot.

The death of Mr. McLaughlin was due to overwork. An excellent newspaper reporter, during his newspaper days he covered many famous events and wrote many famous stories for the press. For many years he wrote a feature article for the Boston Globe and was a correspondent for the Associated Press. During the latter years of his life he entered the Government service in the Department of Social Security, and the work he did there in helping so many of his fellowmen will always be remembered. Always he had time to do just something more for somebody. Never sparing his strength, he worked long hours in his job and for his friends.

Mr. McLaughlin was blessed in life with a very fine and wonderfully respected family. He is survived by his attractive and charming wife, Christine, 4 daughters and 1 son, a sister and 9 grandchildren. It is a wonderful family who, like their father, are friendly and generous and unselfish.

Although death came to James McLaughlin suddenly, I know he was prepared to receive it, for he lived a fine, Godly, Christian life, and knew so well that in spite of all of its beauty, life on earth is just a temporary sojourn.

Included here in my remarks, I am submitting a report of the life of James McLaughlin from the Woburn Times, a fine daily newspaper, on the staff of which he once served. It is a fine description of the life of James McLaughlin, who devoted his life to his community, his country, and his friends:

JAMES MCLAUGHLIN FUNERAL RITES TO TAKE PLACE FRIDAY

The funeral of James A. McLaughlin, veteran newspaper reporter and public informational executive, will be held from his late home, 35 Sturgis Street, Friday at 8:15 a. m. Solemn High Mass of Requiem will be celebrated at St. Charles Church at 9 o'clock followed by burial at Calvary Cemetery, Woburn.

The sudden death of Mr. McLaughlin was received with a shock of grief in the city where he was known as an active, virile, and resourceful member of the fourth estate

with his finger on the pulse of current events at all times. While returning from his office in Waltham, where he was regional director of the Social Security Administration in the area which extends from Newton to Framingham, he was stricken behind the wheel of his car on Lexington Street, this city. A truck driver was in the act of giving the McLaughlin car a push with his machine and he noted that the operation was faulty but snow on the rear window of the car cut off the truckman's vision.

William Murphy, cab operator for the Woburn Cab Co., who was approaching noted the strange happenings and he signaled to the truck driver to stop, as the McLaughlin car came into the side of the road. He saw the driver slumped over the wheel but still breathing. Murphy sent a message over the taxicab radio to the desk in Woburn Square and Joseph Kelleher operator of the company, called the police. Sgt. Edward E. Reil and Officer Edward J. McColgan rushed to the scene in the ambulance and the victim was pronounced dead shortly after his arrival at the hospital. Rev. James J. Cullinan of St. Charles Church administered the last rites.

The fascinating and productive career of Jim McLaughlin as a newspaperman dates back to 1912 when he was an office boy on the old Woburn News. He did not possess a formal education but by self-appliance and an inherent ability in the newsgathering field, he held very important assignments in news coverage and informational center administration. He was a reporter's reporter always quite willing to discuss angles of the developments of a story with reporters from rival newspapers and he was considered outstanding in his thoroughness of investigation, mentally locating the backbone of a story, and his ability in literary formation in presenting his version to the reading public.

His range of coverage ranged from famous murder cases which he covered for the Boston metropolitan dailies to concerning Boston City Hall for the Boston Post during one of the several news-developing administrations of Mayor James M. Curley. He was considered among the staff of Boston newspapers as one of the best and in cases where sordidness and sadness smeared with a breath of scandal to the detriment of an innocent family, he was not considered a good reporter, as his human inclinations and his appreciation of the happiness and humanity of his fellowman inspired to play it down in such instances. He had incidently dedicated his life and talents to the uplift of his neighbor and his neighbor was everybody. The revealing testimony of those who worked with him or under his direction bespeak the kindness and consideration of the man and a person in trouble would not employ a better defender than Jim McLaughlin who went to the lengths to extend a helping hand and to convince those in whose hands the ultimate decision in a case rested. His acts were many and without compensation, or any desire for reward. He was a family man, deeply concerned about the trappings and proper development of his children mentally and physically. He was methodical in the execution of his duties and he was well informed in whatever field his talents brought him.

Mr. McLaughlin was born in Woburn, March 29, 1892, the son of the late Dennis J. McLaughlin and Mary Healy McLaughlin. He attended the grammar schools and left to assist his family. While attached to the Woburn News as an office boy, he took courses in Burdett College. From office boy he was promoted to sports reporter and his youthful masterpieces were his version of the prize fights then conducted in Lyceum Hall. From the Woburn News he went to the Woburn Daily Times, where he covered City Hall, politics, obituaries and general news events. He entered the Woburn Daily Times in 1913 and left for a time to become a member of the Boston Post city staff, during which time he covered Boston City Hall, court stories and famous accidents.

The reporter had a fling at politics and was elected alderman in ward 1, and in 1918 he was elected city clerk at which time he returned to the Woburn Daily Times as the news reporter. He became local correspondent for the Boston Post and then became district man for the Boston Globe which position he has held for thirty years. In addition to general coverage of his district, Mr. McLaughlin wrote feature articles for the Globe. He was also local correspondent for the Associated Press and covered elections in this district for the wire service for the past 32 years. He also covered stories for the old Lowell Courier Citizen and later the Lowell Sun and his coverage also appeared on the Boston Record and Boston American, Hearst newspapers. Mr. McLaughlin was dean of local newspapermen not only in longevity of service but in the variety and scope of his news-gathering activities. In the city government, he was also a member of the board of assessors from 1927 to 1931.

In 1934, Mr. McLaughlin entered the Government service in informational or public relations work. His first assignment was the Home Owners' Loan Corporation, where his work was noteworthy for the many local hardship cases he handled for Woburnites because of his desire to serve. He then went on to the Federal Housing Administration and then to Reconstruction Finance Corporation. For the past 6 years, Mr. McLaughlin was regional director for the Social Security Administration in the Waltham district.

The deceased is survived by his wife, Christine (McDonald) McLaughlin, four daughters, Mrs. Lillian Hooban of West Roxbury, Mrs. Rachel Palmer of Woburn, Mrs. Christine Drew formerly of Atlanta, Ga., now of Reading, Mass., Janet McLaughlin, of Woods Hole, Mass., and one son, James A. McLaughlin, Jr., a student at St. Michael's College in Winooski, Vt., a sister, Maude McLaughlin of Woburn, and nine grandchildren.

THE UKRAINE

Mr. OSTERTAG. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. OSTERTAG. Mr. Speaker, on this the 38th anniversary of the independence of the Ukraine, we may well pause to take stock of our policies with respect to the peoples who have fallen under Communist domination.

President Eisenhower spoke with a clear voice, on the point, last summer in Geneva, when he said:

> The peaceful liberation of the captive peoples has been, is, and until success is achieved, will continue to be the major goal of United States foreign policy.

This is a shining hope and promise to the peoples behind the Iron Curtain, just as the goal of self-government is a beacon to all men everywhere, who love freedom. It is particularly a beacon to the people of the Ukraine, who are this week commemorating the short-lived era of independence which they won after World War I.

The Ukraine is a nation with a grand and heroic past. It came into being in the Middle Ages, and became Christianized a thousand years ago. In 1648 it became known as the Ukrainian Kozak state and as such it stood as a barrier against onslaughts from the east and from the north. Overcome and absorbed by the czars, Ukraine eventually won another brief but glorious era of freedom following World War I, only to lose it again to the Communists. Since then, it has suffered some of the harshest tyrannies known to history, including the Kremlin-made famine of the 1930's which was designed to break the resistance of the Ukrainians to communism, and in which more than 6 million Ukrainians died.

Mr. Speaker, it is a privilege to pay tribute to these courageous people at this time, and to express the hope that the day will come when their liberation, as envisioned in our foreign policy, will be achieved.

RADIO AND TV COMMERCIALS

Mr. HESELTON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include a newspaper article, a copy of a bill, a statement by the Federal Communications Commission, and a statement in regard to the bill.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. HESELTON. Mr. Speaker, on April 20, 1955, I filed H. R. 5471. I did this because of the number of complaints I had received as to the amount and kind of advertising on radio and television programs.

The bill provided only that the Federal Communications Commission shall prescribe appropriate regulations, applicable to licensees, program sponsors, and others, to insure that, of the total amount of time available for any radio or television program, the proportion of such time which is devoted to advertising shall not be excessive.

On July 20, 1955, the Commission adopted what was entitled Comments on H. R. 5471. I shall include the text of the bill and of these comments in my remarks.

The Commission admitted that "there have been, and are, abuses" in this matter.

But it was of the opinion that "fixed rules by a Government agency" would not solve the problem.

However, with apparent satisfaction, it reported as to its exercise of its powers on renewing applications and expressed the desire to continue reliance upon this. It added the usual bureaucratic gobbledegook about "budgetary limitations."

Since then, through the correspondence I have received, the comments made to me, and the statements I have read in the press and elsewhere, plus my personal observations, I have been convinced that the problem has not been solved through the "cooperation of the industry through self-regulation and self-restraint" on which the Commission relied so heavily.

Rather, the abuses have increased to the point of stupidity.

Last night I read the article in the Washington Daily News of yesterday by James O'Neill, Jr. It is well worth reading by each of us and I congratulate Mr. O'Neill and the News on the forthright criticism made of an outstanding example of nauseating drivel and incredibly bad public relations exhibited in this one program.

I am certain that Mr. O'Neill would agree that ABC is not the sole offender. Anyone who sees or listens to other radio and television programs can give countless examples of incessant and monotonous abuse of the listening and viewing public which is basically a combination of flagrant bad taste and arrogant indifference. Those responsible for this seem to be completely unconcerned about the fact that they use the airwaves only by sufferance and that the public interest should be the major responsibility of the Federal Communications Commission.

I am sending Mr. O'Neill's article to the Federal Communications Commission with a request for its comments and for a review of the position it took on H. R. 5471 on July 20 of last year.

Before including the full article by Mr. O'Neill, I want to call your specific attention to certain excerpts. I do so because, through them, Mr. O'Neill has portrayed so accurately and so vividly the reactions of a trained observer that I feel certain scores of thousands who have been forced to submit to this kind of abuse would adopt fully his comments as to this particular instance as being all too representative of other equally offensive handling of the privilege of using the airways.

These excerpts are as follows:

I've watched television botch things before, but never have I witnessed such an indecent, irresponsible, and utterly stupid production in my life.

No one could have imagined, even in the most frightening flight of fancy, what the boy-wonders of the television industry could do to it.

The Cruel Sea builds up to frequent dramatic heights, and to thoroughly demoralize its audience ABC injected commercials of giveaway quiz shows, musical programs which leaned heavily on hillbilly talent, and sundry unsavory items.

I counted 13 commercial breaks in an hour and 45 minutes.

In order to get these "important messages" (that's televisionese for you "you can go to the icebox and get a drink now while we blab about how to smell better") some dramatic moments were sliced out of the picture by some clod who deserves to be drawn and quartered.

Each dramatic moment was cut short by an announcement to hear about someone called Red Foley, a hillbilly, or to watch some asinine comic give away money on a quiz show.

There is no better way in the world to turn composition into decomposition, to borrow a phrase from W. S. Gilbert, than to allow it to fall into the hands of the morons in the television business.

If these people have any conscience at all they will forego a few of their irritating commercials, they will insist the pictures be edited by someone reasonably literate, and will present The Cruel Sea in toto next time out.

The full article follows:

[From the Washington Daily News of January 18, 1956]

THE CRUEL SEA—FINE FILM MISERABLY TREATED BY TELEVISION

(By James O'Neill, Jr.)

If ABS–TV's presentation Monday, The Cruel Sea, is an example of what we can expect of television's good movie offerings, the motion-picture theaters of the country have nothing to worry about.

I've watched television botch things before, but never have I witnessed such an indecent, irresponsible, and utterly stupid production in my life.

The film was that British-made classic of Nicholas Monsarrat's best-selling novel, The Cruel Sea. The star is Jack Hawkins, and in its original form the film was unanimously acclaimed by critics here and abroad.

DEALS

Then someone sold the film to television in one of those highly advertised big deals involving millions of dollars.

The announcement of the purchase was made last fall. TV writers extolled the farsighted intelligent arrangement, and those of us who'd seen The Cruel Sea, were particularly anxious to see it again. Those who were not so fortunate as to see this magnificent movie in a theater must have been equally excited over the prospect of watching it on TV.

No one could have imagined, even in the most frightening flight of fancy, what the boy wonders of the television industry could do to it.

PROMISE

First of all, we were promised Alfred Hitchcock's A Lady Vanishes, Monday. Not so. The man came on the screen and said we wouldn't see A Lady Vanishes. We'd look at The Cruel Sea. This was fine, until the movie started.

Then the roof fell in.

Every 10 minutes the film was stopped in midair, or in midsequence, it made no difference. And came the commercials. One, two, or three commercials in the breaks. Once five were offered.

The Cruel Sea builds up to frequent dramatic heights, and to thoroughly demoralize its audience, ABC injected commercials of giveaway quiz shows, musical programs which leaned heavily on hillbilly talent, and sundry unsavory items.

I counted 13 commercial breaks in an hour and 45 minutes.

WATCH ABC

And, mind you, most of these were simply house commercials. They did not represent bought-and-paid-for time by the soap and deodorant manufacturers. The commercials were intended, of all things, to get people to watch the ABC–TV network.

In order to get these important messages (that's televisionese for you, "you can go to the icebox and get a drink now while we blab about how to smell better"), some dramatic moments were sliced out of the picture by some clod who deserves to be drawn and quartered.

The film, in its original, was beautifully edited by experts. It was a taut, emotional, picture of men at sea, in war. And their precious, few moments on land.

FULL PICTURE

Character, personality, emotions, and continuity were involved. You needed the full picture to get the feeling of H. M. S. *Compass Rose.*

When the picture had passed through ABC's meat grinder there was little continuity left. Each dramatic moment was cut short by an announcement to hear about someone called Red Foley, a hillbilly, or to watch some asinine comic give away money on a quiz show.

There is no better way in the world to turn composition into decomposition, to borrow a phrase from W. S. Gilbert, than to allow it to fall into the hands of the morons in the television business.

If these people have any conscience at all they will forego a few of their irritating commercials, they will insist the pictures be edited by someone reasonably literate, and will present The Cruel Sea in toto next time out.

The text of H. R. 5741 is as follows:

H. R. 5741

A bill to amend the Communications Act of 1934, to provide for regulation of the amount of radio and television program time which may be devoted to advertising

Be it enacted, etc., That part I of title III of the Communications Act of 1934, as amended, is amended by adding at the end thereof the following new section:

"PROGRAM TIME DEVOTED TO ADVERTISING

"SEC. 330. The Commission shall prescribe appropriate regulations, applicable to licensees, program sponsors, and others, to insure that, of the total amount of time available for any radio or television program, the proportion of such time which is devoted to advertising shall not be excessive."

The following is the report of the Federal Communications Commission:

COMMENTS OF THE FEDERAL COMMUNICATIONS COMMISSION ON H. R. 5741, A BILL TO AMEND THE COMMUNICATIONS ACT OF 1934 TO PROVIDE FOR REGULATION OF THE AMOUNT OF RADIO AND TELEVISION PROGRAM TIME WHICH MAY BE DEVOTED TO ADVERTISING

H. R. 5741 would amend the Communications Act of 1934, as amended, by adding a new section 330 to part 1 of title III of the act. This new section would require the Commission to prescribe appropriate regulations, applicable to licensees, program sponsors, and others, to insure that, of the total amount of time available for any radio or television program, the proportion of such time devoted to advertising not be excessive.

The Commission is not unaware of the fact that there have been, and are, abuses with respect to the amount of time devoted to advertising over particular radio or television stations and on particular programs broadcast over some stations. We do not believe, however, that the problem can be handled through the imposition of fixed rules by a Government agency. The Commission's regulatory experience has indicated that any fixed rule in this area cannot hope to achieve the flexibility necessary for dealing with a multitude of differing and changing program formats.

At the present time, the primary responsibility for determining the amount of radio and television time devoted to advertising is primarily the responsibility of the individual station licensee. However, in connection with renewing licenses the Commission examines the overall record of stations, including the amount of time devoted to advertising, to determine whether the continued operation of the station would serve the public interest. In reviewing the overall record of stations on renewal, the Commission has employed criteria, as a guidepost, rather than as a fixed standard, to determine whether there has been overcommercialization. The Commission has found, however, that even these flexible guideposts have had to be adjusted in light of changing advertising practices in the broadcasting industry. Thus, the change in sponsorship techniques in recent years from a program sponsorship concept to one in which time is sold for commercial announcements incorporated into programs produced directly by the stations themselves or by the networks has required a reevaluation by the Commission of the role

of spot announcements in the operation of broadcast stations.

The Commission believes, therefore, that imperfect as the existing system may be, it is clearly preferable to attempting to fix any arbitrary limitations on total advertising time per program. It is our opinion that, with the cooperation of the industry through self-regulation and self-restraint, the Commission's present procedures are best calculated to achieve the goal of operation in the public interest without involving the Federal Govrenent in the day-to-day management of stations in which it cannot and, in our opinion, should not, effectively or properly engage. In this respect it should be noted that in considering renewal applications the Commission presently makes careful inquiries into evidences of abuse through overcommercialization. These inquiries, which are restricted only by the budgetary limitations on Commission manpower available to conduct such studies, have, we believe, served to remedy the more flagrant examples of commercial exploitation that have occurred, and further improvement can be expected through a continuation of such efforts.

Adopted: July 20, 1955.

In conclusion, I want to quote the brief statement I made when I filed H. R. 5471, as follows:

I am convinced from my conversations with many people that the situation with reference to advertising during radio and particularly television programs has reached a point where it is outraging the patrons of those programs. The repetitious, monotonous, excessively long advertising is doing a disservice to the radio stations, the program sponsors, and the advertisers themselves. It is difficult to understand why this reaction has not impressed itself upon those in control of the American radio and television stations.

Repeatedly, persons who have spoken to me have told me that they are now making it a positive rule not to purchase any product that is the subject of this obnoxious advertising.

Consequently, I have filed a bill which will require the Federal Communications Commission to prescribe appropriate regulations to insure that of the total amount of time available for any radio and television program, the portion of such time which is devoted to advertising shall not be excessive.

I regret that it seems impossible to devise regulations which would prohibit the idiotic repetition of advertising, but I do hope the filing of this bill and action on it will point up to those responsible the necessity of exercising some intelligent care in the programing of advertising over our radio and television stations.

While I did not share the Commission's confidence as to its procedures being best calculated to achieve the goal of operation in the public interest at the time it made its comments, I hoped that the industry would recognize the seriousness of the Commission's admission of the continued existence of abuses in this field and would take steps voluntarily to correct the situation. I also hoped that if this was not done, advertisers would begin to realize their own responsibilities and the inevitable bad reaction they would bring upon themselves and their products, if they permitted these abuses to continue.

I submit that Mr. O'Neill's article and the constant public complaint of others who have the responsibility of reviewing such programs constitute conclusive evidence that the Federal Communications Commission has been confronted for all too long with a responsibility of its own, which it has failed utterly to meet. As soon as I have any reply from the Commission, I shall submit it to you. In the meantime, I shall welcome any support any of you may care to give toward insuring some effective action as soon as possible to bring an end to these abuses.

PASSAMAQUODDY TIDAL POWER PROJECT

Mr. SMITH of Virginia. Mr. Speaker, I call up the resolution (H. Res. 364) and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of Senate Joint Resolution 12, to request the Secretary of State to arrange for the International Joint Commission, United States and Canada, to conduct a survey of the proposed Passamaquoddy tidal power project, and for other purposes. After general debate, which shall be confined to the joint resolution, and shall continue not to exceed 2 hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Foreign Affairs, the joint resolution shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the joint resolution for amendment, the Committee shall rise and report the joint resolution to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the joint resolution and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. SMITH of Virginia. Mr. Speaker, I yield 30 minutes to the gentleman from Illinois, [Mr. ALLEN], and yield myself such time as I may use.

The SPEAKER. The gentleman from Virginia is recognized.

Mr. SMITH of Virginia. Mr. Speaker, this resolution makes in order Senate Joint Resolution 12, which has to do with the Passamaquoddy project, partly in Maine and partly in Canada. The matter has been kicked around for a long time.

At 1 time, 20 years ago I think it was, there was some activity up there and some experimentation as to whether or not the project was feasible.

What the Passamaquoddy project proposes to do is to build certain dams along the chain of islands in the Bay of Fundy where the tide is very, very high. They have a 25-foot tide there, and it is proposed that if these dams are built so as to retain the tide as it flows in, then they can let it out in a controlled manner so that it would produce a tremendous amount of power.

The project was abandoned after some minor work had been done and has remained in that state since that time.

The proposal before Congress in this resolution which has already been adopted by the Senate is that the joint commission between Canada and the United States be authorized to make a final and complete survey of the situation, determine its feasibility and cost, and decide whether it is worthwhile to proceed further with it. It seems to me, whatever may be our views as to the merits of the project, that this is a good way to proceed to put the matter to rest and determine whether it is feasible or not feasible, whether it is too costly, by an investigation of the whole project, and let a report be made to Congress. That is what this resolution proposes.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. SMITH of Virginia. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. I agree with the remarks made by my friend from Virginia. The resolution is a very good one. We know the history of this project throughout the years. There is great power potentiality there, and this survey is for the purpose of determining all the factors involved, economic, availability, usability of the great power potentiality that exists at Passamaquoddy.

I may say that Governor Muskie is very much interested in this bill. He came to Washington especially because of his interest. Our Republican colleagues from Maine and elsewhere are very much interested and think it is an excellent project.

The Speaker has authorized me to say to the Members of the House that he also feels it is a deserving measure and one that should pass the House.

Mr. SMITH of Virginia. I thank the gentleman for his statement. I now yield to the gentleman from Illinois.

Mr. ALLEN of Illinois. Mr. Speaker, I yield 5 minutes to the gentleman from Massachusetts [Mr. MARTIN].

Mr. MARTIN. Mr. Speaker, I want to join with the Members of the Maine delegation in Congress in urging support of this resolution.

This resolution has the endorsement of the administration; it comes here with the recommendation of the Budget Bureau. As the gentleman from Virginia has said, it provides for a survey as to the feasibility from the standpoint of cost and the question of whether it would be beneficial for the people of Maine and the United States to be constructed. The harnessing of the tides of Quoddy has long been debated and is one that should be determined as early as possible.

The people of Maine believe it would be a tremendous advantage to their State economically if this project could be carried out. I sincerely hope that this is true. I appreciate the gallant effort of Maine and other New England States to win back their old industrial prestige in the country.

Maine and New England ask only a fair chance to work out its destiny. If this will bring cheaper power to New England it should be constructed. The survey will make this known and if favorable we can determine how it shall be developed.

I hope the House will pass this joint resolution providing for a survey; that the survey will be begun promptly and that the final report will be all that is anticipated.

On behalf of the administration I want to make known that it is for the survey and the hopes for passage of the resolution. I ask the adoption of the rule and adoption of the Senate joint resolution.

I might add the Maine delegation in the House and Senate can well be proud of the intelligent and aggressive fight they have made to bring about the successful passage of this resolution.

Mr. ALLEN of Illinois. Mr. Speaker, I reserve the balance of my time.

Mr. SMITH of Virginia. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

Mr. RICHARDS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of Senate Joint Resolution 12, to request the Secretary of State to arrange for the International Joint Commission, United States and Canada, to conduct a survey of the proposed Passamaquoddy tidal power project, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of Senate Joint Resolution 12 with Mr. FORAND in the chair.

The Clerk read the title of the joint resolution.

By unanimous consent, the first reading of the joint resolution was dispensed with.

Mr. RICHARDS. Mr. Chairman, I yield 1 hour to the gentleman from Arkansas [Mr. HAYS].

Mr. HAYS of Arkansas. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, most of the pertinent facts with reference to this resolution have been covered in the consideration of the rule. The Committee on Foreign Affairs, which has jurisdiction over the resolution, because the proposed project would be financed jointly by our Government and our great friend to the north, the Dominion of Canada, carefully considered the resolution and were unanimous in recommending its passage by the House.

For a long time we have heard about the phenomenal tides in Passamaquoddy Bay, and one could not listen to the testimony offered before our committee without being impressed with their vast potentialities.

I do not want to trespass on the time of the Committee but I should like to point out that this is not a regional matter. While the benefits would flow primarily to the people of northern New England, particularly to the State of Maine, and to New Brunswick, the benefit to the two nations would over a period of years be tremendous if in the final analysis the project is found to be economically feasible. There is no question whatever about the feasibility of the project from an engineering standpoint. The sole question to be determined by the thorough and comprehensive survey which this resolution would authorize is the economic feasibility of the plan.

It is the belief of the members of the Committee on Foreign Affairs that a study of this kind is essential if we are to proceed in a businesslike way toward the development of hydroelectric power for our expanding economy. The people of my area have a stake in the development of the resources of New England, and we are interested in it.

And I might say, without prejudging the case, that when the Congress finally passes upon the project, I hope it will be determined that the plan is economically feasible, because this is an important area and its industrial needs are great. The outlets for electric power include domestic plants and the production of goods to move in ocean-borne transportation to the advantage of our country.

Mr. Chairman, for these reasons I hope the House will look with favor upon the resolution and will weigh the arguments to be advanced by the gentlemen who are familiar with conditions in the area. May I reiterate, this is only an authorization for a study in order that the Congress may become thoroughly acquainted with the facts before an expensive project is launched.

Mr. MERROW. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, Senate Joint Resolution 12 requests the Secretary of State to arrange for the International Joint Commission on United States-Canadian Boundary Waters to conduct a final survey of the proposed Passamaquoddy international tidal power project. From the very outset, it should be made plain that this resolution simply would authorize a survey and that the survey is to be a final survey on this question. It has already been determined that the Passamaquoddy international tidal power project is feasible from an engineering point of view. The purpose of the final survey authorized by Senate Joint Resolution 12 is to make three further and final determinations:

First. The cost of construction of the project;

Second. Whether or not such cost would permit hydroelectric power to be produced at an economical price; and

Third. What contribution the international project would make to the national economy and national defense of the United States.

It should be pointed out here that the Foreign Affairs Committee amended Senate Joint Resolution 12 by adding section 6 to the measure which states specifically that nothing in this resolution or in the final survey shall in any way commit the Congress or the Government of the United States as to future action on actual construction of the project.

During the last Congress I had the privilege of serving as chairman of a special ad hoc subcommittee of the Foreign Affairs Committee on this project, along with Hon. FRANCES P. BOLTON, Hon. KARL M. LECOMPTE, Hon. LAURIE C. BATTLE, and Hon. BROOKS HAYS. The subcommittee held extensive hearings on the measure. To my knowledge no one appeared in opposition. This measure passed the Senate during the last Congress and during the first session of the present Congress. It has been reported out favorably by the House Foreign Affairs Committee both times.

The project covered by this resolution is an international project and should not be confused with the so-called all-American project which was actually undertaken early in the 1930's, but which was halted for lack of funds. I would like to make it clear that Quoddy in its original conception was international in scope. The original plan contemplated the use of that part of Passamaquoddy Bay on the Canadian side of the international boundary as a high-level pool, and the use of Cobscook Bay, an arm of Passamaquoddy Bay lying wholly within the United States, as the low-level pool. The scope of Quoddy changed from international to all-American on September 16, 1929, when the Dexter P. Cooper Engineering Corp. filed a revised application for a two-pool tidal power project lying wholly within the United States, those parts of the more comprehensive project within Canadian territory being eliminated.

The Federal Power Commission filed a report on Quoddy with the Senate on April 3, 1941, which was adverse to the all-American project, but in its report stated:

> The fact that the development and utilization of tidal power is contraindicated at this time should not preclude through exploration of the possibilities of a large international tidal power project at Passamaquoddy by the Governments of the United States and Canada.

It was on the basis of this quoted paragraph from the Federal Power Commission's report that action was taken in 1948 to reestablish the Passamaquoddy power project on an international basis for the development of tidal energy in the waters of Passamaquoddy Bay.

The tides involved in the project are the tides that play between the Passamaquoddy Bay region and the Canadian Province of New Brunswick. The Passamaquoddy project is designed to use the rise and fall of the tides of the Bay of Fundy for generating electricity. The Bay of Fundy, the great body of water of which both Passamaquoddy and Cobscook Bays are a part, forms a broad ribbon of water that separates the coastline of Maine from that of Nova Scotia. The international plans for Passamaquoddy involve two-pool tidal power projects, utilizing both Passamaquoddy and Cobscook Bays. The low pool will be located in Cobscook Bay, which is entirely on the American side. Passamaquoddy, the actual storage area, is about 75 percent on the Canadian side.

The Passamaquoddy area is the only such place in the world where a tidal power project can be constructed without interfering with or destroying the economic importance of other capital assets such as land, industry, and homes; to the contrary, such a project would encourage expansion of whatever capital assets now exist and would promote the creation of others.

The cost of the final survey is expected to be about $3 million. The President's budget for fiscal year 1957 contains an item of $1 million for a Passamaquoddy survey. Such amount would be sufficient to begin the final survey.

While the final survey is to be an independent one, section 2 of the resolution makes it plain that prior surveys are to be made use of, such as the report of the International Passamaquoddy

Engineering Corps made to the Commission in March 1950 and the supplemental report of May 1952 prepared by the United States Army Corps of Engineers. The Foreign Affairs Committee was anxious that in the interest of sound economy those prior reports should be used. Therefore, the Committee amended the language of section 2 by specifying that the final survey "shall make use of" the reports referred to.

Finally I want to stress the industrial and economic impact of such a project. The construction of a Passamaquoddy power project would facilitate the decentralization of industry. This is an important aspect, because our Federal Government has, since the advent of the atomic era, heartily endorsed a program of industrial decentralization.

The area of Quoddy, being expansive, is natural and ideal for industrial plant development, affords the accommodation of a vast array of industrial units. It is evident, then, that such an area possesses great potential for making a supreme contribution to the overall planning for America's defense.

It may be that the proposed Passamaquoddy international tidal power project would be found by the survey to cost too much and that the power could not be produced at a price that is economically feasible, or that the project would not contribute very much to the national economy and the national defense. The final survey authorized by Senate Joint Resolution 12 will make those determinations. I feel that such determinations should be made and I therefore support the measure wholeheartedly.

Mr. VORYS. Mr. Chairman, will the gentleman yield?

Mr. MERROW. I am glad to yield to my colleague from Ohio.

Mr. VORYS. Mr. Chairman, I want to commend the gentleman who acted as chairman of the subcommittee for the exhaustive study they made. Also I want to thank him—I was not a member of the subcommittee—for the permission the subcommittee gave me to sit with them, and for adopting three amendments that I suggested which are now committee amendments. I feel that it is certainly worth while to go ahead and make a final study of this project which has such fabulous possibilities, provided it is feasible from an engineering standpoint.

Mr. MERROW. I thank the gentleman for his very kind words. I should like to express my appreciation to the gentleman for attending the hearings which the subcommittee conducted on this subject. He offered very pertinent amendments to the bill, which improved it greatly. I appreciate the great contribution he made.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. MERROW. I yield to the gentleman from Iowa.

Mr. GROSS. I regret I was not here when the debate opened. I was in a committee meeting.

Can the gentleman tell me what contribution the British Government or the Canadian Government is making to this preliminary survey?

Mr. MERROW. That undoubtedly will be under consideration when the final survey is undertaken.

Mr. GROSS. The question is, Are they making any financial contribution to this survey?

Mr. MERROW. Not as of the present time.

Mr. GROSS. We are carrying the entire cost of the survey?

Mr. MERROW. We are authorizing in this measure $3 million for the survey.

Mr. GROSS. So as usual we are picking up the bill for the Canadian and British Governments?

Mr. MERROW. No, I would not say that. I believe it is in the national interest that we make the survey to determine whether or not it is feasible in our own best interests. Then an arrangement could be worked out afterward with the Canadian Government, if we should decide that we want to embark upon the project.

Mr. GROSS. Why are they not coming in and sharing a part of the cost of the preliminary survey if they are going to benefit from this proposition?

Mr. VORYS. If the gentleman will yield, is it not a fact that practically all the power that would be developed would be on the American side of the line? I think that was shown at the hearings.

Mr. MERROW. That was pointed out in the hearings.

Mr. GROSS. It is now being stated the Canadians will derive no benefit from this power project?

Mr. MERROW. They probably will, but the survey will determine that.

Mr. GROSS. One other question: I take it this deals with salt water exclusively, that is, insofar as water is concerned?

Mr. MERROW. The gentleman is correct.

Mr. GROSS. Therefore, there is no irrigation in this; no bringing of additional land into production in any way?

Mr. MERROW. No; and it will not put any land into production or do any damage because of the rise and fall of the tides.

Mr. GROSS. I want to be sure it does not bring any more land into production.

Mr. MERROW. It will not bring any more land into production.

Mr. REES of Kansas. Mr. Chairman, will the gentleman yield?

Mr. MERROW. I yield.

Mr. REES of Kansas. What is the whole thing going to cost?

Mr. MERROW. The gentleman means the project?

Mr. REES of Kansas. Yes.

Mr. MERROW. I do not know. That is one of the very things that the survey is to determine.

Mr. REES of Kansas. There is no estimate at all?

Mr. MERROW. The survey will determine it. There are no estimates that I know of that would be of any particular value. This is why we propose a survey and why we specifically state in the resolution that this carries with it no obligation for any type of construction.

Mr. REES of Kansas. We will just spend $3 million and not know whether we are going on or not?

Mr. MERROW. For $3 million we will determine whether or not it is worth going any further.

Mr. AVERY. Mr. Chairman, will the gentleman yield?

Mr. MERROW. I yield to the gentleman from Kansas.

Mr. AVERY. I should like to compliment the gentleman from New Hampshire on the fine presentation he has made. There are two questions in my mind. No. 1 is, What is the significance of the word "final" in line 8 on page 1? This Congress could not preclude a subsequent Congress from making 2 or 3 more surveys, could it?

Mr. MERROW. I suppose that is true, but we felt that this would be a survey actually to end surveys. This matter has been discussed for quite a period of time. It was the feeling of the committee that this should be the final survey, and that we would obtain all the necessary information and we would not need any more surveys.

Mr. AVERY. This is more a psychological phrase than a definite statement, is that it?

Mr. MERROW. It could not legally bind a future Congress, but I am sure that the word "final" is definite.

Mr. AVERY. On page 2 the resolution provides that this survey shall determine whether or not the manufacture of hydroelectric power would be economically feasible. Is there anything in this resolution or the committee report, and I have not read the committee report, that would suggest in any way whether this would be a public-power installation or a private-power installation?

Mr. MERROW. No.

Mr. AVERY. Is any reference made to public power in the committee report?

Mr. MERROW. As I recall, there was nothing in it on whether it was to be public or private. The survey would determine whether the construction would be feasible, and then the whole matter of how it should be done would be left to future determination.

Mr. AVERY. There is no suggestion, then, that if it is feasible that it should be a public power development?

Mr. MERROW. No.

Mr. AVERY. I thank the gentleman.

Mr. CARNAHAN. Mr. Chairman, we have no further requests for time.

Mr. MERROW. Mr. Chairman, I yield 15 minutes to the gentleman from Maine [Mr. McINTIRE].

Mr. McINTIRE. Mr. Chairman, Senate Joint Resolution 12 provides for the survey of a project that is indeed fascinating in many respects, for among the manifold forces of nature, there is none more relentless, more dependable than the flow of the tides. Spring or fall, summer or winter, rain or drought, the tides flow and ebb with such regularity and precision that tide tables can readily be set up to calculate tidal movements way into the future for any particular harbor.

Through eons of time, our Creator, using the tools of sun, ice, and water, carved out of the earth's mass the rock

bound coast of Maine, and the rugged land bodies of New Brunswick and Nova Scotia, shaping them in such a manner as to create in the Bay of Fundy the highest tides in the world.

The northeasterly slanting nature of Maine's coastline is one of the major physical features contributing to the dynamic tides that play in this area. Incoming tides strike this slanting shoreline, and they are deflected in a northeasterly direction and driven along with great force and sweep.

The southwesterly "lands end" section of Nova Scotia is also a contributing factor, for, serving as a great gathering arm, it reaches out into the Atlantic toward Cape Cod and draws the ocean's waters into the Bay of Fundy.

Cobscook Bay in Maine and Passamaquoddy Bay, which is astride the International boundary, are also included in this area of high tides—this area which is the focal point of the subject matter that appears before us today in Senate Joint Resolution 12.

We are dealing here with a most challenging concept, one of tying together a variety of unusual physical features of both land and water in an effort to generate electrical energy. This electrical energy is a resource utterly vital to the development of the Quoddy Bay area and the rounding-out of our national defense.

But if the challenge is great, so are the rewards greater still, for here we would have hydroelectric power developed at the shoreline of an ocean port which, being free of ice, is open all the year round. And generators would be fed a constant supply of clean water by a gigantic reservoir that was refilled to capacity twice every 24 hours and replenished from a source that would remain inexhaustible so long as the moon remained in its orbit. In effect, we would have a never-failing source of electrical power.

I wish it were possible, Mr. Chairman, for me to stand with you on a hill at Eastport, Maine, so that I could point out to you from this vantage point a chain of islands that almost succeed in landlocking Cobscook and Passamaquoddy Bays. These islands are almost interlaced, the greatest distance between any two of them being about seven-tenths of a mile; and in only one channel is there water of any significant depth.

A tying together of these islands would bring an area of 100 square miles under control, and this would perform as the reservoir above the generating plant of a power project in this location; a 30-quare-mile area would serve as the lower or discharge pool below the generating plant. There would never be less than a 19-foot head, and only 4 feet of water would have to be captured from the average 25-foot high tide in order to maintain this head. At high tide the upper pool or reservoir would be refilled, and at low tide the lower pool would be emptied.

It has been my pleasure to visit many power developments in the country, such as Big Creek in California on the San Joaquin, Shasta Dam, McNary Dam, and Hoover Dam. All these are indeed intriguing projects, but I might say, perhaps with a mild degree of prejudice, that none of these could have been more challenging than the one that is before you today. Remember this! In the Quoddy area, at high tide, one has to climb up a ladder to reach a ship's deck, and, at low tide, he has to climb down a ladder to reach the same deck. It will interest you, too, to know, Mr. Chairman, that we are talking about tidal changes greater than the distance between this floor and that ceiling.

At this point I would like to make one thing clear, for it is wrongly believed by many that such a project as we are talking about here today would use the rise and fall of the tides to generate electrical power. This is not so. The principle here concerned is one where incoming tide waters are captured in a reservoir or pool, which feeds the generators of the powerplant. It is a matter of putting captive waters to work, rather than permitting them to return, unused, to the sea.

Are we, then, talking about a new principle? The answer is no, for, in 1952, the University of Minnesota Press published a book entitled "Flour for Man's Bread." Let me quote from page 114 of that publication: "Tide mills are unique only in that their water reservoir is filled by the rising tide. They appear to have made their appearance about the 10th century, A. D."

Tidal power was also used in early colonial days on the Maine coast to operate grist mills, saw mills, and carding mills. The waterwheel was, of course, used as a tool for transmitting the power to the mill, and, with the advent of steam, the internal combustion engine, and electricity, the former water tool for power was discarded.

Men of science the world over have long been intrigued by the fabulous power potential inherent in the tides. Dexter Cooper, a Maine resident and a world-famed engineer, was one of these, and, as far back as 1919, he devised the first plans for the locks and dams that would use the tides of the Quoddy area to produce cheap and ample electric power.

The figures on the generating capacity of such a project are indeed interesting, for it has been estimated by competent engineers that the theoretical generating capacity of such a project would be approximately a 300,000-kilowatt-per-hour minimum. And it is indicated that, with the power project in actual operation, it would be possible for the generating capacity to greatly exceed this figure.

This legislation which we are considering today is authorization legislation, providing authority for an appropriation of $3 million to defray costs associated with a survey to determine the costs of construction of a Passamaquoddy power project. Of this sum, $2,700,000 would be used to survey the physical aspects of the project, while $300,000 would be applied to determining the possible effects on fishing waters.

The legislation pertains not at all to construction, but, instead, provides an authorization for a survey not unlike that which is customarily made by our Government on many other resources in our country.

Furthermore, this legislation is designed to determine whether or not the cost of construction would allow hydroelectric power to be produced at a price that is economically feasible, and also to determine what contribution such a project would make to the national economy and the national defense.

We who have long entertained an ardent interest in Passamaquoddy feel that the question as to whether or not a Quoddy project is economically feasible should be resolved and that a survey designed to resolve this question has true merit. Only a survey, such as is provided for in Senate Joint Resolution 12, will supply us with the facts and the answer, whether the tides of Quoddy Bay are to thunder on unharnessed or whether they are destined, as a practical resource, to serve the higher purpose of an America hungry for a present and future supply of hydroelectric power.

In closing my remarks may I express my appreciation to the chairman and members and staff of the Foreign Affairs Committee and the chairman and members and staff of Rules for their very thorough consideration of this subject matter.

Mr. VORYS. Mr. Chairman, will the gentleman yield?

Mr. McINTIRE. I yield to the gentleman from Ohio.

Mr. VORYS. Mr. Chairman, I want to compliment the gentleman on the way he has presented this matter to our committee and to the House. Every time there was a question he sought the answers, and the way he has proceeded in dispelling the misconceptions that surrounded this proposal due to things that happened in the past has been very helpful. I certainly want to commend him for his presentation here today. I feel confident that this bill is finally going through.

Mr. McINTIRE. I appreciate the gentleman's remarks very much. I also wish to express to the gentleman from Ohio my appreciation of the very thorough manner in which he has studied the presentation which was made in behalf of this legislation.

Mr. REES of Kansas. Mr. Chairman, will the gentleman yield?

Mr. McINTIRE. I yield to the gentleman from Kansas.

Mr. REES of Kansas. How much money has been heretofore expended on surveys for Passamaquoddy? If my memory serves me correctly our Government spent quite a sum of money for the survey of a proposed project or projects dealing with tidal power at Passamaquoddy. What is the gentleman's recollection? What was the result of those surveys?

Mr. McINTIRE. If I may mention this, the survey as proposed in this resolution involves the concept of this resource as an international project. The surveys which have been made prior to this time have been devoted almost solely to an application of the principle that it would be entirely on the American side. The concept with which we are dealing here today has not been surveyed to this date.

Mr. REES of Kansas. The gentleman means this is a different kind of survey?

Mr. McINTIRE. That is right; this is an approach to this resource in the concept in which it was originally considered, but not in the concept to which the surveys were made back in the time to which the gentleman refers.

Mr. REES of Kansas. The reason I asked that this subject matter which was quite controversial has been before the House on a previous occasion.

Mr. McINTIRE. May I suggest to the gentleman from Kansas that the matter that was presented to this body some years ago did not have the international approach to this resource. That dealt with a project that was devoted wholly to the American side of the international boundary line.

Mr. REES of Kansas. The difference as you explain is that the other was a national project.

Mr. McINTIRE. The other was a project entirely within the confines of the State of Maine, on the Maine side of the international boundary.

There has been a little exploratory work at a cost of about $30,000 to the United States. This exploratory work was to determine through the use of proper equipment the composition of the ocean floor, but not in any sense an approach to the determination of the feasibility of the international project to which this refers.

Mr. VORYS. One further question, if the gentleman will yield.

Mr. McINTIRE. I yield to the gentleman from Ohio.

Mr. VORYS. Perhaps this is oversimplifying the thing, but is it not true that the lineal footage for the necessary dam and works is not great compared with some of the other hydroelectric projects which have been built? The big study that is necessary is to find out how to hold these structures in place in view of the enormous power of the tides. That is oversimplifying it, I realize, but at least that presents the general picture, does it not?

Mr. McINTIRE. It does, with this one additional comment which I would like to make: That of all of the structures that are necessary to link these islands there is only one structure which is involved in any strong tidal current; the rest are simple from an engineering standpoint. That one structure raises some question which must be determined.

Mr. VORYS. But none of the structures is enormous in length or size; is not that true?

Mr. McINTIRE. Compared with other structures that I have personally seen they are very small in size.

Mr. ROOSEVELT. Mr. Chairman, will the gentleman yield?

Mr. McINTYRE. I yield to the gentleman from California.

Mr. ROOSEVELT. May I also compliment the gentleman from Maine on the very fine presentation he has made? It may seem a little strange that coming from California I should know considerable about this Passamaquoddy Bay region, but the fact of the matter is I have spent a great deal of time there, as the gentleman knows, at this particular location. All the gentleman says about it is true. I think he might also have pointed out that this is the most northeasterly point of the United States and that there is at this location one of the finest natural harbors along the coast of Maine, that it would also be available for the development of commerce if the project is determined to be feasible.

Mr. McINTIRE. I appreciate very much the remarks of the gentleman from California. I know that this area is without question more familiar to him from his personal visits there for years than it is to me.

I too, would like to emphasize the point that there is a very fine natural harbor there and great potentialities for harbor development, that the possibilities of development are almost unlimited with this potential site and its firm foundation. It is the most northerly ice-free port on the eastern coast of the United States.

I thank the gentleman very much for his contribution.

Mr. Chairman, I wish to say that the report dated March 20, 1950, and referred to on page 2, line 9 of Senate Joint Resolution 12 was, as a matter of record, transmitted by the International Joint Commission to the Governments of the United States and Canada on October 20, 1950.

This information is being supplied to indicate that both dates—March 15, 1950, and October 20, 1950—accurately refer to the one and same report.

Mr. CARNAHAN. Mr. Chairman, I yield 5 minutes to the gentleman from Massachusetts [Mr. O'NEILL].

Mr. O'NEILL. Mr. Chairman, the platitudes of the recent state of the Union message this year would remind one of the days of the New Deal. I am more than happy that the administration is going along with Passamaquoddy because of the fact this was originally a New Deal measure. This was considered during the great depression and was the first real public project in the Nation.

As we look back over 25 years, the reason it was not completed was due to the fact it was laughed at, it was ridiculed, it was condemned, not only by the Republicans of Maine but by the Republicans of the entire Nation. I am happy to see here a united Republican front asking for Passamaquoddy. I am happy that they are assisting in cooperating with Governor Muskie who has been down here recently, who has seen the Speaker and the majority leader, who has used his prestige and influence on the members of the Rules Committee to get a quick hearing on this measure so that it may be promptly considered by the House.

I am glad that we from the northeast part of the United States are working in harmony now, all in favor of this bill. There is no question in my mind but what it is going to be of great benefit to New England as a whole. We need more power, we need cheap power. We are all aware of the economic situation that now exists in New England. So I ask the Members of this House to go along with the united efforts of all the Members from New England. Again I say that the cooperation showing what good can be done by Governor Muskie coming down here working and cooperating with the Republican Members from Maine has been of inestimable benefit. I am therefore certain this joint resolution will be passed promptly.

Mr. MERROW. Mr. Chairman, I yield 5 minutes to the gentleman from Maine [Mr. HALE].

Mr. HALE. Mr. Chairman, I am glad that this day has at last come and that I have the privilege of taking the floor to speak in behalf of this resolution. I should like to take this occasion to thank the members of the Committees on Foreign Affairs and Rules for their assistance in getting this matter before you.

As my colleague from the Third Maine District has explained to you, this Quoddy project is what is colloquially known as a natural. Just as the Isthmus of Panama was almost the inevitable place to build an interoceanic canal, so this Passamaquoddy area is the inevitable place for the construction of a new type of hydroelectric project. Not that there is anything new about the idea of using tidal currents to turn water wheels. In the old days there were many such mills. But in Quoddy we create what you might almost term an artificial river and an artificial waterfall. Nowhere else in the world have you this extraordinary natural configuration with two vast basins, the Passamaquoddy Basin and the Cobscook Basin, plus the extraordinary rise and fall of tide. This project, if it can be built, would give firm power the year around, above floods, above droughts, above any vicissitudes of man and nature. All we ask is the moon to draw the sea. There would be no artificial flowage of lands, so that there would be none of the land damage that invariably accompanies damning a stream. In parts of the country we have ruthlessly wiped out towns and farmlands to get precious power. And, of course, we were right to do so. But here at Quoddy we are miraculously privileged.

For we would have the power at a great natural seaport area and an area which has heretofore been precariously dependent on fisheries.

We conceive that power generated at Quoddy would largely be used by industrial plants that would grow up in the area, but there is no obstacle to the transmission of the power. I am happy to say that Maine has by recent legislation abandoned the selfish policy embodied in the old Fernald law which prohibited the transmission beyond State lines of hydroelectric power generated in Maine.

But let me emphasize that this resolution is not one to authorize construction but only a very modest resolution to provide for a cost study of construction. And the committee very graciously added section 6 to the resolution.

If, as a result of such a study, it should be determined that the costs of construction would be excessive, then we should know enough to drop a project which I confess is to me captivating. On the other hand, if it be determined that the project is feasible from an economic as well as an engineering standpoint, then

we have an invaluable piece of information.

Either way the people of my area will accept the result and be satisfied. Thirty years of doubt will be resolved. For it was 29 years ago that I first discussed this problem on the floor of our state house of representatives, on a bill to incorporate Dexter P. Cooper's ideas. I would like to say on this floor that Dexter Cooper was a very warm personal friend of mine. He was a man of great intelligence, great engineering capacity, and high vision. I wish he had lived to see this day.

Let me emphasize that, as these are boundary waters, the resolution of our problem must be at the Federal level. It cannot be at the State or local level. Congress must act.

I hope that this resolution will receive the unanimous support of this Committee.

Mr. CARNAHAN. Mr. Chairman, we have no further requests for time.

Mr. MERROW. Mr. Chairman, I yield 3 minutes to the gentleman from Massachusetts [Mr. HESELTON].

Mr. HESELTON. Mr. Chairman, I would not impose upon this House today if it were not for the fact that I was privileged to have been born in Maine, in the district of my good and able friend, the gentleman from Maine [Mr. NELSON]. I lived there for some 22 years. I think I know as my good friends in the delegation from Maine know how vitally important this proposal is to the economy and future of that great State. Certainly, when our colleagues from Maine come before us as infrequently as they do with any request that we help them on a worthy project, it seems to me that we should be glad to do everything within our power to be of assistance whenever we can.

I know we have in that delegation three of the ablest men who have ever represented the State of Maine. That is saying a great deal, because I have known a great many of their predecessors, including the father of the gentleman from the Second District of Maine. He was recognized as one of Maine's great statesmen.

We have heard the concise and effective presentations of our colleagues the gentleman from Maine [Mr. MCINTIRE], in whose district the Passamaquoddy project is located; and the gentleman from Maine [Mr. HALE]. We shall hear shortly the statement of the gentleman from Maine [Mr. NELSON] and I know that he will be equally persuasive.

They are all entitled to our commendation and support, and to the gratitude of the people of Maine, not only because this is a matter of great importance to the State of Maine and to all of New England, but because they have presented their case both from that point of view and in terms of the national interest. Certainly, the fact that their efforts have resulted in a unanimous report of the excellent subcommittee, representative of so many areas in this country, and of the full committee, is ample evidence of the kind of outstanding representation they have always given in behalf of their districts, of their State, and of this country.

Mr. Chairman, I hope that there will be a prompt and unanimous vote in support of this legislation, which, as our minority leader [Mr. MARTIN] has said, has the full endorsement of the administration.

Mr. MERROW. Mr. Chairman, I yield 10 minutes to the gentleman from Maine [Mr. NELSON].

Mr. NELSON. Mr. Chairman, I should like at the outset to express my deepest appreciation to the members of the Committee on Foreign Affairs and the members of the Committee on Rules, who have listened to our story with kindness, with considerateness, and with an open mind.

I should like also to express my appreciation and the appreciation of the Maine delegation to the leadership on both sides of the aisle and to the many Members of this House, both Republicans and Democrats, who have listened to the story of the men from Maine with an open mind, with considerateness and with earnestness. It has been a great experience to us from Maine to receive such a willing hearing.

Enough has been said about this resolution. In summing up I just want to point out to you that the issue before us today is not whether a power project should be undertaken at Quoddy. The issue before us today is whether or not it is worthwhile to authorize the spending of $3 million to find out whether or not Maine, New England, and this country have an invaluable asset down there in Passamaquoddy Bay, an asset that would contribute to our economy in wartime and in peacetime.

Members of the Committee on Foreign Affairs and members of the Committee on Rules before which we had full and complete hearings have determined this question without dissent through their reports to you that show you that they feel, as separate bodies, that the expenditure of $3 million in order to determine whether this asset at Quoddy is worthwhile or not, is eminently justified.

I would point out to you further that in the resolution itself, perhaps not necessarily, but as a point of emphasis, there is a provision that Congress does not by passing this resolution commit itself to the expenditure of money for the building of the actual Quoddy project. As a matter of fact, this survey will determine whether or not we can produce cheap power at Quoddy, power which would contribute to the economy and defense of this Nation. I may say that a good many private enterprises have indicated their interest in undertaking such a project, if this survey proves that it is feasible.

So the question the House has to determine today is whether or not it is worth spending $3 million to find out that what the engineers say is true, that there is a vast source of endless and continuous power at Quoddy, to determine whether or not this power can be harnessed in order to give power-hungry New England the power that it requires.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. NELSON. I am glad to yield to the gentleman from West Virginia.

Mr. BAILEY. I cannot help but interpose the thought at this point that there is considerable interest in this project in West Virginia. We are wondering how we are going to replace the West Virginia coal markets that would be displaced by construction of this project.

Mr. NELSON. That is a constant problem of the gentleman from West Virginia and one that I cannot help him solve, because he has the same problem of hydroelectric competition in his own area.

Mr. BAILEY. Naturally we are interested in improvements, and in helping other sections of this Nation develop their natural resources through the production of cheap power. At the same time, the State of West Virginia's economy is involved. Already we have lost almost 50 percent of our coal markets. With the hydroelectric power the gentleman is suggesting be developed in a project of this kind, together with what is being done on the St. Lawrence, I can see a loss of practically the rest of West Virginia's coal markets. So I look just a little bit askance at this proposal. Nevertheless I have not yet decided what my course shall be when the Congress will be asked to supply money to build the project.

Mr. NELSON. I completely understand the interest and the concern of the gentleman from West Virginia. Nevertheless the world progresses and cheaper and cheaper power is produced.

Mrs. ROGERS of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. NELSON. I am glad to yield to the gentlewoman from Massachusetts.

Mrs. ROGERS of Massachusetts. I should like to compliment the gentleman—although I do not like the word "compliment" because some take it to mean that it is not deserved—but the whole Maine delegation deserves the greatest commendation for what they have done in their leadership of this battle. I was born in Maine and have many friends there now and have a fellow feeling for those in Maine. Of course I am a New Englander. The best of luck to you.

Mr. NELSON. I am very grateful to the gentlewoman from Massachusetts for her very kind remarks.

Mr. EVINS. Mr. Chairman, will the gentleman yield?

Mr. NELSON. I yield to the gentleman from Tennessee.

Mr. EVINS. I commend the gentleman on the position he has taken. I, coming from Tennessee and the southern area, am not opposed to seeing all sections of our common country grow and advance. There has always been too much sectionalism, it seems to me, when these matters about public power arise in the House. I recall that I supported very vigorously the bill of the gentleman from Michigan [Mr. DONDERO] for the St. Lawrence Seaway. I have also supported a great number of public works projects in the western part of our Nation. But when other projects come along, there seems to be a tendency on the part of some to oppose, on the

ground of sectionalism. Each section of our country has meritorious project requirements and opposition on the ground of regionalism or sectionalism is not valid opposition.

I was impressed by a series of articles written by the junior Senator from Massachusetts recently in which he said that New England needs power. He said New England needs power very badly. I believe we should work together to build up New England, but let us not do it at the expense of downgrading another section of our common country.

After I read his article, I called the Senator and said to him, "I applaud your stand. I like the position you have taken. If New England needs power, let us produce power for that section. We all want to upgrade your section but it should not be done at the expense of downgrading another section of our common country." The same applies to any worthwhile regional need. My region has needs and we have had the encouragement and support of many fine Members in the effort to meet these needs. I am always ready and anxious to assist other regions to meet their needs and certainly most appreciative when these regions reciprocate.

I think this is a very great project. New England does need power. Certainly this bill should be passed and the survey made, and, if necesary, we should go ahead with the project.

I commend the gentleman on the position he has taken.

Mr. NELSON. I will say to the gentleman from Tennessee at this point that for more reasons than one I am very grateful for his statement.

Finally, this project, as far as Maine is concerned, is completely nonpolitical. Both the Republican and Democratic Parties are extremely interested in it, as they have been for years. Those of us in the Maine delegation who have for some years now been urging this project upon you welcome all the help regardless of party that we can get in determining what we consider a very critical situation for Maine and a project which we consider can make a very substantial contribution not only to the economy of Maine and New England but to the economy and defense of the United States.

I urge that you pass this resolution and give us an opportunity to find out whether or not we have there at Quoddy an invaluable source of constant power.

Mr. JOHANSEN. Mr. Chairman, will the gentleman yield?

Mr. NELSON. I yield to the gentleman from Michigan.

Mr. JOHANSEN. As I understand, this project involves at least indirectly harnessing the power of the moon in the sense that it is harnessing the tides.

Mr. NELSON. That is true.

Mr. JOHANSEN. The development of atomic energy involves harnessing the power of the sun.

Mr. NELSON. That is true.

Mr. JOHANSEN. I am not mentioning this to be facetious, but will the survey that is proposed to into the question of the possible outmoding of the proposal here under consideration by the development of atomic energy as a source of industrial power?

Mr. NELSON. I do not think that comes within the scope of the investigation. I think it would be a question for Congress to determine at the time the survey is completed and the report is made as to the actual cost of producing power at Quoddy. Then that cost could be compared with the cost of producing it by atomic energy.

Mr. KEATING. Mr. Chairman, will the gentleman yield?

Mr. NELSON. I yield to the gentleman from New York.

Mr. KEATING. I have heard for many years about this proposed project. This seems like a very rational approach to a problem which has been before Congress for so many years.

I would not want to let this opportunity pass without expressing my admiration for the fine work which the gentleman from Maine now addressing us has done in bringing this matter forcibly to the attention of his colleagues here in Congress in an effort to achieve a constructive result. I think the gentleman deserves the very highest commendation.

Mr. NELSON. I am very grateful to the gentleman from New York.

Mr. NORBLAD. I should like to join with my colleague, Mr. KEATING, in paying tribute to the excellent work of Mr. NELSON, of Maine, in connection with this legislation. His remarks were very clear and explicit and placed in many of our minds a new and different picture of this project as we remembered it many years ago. If this bill passes the House today a great deal of the credit must be given to Mr. NELSON.

Mr. MERROW. Mr. Chairman, as I stated in my opening remarks, I conducted hearings on this subject in the last Congress. I want to pay the highest compliment to my colleagues from Maine for their clear, forceful, analytical and eloquent presentation they made before the committee at that time and for the fine exposition they have made on the floor of the House today. They have done a splendid piece of work in bringing this measure before the Congress. They are to be congratulated and complimented on their splendid efforts.

Mr. KEATING. Mr. Chairman, will the gentleman yield?

Mr. MERROW. I yield.

Mr. KEATING. In the remarks I just made regarding the gentleman from Maine [Mr. NELSON], I by no means intended to exclude our other colleagues from Maine who, we all know, have joined so forcefully and effectively in this effort to arrive at this conclusion.

Mr. MERROW. I was sure of that. They have all done a splendid piece of work, as all of us recognize.

Mr. Chairman, I have no further requests for time.

The CHAIRMAN. If there are no further requests for time, the Clerk will read.

The Clerk read the Senate joint resolution, as follows:

Resolved, etc., That the International Joint Commission created by the treaty between the United States and Great Britain relating to boundary waters between the United States and Canada, signed at Washington on January 11, 1909, under the provisions of such treaty, be requested by the Secretary of State to arrange for a survey to be made to determine the cost of construction of the proposed Passamaquoddy tidal power project at Passamaquoddy Bay in the State of Maine, United States of America, and the Province of New Brunswick, Dominion of Canada, and to determine whether or not such cost would allow hydroelectric power to be produced at a price that is economically feasible, and also to determine what contribution such project would make to the national economy and the national defense.

SEC. 2. The survey provided for in the first section shall be consistent with the report (dated March 15, 1950) made by the International Passamaquoddy Engineering Board to the International Joint Commission, and with the supplemental report (dated May 1952) on details of estimate of cost of comprehensive investigation of Passamaquoddy tidal power project by Corps of Engineers, United States Army.

SEC. 3. The Secretary of the Army, the Federal Power Commission, and other officers and agencies of the Government of the United States are authorized to assist the International Joint Commission in the making of such survey, and shall be compensated for any work performed pursuant to this section out of such funds as may hereafter be appropriated for use by the International Joint Commission in carrying out this joint resolution.

SEC. 4. The Secretary of State shall report the results of such survey to the Congress of the United States.

SEC. 5. There is authorized to be appropriated not to exceed $3 million to carry out this joint resolution, and any sum appropriated pursuant to this section shall be included in any determination of the proportionate share of the cost of construction of the Passamaquoddy tidal power project to be borne by the United States.

With the following committee amendments:

On page 1, line 8, before "survey", insert "final."

On page 2, line 9, strike out "be consistent with" and insert "make use of."

On page 3, after line 5, add the following section:

"SEC. 6. Nothing in this joint resolution or the survey authorized herein shall in any way commit the Congress or the Government of the United States as to future action on construction of any such project."

The committee amendments were agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. FORAND, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration Senate Joint Resolution 12, pursuant to House Resolution 364 he reported the same back to the House with sundry amendments adopted in Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment? If not the Chair will put them en gross.

The committee amendments were agreed to.

The SPEAKER. The question is on the third reading of the resolution.

The Senate joint resolution was ordered to be read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the resolution.

The resolution was passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND REMARKS

Mr. CARNAHAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks in connection with this resolution.

The SPEAKER. Is there objection?

There was no objection.

HABEAS CORPUS

Mr. O'NEILL. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 318 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 5649) to amend section 2254 of title 28 of the United States Code in reference to applications for writs of habeas corpus by persons in custody pursuant to the judgment of a State court. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on the Judiciary, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. O'NEILL. Mr. Speaker, at the conclusion of my remarks I will yield 30 minutes to the gentleman from Illinois [Mr. ALLEN].

I yield myself such time as I may require.

Mr. Speaker, I rise to urge the adoption of House Resolution 318 which will make in order the consideration of the bill (H. R. 5649) to amend section 2254 of title 28 of the United States Code in reference to applications for writs of habeas corpus by persons in custody pursuant to the judgment of a State court.

House Resolution 318 provides for an open rule with 1 hour of general debate on the bill itself.

According to the report on this bill, Mr. Speaker, H. R. 5649 would seek to restrain the abuse of the use of the writ of habeas corpus in the lower Federal courts by prisoners who have been convicted in State courts and who seek to have the action of the State courts reviewed and reversed by the lower Federal courts.

Specifically the bill would provide that an application for a writ of habeas corpus in behalf of a person imprisoned under a State judicial decision may be entertained by a Federal court or judge only if it presents a constitutional question. Even then the case must meet the following conditions:

First. The question must be one "which was not theretofore raised and determined" in the State court proceeding.

Second. Even if the question has not been theretofore raised and determined, it must appear that the prisoner had not had "fair and adequate opportunity to raise and have his—'question'—determined."

Third. Even if the question has not been raised and determined, and even if the prisoner has not had fair and adequate opportunity to have it determined, it must appear that it is a question "which cannot thereafter be raised and determined in the State court by an order or judgment subject to review by the Supreme Court of the United States on writ of certiorari."

H. R. 5649 also has a provision stating that an order of a lower Federal court denying an application for the writ shall be reviewable only on appeal to the Supreme Court of the United States which must be applied for within 30 days of the order.

The committee report complies with the Ramseyer rule and I hope that the House membership will see fit to adopt this resolution which will make consideration of H. R. 5649 possible.

Mr. ALLEN of Illinois. Mr. Speaker, there is no objection to the rule or to the bill on this side of the aisle.

I yield back my time.

Mr. O'NEILL. Mr. Speaker, I have no further requests for time.

Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

Mr. CELLER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H R. 5649) to amend section 2254 of title 28 of the United States Code in reference to applications for writs of habeas corpus by persons in custody pursuant to the judgment of a State court.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H. R. 5649, with Mr. EDMONDSON in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule the gentleman from New York [Mr. CELLER] is recognized for 30 minutes, and the gentleman from New York [Mr. KEATING] will be recognized for 30 minutes. The gentleman from New York is recognized.

Mr. CELLER. Mr. Chairman, I yield myself 8 minutes.

The CHAIRMAN. The gentleman from New York will proceed.

Mr. CELLER. Mr. Chairman, the purpose of the bill is to regulate applications for the time-honored and traditional writ known as the writ of habeas corpus which is guaranteed by article I, section 9, clause 2 of our Constitution.

This bill in nowise hampers application for the writ, it in nowise militates against the use of the writ of habeas corpus; all it seeks to do is prevent certain abuses that have crept in concerning application for the writ.

The purpose of this legislation is not to suspend the writ of habeas corpus guaranteed by the Constitution—article I, section 9, clause 2. Its only purpose is to restrain the abuse of the use of the writ by prisoners who seek, by repeated use of the writ, to delay the ends of justice.

It should be noted that this legislation deals only with State prisoners confined in State prisons who were convicted in State courts for State crimes. It has no direct connection with Federal crimes or Federal prisons.

The legislation has the approval of:

First. The Judicial Conference of the United States, composed of the Chief Justice and the presiding judges of the Federal courts of appeal;

Second. The Conference of Chief Justices of the several States, composed of the senior judge of the highest court of each State;

Third. The Association of State Attorneys General; and

Fourth. The section on judicial administration of the American Bar Association;

Fifth. It also has the support and approval of the United States Department of Justice.

It represents, therefore, the considered judgment of both the State and Federal judiciaries, as well as the State and Federal prosecuting departments.

The legislation, as admitted by the NAACP, through its counsel, Thurgood Marshall—hearings, page 79—has, "no special racial significance" and contains "no threat of racial discrimination."

In fact, the greatest rash of habeas corpus applications is not, as could be supposed, in the Southern States, but rather is to be found in the States of Illinois, eastern Michigan, and northern Indiana. In the last 14 years, out of a total of 6,500 Federal applications for habeas corpus, the Illinois courts alone have entertained almost 2,500.

The writ is being abused in that State prisoners are seeking, through habeas corpus, to have the lower Federal courts sit as a court of review on the decisions of the highest courts of the States. While feigning constitutional violations, they seek a review, in the Federal court, of the entire record of their trial and appeal proceedings before the State courts. The writ was never intended as a writ of review.

The legislation does not impinge on constitutional guaranties. The Constitution—article 1, section 9, clause 2—provides:

> The privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion or invasion public safety may require it.

The instant legislation in no way seeks to suspend the writ; in fact, its purpose, in addition to eliminating abuse, is to clarify the intent of the Congress by restoring the effectiveness of the present

law, which was enacted in 1948— title 28, United States Code, section 2254.

Reduced to its essentials, this legislation is the result of the Supreme Court decision in *Brown* v. *Allen* (344 U. S. 443), wherein the Supreme Court stated that a further directive as to congressional intent was needed—page 450. Although the present law states that a prisoner must exhaust State remedies before he can apply to the Federal courts for relief under the writ, the Supreme Court in Brown against Allen has held that a prisoner meets those requirements when, after being convicted in a State court, he appeals to the State appellate courts, and thereafter is denied certiorari by the Supreme Court of the United States. This is so even though other remedies such as habeas corpus, and coram nobis are available to him in the State court.

The proposed legislation would again restrict the writ of State prisoners to State courts so long as there was an available State remedy. The writ in the Federal courts will be confined to substantial constitutional questions only and the prisoner must show:

First. That the question was not raised and determined at his trial or in appellate proceedings; and

Second. That he did not have a fair opportunity to have it raised; and

Third. That the question cannot thereafter be raised in a State court proceeding.

The writ of habeas corpus has only been expanded (and not suspended) over the years. At the time the Founding Fathers promulgated the United States Constitution, a person imprisoned under a judgment of a court could be released on habeas corpus only on a showing that the court was without jurisdiction to render the judgment. And the question of jurisdiction was confined to whether, first, the court had jurisdiction of the subject matter; and, second, jurisdiction of the person.

In recent years, however, the courts, through judicial decisions, have expanded the scope of habeas corpus. They now hold that even though a court may have had jurisdiction at the inception of a case, it may lose jurisdiction during the course of the proceedings as the result of a violation of a person's constitutional rights. Because of these decisions, habeas corpus writs have multiplied in recent years, with prisoners alleging all sorts of violations of their constitutional rights during the course of their trial. These questions, of course, should in most instances be raised at the time of their occurrence during the trial, or on appeal in the State courts, and should not be the subject of separate habeas corpus proceedings. The proposed legislation will properly restrict defendants to the trial, and prohibit separate proceedings through habeas corpus.

In many instances prisoners submit their habeas corpus petitions to the Federal courts and then sit back and let the judges and their law clerks do their legal research for them; they seek and obtain free legal advice. The court becomes a prisoner's legal aid bureau.

As Justice Frankfurther has so aptly stated:

After all, this—

The Supreme Court—

is the Nation's ultimate judicial tribunal, not a super legal-aid bureau.

There have been grave abuses in the use of the writ of habeas corpus. In line with what I have just said, a State prisoner will just write out on a piece of paper, formally or informally, that he has been improperly incarcerated. He presents that or has it presented to a Federal judge and that judge must hear the application. There are also many jail lawyers, jailbird lawyers, who gratuitously or sometimes for a small fee, will give advice to these prisoners saying, "Why, you can get out of this place. Just file your application for a writ and make the judge hear it."

There have been thousands of such writs filed. In 14 years—I think the last year was 1954—there were 6,499 such writs filed and only 77 granted, and strangely enough, most of those writs were filed in the Northern States.

It is interesting to note that in the State of Illinois 2,476 were filed, in Michigan 393, in the northern district of California 295, in the northern district of Indiana 354, in the eastern district of Washington 293, and in Virginia 210. So most of these applications, these improper applications, if I might put it that way, have been filed in the northern districts.

Here is an interesting colloquy which occurred between the distinguished member of our committee on my left, the gentleman from Pennsylvania [Mr. QUIGLEY], and Chief Judge Parker, of North Carolina, a distinguished Federal jurist:

The gentleman from Pennsylvania [Mr. QUIGLEY] said:

Am I correct in assuming that most of the appeals to the district court are made primarily for the purpose of delay?

Judge PARKER. That is true in the case of death sentences. I think that is correct. But it is not true with respect to all these applications that come from prisoners in State penitentiaries. They are made for 2 purposes, 1, that hope springs eternal in the human breast; and another is that they may get a free ride, they may go to the Federal court and have a nice trip.

In a lot of penitentiaries there are a lot of guardhouse lawyers who get the prisoners to pay them a little money to get up these petitions and sometimes they come up with a written brief. Very seldom do they present any contention that has any merit whatever.

Now, there has been an increase in these applications in geometric proportions. Away back in 1941 there were only 127 of those cases; in 1954 there were 597. Well, that is a very steep increase and certainly indicates an abuse. Now, the purpose of this bill is to prevent that abuse.

Now, we take away the use of the writ from no one. That right is guaranteed. Nobody can suspend the writ. The Constitution would forbid that. We simply provide that the writ shall be granted only upon the showing of the following: That the substantial constitutional question was not raised theretofore and determined; that there was no fair and adequate opportunity to raise the question; and that the question cannot thereafter be raised and determined in a proceeding in a State court, by an order or judgment subject to review by the Supreme Court of the United States on a writ of certiorari.

Now, what are those cases where there might be deemed a miscarriage of justice? It may be a case of coercion by State officers; it may be a case of forced confession; it may be a case of threats by State officers; the defendant might not have been properly advised as to his right of counsel; he might have been assigned by the judge in the State court a State counsel and that counsel may have been ignorant or biased or incompetent or showed bad faith to his client; there might have been no benefit of counsel whatsoever; there may have been an improper paneling of jurors; there may have been an improper selection of jurors. I do not care what impropriety or injustice there may have been in these individual cases, but there will be no denial whatsoever of the application for a writ of habeas corpus, only that his application must be channeled properly and there must be proper supervision. He must stay in the State courts, so long as the States provide remedies through State habeas corpus, coram nobis, and so forth. As it is now, prisoners run wild, as it were. We must have orderly procedure, and, as I shall point out in the extension of my remarks, these amendments even go further in the protection of the prisoner's rights. But, as I said, we must have orderly procedure, and that is what is involved in this bill.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Iowa.

Mr. GROSS. Do I get the impression that we are asked to pass legislation to in some way police the legal fraternity?

Mr. CELLER. No; I would not say it was to police the legal fraternity. I am a member of that honored body called the legal fraternity, and I do not think they need to be policed, and this bill does not do that.

Mr. GROSS. The gentleman is saying that many lawyers have abused this right of the writ of habeas corpus; or that they have lent themselves to abuses.

Mr. CELLER. I did not say that.

Mr. GROSS. The gentleman spoke of guardhouse attorneys.

Mr. CELLER. I said many prisoners in the State penitentiaries have abused the right, they are in contact with other prisoners who are known as guardhouse lawyers, and they will scratch out something on a piece of paper or on a bag, and then it may be in the form of a writ or asking for a review, claiming that they have been improperly incarcerated and that justice was denied them, and the court must listen to all of that.

Mr. GROSS. But they must have some vehicle. They must have an attorney; must they not?

Mr. CELLER. No; you do not have to have an attorney to sue out a writ of habeas corpus.

Mr. GROSS. The gentleman stated that there were many guardhouse attorneys who were participating in this sort of procedure.

Mr. CELLER. These guardhouse attorneys would urge some of the prisoners to make the application. Sometimes the guardhouse attorneys will draw the papers for them, but the guardhouse attorneys do not make the application. They sort of give them the advice or misadvice. That is what I was trying to tell the gentleman.

Mr. GROSS. Could not county and State bar associations police a situation of that kind?

Mr. CELLER. In the penitentiaries?

Mr. GROSS. No; the use of lawyers.

Mr. CELLER. Lawyers are not involved When I say "guardhouse lawyers," I am referring to somebody who assumes to act as a lawyer, but who might be a fellow prisoner.

Here are some specific examples of the abuse of the writ, for example an inmate under sentence of death in the State prison of California was convicted of 17 separate felonies, including robbery, rape, kidnapping, and the crime of sex perversion. The sentence of death was imposed in 1948 and some 7 years later he is still very much alive and in fact has written a best-seller book on his stay in the deathhouse.

He has compiled an astonishing record in his relentless and seemingly endless pursuit of post conviction remedies. He has been turned down by the California Supreme Court on his appeal from the trial of his case, and has been refused three applications for a writ of habeas corpus in his case. In addition, he has been rejected by the United States Supreme Court on five applications for a writ of certiorari. He has been denied five times by the United States district court on application for habeas corpus. He has also been turned down by the Ninth Circuit Court of Appeals on an appeal from the district court. Furthermore, he has been refused clemency on several occasions by two Governors of California. This prostitution of legal procedure by this depraved sex terrorist has caused the California State Legislature to adopt a resolution petitioning this Congress to enact the proposed legislation into law as soon as reasonably possible.

In the State of Washington, two defendants were convicted in June 1950, of rape and murder. Through the use of some 15 separate petitions of habeas corpus, coram nobis, and stays, they were able to save themselves from execution until 1953, a period of almost 3 years.

I strongly urge that the report of the Special Committee on Habeas Corpus of the Conference of Chief Justices of the several States, which is set out beginning on page 92 in the committee hearings, serial No. 6, 84th Congress, be read so that the Members may see for themselves the numbers and kinds of applications which have been submitted by prisoners in attempts to delay the ends of justice.

Mr. KEATING. Mr. Chairman, I yield myself 1 minute. I do that for the purpose of clearing up with the gentleman from Iowa [Mr. GROSS] the use of the phrase by the gentleman from New York [Mr. CELLER]. Among lawyers there is a phrase "guardhouse lawyers" which refers to prisoners who may have had some legal training but are not necessarily lawyers, or who might be disbarred lawyers, who gained their experience in criminal proceedings and who are incarcerated at the time, who go around either on their own behalf or on behalf of fellow prisoners and stir up these prisoners.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. KEATING. I yield to the gentleman.

Mr. GROSS. Then there was no testimony before the gentleman's committee that attorneys, as such, indulged in the practice of aiding these prisoners in the abuses of which the gentleman from New York [Mr. CELLER] spoke?

Mr. KEATING. No.

Mr. GROSS. No attorneys ever lend themselves to that sort of practice?

Mr. KEATING. Let me say that I, like the gentleman from New York [Mr. CELLER], am a member of the legal profession. Both of us, not unnaturally, have an extremely high regard for that profession.

Mr. GROSS. I am sure of that.

Mr. KEATING. Mr. Chairman, I yield 5 minutes to the gentleman from Utah [Mr. DAWSON].

Mr. DAWSON of Utah. Mr. Chairman, I support this legislation. The increasing tendency of Federal district courts to assume jurisdiction over defendants who have exhausted all State court remedies—particularly in capital cases—must be curbed.

Under our Constitution, the scales of justice must be in delicate balance. The accused must be afforded every reasonable means to defend themselves against their accusers. But the rights of the accusers—in capital cases, the public—must also be protected. And both the public and the accused are entitled to a speedy administration of justice.

Let me cite an example of how the scale of justice is now out of balance.

Verne Alfred Braasch and Melvin LeRoye Sullivan were tried and convicted and sentenced to death for the brutal holdup slaying of a gas station attendant in Beaver, Utah, on October 22, 1949. The original execution date was February 16, 1950.

The execution was stayed when the defendants appealed to the Utah Supreme Court. Utah's highest court unanimously upheld conviction and subsequently considered three additional appeals for extraordinary writs and reviews—all of which were denied after careful study.

Attorneys for the defendants carried their case to the United States Supreme Court. Twice the Nation's highest tribunal was petitioned and twice the Supreme Court refused to review the conviction. One could reasonably expect that the men had run their full legal course. Certainly their rights and privileges had been given full consideration.

The case, however, did not end here. Despite the refusal of the United States Supreme Court to upset Utah's State court decisions, the Federal district court in February 1952 assumed jurisdiction after attorneys for the convicted killers filed for a write of habeas corpus. The case has now been carried through the Federal circuit court of appeals, and the defendants have appealed the adverse ruling to the United States Supreme Court. For the third time, the Nation's highest court is asked to review the case. Pending the Supreme Court's decision, the convicted killers' sentence is stayed.

No one in this chamber would want to deprive these men of their right to a fair trial. But the public's respect for their courts is also important. Extended delays of the execution of sentences imposed can only make them question the efficacy of our legal machinery.

No one would equate cost with the rights of any prisoner to a full review of his conviction. This includes Gov. J. Bracken Lee—the cost-conscious chief executive of Utah. The Governor, however, has computed what it has cost Utah to maintain these men since the State of Utah lost jurisdiction over them by habeas corpus action in the Federal district court. Based upon his studies, the State of Utah has spent $28,852.94 to date maintaining these convicted killers in the Utah State Prison. He has billed the Government for this amount—reasonably contending that if the Federal courts are to assume jurisdiction, then the concommitant expense of maintaining the defendants should be assumed at the same time.

This law gives full protection of the courts to the accused. Its only purpose is to prevent abuse of our laws through extended legal procedures. Such abuse can only create contempt of our statutes, and contempt encourages crime. This bill should be passed.

Mr. CELLER. Mr. Chairman, I yield 5 minutes to the gentleman from Illinois [Mr. MURRAY].

Mr. MURRAY of Illinois. Mr. Chairman, I urge the enactment of the pending legislation for four reasons:

First, it will correct a confusion presently existing in State criminal procedure without infringing upon the rights of individuals.

Second, it will restore a proper balance between the Federal and State courts.

Third, it will save a needless expenditure of State funds devoted to the enforcement of State criminal laws.

Fourth, it will relieve Federal district courts from needless and costly inquiries into State criminal prosecutions.

I should like very briefly to state the present situation with respect to writs of habeas corpus in Federal district courts as they appertain to State convictions, the problems it creates, and the effect of this legislation in correcting such problems and at the same time protecting the Federal constitutional rights of individuals.

Under Illinois law and the law of every other State, after a person is convicted of a crime and sentenced to the State penitentiary, he is entitled to a review by the State appellate court and thereafter, or subsequent to that review, he is

entitled to seek a writ of certiorari to the United States Supreme Court. Thereafter, if something had occurred at his trial which made his trial unjust, he is given additional remedies. For example, in Illinois he might file a petition for habeas corpus in the event the trial court had no jurisdiction over his person, the subject matter of the charge, or in the event the trial court lost jurisdiction during the trial, and after decision by that trial court in habeas corpus, he can seek certiorari to the United States Supreme Court.

He also has the remedy by writ of error coram nobis. If facts exist which the trial court which convicted the prisoner was not apprised of, and which facts he failed to present to the trial court by reason of mistake or incompetency of counsel or other such reason, he might file a writ of error coram nobis in the State court, get a review of that writ of error coram nobis in the State supreme court, and then take certiorari again to the United States Supreme Court.

In addition to these two remedies subsequent to conviction, in Illinois he has a third remedy. He has a catchall remedy which is provided by an act entitled "The Illinois Postconvection Review Act," in which he can try any allegation of a deprivation of constitutional rights in the State trial court, have a review by the State supreme court, and take certiorari to the United States Supreme Court.

Under the present law, after all of those reviews and every conceivable contention he might make has been tried and tested by various and sundry trial courts, he can go into a Federal district court on an application for habeas corpus and retry those same charges or some other fictitious charges he might make with respect to the State trial that resulted in his conviction.

After he goes into the Federal district court, he can take a review to the Federal circuit court of appeals and then seek a review in the United States Supreme Court, again by certiorari. But it does not stop there because under our existing Federal Habeas Corpus Act, he can apply again and again and again to the Federal district court.

Prior to 1940 in Illinois in the Federal district courts, seldom, if ever, did a Federal district court by habeas corpus or otherwise inquire into the propriety of a State conviction. Since 1946, as a result of this habeas corpus procedure, a veritable flood of habeas corpus petitions has emanated from our State penitentiaries containing every type of conceivable charge with respect to the State court convictions. As I recall one case, the prisoner charged that the State of Illinois had never done away with trial by battle. Incidentally, for those who may not be lawyers in the Chamber, a trial by battle is a trial where the accused faces his accuser in armed conflict. He had a hearing in the Federal district court and that case was appealed to the circuit court of appeals. In 1953, there were 1,500 inmates received at the Illinois State Penitentiary at Joliet. The population of the institution at that time was between 4,000 and 4,500 prisoners serving an average term of 4.9 years. In that year—in just 1 year—there were 3,814 pieces of correspondence sent to the various State and Federal courts in the State of Illinois. Yet, in that period and with all these petitions, not a single prisoner was released on habeas corpus in the Federal district courts. The cost of this procedural binge has been a tremendous one. One assistant attorney general devotes his entire time completely to responding to prisoners' petitions for habeas corpus in the Federal district courts. Three other assistants devote 10 to 20 percent of their time. One assistant State's attorney in Cook County devotes all of his time to cases arising under the Illinois Postconviction Act. And a number of other assistants devote part of their time.

Mr. CELLER. Mr. Chairman, will the gentleman yield?

Mr. MURRAY of Illinois. I yield to the distinguished chairman of the Judiciary Committee.

Mr. CELLER. Does the gentleman feel, as a result of his experience as a member of the attorney general's office in the State of Illinois, that these amendments which we offer will bring about a diminution in the number of these applications that will be filed; is that correct?

Mr. MURRAY of Illinois. The amendments will cause a lessening of petitions in the Federal district court, but not in the State court.

Mr. CELLER. That is right. Now, does the gentleman envisage any kind of a case—can he conceive any kind of case of miscarriage of justice where the remedy would not be available in connection with the application for a writ of habeas corpus?

Mr. MURRAY of Illinois. I cannot conceive under this legislation where in any case a prisoner's rights would be jeopardized. As a matter of fact, from my experience, I feel that this will more clearly define a prisoner's rights, because under present procedure our prisoners and many of our lawyers are confused as to when the Federal court has jurisdiction. I would like to take one case in Illinois which illustrates my point. A State prisoner had some nine cases filed in various State and Federal courts, some even in the United States Supreme Court, to review his conviction because of an alleged violation of his constitutional rights. Subsequently he obtained a review in the Federal district court. A long and lengthy trial was had. The record alone cost the State of Illinois $10,000. He went to the circuit court of appeals, and the circuit court of appeals held that he failed to exhaust his State remedies, and he was again required to go into the State court. Subsequent to the decision in the State court, he may go into the Federal district court again under present procedure.

Mr. CELLER. Will the gentleman yield?

Mr. MURRAY of Illinois. I yield.

Mr. CELLER. Does not the gentleman feel that the language used on page 2, lines 2 and 3, referring to the constitutional question, "There was no fair and adequate opportunity theretofore to raise and have determined," is rather broad language, and does it not cover every conceivable case of miscarriage of justice?

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. CELLER. Mr. Chairman, I yield the gentleman 3 additional minutes.

Mr. MURRAY of Illinois. The distinguished chairman, I know, has long been a champion of the rights of individuals and would heartily oppose any legislation that could possibly deprive anyone of relief from a miscarriage of justice. That language, in my opinion, based on a number of years of experience, covers every conceivable case. Particularly if a person presents a case that indicates that the State trial court did not provide him with a fair trial and a fair and adequate test of his complaints as to his trial, this legislation contemplates a fair and adequate review by a State trial court of allegations made by a State prisoner that disclose that his State conviction is predicated upon a violation of his Federal constitutional rights.

I might refer to the problem of the State penitentiaries just to illustrate what the chairman was speaking about when he referred to "guard-house lawyers." An article was written in the Chicago Tribune last year with respect to our State penitentiary; it disclosed that the most popular book in the State penitentiary was the Encyclopedia of Law. Some 400 typewriters are rented and in constant use by prisoners in one of the State penitentiaries in Illinois, preparing petitions for relief from State confinement. The cells had become so flooded with lawbooks that the warden had to adopt a rule requiring the prisoners to keep the lawbooks outside of the cells. I do not think the warden is too displeased about the problem, because it keeps the minds of the prisoners occupied, where they might otherwise be thinking of other ways to get out of the penitentiary.

One writer said that the writ and the tort have replaced the file and saw as State prisoner's favorite method of escape. One writer describes it as follows:

"The do-it-yourself fad has spread even to the State penitentiary."

In the final analysis, all that this legislation does and all that it is intended to do is that it takes from the Federal district courts review jurisdiction which it now is able to assert, over State criminal prosecutions, including State circuit courts, and imposes that review power in the place where our basic Constitutional concept so intended—in the United State Supreme Court.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

Mr. KEATING. Mr. Chairman, I yield 5 minutes to our distinguished colleague from Indiana [Mr. CRUMPACKER], who is a member of the subcommittee which handled this legislation.

Mr. CRUMPACKER. Mr. Chairman, this bill is a second attempt by Congress to deal with a problem which has arisen largely in the last 15 years. The Constitution provides that the writ of habeas corpus shall not be suspended except during rebellion or times of civil disorder. The Constitution, however,

does not define the term "habeas corpus," and this has been left to the courts. Originally it had a very narrow legal definition and was not too much employed. However, during the past 15 years a number of decisions by the United States Supreme Court have considerably broadened the use of the writ, and this has led to a considerable clogging of the Federal courts with procedures of this type.

Congress first attempted to deal with this situation in 1948. At that time they adopted section 2254 of title 28 of the United States Code and attempted to specify the conditions under which the writ of habeas corpus could be used as a means of intervening in State criminal proceedings.

The Supreme Court, however, in interpreting this provision of the Code decided that the language used was not specific enough to require them to restrict the use of the writ to the extent Congress had anticipated. Hence, the flow of these cases has continued, and in this bill we are attempting again to restrict the use of the procedure.

It should be made absolutely clear that no attempt is being made in any way to interfere with the constitutional right to the writ of habeas corpus. It is no attempt in any sense to suspend the writ. It is merely an attempt to define the term and to specify the circumstances under which its use is proper.

This problem is one which has arisen largely in a localized area within the United States. From 1941 through 1954 in the 86 district courts of the United States 6,409 habeas corpus proceedings of this type arose. Almost half of them came from just 4 districts out of the 86. These 4 districts oddly enough are all in the Midwest—2 in the State of Illinois. They are the northern and eastern districts of Illinois; the northern district of Indiana, and the eastern district of Michigan. So it would seem that these guardhouse lawyers that have been so frequently referred to previously in the debate seem to be concentrated in the State penitentiaries of Illinois, Indiana, and Michigan. Because of their very great activities the district courts in these four districts have been burdened very heavily with this type of proceeding.

This legislation is merely an attempt to restrict the flow of this type of activity to reasonable claims of violation of constitutional rights, and to expedite punishment of crimes in the State courts. It has nothing to do with racial or religious discrimination or things of that sort, and it has nothing to do with any restriction of civil rights; it is merely an attempt to bring about orderly administration of justice.

Mr. KEATING. Mr. Chairman, I yield myself 1 minute.

Mr. Chairman, this bill I believe merits the support of this body. It was unanimously reported by our committee after very thorough hearings and after very full debate in the committee. It is designed to rectify the abuses in the use of the writ of habeas corpus without in any way infringing upon the fundamental rights of anyone or interfering with the legitimate use of that writ.

Mr. CELLER. Mr. Chairman, I yield the balance of the time on this side to the gentleman from Pennsylvania [Mr. QUIGLEY].

Mr. QUIGLEY. Mr. Chairman, I think it has been made crystal clear in the debate that all we are attempting to do by this measure is to bring a little order where there is now much chaos. If this bill is enacted into law, it is the anticipation of the Committee on the Judiciary that literally hundreds and thousands of phony habeas corpus proceedings which now clutter up and confuse an already overcrowded Federal docket may be removed. At the same time, we trust that enactment of this legislation will expedite the handling of bona fide habeas corpus proceedings so that any man who is improperly detained in prison, who is improperly incarcerated, will have an opportunity to have his case considered and disposed of by the highest court of this land with a minimum amount of delay and that, if he is entitled to be free, he will get that freedom without languishing in jail for a year or 2 or 3 or 4 years while he works his way up on an overcrowded court calendar.

Mr. Chairman, this legislation is not intended to impinge, restrict or deny the traditional and sacred use of the writ of habeas corpus which, since the days of antiquity, even before the days of the Magna Carta, has been one of the really priceless protectors of individual freedom. I think that we are not in any way restricting the writ, but actually are freeing it so that it may be properly used in those cases where it was intended to be used. That is the purpose, that is the function, that is the intention of this bill.

As has already been indicated, the Congress thought it had accomplished this purpose back in 1948. At that time the legislation which was adopted contained language which was not of sufficient clarity to the Supreme Court of the United States to persuade it that what we are attempting to do here today was actually the intent and purpose of the Congress at that time. Because there was that doubt about our intention as expressed in the bill passed in 1948 the Supreme Court in recent decisions has permitted the flow of these habeas corpus writs to continue. It felt that the Congress had not made it crystal clear in 1948 that it was intending to restrict the use of the writ along the lines that we feel, and I think that lawyers have always felt, the writ of habeas corpus should be confined and should be restricted.

As I say, what we are trying to do here today is what the Congress thought it had done back in 1948. On the basis of the studies that have been made by the Judicial Conference, on the basis of studies that have been made by the Chief Justices of the 48 States, on the basis of studies that have been made by the attorneys general of the 48 States, on the basis of the studies and recommendations made by the Department of Justice, and on the basis of studies and recommendations that have been made by members of the Committee on the Judiciary, we believe that the legislation now before you will accomplish this very worthwhile purpose and that we will henceforth have an orderly habeas corpus procedure in our Federal courts and that in this order and because of this order no one's rights will be adversely affected and everyone's rights will be securely protected. For these reasons I urge the enactment of H. R. 5649.

The CHAIRMAN. If there are no further requests for time, the Clerk will read.

The Clerk read the bill, as follows:

Be it enacted, etc., That section 2254 of title 28, United States Code, is amended by placing "(a)" before the present language of the section and adding thereto subsection "(b)" as follows:

"(b) A Justice of the Supreme Court, a circuit judge or a district court or judge shall entertain an application for a writ of habeas corpus in behalf of a person in custody pursuant to a judgment of a State court, only on a ground which presents a substantial Federal constitutional question (1) which was not theretofore raised and determined, (2) which there was no fair and adequate opportunity theretofore to raise and have determined, and (3) which cannot thereafter be raised and determined in a proceeding in the State court, by an order or judgment subject to review by the Supreme Court of the United States on writ of certiorari.

"An order denying an application for a writ of habeas corpus by a person in custody pursuant to a judgment of a State court shall be reviewable only on a writ of certiorari by the Supreme Court of the United States. The petition for the writ of certiorari shall be filed within 30 days after the entry of such order."

Mr. POWELL. Mr. Chairman, I move to strike out the last word.

I would like to ask just two questions of the committee. On page 2, line 2, section 2, is that to be construed that when the aggrieved person has not been advised of his rights, that he has had a fair and adequate opportunity?

Mr. CELLER. Mr. Chairman, if the gentleman will yield, does the gentleman mean where a prisoner has not been advised of his right of counsel, for instance?

Mr. POWELL. Yes.

Mr. CELLER. If he has not been advised as to his right of counsel, and he remained in ignorance of this right then there was no fair and adequate opportunity, and therefore the application could be granted.

Mr. POWELL. I thank the gentleman. Next: Page 2, line 5, we find the language "in the State court," and on page 2, lines 9 and 10, "a State court."

Mr. CELLER. What is the question?

Mr. POWELL. The question is: Is that a State court?

Mr. CRUMPACKER. Mr. Chairman, will the gentleman yield?

Mr. POWELL. I yield to the gentleman from Indiana.

Mr. CRUMPACKER. I think if you will look at the first one the gentleman refers to, they are referring to English all the way through in the singular, while the second paragraph starts out "An order," which is any order.

Mr. POWELL. But the committee is referring there to the State court of final appeal rather than any court in a State.

Mr. CELLER. It means the proceedings in any of the courts, either in the trial court or the appellate court of a State and either at the time of his trial or at some later date in a separate habeas corpus proceeding, and "a State court" means a judgment of any State court.

Mr. KEATING. Mr. Chairman, will the gentleman yield?

Mr. POWELL. I yield to the gentleman from New York.

Mr. KEATING. May I put it another way which I think might clear it up in the gentleman's mind? In the first place where it is used it is referring to the particular State court, whether it be an appeal court or a lower court where the previous proceeding had been had. In the second place it is general language, and it refers to any judgment of any State court and is used without reference to the prior use and prior reference to a State court.

Mr. POWELL. I thank the gentleman. I am, of course, very zealous that there be no retreat in this ancient concept of "habeas corpus." I trust that these answers to my questions will help preserve the best while helping our judicial arm.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. EDMONDSON, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H. R. 5649) to amend section 2254 of title 28 of the United States Code in reference to applications for writs of habeas corpus by persons in custody pursuant to the judgment of a State court, pursuant to House Resolution 318, he reported the bill back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

AMERICANS OF UKRAINIAN DESCENT ARE KEEPING ALIVE THE FIRES OF FREEDOM

Mr. SMITH of Wisconsin. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. SMITH of Wisconsin. Mr. Speaker, Americans of Ukrainian descent are vigorous in their determination to see that one day all of the Ukraine will be free from the domination and enslavement of the Soviet Communists. This is fortunate for the future of those people who still suffer as slaves under the dictatorship in the Kremlin.

It is a privilege for me, Mr. Speaker, to have some part in the proceedings on the floor this morning in which Members are actively supporting that gallant band of Americans who will not say die in support of their homeland. It is important that the world realize that Bolshevik Russia is committed to the principle of imperialism and that it intends to enslave the world, if it can.

Bolshevism, which for some reason is at present called and identified with communism, originated, as is well known, in the center of the Russian Empire. Having captured power in Russia, it was imposed upon other nations which had reestablished their national states in 1917. After conquering the national republics, Bolshevism reassembled the Russian Empire and began a new era of Russia which has survived for over 30 years. As a historical phenomenon, Bolshevism is closely related to a certain geographic area, a certain population and human type of a national distinction, to a history of a people and its cultural climate. In spite of this, in the present struggle against Bolshevism which is denominated communism without a country, for some reason no mention is made of its historical background and of the history of the phenomenon itself which has become the terror of the world and of human liberty. Lately, the terminology used by the press frequently employs the terms: "Communist Koreans," "Communist Chinese," "Communist Germans," et cetera. These seemingly innocent new phrases of journalism conceal a certain objective. Someone is seeing to it that the real truth, the source of danger to human liberty, remains concealed, and it is Bolshevik Russia, the U. S. S. R. It is not the Communist Chinese, Koreans, Germans, and other peoples that constitute a threat to the world, but the imperialism of Bolshevik Russia, of the U. S. S. R.

The Russian Empire with its centuries-old desire to spread beyond the confines of its national-state limits gave birth to Bolshevism and gave to it a spiritual facet. The Moscow legend about the international structure of socialism, prepared in the Kremlin laboratory, has no real meaning in Moscow's present Bolshevik aggression. "The Soviet order is national, it is of us" states the thoughtful anti-Communist V. Ivanov in his work We—My. Identical thoughts are propounded by the Russian historian Fedotov and by the philosopher Berdyayev. It is no coincidence that Bolshevism entrenched itself with great ease, almost without resistance, in Petersburg and Moscow, and that all great Russia had hardly any civil war. Signs and labels were changed merely, and the imperial essence, the spiritual part, remained the same. The tradition of the Muscoviate state had an ingredient which favored Bolshevism: Serfdom, village community property, and autocracy. On the borders of the Russian Empire—Ukraine, Caucasus, Byelorussia, Uzbekistan, et cetera—the Bolsheviks were compelled to wage long and bloody warfare in order to impose Bolshevism. The commander in chief of the Bolshevik army in Ukraine, Antonov-Ovsieyenko admits that "unless we"—Bolsheviks—"had behind our backs such a defense like Soviet Russia, the revolution in Ukraine would have perished." Did not the same thing happen right in front of our eyes in China, Korea, Indochina, and today is being readied in the Arab world? Backing the Communist fifth columns which attack the freedom of nations, there is always Soviet Russia.

We observed recently from here Khrushchev and Bulganin, in their travels across India, Burma, and Afghanistan, inciting the peoples of these countries against the United States and Great Britain. It was not of communism that they spoke, only of age-long friendship of the Russian people. The leaders of the bolshevik empire have always taken advantage of social demagoguery, and it is nothing new in Russia's imperialism. The well-known Slavophile Leontiyev, who planned the establishment of a Pan-Slav empire following Russia's conquest of all Slav people, advised the czarist politicians in 1890 to tie Russian imperialism with the socialist movements of the West:

> Sometimes I believe that some Russian tsar, perhaps in the not too distant future, will stand at the head of the socialist movement and will organize it in the same manner as Saint Constantine favored the organization of Christianity, being the first to take the path of Universal Synods. (Bogoslovskiy Vyestnik—Theological News, May 1914, pp. 858–862.)

A monarchist, every fiber of whose soul hated socialism, considering it to be organized slavery, when it came to conquest of other lands, advised his government to lean on that movement. Is it not in accord with this testament that the present leaders of bolshevism are acting in Asia and Africa? Conditions have changed, but not the essence of aggression. And here is another prophetic vision of the imperial geopolitician M. Ya. Danilevsky who, as early as 1865–67 drew the geopolitical lines for the invasion of present bolshevism:

> The Russian people, who live between two oceans, the eastern and the western, wash by their (human) waves two capitals, Moscow and Peking, and its history is that junction from which grow new centers of the world's history because, for the time being, we see no other possibility of solution of modern problems. (M. Ya. Danilevsky, Yevropa i Rossiya (Europe and Russia).)

The Messianism, according to which the Russian people are chosen to realize truth in the world, is an integral part of contemporary bolshevism and it was born of the historical process and is peculiar to the imperialist mentality. The idea of Russia's external policy has been put into poetical form by the Russian poet F. Tyutchev long before bolshevism, in the following lines:

> In reborn Byzantium, the domes of old Sophia will beautify again the altar of Christ Fall prostrate before him, O Tsar of Russia, and rise as Tsar of all the Slavs.

This ruling ideal of imperial policy has been realized by the Bolsheviks in Europe after World War II. Stalin became that "Tsar of all the Slavs" and now Khrushchev is continuing his work in India and Burma in order to become

the emperor of the world. Khrushchev is merely putting into deed the teachings of Danilevsky. The latter wrote that—

> Russia's mission is a happy one: for her aggrandizement she does not have to conquer nor oppress, as has been the lot of representatives of force—the nations of the German-Roman world—but to liberate and to renew, and in this remarkable and probably unique confluence of ethical compulsions and duties with political expediency and necessity one cannot fail to see the law, the execution by Russia of her great destiny.

If we compare the program of the Monarchist Danilevsky with Khrushchev's speeches in India, we can see that Bolshevik Russia, the U. S. S. R. is unfailingly pursuing the external policy of Tsarist Russia. This fact was well noticed and well understood by the Russian poet M. Voloshyn, of Ukrainian origin, who, at the time of the revolution asked himself, "What has changed?" and answered:

> Signs and slogans.
> The same storm rages on all roads:
> The commissars—have autocratic minds
> The Tsars—had revolutionary rapture.

The conclusion: Bolshevism is a product of the imperialist spirituality of Russia. A struggle against bolshevism cannot be separated from the struggle against the Russian Empire—the U. S. S. R.

In this struggle the best and stanchest allies of human freedom are nations enslaved and conquered by Russia, the Russian people included.

AGGRESSION OF SOVIET RUSSIA

Mr. FLOOD. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. FLOOD. Mr. Speaker, the new phase of the cold war of the Russian Communists against us compels us to ask what is the essential feature of the cold war. The cold war of the Russian Communists is the sum total of psychological devices deliberately used to break the nerve of the opponent, to disarm him morally for that moment when the armed blow will be delivered in one or the other planned sector. The Soviet Union is trying to bring about this breaking of nerve by alternating again and again the direct threat of the outbreak of war and the hope of removing it by the mirage of peaceful coexistence over a long period of years.

These tactics of the war of nerves combined with the use of armed military aggression have been the basis for building the Russian Bolshevik Empire, not merely the complex of the so-called Soviet Union but also that and the so-called satellites. Not one of the non-Russian lands, taken by Soviet Russia, whether they are called Soviet National Republics or as satellites, People's Democratic Republics have ever voluntarily joined the Soviet Russian Empire and in not a single one have the native Communists been able to dominate them except by the combination of the war of nerves and hot war on the fronts.

Let us take for example the greatest non-Russian nation in the Soviet Union, Ukraine. Even in those areas which have been incorporated by force in the Soviet Union there are 42 million in population and in the entire U. S. S. R. there are 50 million. This nation began to create its national self-determination on April 21, 1917, when the Ukrainian National Congress chose as its representative the Ukrainian Central Rada and this by a constitutional act on June 21, 1917, declared for the formation of its own system on its own territory.

This development under the hard revolutionary conditions of that year culminated in the creation of the Ukrainian National Republic which was constitutionally declared on November 20, 1917. The attempt of the Russian Communists with the aid of their fifth column to seize the power in Ukraine at the same time that it took over Russia did not succeed, for the Ukrainian Central Rada checked the planned revolution. This was set for the end of November 1917. The elections to the constituent assembly which were held then, showed the complete unimportance of the Communist influences in Ukraine. Just as later the publications of the Soviet Government in Ukraine admitted — Arkhiv Soviet Ukraine, No. 1–2, 1932—the Communist ticket received only 10 percent of the votes in Ukraine at the same time when it received in Russia itself 44 percent in some districts.

When the Russian Communists saw that they had no hope of winning by an internal coup d'état, they decided to combine, as we have said, the war of nerves and the hot war. It at first threatened the government of the Ukrainian National Republic with nonrecognition. When they thought that these threats should have influenced the nerves of the Ukrainian population, they began to promise the government of the Ukrainian National Republic recognition, provided that they cooperated with the aggression of Moscow against the Don Cossacks. When Moscow believed that it had secured enough adherents through this hope of peaceful coexistence and had broken the moral opposition to its imperialism, it first on December 17, 1917, with all formalities recognized the government of the Ukrainian National Republic and at the same time formally sent an ultimatum to agree within 48 hours to the establishment of Russian Red guards on Ukrainian territory. As we have since seen, this was the same device that they used in the Baltic Republics in 1939. But Moscow made a misjudgment. The Ukrainian Government did not yield to this ultimatum of December 17, 1917, and with its army it opposed this aggression of Soviet Russia. This is an interesting episode in the history of the military aggressions of Soviet Russia, for it is the only case when Moscow formally declared a war of aggression against any country. In all others when it attacked non-Russian peoples, Moscow used the same tactics as recently in Korea; it asserted that its victim had made the first attack. But the first assault of Moscow did not succeed. The Ukrainian parliament during the war definitely proclaimed the full sovereignty of Ukraine. For a short time this was recognized not only by France and Britain but also by the central powers, Austria, Germany, Turkey and Bulgaria.

The unsuccessful attack upon Ukraine by Soviet Russia compelled the latter to enter into negotiations with the government of the Ukrainian State in Kiev in May 1918. These negotiations led to the conclusion and signing of a treaty for a permanent armistice prior to the conclusion of a definitive treaty of peace. This was the armistice agreement of June 12, 1918, which not only ended military operations but called for normal diplomatic and consular relations between Ukraine and Soviet Russia. But again after this hope of peaceful coexistence the Russian Communist commissars scarcely 8 full weeks after the formal signing of the armistice and the exchange of diplomatic representatives made an attempt to bring about an internal revolt in Ukraine on August 8. The center of the Communist Party in Moscow issued under the signature of their Revkom—Revolutionary Committee—on that day an appeal "Till the storm" for a general uprising, but this found no echo among the workers in Ukraine. After this attack of nerves Moscow again came forward with the spread of new hopes for peaceful coexistence but not for long, only until December 1, 1918. It then turned to the method of unprovoked aggression against the Ukrainian State and broke the obligations which it assumed in the armistice treaty of June 12, 1918. To mask its faithlessness it adopted the tactics of Korea; it sent its regular troops against the Ukrainian National Republic in the guise of volunteers just as Moscow forced Red China to do in the war against the United Nations in Korea. After seizing in this way part of the territory of Ukrainian National Republic, Moscow threw off the mask and openly sent division after division under its own commander in chief against Ukraine. This war lasted incomparably longer than all the other aggressive wars of Russia against the non-Russian peoples, until November 12, 1920, when the Russians by their superiority in numbers broke the regular army of the Ukrainian National Republic and compelled it to withdraw into the territory occupied by Poland and Romania. The legal government of the Ukrainian National Republic also had to leave Ukraine and continue its activity abroad, where it still continues as the Ukrainian National Rada.

The pattern of this conquest of Ukraine by Soviet Russia was with some changes applied later to other countries after the organization of the Soviet Union. We have been witnesses of the use of these tactics in Korea, where our young men laid down their heroic heads in defense of law and freedom in international life and the basis on which our country rests. On the anniversary of the Independence Day of Ukraine, January 22, this example should warn us against the policy of the Soviet Union still more than in the past. We must not allow ourselves to be frightened, but

increase our power of defense, and we must not let ourselves be deceived by vain hopes in the love of peace by the Russian Communist overlords. After the 38 years which have passed since the military ultimatum of Soviet Russia to Ukraine on December 17, 1917, the government in Moscow is still the same, although individual persons have changed. There is the same dictatorial party of Russian Communists and it has the same program and uses the same tactics. These are the Geneva smiles of Krhushchev, Bulganin and Zhukov and the preparation of an armed threat in the Near East and Berlin. These are not new. Lenin, the creator of Russian bolshevism applied them himself and taught his disciples also to use them. We must learn this program of world imperialism and cleverly and firmly oppose both open aggression and the deceiving tactics of smiles.

TAXES AND FAIR PLAY

Mr. DAVIDSON. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. DAVIDSON. Mr. Speaker, whether for poltical reasons or otherwise, one thing is certain—namely, that this year the Congress will give serious consideration to the question of tax reduction. In approaching this question, it is my fervent hope that we shall bear in mind and keep in view certain essential concepts with regard to taxes generally.

Scientifically, taxes where necessary should be based on the ability to pay. Taxes and the basis for their imposition must be fair. Just as our people demand morality in domestic government and morality in international dealings, taxes must have a morally acceptable basic justification. People in the United States pay very high taxes because they have faith in the justice of their imposition. Heaven help the government whose people heed the anarchistic rantings and havings of a demagog such as France has had visited upon her in the person of the infamous Pierre Poujade.

I must stand opposed to tax reduction which has no moral or scientific justification. It is Poujadism to reduce taxes just because this is the year of a great national election.

If taxes can be reduced safely and in good conscience without impairment of our national strength and essential governmental services, then Congress has the responsibility and, indeed, the duty to reduce them. But I insist that the reduction should be scientifically and fairly arrived at.

The reduction should be first and foremost for those upon whom the burden of taxes falls most heavily and cruelly. Our primary consideration must be the man whose major problem is to make both ends meet, the taxpayer who labors under the greatest hardship and has the least ability to pay. Certainly we should eliminate for him any tax which is unfair or unjust before we do anything else in the field of tax reduction.

As a beginning, it occurs to me that a breadwinner must go to work every day. To do so, he requires transportation. This is an essential without which he not alone would be unable to support his family and himself, but likewise, without which he could not earn any income upon which our Government might expect him to pay a tax. The average large business enterprise is permitted deduction from its taxable income, of legitimate travel expense. Our Federal Government does not permit deduction of transportation costs from the home to the place of business or employment, in fact it does not even allow for travel expenses incurred in a journey to another city to accept or seek employment, and I maintain that this poses a classic example of unreality and unfairness in our tax laws and regulations.

Transportation to and from work is a vital item of a man's business expense.

Ordinary public transportation costs for the average citizen are a not inconsiderable cost directly and intimately connected with the business of earning a living or holding a job.

Whether a breadwinner daily travels to his job or place of business by train, bus, trolley, subway, or car, the expense for him in employing these essential facilities has doubled or tripled in recent years. For him, these truly necessary business or job costs are an increasingly heavy burden.

Is it fair, is it morally justifiable that our tax laws and regulations should refuse to allow these expenses as a proper business deduction? Without the expenditure of transportation money from home to job, would there be a job to produce income?

In New York City, a workingman pays a minimum of $75 a year just to get from his home to his job and back each working day. This essential outlay is the very least he must pay. Many taxpayers are required to pay several times this amount. Commuters living in outlying districts and coming to a city to work each day are spending vastly more. It is sheer hyprocrisy on the part of our tax regulations to characterize these sums as "living or personal expenses"; they are in truth and in fact job or business expenses. Why should not this taxpayer's legitimate business expense be deductible. Is not this morally right? Is not such allowance fair play?

This seems to me to be far more scientific than some of the proposed across-the-board cuts. An increase in dependency exemption is urged by many as being logical, but the present dependency exemptions in the light of existing living costs are so unrealistic that a modest increase in the amount of such dependency allowances, which is all that could be expected, would not bring us very much closer to the all-important goal of the just and equitable tax base.

I am introducing a resolution today to study the efficacy of this proposal, its impact, and its reasonableness, in the hope that we can approach the question of tax relief morally, scientifically, and fairly—not politically. This is, I think, all that our people ask for and certainly what they have the right to expect of us.

ANNIVERSARY OF THE INDEPENDENCE OF BURMA AND YEMEN

The SPEAKER. Under previous order of the House, the gentleman from New York [Mr. POWELL] is recognized for 10 minutes.

Mr. POWELL. Mr. Speaker, when I came back from the Asian-African Conference at Bandung, I said I would address from the floor of Congress each one of the participating countries, except the two Communist ones, Red China and North Vietnam on the occasions of their independence celebrations.

Last week was the anniversary of Burma's eighth year of independence. The date specifically was January 4. I would like to congratulate the people of Burma, Prime Minister U Nu, and His Excellency U Win, Ambassador of Burma to the United States on the occasion of the celebration of independence day.

On July 1, Prime Minister U Nu was the guest of the National Press Club in Washington. Following are extracts from his speech:

And we are independent of any power blocs based on military treaties. Nations that choose not to participate in military blocs usually are referred to in this country as neutrals.

* * * * *

First of all, as most of you probably know, Burma has a long history. We had a great and flourishing civilization in Burma based on one of the great religions of the world, Buddhism, at the time when William the Conqueror was crossing the English Channel. This civilization, passed on to us by our forbears, has now become our national heritage. It is our way of life. We prefer it to any other way of life on this earth. We do not say that it cannot be improved, or that it cannot be adapted to suit modern conditions, but we do not wish to change its basis. We are not prepared to exchange it for any other way of life. This is not a matter of conceit. We do not claim that our way of life is better than that of other people. We merely say that it is different, that it suits us better, and that we cannot therefore be induced to give it up in exchange for some other way of life, be that the Communist way, the West European way, the American way, or any other way.

Now, I submit to you that if the citizens of any nation are deeply devoted to their culture, to their religion, to their way of life, to their country—as we in Burma are—then they will defend their way of life and their national frontiers with all the forces at their command. I can assure you that we are just as determined as any people to defend ourselves against foreign invasion or the imposition of any alien way of life by whatever method. And we have concluded that in the present phase of our history, and in the present state of the world, the wisest, and even the only, course for Burma is to pursue an independent policy, unshackled by what George Washington called "entangling foreign alliances."

Burma is not alone. She is a member of the United Nations. As such she is entitled to the protection which collective security affords. The charter of the United Nations is in effect one great mutual security pact. This is a fact which is very often overlooked.

It will probably be said at once that this implicit faith in the United Nations is pa-

thetic; that the United Nations system of collective security has broken down and can no longer be relied on. Here again, we must beg to differ. We say that the system has not broken down, but merely that it has not been made to work; that the remedy is not to push the United Nations aside but to strengthen it and put more life into it.

It is possible to disagree with this point of view. But whether one agrees or disagrees is immaterial, because in the present circumstances of Burma her membership in any alliance with a great-power military bloc is incompatible with her continued existence as an independent state. This may seem to be putting it strongly, but it is a fact. Our recent history is such, our experience with great powers is such that in the minds of the people of Burma an alliance with a big power immediately means domination by that power. It means the loss of independence. You may question the validity of that belief. But perhaps you will accept my statement that it is a political fact of life today that any Government of Burma which alined itself with a big-power bloc would at once lose the confidence and support of the people. In other words, the chances of subversion would be greatly increased. And if it is true that the real danger to countries like Burma lies in subversion rather than overt aggression, then it follows that membership in a big-power bloc would only tend to add to what is already said to be the greater of the two dangers.

What is the practical effect of this? It is that Burma at the present time has no choice but to pursue her policy of neutrality if she wishes to preserve her independence, and that to us is more important than anything else. It is part of her defense, and an important part, against subversion. But in another way, she cannot abandon her neutrality without increasing the risk of losing her independence through subversion.

But of course subversion cannot be successfully combatted merely by following a foreign policy of neutrality, as we in Burma know only too well. Despite our strict adherence to a neutral foreign policy, Burma has been the victim of subversion both from Communist and non-Communist elements. Indeed, at one time some 5 years ago, it seemed certain that she would go under. At that time the government's authority extended only to 4 or 5 of our cities and towns. Even Rangoon, the capital was infiltrated by subversive elements. The rest of the country was controlled by various kinds of subversive groups ranging in political hue from the Communists who received their orders from outside, to the anti-Communist Karen National Defense Organization which also was inspired and encouraged from abroad.

Today that situation has completely changed. The government's authority runs throughout the length and breadth of Burma.

* * * * *

What we had to deal with basically was not just an armed rebellion, but with underlying evils that had crept into our society and with the resulting psychological attitudes of large numbers people.

This called for nothing less than a comprehensive program of nation-building that involved religion, ethics, politics, health, education, and economic and social betterment.

* * * * *

I am firmly convinced that a major contribution to the restoration of stability in Burma was brought about by the fact that we in the Government stuck to the ways and procedures of democracy throughout. Fundamental freedoms and human rights were assured at all times.

* * * * *

All these measures have combined to bring home to the people the meaning of independence.

* * * * *

The major answer to internal subversion lies in honest Government and in dedication to the interests and welfare of the people. And I support this conclusion with the fact that we tried just such a program in Burma and it worked. Now that the advent of the atomic era reduces even further the chances of overt aggression, it seems to me that what is required is for greater stress to be laid on such programs.

In this talk, I have been trying to explain how our love of independence—call it preoccupation if you will—leads us logically and inevitably to the foreign policy of independence from any alinement of major powers on the basis of a military treaty. This policy has been called neutralism in the cold war. Perhaps that is the right name for it.

But I should like to take just another minute or two to point out that this is not a negative policy toward world affairs. Rather, it is a positive concept. It is a positive policy of seeking peace and friendship with all countries.

* * * * *

The best way for a nation to promote its own security is to promote the peace.

On July 6, Prime Minister U Nu was the guest of Secretary General Dag Hammerskjold at the United Nations. After lunching with the Secretary General, touring the United Nations building, and meeting Burmese nationals working with the United Nations staff, the Prime Minister recorded a broadcast for the United Nations radio service. The following are extracts from the broadcast:

In fact, the first major act of the newly independent government in the international field was to apply for membership in the world organization.

* * * * *

I suggest that the first step in this direction is to make it a world organization in fact as well as in name. The fact that so many nations which are not yet members of the organization keep knocking at our door indicates that they have faith in it. Let us admit them, and benefit from their counsel and advice. Technological advances in the last 15 years have rendered many of our old ideas and thoughts obsolete. The world stands desperately in need of new ideas, new approaches and new ways of looking at things. No nation or group of nations can claim a monopoly of wisdom. Therefore let us open wide our doors to those who wish to enter, so that they may help to work out their own salvation—and ours. And while we are about this, let us also make sure that those who represent member states in our organization actually are qualified to speak for the people whom they purport to represent.

Following his visit to the United Nations, Prime Minister U Nu was guest of honor at a reception given by the Overseas Press Club in New York. Following are extracts from his address on the occasion:

As is only to be expected, Asians hold all sort of views about Americans. These range all the way from those who think the Americans are heroes, brave men and women whose mission is to make a happier world for all, to those who see Americans as a race of warmongers, spoiling for a fight, and ready to doom the world to an atomic holocaust.

Those who think of the Americans as heroes do so because of your history, your experience, your traditions and your devotion to the principles of freedom and democracy. America was the source of those ideas and moral principles of government that have been the inspiration and hope of Asia for more than half a century. Among them are the following:

1. All men are created equal and must be equal before the law.

2. All men are endowed with certain inalienable rights which it is wrong and immoral of any government to deny or curtail.

3. A right and moral government is a government of the people, by the people, for the people, devoted to the greatest good of the greatest number.

4. A right and moral government is a government of laws, not of men, which derives its just powers from the consent of the governed.

These are tremendous ideas. They are more explosive, more powerful in their effects upon world history than all the weapons in all the arsenals. As is only to be expected, they had a tremendous impact on an Asia in which there was no recognition of the equality of men; where there was little recognition of the fundamental rights of man; where governments were imposed from above, and had as their primary objective the exploitation of the people. In fact, I think it is true to say that these ideas played a leading part in inspiring Asia's fight for freedom from colonial bondage.

Nor is this the only reason why Asians think well of Americans. Your glorious record in the two world wars in which you undoubtedly saved the world from tyranny, at great sacrifice and expense, cannot be ignored or belittled even by your most severe critics; and finally your post-World War II record, in which you have given so much of your substance to help the war-devastated countries to recover and to rebuild their shattered economies is entirely without precedent in the annals of history.

With such an impressive record behind you, it is not a matter for surprise that you should have so many admirers in Asia. Indeed the surprising thing is that there should be anyone in Asia who is dubious about America and Americans. But unfortunately there are such people, and I would like now to go into the reasons for their attitude.

One very important reason for this attitude is the equivocal position which you seem to have taken in recent years on colonial issues. To an Asia which had come to regard America as the symbol of freedom, the spearhead of the attack against colonialism, and the champion of the underdog, this has indeed been not only a disappointment, but even a great shock. Some Asians have begun to wonder whether you had abandoned your heritage and your tradition. Explanations which have been given, to the effect that colonialism is dying, and that a new and even greater danger has emerged, have left nearly all of Asia unconvinced. For we had come to believe, partly as a result of your own teaching, that two wrongs do not constitute a right. For it is not sufficient with us that we have gained independence for ourselves.

On the evening of July 6, Prime Minister U Nu was guest of honor at a dinner given by the Far East American Council of Commerce and Industry at the Waldorf-Astoria in New York. Following are extracts from his address on the occasion:

We are determined to move ahead economically, both within our own borders and in relation to all countries, both near to us and far from us * * *. I have confirmed my conviction as to the need for close and continuing economic relations between my country and friendly nations. I have also become more and more convinced that the people of Burma, using their talents and resources intelligently, can share in the greater material well-being which modern technology affords.

Ours is an ancient culture. Our people have deep spiritual beliefs. The close ties of family life, the deep devotion to religious objectives, the warmth of personal relationships and the dedication of our people to the concept of freedom are permanent values to which we are firmly devoted.

* * * * *

Apart from this, we suffered enormous damage in World War II, with the result that our gross national production—in a country that is primarily agricultural—was reduced by 50 percent. A far greater percentage of our productive capacity was destroyed in the war than the percentage of your capacity that was temporarily idle during the great depression.

The restoration of peace in the world brought only temporary recovery and partial stability to Burma. We were determined to have our independence and the period from the end of World War II until we achieved our free status in January 1948, was one of tension and uncertainty. Then, with independence came further destruction through the misguided efforts and activities of Communist and non-Communist insurrectionists. Once again production fell to approximately half of the prewar level. The Government was faced with grave military and political, as well as economic, problems. There were many who despaired of the hope for stability, for any economic improvement and for the democratic process itself.

In the face of these facts, we believe that the progress made in the past 4 or 5 years not only justifies a sense of pride on our part but also a high degree of confidence in our future.

* * * * *

We call the New Burma to which we aspire Pyidawtha, which means happy land. Our plans for achieving a happy land are comprehensive and ambitious but, I believe practical. They include carefully-worked-out programs of development in agriculture, mining, manufacturing, transportation, public utilities, housing, education, health, welfare, and other social services and the training of technicians and administrators.

* * * * *

We seek to raise the quantity and quality and variety of our agricultural output through more irrigation, better seed, improved husbandry, more efficient land use, and an increase in the acreage under cultivation. In the field of mining we have the double job of restoring petroleum and mineral facilities that were wrecked in the war and opening up deposits of coal and a variety of other minerals. In transport we have a program for the restoration and extension of river, road, sea, and air transport, including the construction of secondary and farm-to-market roads.

In the industrial field we have an extensive but sound program. I should like to stress that we are not going overboard for industrialization. We have a primary agricultural economy and it will remain predominantly agricultural for some time to come. And we are not building uneconomic industrial facilities whose products would have to be protected by high import duties, because we believe in a liberal foreign trade policy. In fact, we seek to actively explore ways of stabilizing markets and expanding our trade with all countries, including the United States.

These are the major segments of the economic program. But hand in hand with these economic projects must go an equally intensive effort to add to our social capital. Quite apart from the direct social benefits involved, we all know that only a healthy and educated population can perform productive and creative work. So we have programs for new housing construction, for a great expansion of our schools and hospitals and clinics and nurseries and related social services. The need to build rapidly both productive and social capital involves competition for limited resources and requires difficult decisions in the allocation of these resources. We are striving for a balanced economic and social development. And on top of that we must also carry out simultaneously an extensive program to train professional people, technicians, and administrators, including civil servants.

We started seriously to work on the blueprint of our new Burma about 4 years ago. Three years ago we began taking the first steps in the comprehensive economic and social development program. Let me indicate to you very briefly and generally how we are getting along.

Our production of rice, which is our principal product, is 50 percent above the postwar level, though our exports are still only half of what they were before the war.

We are making good headway in the restoration of petroleum facilities and somewhat slower progress in restoring output of teakwood and tin, zinc, lead, and other minerals. We are producing increasing quantities of cement, cotton yarn, sugar, building materials and other basic commodities. A modern factory for the production of tile and brick is nearing completion, the first pharmaceutical factory is under construction, and we have facilities planned or under construction for producing tea blend, silk, sugar, condensed milk, pottery, steel and jute products.

Our first hydroelectric project is underway, and when the first phase is completed in 1957, it will furnish abundant cheap power to most of our towns. In the meantime we have a diesel electrification project in progress.

In the transport field we have made much progress in restoring and improving road, rail, port and river facilities.

Schools, hospitals, public buildings, welfare centers and so forth are going up in many parts of Burma. We already have 10 times the number of schools that we had before the war.

I should also mention that we are making good progress in establishing the institutional and administrative mechanisms of a modern economy—a state agricultural bank, a state commercial bank, development boards and corporations, and agricultural and industrial research facilities. It may interest you to know that we are experimenting rapidly and successfully with the delegation of administrative authority to our villages so that many more people will experience the democratic responsibilities of managing their own affairs and so strengthen the democratic foundation of our society.

But to sum up our progress to date in our economic development program, the rate of capital formation has risen to 20 percent of total production; total production this year is running perhaps 10 percent ahead of last year; construction activity is at a very high level, and we are now more than one-third of the way toward the 1960 total production goal.

This isn't to say that we have not had our problems, nor that we shall not have even greater problems in the future. The sudden conversion of the rice market from a seller's market to a buyer's market has kept our rice exports below expectations. This, in return, has meant less earnings of foreign exchange than we had anticipated. Heavy investment in new facilities always runs the risk of inflation. We have had to control our imports. It has been necessary to take varied measures to avoid an inflationary development.

Our political bondage was accompanied by economic bondage. The marvelous technological progress of the past century simply passed us by. Now we have suddenly projected ourselves into the 20th century, politically speaking. We have adopted, with great enthusiasm and great faith, the principles, the methods, and the apparatus of modern political democracy. And in so doing we have borrowed heavily from your country and experience. But if this democratic society is to remain secure and strengthen and deepen its roots, then we must make haste to catch up with the 20th century economically and technologically.

Today is the 44th anniversary of the independence of Yemen. I would like to congratulate the people of the Kingdom of Yemen, His Majesty, the Imam, and Assayed Ahmad Ali Zabarah, First Sectary, Chargé d'Affaires ad interim, on the occasion of the celebration of Independence Day, January 19.

In the words of Mr. Adnan Tarcici, member of the Yemen delegation at the United Nations taken from the publication, Yemen: "Yemen may be considered the first among the countries in the League of Arab States to have acquired its full independence". Yet its name has seldom appeared on the international scene. Its sovereign, His Majesty Imam Yahia, adhered to a policy of almost total isolation.

During the period between the two World Wars, a policy of colonial subjagation being at the basis of the interests of certain powers, His Majesty was well aware that any collaboration might have consequences detrimental to the sacred sovereignty of the country and that, by collaborating, he might not be able to prevent such an impending danger. The example of other countries, and especially the experience of neighboring Abyssinia with the Italy of Mussolini, gave food for thought.

Hence the policy of "no suspicious infiltrations and no contacts which might lead to disputes wherein the interests of the weaker power might be jeopardized." Preventive treatment seemed to be the safest course. It is evident that this policy of prudence hampered a desirable evolution of the country, but oriental wisdom does not favor haste; it prefers reflection.

Fortunately, the spirit prevailing throughout the world since the termination of World War II has fostered international cooperation and favored the independence of peaceful nations. The League of Arab States has seen the light of day and its ranks have been reinforced by the addition of three new Arab countries that have attained the authority of sovereign states.

It was then that Yemen emerged from its isolation in order to cooperate first of all with its brothers and neighbors, the Arab States. This first step was an encouragement to take others, because there was the feeling that a change had really taken place in the world which was conducive to international collaboration. Furthermore, desirous of accelerating its evolution through a dignified and prudent cooperation, based on friendliness to all without special privileges to any, Yemen asked to be admitted to the United Nations and its application was unanimously approved by the Security Council and the General Assembly.

And so the colors of His Majesty Imam Yahia, King of Yemen, have been flying over Lake Success since September 30, 1947, and the policy of prudence and peace have spared Yemen the hostility of some and have earned for this country the friendliness of all.

ATOMIC WASTE: FINANCIAL AND OTHERWISE

The SPEAKER. Under previous order of the House, the gentleman from West Virginia [Mr. BAILEY] is recognized for 30 minutes.

Mr. BAILEY. Mr. Speaker, under special permission to extend my remarks, I am inserting in the RECORD an article entitled "The Basic Danger in the A-Power Program," which was written for Public Utilities Fortnightly Magazine by the distinguished gentleman from Pennsylvania [Mr. SAYLOR]. In that it points up some questionable spending of the taxpayers' money by a Government agency, I feel that the article merits the attention of every Member of the House and Senate.

Congressman SAYLOR has stated, in effect, that the Atomic Energy Commission's rapacious penchant for developing atom-powered electric plants has led to extravagant expenditures for which justification is sought through the use of distorted figures on coal reserves.

Mr. Speaker, at the outset of these remarks let me make it clear that the prospects of using the atom to make electricity and for other peacetime chores is a welcome thought. We are cheered at the United States Navy's success in using the atom as a fuel for powering submarines. We look with relish to the improvement of agricultural crop yields through the application of radiation from radioisotopes. We hope that someday a jigger of uranium will be all that is needed to move our automobiles for hundreds of thousands of miles. And we will be grateful if research and science ultimately enable us to light and heat our homes through fissionable materials at as small a cost as we have been led to believe will be possible. But I protest the idea that an endless stream of funds from the Federal Treasury should be channeled through the Atomic Energy Commission to conduct a myriad of experiments in an effort to make these dreams come true.

As representative of the Nation's largest coal-producing State, I particularly resent the AEC's implication that atomic powerplants must be constructed at all costs because there will not be an adequate supply of conventional fuels to meet demand. We recognize that electric-generating capacity is steadily being increased; it is estimated that in another 20 years 350 million tons of coal per year will be required by the electric utilities alone. A current advertisement published by the First National City Bank of New York predicts that the figure may reach 500 million tons by 1975. Well, West Virginia can guarantee to provide its share of that load, plus its other commitments for both industrial and domestic use, for at least another two centuries.

Yes, annual coal production can be doubled over present output and there will still be enough mineable reserves to last for at least 200 years. If that sounds like such a short time as to be cause for alarm, let me remind you that two centuries would take you back 20 years before this great Republic was born. In 1756 Benjamin Franklin, whose memory we honor this week, still had more than three decades of his life to go. Young Charles Cornwallis, who later surrendered at Yorktown to end the fighting in the Revolutionary War, was commissioned an ensign in the British Army. Maria Antoinette and Louis XVI were still babes-in-arms and Napoleon Boneparte was not yet born. There was no talk of atomic piles at that time; in fact Alessandro Volta was still too young to have developed Volta's pile, which was to become the first real battery capable of delivering a steady current of electricity.

So you see a lot can happen in 200 years; in fact, there is a good chance that the atom as a source of power for electric power will become obsolete even before those supplies of coal in West Virginia are exhausted. For the record, let me also point out that there will be a lot more coal in America's reserve stockpile even after West Virginia's share is gone. In addition to the 50 billion tons in my home State, there are at least 1 trillion, 162 billion tons of coal elsewhere in the United States. Members of Congress should keep these figures in mind when they are told that the Atomic Energy Commission must be given more millions of dollars to hurry up the job of developing reactors that will compete with coal and other conventional fuels.

Another factor which cannot be overlooked in the program for peacetime application of nuclear power is the risk element. Thus far the insurance companies have found it impractical to underwrite the hazards, and the Federal Government apparently will soon be asked to accept this responsibility as a necessary expense.

I contend that if the operation of a nuclear powerplant, as well as the disposal of radioactive wastes resulting therefrom, constitutes such a tremendous hazard to the welfare of the people, then Members of Congress had better stop and decide whether the Government should be willing to stimulate the growth of the hazard by accepting such a responsibility. Congress is first obliged to demand concrete information that will enable us to determine whether the need for setting up atomic powerplants at this time is worth taking such chances, and whether the tremendous outlays for nuclear power and the perils to which our people may be exposed will be compensated for by savings in the cost of power.

Before such questions can be answered, we need additional information which has not yet been made public. The dangers that would come with the disposition of radioactive wastes, and attendant hazards that go with the operation of a nuclear powerplant, appear to be of such tremendous magnitude that the Members of Congress cannot blindly stimulate further the creation of such jeopardy without breaching the trust imposed by the American people.

Not long ago a scientist warned that the disposal of atomic waste might inflict serious damage on the minds and the bodies of future generations. Another scientist, a sanitary engineer for the Atomic Energy Commission, recently made a speech in which he admitted that, as the atomic power industry grows, the problems of sufficiently diluting atomic wastes to make the air and water safe for human beings could be fabulous. He said that if one-third of the electric power which this country expects to produce in 1980 were to be supplied through atomic energy, the amount of water required to dilute the poisonous byproducts to safe levels would be equivalent to the flow of 12,600 Mississippi Rivers.

I cannot vouch for the authenticity of these statements, but I do know that the man who tried to tell the world about the serious effects of atomic radiation was quickly hushed up by the people who want to rush the reactor program through without first taking heed of the consequences.

Mr. Speaker, these are some of the conditions which must be studied carefully when the request for the Atomic Energy Commission budget is taken into consideraiton. In view of the fact that United States coal reserves will last us hundreds of years longer than AEC spokesmen have been saying, I question the soundness of placing almost $2 billion at the disposal of the crowd which is so quick to dispose of coal's potentialities. For the further elucidation of Congress I believe that the AEC could be most helpful if it would make available complete data on how much of its total expenditures are actually being spent on the electric power phase of the program. These statistics would include information on how many persons were sent to the atoms-for-peace session at Geneva at taxpayers' expense and how many others are traveling all over this country and the rest of the globe working on a project that no one is sure will be practical.

You can be sure, Mr. Speaker, that I do not for 1 minute object to the appropriation of funds for the continuance of the defense aspects of the nuclear program. We will give our scientists and engineers what they need to develop the necessary weapons to protect our shores and our homes, but I think that the time has arrived when we should check closely to find out just how much of the rest of the work is necessary and feasible, and how much of it is the dream of that coterie of spenders who insist upon discounting the coal industry and its potential. West Virginians who have been put out of work by maneuverings of free-trade theorists and other stargazers want to know how much of the money which we pay in taxes is being used to develop another means of encroaching upon our markets.

I commend Congressman SAYLOR'S article to your reading.

(The article referred to is as follows:)

[From Public Utilities Fortnightly of January 19, 1956]

THE BASIC DANGER IN THE "A" POWER PROGRAM

(By the Honorable JOHN P. SAYLOR, United States Representative from Pennsylvania)

(This author warns against expecting too much and too soon in the way of atomic power. It could be just as disastrous as too little and too late—if the American taxpayer has to pay the bill for a pig in a poke.)

For an industry traditionally disdainful of Government supports and subsidies, the electric utilities today appear to be treading

on dangerous right of way. The perilous path originates at the disbursing office of the Atomic Energy Commission and moves along the course carefully designed by advocates of public power.

Of a certainty, the Atomic Energy Commission—in its headlong drive to set up the atom as a producer of electricity—has made it difficult for private companies to refuse its generous subventions; perhaps, however, the time has come for beneficiaries in the utility field to make it distinctly clear that further grants—whether in the form of finished reactors, guaranties, or writeoffs—are unwanted, unwelcome, and unacceptable.

The desirability of encouraging research and development leading to the production of electricity at reasonable costs through the medium of fissionable materials is not in question. There is definitely a place for the atom as an added fuel, particularly in areas where conventional fuels are not readily available. Development of economically feasible nuclear power is necessary to provide electrical energy for underdeveloped areas of the world, to assist nations which have power shortages, and to protect the future of the United States in the power field. The atom should be put to work in whatever peacetime roles it is capable of assuming in our competitive economy, but not at the risk of enabling the Federal Government to encroach further into the realm of private business.

House-to-house salesmen often use gifts as a guise for getting a foot in the door. The Government also employs this technique most effectively. It entered the electric-power business on a broad scale through a backdoor entrance by using agricultural development in the Tennessee Valley as a part of the opening wedge. By the same token, bureaucracy's continued investments in the power-by-atom program might give the Government a foothold on private property that would ultimately bring a demand for full title. Meanwhile the A program may be placing all supporters of the free-enterprise system in an embarrassing position, for the so-called participating projects are creating a made-to-order and more-than-valid issue for public-power protagonists.

The recent history of AEC's participation in the development of atomic energy for commercial purposes would imply that (1) the Federal Treasury has such an abundance of funds as to preclude the necessity for careful and economic expenditures, and (2) the welfare of the Nation depends upon the ability of the Government and/or the utilities to generate power through the use of fissionable material.

The fallacy of the first premise is evident to everyone save possibly those Government officials behind the go-for-broke program. Assumption No. 2 has been given such widespread publication that the principal arguments of the program's promoters need to be exposed if the AEC spending spree is to be effectively restrained.

The obvious strategy of the program has been to attempt to convince the general public that diminishing resources of conventional fuels make it necessary for the rapid development of electric-generating plants powered by the atom. Voluminous statistical reports have been prepared in whatever way is deemed necessary to strengthen this impression. Few have any basis in fact, and all such allegations can automatically be refuted by a reference to authentic tables on coal reserves.

Oil and natural-gas reserves, are undeniably being depleted at an increasing rate and eventually will be exhausted. Natural gas is admittedly a short-term fuel. The necessity for conserving it has prompted the Federal Power Commission, on occasion, to refuse applications for the use of natural gas under industrial boilers in areas where coal is available.

The end of our oil reserves, on the other hand, is not in sight at the present time, although it is highly possible that the country will begin to feel a pinch before the end of the century. When this scarcity develops, America's fuel industries will be prepared for it. Atomic energy cannot replace the higher uses of petroleum, but synthetic fuel plants can provide both gas and oil when they are no longer available in Nature's storehouse. The raw material to be used in the production of synthetic fuels will be oil shale or coal—both of which occur in generous quantities within America's soil.

All indications point to coal's carrying a progressively increasing portion of the energy load in the years ahead. The continued upturn in the use of electrical and mechanical energy will spiral demand for coal from the present 400 million to 500 million tons per annum to the billion-ton mark before the year 2000. Even at this rate of production, however, there is enough coal within the borders of the United States to last for more than a thousand years.

Specifically, recoverable coal reserves are in excess of 1.2 trillion tons. Pennsylvania, which has produced about one-third of all the coal used in this country since 1850, still contains some 30 billion tons of mineable deposits. These estimates are based on studies of the United States Geological Survey, an agency which apparently has not been consulted by the AEC officials who have set out to portray coal as a short-life fuel.

The other misconception being publicized in the all-out campaign to continue using taxpayers' money in attempts to expedite creation of an atom-powered electric utility industry is being developed around the cost factor. In the past year there have been numerous news stories based on promises by AEC spokesmen that the atom will eventually generate cheap electric power. Presumably, this objective will be reached if a kilowatt-hour of electricity can be produced in a range somewhere between 4 and 7 mills.

To the average reader, that statement may sound most attractive. The fact is, however, that conventional fuels have long been producing electricity at a cost of less than 4 mills per kilowatt-hour. Modern steam plants within close proximity of coal mines are producing 3-mill electricity at the present time. Even in remote areas, where freight rates boost the delivered cost of coal to twice the cost at the mine, electricity is generated for less than 7 mills per kilowatt-hour.

The Government's failure to disseminate actual cost information in regard to the peacetime nuclear program makes it almost impossible to determine how many billions of dollars will have to be turned over to the AEC before the atom will produce electric power at a reasonable cost. When construction began on the atomic power plant at Shippingport, Pa., in September 1954, the AEC—which is building the reactor—was extremely vague about the cost factor. Finally, 15 months and a great many millions of dollars later, a Commission spokesman was cornered at a press conference and admitted that electricity from the Shippingport plant is expected to cost 52 mills per kilowatt-hour—at least 10 times the cost of electric power generated with conventional fuels.

The AEC's propensity for keeping expenses in the darkroom while the artist's conception of nuclear power plants is projected to the public in glowing terms could eventually strike a damaging blow at the private utility industry. Sooner or later the public power sodality will reveal figures disclosing the total amount invested by the AEC in developing atomic electricity, then ask this question:

"Since the Federal Government has contributed such an enormous sum toward making nuclear power stations possible, is there any reason why the taxpayer should permit public utilities to profit from this undertaking?"

To obviate such a possibility, the general public should demand dissemination of actual cost information except where publication would be inimical to the national security.

The assumption that nuclear power from presently contemplated reactors may eventually become competitive with electricity from conventional plants disregards the progress in coal utilization. In other words, the nuclear power planners are assuming that atomic-generated electricity will challenge coal pricewise if capital and operating costs of nuclear reactors are reduced as hoped for and—meanwhile—coal technology stands still.

In 1920 it required an average of 3 pounds of coal to produce 1 kilowatt-hour of electricity. By 1930 the figure was down to 1.60; in 1940 it was 1.34 and in 1950 it was 1.19. Early in 1955 the average dropped below 1 pound of coal per kilowatt-hour. Some of the modern plants are far below that average. These figures, unlike those pertaining to power costs in atomic electric plants, are not hypothetical. They are based on established records and are in the files of the Federal Power Commission.

In spite of continuing progress, the present utilization efficiency of coal in the steam plant is only about 33 percent. Obviously, there is still a great deal of room for progress. It is not inconceivable, if research underway bears fruit, that when and if nuclear power reaches the point where it can be producing 7-mill electricity, the efficiency of coal utilization will have doubled over its present rate. Philip Sporn, president of the American Gas & Electric Co., explains it this way:

"It needs to be kept in mind, too, in judging whether and to what extent nuclear plants will be built in the future in place of new conventional plants, that the nuclear development will always be competing with a constantly improved—that is to say, more efficient—conventional alternative."

Another factor which the backers of this new application of atomic power find convenient to withhold from publication is the relative cost of fuels in the overall operating budget of a public utility system. It is therefore not generally realized that only 16 percent of the total cost involved in generating power and bringing it to the consumers is chargeable to fuels. Thus, even if it were possible to find a way to generate electricity through a self-perpetuating fuel that could be obtained absolutely free, it would still be impossible to reduce a $6 electric bill by more than $1.

Under the circumstances, it would appear that United States consumers are already receiving inexpensive electricity and that, since the promised cheap power from the atom is still confined to the province of theory, there is no justification for the vast expenditures being made under the auspices of the AEC research on the commercial application of nuclear materials.

There is no denying that—if the Government is going to subsidize construction of reactors and other necessary facilities, if the Government is going to undertake to insure property and personnel against damage that could be inflicted in the event of an accident in an atomic plant, if the Government is going to underwrite commercial operations against losses incurred in developmental programs, if the Government is going to supply atomic fuel at less than the full cost thereof, if the Government is going to subsidize atomic fuel processing and disposal of atomic waste—then there is a basis for the assertion that the atom may soon become a principal source of electric power. In all likelihood, electricity at TVA rates can be made available to consumers in vari-

ous areas of the country if the Federal Government is willing to pour sufficient funds into the atomic energy program.

Public power groups want to make Federal funds available to whatever extent is necessary to produce their brand of cheap electricity. They are urging more AEC help to private firms for the construction of atom power reactors. They want research and development aid on more liberal terms, and they want the AEC to bear the cost of fuel elements for small reactors. And while the Nation's private insurance industry is attempting to determine the most feasible methods of providing indemnity to cover damages that would result from an accident in an atomic electric plant, the public power enthusiasts would have the Government assume the insurance burden regardless of costs involved. What we who oppose unnecessary expansion of the public-power program must realize is that each such subsidy provides bureaucratic forces with a further opportunity to claim a vested interest in the electric power industry; to believe otherwise is to underestimate the intent of public-power supporters.

Those who would socialize the whole power industry find the atom's potential in the generation of electricity a very convenient stepping-stone, particularly since the Government fostered basic research and has exercised strict control over succeeding developments. The new atomic energy law, enacted in 1954, tended to lessen the Government's monopolistic grasp on the atom, but it retained Federal control over private development in the nuclear fission field. The revised law has been described thusly by Dr. Robert E. Wilson, chairman of the board of Standard Oil Co. (Indiana), himself a renowned engineer:

"If anyone claims that the new Atomic Energy Act turns over to private industry a bonanza in the form of already solved technical and economic problems and an assured profit, either he does not know the facts or he is an arrant demagog. Any private investment in commercial atomic power generation in the near future will have to be inspired more by public service motives than by any reasonable expectation of substantial profit."

Atomic energy is novel, and its advertised possibilities in industrial application have wide public appeal. It arouses the curiosity, heightens the imagination. It is another source of heat with a new and special technology, yet on close examination we discover that it has no immediate advantages which should impel us to expedite its advent into the power field by investing billions of hard-to-get tax dollars.

Practical businessmen and industrialists will welcome the opportunity to put this new source of power to work. Yet they foresee no immediate need for it. The electric-utility industry is proceeding with an unprecedented expansion program in steam-electric stations. Some of the companies, while not discounting the theory that in a decade or so hence it may be profitable to invest in full-scale atomic-energy plants in certain areas of the country, are erecting steam-generating stations in coal-producing regions at greater distances from consuming communities than has heretofore been considered economically feasible. At the present time 340,000 volts are transmitted by generating stations; utility experts believe that eventually it will be possible to operate 500,000-volt wires, thereby decreasing line losses and permitting transmission over greater distances. Under such circumstances, more and more generating stations would be located at the mine mouth, thus reducing costs and further discouraging the entry of competitive sources of power, except in remote sections of the country.

Left to their own resources and ingenuity, the electric utilities will develop atom plants soon enough. Meanwhile the industry will supply all the power that is required without any help from the Federal Government. This point was stipulated very succinctly in one sentence of Adm. Ben Moreell's analysis of the Hoover Commission Task Force Report on Water Resources and Power: "Technically and financially there is no present of prospective need for Federal power activities."

Federal encroachment in the power-making business has already gone entirely too far. Neither the general public nor the electric-utility companies can afford to permit the Government to proceed with some of its elaborate plans for participation in the atomic-energy projects that belong in the private-industry classification. By allowing the Government to come into the tent so long as it has the price of admission, electric utilities might learn too late that they have made it possible for the bureaucrats to take over the center ring.

WHY NATURAL GAS SHOULD NOT BE EXEMPTED

The SPEAKER. Under previous order of the House, the gentleman from Massachusetts [Mr. HESELTON] is recognized for 10 minutes.

Mr. HESELTON. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include an editorial, certain excerpts from articles, and statistical information.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. HESELTON. Mr. Speaker, I had intended to submit further factual information this afternoon with reference to the proposal to exempt natural gas from Federal regulations because some of it has now become available. I shall not do so at this time because of the editorial which appeared in this morning's edition of the New York Times.

That editorial is such a concise and powerful argument against this proposal that I want to take this means of making it widely available to all who are interested in the matter and who may wish to make use of it.

The editorial is as follows:

THE NATURAL GAS BILL

The debate now proceeding in the Senate on the Fulbright-Harris bill to exempt independent producers of natural gas from Federal regulation as public utilities may sound technical, but it is of direct practical concern to every person who owns or uses an ordinary household gas appliance—and there are an estimated 25 million American families who do. Furthermore, the principles of regulation involved in this dispute affect all citizens. So it is safe to say that the gas issue is not only the first but one of the more important public questions to be decided in the present session of Congress.

This newspaper believes that the Fulbright-Harris bill ought to be defeated. The measure passed the House last year by only a six-vote margin, but it passed. The bill would have the effect of overturning a Supreme Court decision that the prices charged by independent producers of natural gas are subject to regulation by the Federal Power Commission.

While we prefer to see as little governmental price-fixing as possible, there are certain circumstances under which it is essential to protect the interests of the consumer. The distributors' price of natural gas is now regulated by State public utility commissions; the transporters' price of natural gas (through the pipelines that are extending themselves into almost every part of the country) is now regulated by the Federal Power Commission. The producing fields are so closely tied to the pipelines that carry the gas and therefore to the ultimate household and industrial consumer that the very purpose of regulation to protect the latter would be defeated by failure to regulate prices at the source. Your gas stove is in a very real sense connected with a gas well located many hundreds of miles away, and the price at each stage of the process from well to stove obviously has a direct effect on the price at every other stage.

The producers emphatically reject the contention that utility-type regulation is necessary at their end, maintaining that there is great competition among them and therefore the prices in effect regulate themselves. But we have doubts that theirs is a genuinely competitive situation, especially in view of the complicated and elaborate escalation clauses in many contracts under which one producer may profit from another's increase in prices. Furthermore, as Senator PAUL DOUGLAS of Illinois has pointed out in his monumental attack on the Fulbright-Harris bill, the dominant figures in the production of natural gas for interstate commerce are a handful of major oil companies; and it is unrealistic to talk about thousands of small producers as though they had any real effect on the market price.

The Fulbright-Harris bill does not abolish all Federal supervision over proposed rate increases; but the standard of reasonable market price it does establish for the Federal Power Commission is, in the words of a minority House report, a disguised back-door surrender of regulatory control to the producers themselves. Even though it is true that costs of production form only a small fraction of what the consumer ultimately pays on his gas bill, a rise of only a few pennies in the price of gas at the well-head could mean increased costs of hundreds of millions of dollars to consumers in the aggregate, and a corresponding profit of hundreds of millions to the producers. The oil and gas producing industry is not exactly in a state of depression, and it already has its own special tax gift in the form of a 27½-percent depletion allowance. We see no sound reason why the regulatory arm should not be extended right down the continuous and indivisible line from distributor all the way back to producer. Other extractive industries stand in a totally different relation to the consumer, who can go to any one of hundreds of suppliers if he chooses. But he can't do that once he is tied to a gas line.

The leaders in the fight for this bill are prominent Democrats from the central Southwest, notably the oil and gas producing States of Texas, Arkansas, and Oklahoma. While the measure affects natural resources primarily in private rather than public hands, nevertheless when Democratic politicians in the next few months raise the cry of giveaway against the present administration, as they are sure to do, the words coming from them will to many independent ears have a rather hollow ring if the Fulbright-Harris Act should pass.

UKRAINIAN NATIONAL INDEPENDENCE IN THE WORLD OF TODAY

Mr. FEIGHAN. Mr. Speaker, today marks the 38th anniversary of modern-day Ukrainian national independence. We fittingly opened today's session of Congress with the invocation in the House by the Very Reverend Nicholas Babak, M. A., vice president of St. Basil's

College, Stamford, Conn., and the Senate by another distinguished member of the clergy of Ukrainian descent. On an important historic occasion such as this, it is the time-honored custom that Members of Congress who are acquainted with the heroic struggle of the Ukrainian people for their national independence, to pay tribute to that spirit and offer hope that Ukraine will once again be free and independent.

In somewhat recent years, we Americans have come to learn a great deal about the Ukrainian nation and the place it has played in world affairs. During World War II most of us were aware that the Nazis were anxious to take over and occupy Ukraine because it is the bread basket of Europe, but equally important is the fact that it is unbelievably rich in natural resources and geographically occupies a key position from the military point of view. During the course of World War II we learned of the struggle of the Ukrainians to regain their national independence by first fighting against the Russian occupier and then later having to fight against the tyranny of their Nazi occupier. Following World War II the cause of Ukraine has maintained an important place in the developing world affairs because of the demonstrated resistance of her people to the continued occupation by the Russian Communists.

Ukraine, indeed, presents one of the most tragic cases in all of history of the struggle of a people for their national sovereignty, acquiring it at great sacrifice, losing it only against overwhelming odds, together with the failure of the advocates of democracy to support her and the continuing sacrifice of the Ukrainian people in their struggle forward toward the goal of national independence. Ukraine is the largest non-Russian nation, next to Germany, on the European continent. The best estimates of the number of Ukrainian people still living in their traditional homeland range between 36 and 40 million people. The importance of this submerged nation to the eventual triumph of the cause of individual liberty and human freedom might be measured by the fact that the Russian Communists know that all of Ukraine awaits the day when it can turn upon its Russian occupier and drive him from their beloved lands. The Russian Communists also know that hundreds of years of tyranny and oppression, first by Czars and now by the Communists, has not destroyed the Ukrainian nation nor has it weakened the determination of its people to be free and independent. This is also a fitting occasion to recall to memory the fact that the occupied nations of Estonia, Latvia, Lithuania, Byelorussia, Poland, East Germany, Czechia, Slovakia, Hungary, Rumania, Bulgaria, Albania, Georgia, Armenia, Azerbaijan, Turkestan, North Caucasia, Idel-Ural, Inner and Outer Mongolia, Manchuria, China, North Korea, North Vietnam, Tibet, each share with Ukraine the desire to throw off the yoke of Russian communism. The freedom loving people of all those nations likewise await the day when they will have the opportunity to drive the Russian occupier from their homelands.

These then, the non-Russian nations held in colonial bondage of the Russian Communist Empire, are the best allies we have in our campaign crusade for a just and lasting peace. These allies have been tested, they have rejected neutralism because they know what it means to live under the whip of the Communists. They will not be found wanting when their day of deliverance arrives.

It is a source of great encouragement to see so many nations of the world who were submerged by colonialism and imperialism gaining their national independence and position of equal dignity among the nations of the world. These same young nations, young only in terms of their national independence and many of them with cultures thousands of years old, are threatened by a new colonialism which boldly states its goal to be world domain. I refer to Russian communist colonialism, the only colonial power left in the world whose imperial star is still rising. One who knows the fate of Ukraine, which enjoyed its modern-day independence from November 1917 to November 1920 cannot help but wonder whether these newly independent nations may suffer a similar fate at the hands of the Russian Communists. Of one thing we can be certain, the schemers of the Kremlin will use every device and method at their command to enslave these newly independent nations. This should also cause us to pause in our review of world affairs to make certain that we are doing everything possible to support the cause of these newly independent nations and to bring to their attention the true facts about Russian communism.

The fight against colonialism and imperialism in the world continues on, hardly a day passes but that we hear about violence and death in Africa and in parts of the Near East, but it is sad that we seldom hear about the Russian Communist colonial empire and the struggle of the nations it enslaves to regain their national independence, yet there are more nations enslaved by the Russians today than were ever held in bondage by any other imperial power in history. The time has arrived for the United States to take the lead in an all-out political campaign to eradicate colonialism in all its forms from the face of the earth. I believe this Congress has laid the groundwork for such a campaign through House concurrent resolution 149, introduced by our distinguished majority leader, Mr. McCormack, which has become known as the anticolonialism resolution. It is significant that this Congress, during the last session, passed this resolution unanimously and in a climate of vigorous support seldom seen in any parliamentary body of the world. I sincerely hope that the administration will take up this cause and carry it forward to every nook and cranny of the world. There can be no doubt but that Congress intended that this be done and that Congress will, without reservation, support our Government in such a campaign.

There are, however, some strange developments taking place in some quarters here in Washington on the subject of national independence movements and the part revolution plays against oppression in our modern world. Since both the national independence movements and revolution against tyranny have always played the counterrole to colonialism and imperialism, it is proper that a word be said about the strange developments now taking place in Washington. In some quarters it is argued that the United States should only recognize and give support to those submerged nations which have in the past demonstrated a capacity to gain and maintain their national independence. It is argued that unless a nation, including those now enslaved by the Russian colonizers, has demonstrated a capacity to hold its national independence against great odds, they are not worthy of recognition by the United States and that our best interests are served by coldly disregarding the struggle of people of those nations for national independence. Upon careful examination, it is obvious that those who advocate this strange notion are also advocating that the United States divest itself of all its allies, both those still free as well as those enslaved by the Russian Communists. I say this because it is obvious that any nation which has the capacity to maintain its national independence will not need the United States as an ally. This same strange notion also advocates that the smaller and therefore the weaker nations be put at the mercy of the aggressive imperial power of Russia and that the world would be better off if it were divided into 2 or 3 huge power blocs rather than a peaceful community of nations. If such notions are allowed to infiltrate the policy of this Government, it will not be long before the United States is standing alone in a world otherwise occupied by the Russian Communists.

There is also a good deal of talk in the rarified atmosphere frequented by the new crop of strange planners who have invaded Washington in recent years on the subject of evolution versus revolution. As every American schoolboy knows, revolution has always been the answer of an oppressed and exploited people to the tyrants down through the ages. Every American knows that our country was born in the crucible of revolution—revolt against tyranny and exploitation and a studied disregard for the inherent rights of man. Revolution has always been a healthy byproduct of empires and colonial powers, but somehow during the last few years, revolution has been regarded by the new crop of strategic planners as both undesirable and unnecessary in any circumstances, including the reign of despotism without equal in history which is now taking place within the Russian Communist Empire. These same strategists argue that evolution is the answer to the prayers of the oppressed and the tyrannized. Evolution, they say, is the solution to all of mankind's problems. Evolution, they say, will bring out the best in the Russian Communists and will eliminate all

the evils which they claim are the by-products of western democracy, and that out of these two conditions will emerge a new and perfect system. These newcomers to the struggle which requires eternal vigilance to maintain our liberties show a keen ignorance of the basic nature of communism and the fact that the Russians themselves are the foremost advocates of the concept of evolution, not revolution. By evolution the Russion Communists mean the complete destruction of all cultures, religion, traditions, languages, and customs, and replacing them with a new and universal civilization called Russian communism. Revolution has never been a weapon of Russian communism, but evolution has been a basic tenet of Leninism. Revolution has always been the basic weapon of men who fought for freedom and individual liberty and who were oppressed or tyrannized by some form of dictatorship. This is a fact which I hope every American will never forget and that it will be reiterated by our Government upon as many occasions as circumstances permit.

It is fitting on this occasion when we commemorate the 38th anniversary of modern day Ukrainian national independence, that we once again repair to that great political principle of national self-determination which was enunciated by President Woodrow Wilson during World War I. President Wilson, by stating our adherence to the principle of national self-determination as a basic American policy, made it clear to the world that we believed every nation, large and small, had a right to national sovereignty and a duty to guide its own destinies as it deems fit. In the wake of President Wilson's inspiring proclamation, many new nations sprang up from the ruins of the Czarist Russian, Austro-Hungarian and Ottoman Empires. Ukraine was one of those many nations. All of us hope and pray that Ukraine will soon again be free and independent. We also wish good will for the Russian people and that they too will soon have their national independence. We wish also that all the other enslaved non-Russian nations will soon again celebrate the return of their sovereign rights and their national independence.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mr. RHODES of Arizona (at the request of Mr. MARTIN), for 5 days, on account of illness.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. FEIGHAN, for 15 minutes today, and to revise and extend his remarks.

Mr. POWELL, for 1 hour on Tuesday next.

SPECIAL ORDERS VACATED

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the special order granted to the gentleman from New York [Mr. DONOVAN] for today may be vacated, and that he may address the House for 1 hour on Tuesday, January 24.

The SPEAKER. Is there objection?

There was no objection.

EXTENSIONS OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks was granted to:

Mr. DAVIDSON.

Mr. FLOOD and to include extraneous matter.

Mr. BOW (at the request of Mr. ADAIR) and to include extraneous matter.

Mr. BRAY and to include extraneous matter.

Mr. DORN of New York and to include extraneous matter.

Mr. KEATING and to include extraneous matter.

Mr. SCOTT and to include extraneous matter.

Mr. DURHAM.

ADJOURNMENT

Mr. PRIEST. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 2 o'clock and 41 minutes p. m.), under its previous order, the House adjourned until Monday, January 23, 1956, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1398. A letter from the Director, Legislative Programs, Office of the Assistant Secretary of Defense, transmitting a draft of proposed legislation entitled "A bill to authorize permanent appointments in the Armed Forces of the United States, and for other purposes"; to the Committee on Armed Services.

1399. A letter from the Secretary of the Army, transmitting a draft of proposed legislation entitled "A bill to continue the effectiveness of the act of July 17, 1953 (67 Stat. 177), as amended"; to the Committee on Armed Services.

1400. A letter from the Director, Legislative Programs, Office of the Assistant Secretary of Defense, transmitting a draft of proposed legislation entitled, "A bill to authorize certain construction at military installations, and for other purposes"; to the Committee on Armed Services.

1401. A letter from the Archivist of the United States, transmitting a report on records proposed for disposal and lists or schedules covering records proposed for disposal by certain Government agencies, pursuant to the act approved July 7, 1943 (57 Stat. 380), as amended by the act approved July 6, 1945 (59 Stat. 434); to the Committee on House Administration.

1402. A letter from the Secretary of Commerce, transmitting the annual report of the Secretary of Commerce for the fiscal year ended June 30, 1955, pursuant to the act of February 14, 1903 (5 U. S. C. 604); to the Committee on Interstate and Foreign Commerce.

1403. A letter from the Secretary, of Health, Education, and Welfare, transmitting a draft of proposed legislation entitled "A bill to extend through June 30, 1957, the duration of the Poliomyelitis Vaccination Assistance Act of 1955"; to the Committee on Interstate and Foreign Commerce.

1404. A letter from the Assistant Secretary of the Interior, transmitting a copy of an order canceling certain charges existing as debts due the United States by individual Indians and tribes of Indians, pursuant to the act of July 1, 1932 (47 Stat. 564); to the Committee on Interior and Insular Affairs.

1405. A letter from the Deputy Maritime Administrator, Maritime Administration, Department of Commerce, transmitting the annual report of the Federal Maritime Board and Maritime Administration for the fiscal year 1955; to the Committee on Merchant Marine and Fisheries.

1406. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated May 24, 1955, submitting a report, together with accompanying papers and an illustration on a review of reports on Saline River and tributaries, Illinois, requested by resolutions of the Committee on Flood Control, House of Representatives, and the Committee on Public Works, United States Senate, adopted July 5, 1946 and March 9, 1948, respectively. It is also submitted in response to two other authorizations listed in the report. (H. Doc. No. 316); to the Committee on Public Works and ordered to be printed, with one illustration.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. SPENCE: Committee on Banking and Currency. H. R. 7927. A bill to extend the time within which the State of Louisiana may make the initial payment on the purchase of certain property from the United States; without amendment (Rept. No. 1656). Referred to the Committee of the Whole House on the State of the Union.

Mr. SPENCE: Committee on Banking and Currency. House Joint Resolution 471. Joint resolution to permit FHA title I repair assistance to new homes damaged by major disasters; without amendment (Rept. No. 1657); referred to the Committee of the Whole House on the State of the Union.

Mr. BONNER: Committee on Merchant Marine and Fisheries. Report on labor-management problems of the American merchant marine, pursuant to House Resolution 918; without amendment (Rept. No. 1658). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severaly referred as follows:

By Mr. COOPER:

H. R. 8615. A bill to provide wage credits under title II of the Social Security Act for military service before July 1, 1959 (the termination date for inductions into the Armed Forces), and to permit application for lump-sum benefits under such title to be made within 2 years after interment or reinterment in the case of servicemen dying overseas before such date; to the Committee on Ways and Means.

By Mr. BARTLETT:

H. R. 8616. A bill to provide for the appointment of one additional district judge for the Third Division of the District of Alaska; to the Committee on the Judiciary.

By Mr. BEAMER:

H. R. 8617. A bill to validate certain payments of sea duty pay made to naval personnel serving on board vessels in the Great Lakes during the period November 1, 1950, to October 31, 1953; to the Committee on the Judiciary.

By Mr. BURNSIDE:

H. R. 8618. A bill to amend the act providing for Federal aid for State veterans' homes to permit payments to homes not primarily furnishing domiciliary care; to the Committee on Veterans' Affairs.

By Mr. CANNON:

H. R. 8619. A bill to amend the Universal military Training and Service Act to provide for the deferment from training and service thereunder of men residing on a farm with their families when their induction would seriously impair the successful operation of the farm; to the Committee on Armed Services.

H. R. 8620. A bill to amend the Universal Military Training and Service Act to provide for the discharge from the Armed Forces of men whose families reside on a farm and whose continued absence from home would seriously impair the successful operation of the farm; to the Committee on Armed Services.

By Mr. CELLER:

H. R. 8621. A bill to provide that the United States district judges for the districts of Hawaii and Puerto Rico shall have the same tenure of office and retirements rights as all other United States district judges; to the Committee on the Judiciary.

By Mr. DAVIS of Tennessee:

H. R. 8622. A bill to assist cities and States by amending section 5136 of the Revised Statutes, as amended, with respect to the authority of national banks to underwrite and deal in securities issued by State and local governments, and for other purposes; to the Committee on Banking and Currency.

By Mr. DOLLIVER:

H. R. 8623. A bill to liberalize the net operating loss deduction for farmers; to the Committee on Ways and Means.

By Mr. DORN of New York:

H. R. 8624. A bill to establish a national policy with respect to commercial fisheries; to establish the office of Assistant Secretary of Commerce for Commercial Fisheries, and define his functions, powers, and responsibilities; to strengthen the commercial fisheries segment of the national economy, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. VINSON:

H. R. 8625. A bill to authorize certain construction at military installations, and for other purposes; to the Committee on Armed Services.

By Mr. FISHER:

H. R. 8626. A bill to provide for a preliminary examination and survey of San Felipi Creek, Tex.; to the Committee on Public Works.

By Mr. FLOOD:

H. R. 8627. A bill to amend title II of the Social Security Act to provide that benefit checks and certain related materials sent through the mails shall not bear any markings which would reveal the nature of the recipient's entitlement or disentitlement to benefits under such title; to the Committee on Ways and Means.

By Mr. HAGEN:

H. R. 8628. A bill to appropriate $132,000 for advance planning of the Terminus Dam on the Kaweah River in California; to the Committee on Appropriations.

H. R. 8629. A bill to appropriate $132,000 for advance planning and construction of the Terminus Dam on the Kaweah River in California; to the Committee on Appropriations.

H. R. 8630. A bill to appropriate $2,500,000 for advance planning of the Success Dam on the Tule River in California; to the Committee on Appropriations.

By Mr. HALEY:

H. R. 8631. A bill to provide for national cemeteries in the county of De Soto, Fla.; to the Committee on Interior and Insular Affairs.

By Mr. HARRISON of Virginia:

H. R. 8632. A bill to amend the Servicemen's Readjustment Act of 1944 to provide that certain loans made to veterans to refinance indebtedness on their homes may be made or guaranteed under that act; to the Committee on Veterans' Affairs.

By Mr. JENSEN:

H. R. 8633. A bill to amend the Internal Revenue Code of 1954 to relieve farmers from the excise tax on gasoline and lubricating oils used exclusively in farm tractors or farm machinery or for other agricultural purposes; to the Committee on Ways and Means.

By Mr. JONAS:

H. R. 8634. A bill to authorize the conveyance of a certain tract of land in North Carolina to the city of Charlotte, N. C.; to the Committee on Government Operations.

By Mr. KING of California:

H. R. 8635. A bill to amend the Internal Revenue Code to provide that the gain from the sale of a residence by a taxpayer who has attained the age of 65 shall be excluded from gross income; to the Committee on Ways and Means.

By Mr. McCARTHY:

H. R. 8636. A bill to continue until the close of June 30, 1957, the suspension of duties and import taxes on metal scrap, and for other purposes; to the Committee on Ways and Means.

By Mr. MILLER of New York:

H. R. 8637. A bill to amend the Career Compensation Act of 1949 (63 Stat. 804), as amended, to provide pay of the highest enlisted or commissioned World War I rank, to retired enlisted men, who retired from the armed services with credit for 30 years' service; to the Committee on Armed Services.

By Mr. RUTHERFORD:

H. R. 8638. A bill to authorize a preliminary examination and survey in Texas in the vicinity of the city of El Paso, El Paso County, and immediately adjacent areas, in the interest of flood control, drainage, and allied purposes; to the Committee on Public Works.

By Mr. SIKES:

H. R. 8639. A bill to provide for the issuance of a special postage stamp in honor of Dr. John Gorrie; to the Committee on Post Office and Civil Service.

By Mr. SISK:

H. R. 8640. A bill relating to the administration by the Secretary of the Interior of section 9, subsections (d) and (e), of the Reclamation Project Act of 1939; to the Committee on Interior and Insular Affairs.

By Mr. TOLLEFSON:

H. R. 8641. A bill to amend section 8 of the Civil Service Retirement Act of May 29, 1930, as amended; to the Committee on Post Office and Civil Service.

By Mr. WRIGHT:

H. R. 8642. A bill to amend the Sherman Antitrust Act by providing for additional penalties for the doing of any thing or the performance of any overt act forbidden in the antitrust laws, and for the doing of any thing or the performance of any overt act in violation of the Federal Trade Commission Act, because of its dangerous tendency unduly to hinder competition or create a monopoly; to the Committee on the Judiciary.

By Mr. DORN of New York:

H. J. Res. 480. Joint resolution to authorize and request the President to excuse from duty employees in the executive branch for the observance of religious holidays; to the Committee on Post Office and Civil Service.

By Mr. WILLIAMS of New Jersey:

H. J. Res. 481. Joint resolution to establish a joint congressional committee to be known as the Joint Committee on United States International Exchange of Persons Programs; to the Committee on Rules.

By Mr. DAVIDSON:

H. Res. 385. Resolution to authorize the Committee on Ways and Means to investigate and study the desirability and feasibility of allowing individuals to deduct ordinary and necessary expenses paid for transportation to and from work; to the Committee on Rules.

By Mr. PATMAN:

H. Res. 386. Resolution requesting the Board of Engineers for Rivers and Harbors to consider improving White Oak Creek and Cypress Creek, Tex.; to the Committee on Public Works.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BROWN of Georgia:

H. R. 8643. A bill for the relief of Knox Corp., of Thomson, Ga.; to the Committee on the Judiciary.

By Mr. DAVIDSON:

H. R. 8644. A bill for the relief of Mrs. Relly Samuel, nee Zeichner; to the Committee on the Judiciary.

H. R. 8645. A bill for the relief of Newton Young; to the Committee on the Judiciary.

By Mr. FENTON:

H. R. 8646. A bill for the relief of Sfc. Albert Serowiec; to the Committee on the Judiciary.

By Mr. FLOOD:

H. R. 8647. A bill for the relief of Elsie Purvis; to the Committee on the Judiciary.

By Mr. FRIEDEL:

H. R. 8648. A bill for the relief of Lucien Dendoncker; to the Committee on the Judiciary.

By Mr. McINTIRE:

H. R. 8649. A bill for the relief of Margaret Helen Grant; to the Committee on the Judiciary.

By Mr. MILLER of California:

H. R. 8650. A bill for the relief of Francisco Haro Galaviz; to the Committee on the Judiciary.

By Mr. NORRELL:

H. R. 8651. A bill for the relief of Mrs. Mary Jane Russell; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

443. By Mr. NORBLAD: Petition of Mrs. Ethel Harrington and 65 other citizens of Silverton, Oreg., urging enactment of legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce; to the Committee on Interstate and Foreign Commerce.

444. By Mr. SADLAK: Petition of citizens of New Haven, Conn., and vicinity, urging the Congress of the United States to amend the Refugee Relief Act of 1953 in such a manner that all authorized but not issued visas be given to the escapees from the Iron Curtain now residing in European countries, all of them valiant fighters for the liberation of their peoples from communism; to the Committee on the Judiciary.

445. By the SPEAKER: Petition of Alexis Govaloff, president, the Russian Anticommunist Group, New York, N. Y., urging the Congress to amend the Refugee Relief Act of 1953; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

Tribute to Robert E. Lee by Senator Sparkman

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, January 19, 1956

Mr. SPARKMAN. Mr. President, today at the ceremony held in Statutary Hall I had the pleasure of delivering an address in tribute to Gen. Robert E. Lee. I ask unanimous consent that my remarks on that occasion be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR JOHN SPARKMAN AT CEREMONIES HONORING ROBERT E. LEE, STATUTARY HALL, JANUARY 19, 1956

I am deeply honored to join you today in tribute to a great American.

To me the life of Robert E. Lee has always been an inspiration and a challenge. Our history holds no counterpart to the story of Lee. He was by his own appraisal, a failure. Some historians agree that his record was one of failure. If this be true he was the most magnificent failure of all time. For where will you find a life more sublime in its devotion to duty, more inspiring in its reverence of Almighty God, or so grand in its hour of defeat?

The star that guided the career of Robert E. Lee grows brighter with each passing year. So it is with all of the truly great. Today we see in retrospect many facets of Lee's lonely existence which were obscured by the prejudices and the mores of the early postwar years.

In my early schooldays Lee was almost a legendary figure. Some of you, perhaps, will recall that Historian Long declared: "Throughout his whole student life, he performed no act which his pious mother could not have fully approved;" or the words of an old teacher: "He was never behind time at his studies, never failed in a single recitation, was perfectly observant of the rules and regulations of the institution." We can all rejoice that such legendary acclaim has been dispelled. Lee's own letters reveal him as a warm, compassionate man with many of the frailities of mankind.

Still later, we have Lee presented as a man of mystery. His letters and his words, we are told, are couched in formality and carefully conceal his innermost desires or his true nature.

He was by his own admission like his daughter, "always wanting something"—but what? Again, we are given the picture of a lifelong conflict of conscience with the realities of his existence.

Lee deprecated war. He opposed secession, yet with all of the great ability he possessed sought to defend this right of the States. He owned slaves, yet he opposed slavery and freed those he owned long before the war. He was a soldier of the United States, a graduate of the West Point Academy, and a former superintendent of the Academy. Yet his sense of duty, or honor if you please, called him to the defense of his native Virginia. He was devoted to his home and to his family. Fate decreed that much of his life should be spent away from both.

These are serious contradictions. But to me they are not difficult to understand. Lee's life was a pattern of rigid discipline. His religion—he was an Episcopalian—was its dominating influence. Through every deed and word runs the theme of "Let mankind do what man can and must do—God will take care of the rest."

Lee was born January 19, 1807, in Stratford, Va. He was the son of "Light Horse Harry" Lee and Anne Hill Carter Lee. Light Horse Harry served with Washington in the Revolutionary War. Robert E. Lee's father died when Robert was 11 years old.

The Lees moved to Alexandria in 1811 to educate their children.

Unfortunately, very little is known about the childhood or the early education of Robert E. Lee. His first teacher was a Mr. Leary. He later attended the school of Benjamin Hallowell where his time was devoted chiefly to mathematics. He was an exemplary student.

Lee entered West Point when he was 18 years old. He was a good scholar. He graduated high in his class in 1829, and received an appointment in the Engineering Corps.

For some years he was stationed at Old Point Comfort. While there he married Miss Mary Custis, the great-granddaughter of Mrs. Washington. This took place in Arlington in June 1831. Through this marriage, Lee came into control of extensive property—farms, mansions, and a considerable number of slaves.

In the years before the Mexican War, Lee was stationed in various parts of the country, pursuing his profession as a military engineer. He was sent to Ohio to adjust the boundaries of that State with Michigan. Later he supervised the defenses of New York harbor. In St. Louis he worked to control the course of the Mississippi River.

In the Mexican War he began as captain under General Wood. He took part in the battle of Buena Vista. He participated in the siege of Vera Cruz. His promotion was rapid. He was made a major at Cerro Gorda, a lieutenant colonel at Contreras, and a colonel at Chapultepec. He was slightly wounded at Chapultepec.

There is evidence that he displayed great courage and resourcefulness throughout the war. For this he received high commendation from General Scott who also was a Virginian.

After the Mexican War Lee resumed his engineering work in various parts of the country. For some time he was engaged in construction of a fort at Baltimore.

In 1852, at the age of 45, he was made Superintendent of the West Point Academy. He accepted with regret because he feared he could not measure up to the expectations of the Secretary of War. It was his feeling that the job required "more skill and experience" than he possessed. Lee improved the discipline and the courses of study at West Point.

In 1855, Lee left West Point for a lieutenant colonelcy in one of the new cavalry regiments. His service with the cavalry was in the Western and Southwestern States while his family remained at Arlington.

Now the war clouds were gathering. Lee wrote that he hoped President Buchanan would "be able to extinguish fanaticism between North and South, cultivate love for the country and Union, and restore harmony between the different sections."

In October 1859, while on furlough at Arlington, Lee was ordered to arrest John Brown. He discharged his duty in a quiet and efficient manner, as witness his report: "Tuesday, about sunrise, with twelve marines under the command of Lieutenant Green, broke in the door of the engine-house, secured the robbers, and released all of the (Southern) prisoners unhurt."

Brown was turned over to the civil authorities. "I am glad we did not have to kill him," Lee remarked afterward, "for I believe he is an honest, conscientious old man."

The year 1861 was the year of the great decision. Lee was 54. "As far as I can judge from the papers," he wrote, "we are between a state of anarchy and civil war. May God avert us from both . . . I must try and be patient and await the end for I can do nothing to hasten or retard it."

Lee had previously expressed his resentment of the North's aggression and "denial of equal rights of our citizens to the common territory of the Commonwealth" and his displeasure with the course of the "Cotton States" which he termed "selfish and dictatorial."

"While I wish to do what is right," he said, "I am unwilling to do what is wrong at the bidding of the South or the North."

Lee's account of the interview with Francis P. Blair in which he was offered and declined the command of the United States Army, is well known.

In this account he said: "I never intimated to anyone that I desired the command of the United States Army, nor did I ever have a conversation with but one gentleman, the Honorable Francis P. Blair, on the subject, which was at his invitation and, as I understood, at the instance of President Lincoln. After listening to his remarks, I declined the offer he made me to take command of the army that was to be brought into the field, stating as candidly and courteously as I could that though opposed to secession and deprecating war I could take no part in an invasion of the Southern States."

This interview occurred on April 18. Lee went immediately to tell General Scott of the proposition that had been made to him, and of his decision. Some historians are convinced that General Townsend's eyewitness account of the talk with General Scott is substantially incorrect, because it makes no mention of Lee's report on the proposition submitted by Blair. In the Townsend report, Lee is quoted as saying: "The property belonging to my children, all they possess, lies in Virginia. They will be ruined if they do not go with their State. I cannot raise my hand against my children."

Townsend said this interview took place on April 19. Lee gave the date as April 18.

Two days later Lee sent his letter of resignation to General Scott saying that "Save in the defense of my native State, I never desire again to draw my sword."

It is significant that Lee clung to the Union up to the hour of Virginia's decision to secede.

In January 1861, he wrote: "I can anticipate no greater calamity for the country than a dissolution of the Union. It would be an accumulation of all the evils we complain of, and I am willing to sacrifice everything but honor for its preservation. * * * Secession is nothing but revolution."

I think we have to consider that Lee had a profound regard for the sovereignty and rights of the States, as expressed by Jefferson and opposed by the Hamiltonian theory. Lee's father had served as Governor of Virginia. Two of his kinsmen, Richard and Francis Lee, signed the Declaration of Independence. A third, Thomas Lee, was President and Commander in Chief of Virginia. The Constitution and the rights reserved for

the States were sacred to Lee. Lee felt that he was fighting, not for slavery, but for the preservation of all of the other constitutional powers of the States.

"I had no guide," he said, "nor had I any other object than the defense of those principles of American liberty upon which the constitutions of the several States were originally founded; and unless they are strictly observed, I fear there will be an end to Republican Government in this country. * * *"

Again he declares, "All that the South has ever desired was that the Union, as established by our forefathers, should be preserved, and that the Government as originally organized should be administered in purity and truth."

Then followed the four years of brilliant campaigns that proved him one of the greatest strategists of all time—four years of privation with an ill-clad and hungry army—a heart-breaking struggle ending at Appomattox. "A Caesar without his ambition; a Frederick without his tyranny; a Napoleon without his selfishness; and a Washington without his reward."

It is recorded that no general was more greatly beloved by his men.

In all the storm of criticism toward the close of the War, Lee steadfastly declined to "assume responsibilities or make decisions that were properly those of President Davis or other civil authorities."

If Lee was great in battle, he was grand in defeat. In all of his career, Lee had been resolute and forward-looking in every deed and decision. Now he called upon the people of the South to unite in the restoration of the country and the re-establishment of peace and harmony. For himself all he desired was "some little quiet home in the woods, where I can procure shelter and my daily bread, if permitted by the victor."

He considered himself a citizen of a united country, although his plea for amnesty was never formally granted. He turned a deaf ear to all offers by commercial enterprises for use of his name, declaring: "My name is not for sale."

In August 1865, he accepted the Presidency of Washington College—a school with 40 students and four professors. The college prospered during the 5 years of Lee's tenure. Lee seemed to relish this, saying:

"For my own part, I much enjoy the charms of civil life and find too late that I have wasted the best part of my existence."

Here ended the career of Robert E. Lee. He died on October 12, 1870. He was buried at Lexington in a chapel erected by his efforts.

Lee regarded his life as a failure. Shortly before his death he wrote:

"Life is indeed gliding away and I have nothing of good to show for mine that is past. I pray I may be spared to accomplish something for the benefit of mankind and the honor of God."

It is singular to note that Bradford, a distinguished historian, agrees that Lee's life will always be regarded as a record of failure. He says that success is the idol of the world and the world's idols have been successful.

From Lee's pen we have his assertion that "human virtue should be equal to human calamity." From his own life we have proof that this can be true.

Only recently William Faulkner observed that we are all failures to the extent that we can never achieve all we have hoped to achieve.

And on this subject of failure, let me quote from the great jurist, Learned Hand:

"By some happy fortuity man is a projector, a designer, a builder, a craftsman; it is among his most dependable joys to impose upon the flux that passes before him some mark of himself, aware though he always must be of the odds against him.

"His reward is not so much in the work as in its making; not so much in the prize as in the race. We may win when we lose, if we have done what we can; for by so doing we have made real at least some part of that finished product in whose fabrication we are most concerned—ourselves."

Robert E. Lee a failure. If so, let me say again that he was history's most magnificent failure.

When we think of the influence that he has had down through the years on the people of his own generation and on those who came after him, not only in Virginia, not only throughout the South, but all over this Nation, what more could one have done toward succeeding?

I mentioned above that the historian Bradford considered Lee a failure. Yet it is my understanding that even the study of Lee had a tremendous influence upon Bradford. I have been told that he started his work on the subject, "Lee, the Rebel"; that as he studied Lee's direction of the armed forces of the Confederacy he changed his title to "Lee, the Soldier"; that as he studied Lee's life and influence and his personal conduct following the end of the war he ended up with the title under which his book is published: "Lee, the American."

It is interesting to note the closing paragraph of Bradford's appendix to "Lee, the American."

"It is an advantage to have a subject like Lee that one cannot help loving. I say, cannot help. The language of some of his adorers tends at first to breed a feeling contrary to love. Persist and make your way through this and you will find a human being as lovable as any that ever lived. At least I have. I have loved him, and I may say that his influence upon my own life, though I came to him late, has been as deep and as inspiring as any I have ever known. If I convey but a little of that influence to others who will feel it as I have, I shall be more than satisfied."

Robert E. Lee will ever live in the hearts of Americans everywhere as a great American.

Tax on Gasoline Used by Farmers

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. BRAY. Mr. Speaker, I have introduced a bill to refund the 2-cents-a-gallon tax on gasoline used by farmers for nonhighway use. This tax is an unnecessary and unwarranted burden on the farmers of this Nation.

Farmers should be expected to pay the same taxes as others on the gasoline and lubricating oil they use to travel public roads and streets. There is little justification, however, for extracting this tax from them for gasoline and oil used to power the vehicles and instruments of modern farm production. This tax is a significant item to many farmers, and should have been set aside long ago. It is all the more worthy at this time when so many farmers are caught in the squeeze between higher costs of production and lower prices for their products.

Other Congressmen have introduced legislation for this purpose, and the Ways and Means Committee is presently considering the subject. I trust a bill to exempt farmers from payment of this tax on gasoline purchased for nonhighway use will be approved by the committee in the very near future, and will be passed by a resounding majority.

The Merchant Marine

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. DORN of New York. Recently all New York City newspapers gave prominence to a roundup story showing that a total of 132 big ships had made their maiden visit to the world's largest port during 1955.

New York is my home port, and port officials there were greatly gratified to learn that such a great flotilla of fine vessels had passed the Statute of Liberty for the first time and docked at the city's piers carrying passengers and cargo from all over the world. It was good news, indeed, for everyone except those of us in Congress who hold the interests of the American merchant marine to be one of our paramount considerations

As a member of the House Merchant Marine and Fisheries Committee I read these stories with keen disappointment. For, out of the grand total of 132 ships making their initial visit to New York, only 6 flew the American flag. Twenty-two times that number carried foreign flags. This is distressing news, indeed, for anyone holding the firm conviction that the American merchant marine is not only vital to our whole economy, but to our very security as a Nation.

The American Legion and Veterans of Foreign Wars at their last annual conventions again emphatically stressed the necessity of a strong American merchant marine as a vital defense factor. These veterans' organizations realize, probably more deeply than anyone else, the hard fact that it was the American merchant marine that made it possible to fight and win two great World Wars on the enemy's territory instead of fighting it out here on our own. It was this offensive defensive which paid off so brilliantly, and it was our own merchant marine which made it possible.

But the figures I have cited on new-vessel arrivals in my own home port are a dramatic warning. We are letting our merchant marine, the most powerful defense corollary of our Armed Forces, decline. It will decline even more rapidly unless Congress meets head-on a new threat whose ominous proportions at last are made clear. I speak of the oncoming attempt by foreign-flag steamship lines, with the direct assistance of their governments, to break down the historic 50–50 law whereby American ships are carrying half of the relief cargoes we are sending to those very countries. These cargoes are financed by the American taxpayer. Because of this, you would naturally think that our foreign marine competitors would

accept the fair and just principle that Americans just be given an even break with their own. But no. Apparently they want to transport it all. If this strikes a paralyzing blow at our merchant marine, well, so what?

The exposure of this calculated plot was fully revealed just the other day by Francis T. Greene, president of the American Merchant Marine Institute. Appearing before the National Security Commission of the American Legion here in Washington on January 18, Mr. Green charged that there is a collective conspiracy by powerful foreign steamship groups to pressure Congress into emasculating one of its laws, "to the detriment of our national security and the security of the free world."

President Greene told the Legion Security Commission that the law the foreign shipping interests sought to break down is the statute which the Legion has strongly supported for years, guaranteeing that 50 percent of the cargoes for foreign relief and paid for by American taxpayers, must be carried in American ships.

It is due largely to the vision and support of the Legion that Congress each year has assured the American people that their own merchant marine shall be used to transport a fair half of these cargoes—

Mr. Greene said.

The hope of this conspiracy by foreign steamship lines is to mislead the American farmer and the American people into the belief that the fair and equitable 50–50 law is blocking surplus agricultural disposal—

The shipping official told the Legion. He continued:

Thus, the foreign shipping associates, by arousing the fears of American agriculture, hope to ride on the back of the American farmer and tear down the 50–50 law. These foreign shipping lobbies could never do this by themselves.

Mr. Greene charged that as early as September 1954, the principal European maritime nations represented by the Organization for European Economic Cooperation, made the pointed suggestion that their member countries, rather than abide by the 50–50 provision in American law, might prefer to take care of their agricultural requirements elsewhere.

The American shipping official cited an impressive list of collusive incidents by Scandinavian shipowners' associations in refusing to buy American agricultural products where the 50–50 law applies.

This documented record proves that the Western European shipping associations have induced their governments to raise the 50–50 issue in their own self-interest in order to put pressure on the American farmer to put pressure on our Congress to remove this essential safeguard for our own merchant marine—

Mr. Greene added.

All these attacks by foreign shipping interests on American laws violate a basic tenet of American Legion policy, which supports a strong American merchant marine as being vital to our security as a nation—

Mr. Greene testified.

The authoritative Defense Department estimate is that this country should have not fewer than 1,085 ships in the dry-cargo category alone—

Mr. Greene said.

This is greater than our entire private merchant marine today, tankers included.

Another factor impairing the efficiency of the American merchant marine as a defense auxiliary is the direct competition of the Military Sea Transportation Service with our commercial passenger fleet, Mr. Green said.

Currently, MSTS is operating 47 Government-owned passenger ships, as against 39 privately-operated liners. While this direct competition is destructive, the paramount issue is the retention of the 50–50 principle. Its emasculation or abandonment would put American exporters in general, and American farmers in particular, at the mercy of discriminatory foreign-flag rates. All Americans who produce any commodity for export need the assurance of reliable ocean transport. This can be given only by a merchant marine under American control. It is my sincere conviction that elimination of 50–50 from Government-financed sales of Government surpluses, or from any other category of public cargo to which it now applies, would, in the long run, be no less a disaster for American agriculture and industry than for American shipping, which it would severely cripple, or for our national security, which it would dangerously jeopardize.

Edward Bacon Wilber

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mr. BOW. Mr. Speaker, I am certain many Members feel, as I do, a deep sense of loss in the passing of Edward Bacon Wilber, Deputy Assistant Secretary of State for Administration and budget officer of the State Department.

Many of us knew Ed personally. All of us admired him for his integrity, ability, and patience. We trusted his discretion and tact. I am confident that this feeling was shared by members of both parties. It was the feeling all of us have for a truly outstanding public servant.

Edward Bacon Wilber was born in Fairport, N. Y., and graduated from Union College in 1925. He was a widely respected management consultant before he joined the Government in 1941. In addition to his work in the Department of State, he served the Bureau of the Budget for 7 years and was a consultant to the Hoover Commission.

In 1951, to show its appreciation for Mr. Wilber's unswerving devotion to our country and his outstanding accomplishments for good government, the other body adopted a resolution directing that he should "receive a salary commensurate with the service he renders to the Government as an outstanding employee of the Department of State."

Those of us whose duties required inspection trips abroad have had the pleasure of traveling with Mr. Wilber on various occasions. We profited by his extensive knowledge of State Department operations abroad, his ability to analyze the difficult problems encountered in such work, and his sincerity and energy in everything that he undertook.

I know that many Members join me in sincere condolences to Mrs. Wilber and the children, Edward, Jr., Paul and Marcia Jeanne. While there is little that we can do to ease the burden of their grief, I hope it may help them to know of the high regard in which Edward Bacon Wilber was held by all who know him in his Government career.

Remarks of Senator James H. Duff, Republican, of Pennsylvania, at Conference of Jewish Organizations, January 18, 1956, Shoreham Hotel, Washington D. C.

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

It can no longer be gainsaid that the darkening clouds in the Near East are the early portents of a storm that could burst in that area with completely devastating violence.

There is every evidence that the Communists have concluded that the Near East is the soft spot that now presents the most promising opportunities for exploitation in the characteristic Communist way.

In determining how to deal with this critical situation, it is important to bear in mind that in the years intervening since the end of World War II the Communists, by methods similar to those now being employed in the Near East, have brought under their domination seven hundred million peoples and one-quarter of the whole surface of the earth, and with this, enormous material resources, including those vital to supplement the particular deficiencies which the Communist world has so far suffered from the lack of. The implication of the successful continuation of such methods is too clear to require elaboration.

It is of no avail at this late hour to cry over past spilt milk. But possibly a realization of how that milk was spilt may be instructive in dealing with the present constantly mounting crisis. Failure to act in 1949, when Israel had won a decisive victory against the Arab States, has resulted, as such delay always does, in making infinitely more difficult the resolution of the problem.

At that time, had treaties been definitized and a modus operandi established, there would have been no crisis today.

As might reasonably have been expected, the Communists have shifted from one tack to another in dealing with this situation, studied to create confusion, and done everything in their power to prevent a peaceful and fair solution of the difficulties in that area.

Hardly a day passes without some new move by the Communists to keep the whole situation upset and to make it increasingly difficult to deal with. Only today a dispatch out of London indicates that Czechoslovakia has offered cheap Communist arms to Afghanistan, an immensely important spot on

the flank of the Baghdad Pact Defense Alliance. Other moves of the same character can with assurance be expected. All of which indicates that this vitally critical area to the free world has been selected by the Communists for the embarrassment of the West and the continuous further march of the communistic infiltration and expansion.

This complicated and aggravated situation in the Near East, especially between Israel and Egypt, poses the greatest possible threat to world peace. Too little and too late is a sure invitation to Communist aggression as was proven both in Korea and in Indo-China.

Formosa is not the only place where it was necessary for the free world to draw a line and say: "No further."

It was always the dream of Imperialist Russia under the czars to extend the domain of Russia eastward to the Pacific—a dream realized under the Communists. It was as well the dream of Imperialist Russia to extend their domain from the Mediterranean and the Dardanelles eastward to the Persian Gulf. There is every reason to believe that the intention of the Communists to realize this second ambition is as definite as was the first. There can be no doubt that the free world cannot possibly permit this expansion to be realized. And yet the Israel-Arab dispute is on the very doorstep of that expansion.

Consequently it would seem that it was in the enlightened self-interest of the free world to put a period to this expansion now before it expands beyond control so as to threaten the peace of the world.

The policy of the United States is to wage peace, not war. The policy of the Communists is to wage war, and not peace. The sure way to play into their hands, to make it easier for them to gain their ends, is to vacillate at a time when decisive action is necessary and it seems to me that this is the time for decisive action in the Near East. Certainly that problem will not be settled in the United Nations. It will not be settled at all except by the definite and united action of the United States, Britain, and France. That was true in 1949. It is true today. It will continue to be true until the situation develops into a crisis that may be unresolvable except by conflict. That conflict must be prevented.

Speaking as an individual, the only practical solution for this problem is for the free world to guarantee the existing borders between the disputants, to offset arms to Egypt by arms to Israel—not to encourage an arms race but to maintain a proper balance between them.

Vacillation can only result in ultimate disaster. Decisive action now is the answer.

To the answer that this is dangerous procedure, the reply is: Of course, it is dangerous. Everything is dangerous unless the Communists are permitted to have their own free way. To guarantee these boundaries at this time instead of allowing the Communist infiltration and expansion might very well be the means of preventing another local war of enormous strategic importance where ultimately we would be compelled to interfere. Therefore, the risk would be no greater now than later and it very reasonably might be expected to stabilize a situation that would otherwise be completely out of hand.

By the very nature of current events, it must be clear that we are living in a tremendously dangerous and explosive world. And it will continue to be dangerous and explosive until the Communists are made to understand unmistakably that the time has come when we will act and not talk when they continue in a course that unimpeded can lead to disaster both to us and free people everywhere.

In conclusion, the time has come when we've got to say to the Communists: "You've got to stop this and you've got to stop it now."

Fifth Anniversary of Imprisonment of Archbishop Beran

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. KEATING. Mr. Speaker, the one thing above all else the Communists fear is the spread of truth behind the Iron Curtain. Their entire system is based upon the suppression of information from the outside world and stifling of opinion and thought within their tyrannical empire.

Recognition of this situation makes it doubly important that we pause today to consider that next Saturday marks the 5th anniversary of the imprisonment by the Communists of Archbishop Joseph Beran, Archbishop of Prague.

Archbishop Beran is one of the great churchmen of Europe, widely loved within and without the Catholic Church. Even in absentia, his spirit is a strong factor in the will of his countrymen to be free. He stands today—wherever he may be—as a symbol to the people of Czechoslovakia of their desire to rid themselves of the infamous Soviet rule which has temporarily rubbed out their proud heritage of liberty and freedom.

The Archbishop of Prague is but one of many noble men who have lost their freedom in service to their church in recent years. Cardinal Tien in China, Cardinal Wyszyski in Poland, Cardinal Stepinac in Yugoslavia, and Cardinal Mindszenty in Hungary are others who have suffered cruel imprisonment under the Soviets.

Mr. Speaker, the free world, by its stony silence, is sealing the fate of Archbishop Beran and his gallant churchmen. Does the fact that these innocent men are still suffering amidst the apathy of the rest of the world mean that we have given them up for lost? Does it mean that we are insensible to the crimes which have been perpetrated against them?

No, Mr. Speaker; we have not forgotten them. But we must intensify our efforts to set them free. Through the Voice of America and Radio Free Europe we must demand an end to the terror behind the Iron Curtain. By raising our voices in protest, we not only bring hope to those imprisoned under Soviet rule, but we also make sure that the entire world is informed of the true facts of religious persecution in the lands where the Red hordes have taken over.

As we pause today in sober commemoration of Archbishop Beran's tragic removal from Prague, let us reaffirm our opposition to the godless evil which has brought so much misery and suffering upon the world. We in the United States, as the world's great disciples of freedom, cannot in good conscience continue to pursue our present disinterested course. We must renew our demands that Archbishop Beran and others who are suffering a similar fate are given the freedom to which all men are entitled.

Psychiatric and Narcotic Hospitals a Federal-State Partnership

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. DAVIDSON. Mr. Speaker, I should like to speak today in support of my bill H. R. 7838, which I introduced in the first session of this Congress. This bill would amend the Hospital Survey and Construction Act to provide grants of Federal aid to States for surveying and meeting the needs for psychiatric hospitals and auxiliary facilities and for narcotics hospitals and auxiliary facilities. There can be little doubt as to the crying need for action in these areas of concern for public health.

Nor can there be any doubt that under the provisions of the so-called Hill-Burton Act great strides forward have been made to alleviate the painful shortage of general hospital facilities. From January 1948 through September 1955, 126,740 general hospital beds have been provided or are in process under the provisions of the 1946 act. The emphasis in the past has been, however, on general hospital facilities, and the time has now come for specific attention to be given to two of our Nation's major health problems: mental illness and narcotic addiction. Both of these phases of our Nation's health have been all but neglected in the administration of the Hill-Burton Act, and it is only through a specific allocation of funds for these purposes that significant steps can and will be taken to improve the present situation.

In the field of mental illness, it has been estimated recently that 9 to 10 million Americans, 1 of every 16, are suffering from some mental or emotional disorder. On any given day, 750,000 are mentally ill in a hospital bed. In addition, some 400,000 persons suffering from mental illness should be in mental hospitals. The remaining millions, though not requiring hospitalization, are seriously handicapped in their ability to work and lead normal family and civic lives.

The fact remains clear that existing facilities are nowhere near adequate to handle the present burden. In some States, persons legally committed to mental hospitals have to wait months, sometimes years, before they can be placed. In some cases, these mentally ill persons spend this waiting period in jails, often ruining any chance they might have had for recovery.

The hospitals are extremely overcrowded. Two out of every four State mental hospitals are handling a patient load greater than their intended capacity. The need for additional hospital beds has been estimated at between 330,000 and 500,000, but even the lowest figure is a huge one. Congress, having recognized its function in the construction of general hospitals, should now provide specific aid to the States to ease

the critical shortage which now exists in the field of mental care. We must recognize the need to aid States which cannot provide or have not provided adequate facilities to care for their mentally ill.

In addition, my bill provides for surveying the needs and constructing badly needed psychiatric rehabilitation facilities. More than 200,000 persons a year are being treated at these clinics and they too are greatly overcrowded. It has been estimated that to fulfill the requirements for outpatient psychiatric services, an additional 800 centers are needed.

The effectiveness of psychiatric clinics and rehabilitation centers has already been well established. Psychiatric techniques have so advanced in recent years, that authorities in the field have estimated that as many as one-third of the patients being treated successfully in clinics would, several years ago, have been regarded as suitable only for more costly hospital treatment.

These facilities are used not only for cases which are of a less serious nature, but also function as diagnostic centers, spotting incipient mental disease and recommending treatment before it becomes drastically disabling. Furthermore, clinics provide follow-up aid for patients who have been released from mental hospitals.

We know that readmission rates to mental hospitals are very high. Although there are no adequate statistics for the total picture, studies have indicated that in my own State of New York, for example, one-third of all mental hospital entrants have been in these hospitals at least once previously. The follow-up treatment given at psychiatric clinics may well cut into this readmission rate substantially. Thus, establishment of such clinics would represent a saving in money and in human resources.

In the area of treatment and rehabilitation of narcotic addicts virtually nothing has been done under the Hill-Burton Act, and every day the scourge of narcotic addiction increases. My bill is designed to allocate funds for the specific purposes of surveying the need for narcotic hospitals and narcotic rehabilitation facilities, as well as for their construction. The narcotic problem merits the considered attention of the Congress.

At the present time, the Narcotics Bureau estimates that there are 60,000 addicts in our population; that is, 1 of every 3,000 persons. This represents an increase of 10,000 to 15,000 addicts since 1948, an increase which is frightening since the trend indicates that since the end of the war there has been an increase of narcotic use among our juveniles. In 1948, for example, approximately 3 percent of all addicts admitted to the Lexington Narcotics Hospital were under the age of 21 years and, in 1955, the figure rose to approximately 7 percent. Some form of aid must be given to help these young persons.

In addition to the problems caused by the use of narcotics by these minors, there is the testimony of many authorities that addicts, to support their habit, must resort to crime. It has been previously estimated that as much as 50 percent of the crime in our major cities today is perpetrated by drug addicts.

Commissioner Anslinger has stated that 11.8 percent of the total Federal prison population in this Nation are persons convicted of violations of the Federal narcotics and marihuana laws. He further cited a city in this Nation where there was heavy traffic in narcotics and a 600 percent increase in the number of housebreakings, armed robberies, and larceny. The Commissioner reported that when narcotics agents cracked down on the drug traffic, the crime rate dropped to its normal level.

The tragedy of the situation is simple: All efforts have been and are being directed at the flow of narcotics to the user, and few forward strides have been made in the cure of the addict who is captured or voluntarily comes forward for cure.

It is generally recognized that it is impossible to defeat addiction outside of institutions specifically and specially staffed and equipped to effect a proper cure. At the present time, there are only two hospitals in the United States specifically equipped to supply a comprehensive treatment to addicts. They are the Federal institutions at Lexington and Fort Worth. The combined facilities of these 2 hospitals is a mere 2,340 beds, a pitifully inadequate figure. There is a waiting list at present of over 500 applicants.

The shortage of facilities must be overcome. To do the job intelligently, however, it is necessary first to determine the specific needs of specific localities. For this purpose, my bill authorizes that funds be appropriated for a survey to inventory existing facilities for the diagnosis, treatment, and care of addicts, to determine the need for construction of facilities for such diagnosis, treatment, and care, and to develop programs for the construction of such facilities.

Perhaps the most important feature of my bill is its concern with the construction of rehabilitation facilities to aid users of narcotics who are not as yet addicted, to counsel addicts to prepare them to accept the benefits to be derived from hospitalization, and, finally, to provide aftercare to addicts who have been released from narcotics hospitals so that they may once again take their place in society.

This latter phase is one which is receiving growing recognition. Commissioner Anslinger recently testified before the subcommittee investigating this problem that "aftercare is probably one of the most promising phases of rehabilitation." Aftercare in clinics would help the addict adjust psychologically to withdrawal of drugs after he had been relieved of physiological dependence on them.

Too many addicts, who have been treated at the hospitals, return to the same environment from which they came and, unable to find work, or acceptance by a new social group, they return to their addiction. This is considered a strong factor in the large proportion of addicts, estimated at 85 percent, who return to their addiction after release from the Federal narcotics hospitals.

With clinics and rehabilitation centers which could provide psychological counseling, and which could mobilize community employment and recreation resources, we might be able not only to cure the addict, but to keep him cured. Only a small number of such rehabilitation centers exist. They are of recent origin and are located in New York, Chicago, and Los Angeles. Although they are able to handle only a small number of cases, their indicated progress is heartening. I feel that Congress should provide aid to the States in establishing more of such facilities.

I wish also to report, Mr. Speaker, that I have requested the opinions of State public-health officials, and of public-health groups throughout the Nation on the bill I have introduced. The response has been exceptionally gratifying, not only in terms of the number of replies, but much more important, in terms of the enthusiasm displayed for the legislation. I shall present all of these communications to the Committee on Interstate and Foreign Commerce when hearings are held on the bill.

In closing, Mr. Speaker, may I say that this bill, H. R. 7838, represents an application of a well-established principle, Federal aid to State health activities, in two crucial areas of national concern. I hope that consideration of the magnitude of the mental health and narcotic addiction problems will cause the legislature to pass this bill.

Markings on Social Security Checks Sent Through the Mails

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mr. FLOOD. Mr. Speaker, today I introduced a bill in the House of Representatives that would amend title II of the Social Security Act to provide that benefit checks and certain related materials sent through the mails shall not bear any markings which would reveal the nature of the recipient's entitlement or disentitlement to benefits under the act, such as, for example, unremarried widow.

My bill would provide that no check drawn in payment of any benefit under title II of the SSA, and no envelope or other outer covering for any such check, or for any other statement or document relating to an individual's eligibility for any such benefit, which is sent through the mails, shall bear any markings or devices which might disclose any information with respect to such individual's status under title II, or to the nature of his or her entitlement or disentitlement to benefits under title II.

Mr. Speaker, I have received numerous complaints from constituents on this problem.

After all, communications between the department of social security and an individual should not be for the information of outsiders; it sometimes causes needless personal embarrassment.

The Late Dr. Will W. Alexander

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to express my regret in the passing of Dr. Will W. Alexander, who died from a heart ailment in my home town of Chapel Hill last Friday.

Dr. Alexander had been in failing health for the past 4 months but until recently he carried on his duties with the Rosenwald Foundation.

Will Alexander lived a full and rewarding life and served in many posts of distinction in his long public career. Ordained as a minister, he served churches in Tennessee before leaving the ministry to become executive director of the Commission on Inter-racial Cooperation in Atlanta. He was president of 1 college and trustee of 5 colleges. An assistant director of the United States Resettlement Administration and vice president of the Rosenwald Foundation, he labored faithfully to improve living conditions for many groups, particularly in the South. Under the late President Franklin D. Roosevelt, Dr. Alexander served as Director of the Farm Security Administration.

Known nationally as a race relations authority, Dr. Alexander was awarded in 1928 the Harmon award for service in American race relations.

On retirement, Dr. Alexander moved to Durham County in my district, and bought a farm. He had many friends and admirers in the university community of Chapel Hill, and his counsel and advice were often sought. He will be greatly missed throughout the South and the Nation, and I am sure many Members of the House who knew him and know of his work and influence will regret the ending of a useful life devoted to the public good.

SENATE

FRIDAY, JANUARY 20, 1956

(Legislative day of Monday, January 16, 1956)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

Our Father God, who hast ordained that in trial we shall find our strength and that our faith must stand the test of fire: Give us this day a sense of Thy nearness; take Thou the dimness of our souls away.

In these turbulent days be Thou our strength and shield. Make those here, by the people trusted with the very life of the Nation, to be truly the ministering servants of Thy will and purpose in the temple of patriotism pure and undefiled. Forbid that for any partisan advantage the precious oil of national unity be spilled upon the ground to ignite selfish fires. May it rather still feed the flame of liberty's torch as it enlightens the whole world. We ask it in the dear Redeemer's name. Amen.

THE JOURNAL

On request of Mr. CLEMENTS, and by unanimous consent, the reading of the Journal of the proceedings of Thursday, January 19, 1956, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Miller, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the Committee on Armed Services.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its clerks, announced that the House had passed the joint resolution (S. J. Res. 12) to request the Secretary of State to arrange for the International Joint Commission, United States and Canada, to conduct a survey of the proposed Passamaquoddy tidal power project, and for other purposes, with amendments, in which it requested the concurrence of the Senate.

The message also announced that the House had passed the bill (H. R. 5649) to amend section 2254 of title 28 of the United States Code in reference to applications for writs of habeas corpus by persons in custody pursuant to the judgment of a State court, in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED

The bill (H. R. 5649) to amend section 2254 of title 28 of the United States Code in reference to applications for writs of habeas corpus by persons in custody pursuant to the judgment of a State court, was read twice by its title and referred to the Committee on the Judiciary.

ORDER FOR TRANSACTION OF ROUTINE BUSINESS

Mr. CLEMENTS. Mr. President, I ask unanimous consent that there may be the usual morning hour for the presentation of petitions and memorials, the introduction of bills, and the transaction of routine business, and that any statement made in connection therewith be limited to 2 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

AUTHORIZATION FOR CERTAIN CONSTRUCTION AT MILITARY INSTALLATIONS

A letter from the Director, Legislative Programs, Department of Defense, transmitting a draft of proposed legislation to authorize certain construction at military installations, and for other purposes (with an accompanying paper); to the Committee on Armed Services.

CANCELLATION OF CERTAIN DEBTS DUE THE UNITED STATES BY INDIVIDUALS AND TRIBES OF INDIANS

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a copy of an order canceling certain charges existing as debts due the United States by individual Indians and tribes of Indians (with accompanying papers); to the Committee on Interior and Insular Affairs.

REPORT OF SECRETARY OF COMMERCE

A letter from the Secretary of Commerce, transmitting, pursuant to law, his annual report for the fiscal year ended June 30, 1955 (with an accompanying report); to the Committee on Interstate and Foreign Commerce.

REPORT ON BACKLOG OF PENDING APPLICATIONS AND HEARING CASES, FEDERAL COMMUNICATIONS COMMISSION

A letter from the Chairman, Federal Communications Commission, Washington, D. C., transmitting pursuant to law, a report on backlog of pending applications and hearing cases in that Commission, as of November 30, 1955 (with an accompanying report); to the Committee on Interstate and Foreign Commerce.

REPORT ON TORT CLAIMS PAID BY STATE DEPARTMENT

A letter from the Secretary of State, reporting, pursuant to law, on tort claims paid by the Department of State, during the calendar year 1955; to the Committee on the Judiciary.

REPORT OF BOARD OF ACTUARIES OF CIVIL SERVICE RETIREMENT AND DISABILITY FUND

A letter from the Chairman, United States Civil Service Commission, transmitting, pursuant to law, a report of the Board of Actuaries of the Civil Service Retirement and Disability Fund, for the fiscal year ended June 30, 1954 (with an accompanying report); to the Committee on Post Office and Civil Service.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A resolution adopted by the Knights of Columbus-Our Lady of Fatima General Assembly, Fourth Degree (Patriotic), Suffolk County, N. Y., relating to a revision of the Status of Forces Agreement; to the Committee on Foreign Relations.

A resolution adopted by the League of Alaskan Cities, at Anchorage, Alaska, relating to appropriations for authorized Federal buildings and post offices; to the Committee on Appropriations.

A resolution adopted by the League of Alaskan Cities, at Anchorage, Alaska, favoring the enactment of legislation to provide Federal insurance of municipal bonds; to the Committee on Banking and Currency.

A resolution adopted by the League of Alaskan Cities, at Anchorage, Alaska, relating to payment in lieu of taxes on Federal property, the transfer of tidelands to the Territory of Alaska, and appropriations for Alaska public works; to the Committee on Interior and Insular Affairs.

Five resolutions adopted by the League of Alaskan Cities, at Anchorage, Alaska, relating to the construction of public works in the Territory of Alaska; to the Committee on Public Works.

IMPOSITION OF QUOTAS ON IMPORTED TEXTILE SHIPMENTS—CONCURRENT RESOLUTION OF SOUTH CAROLINA LEGISLATURE

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the RECORD, and appropriately referred, a concurrent resolution of the Legislature of South Carolina, memorializing Congress to issue a directive to the Secretary of Agriculture requiring him to impose quotas on textile shipments from Japan to the United States and other foreign countries.

There being no objection, the concurrent resolution was referred to the Committee on Agriculture and Forestry, and, under the rule, ordered to be printed in the RECORD, as follows:

Concurrent resolution memorializing Congress to issue a directive to the Secretary of Agriculture requiring him to impose quotas on textile shipments to the United States from Japan and other foreign countries

Whereas the General Assembly of South Carolina is greatly concerned over the alarming number of cheap-labor goods and garments being shipped into this country from Japan and other foreign countries; and

Whereas the importation of these cheap-labor goods and garments is threatening the textile industry and the economy of this and other States: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That Congress be memorialized to issue a directive to the Secretary of Agriculture requiring him to use the authority he possesses under section 22 of the Agricultural Adjustment Act to impose quotas on textile and apparel shipments to the United States from Japan and other foreign countries; be it further

Resolved, That copies of this resolution be forwarded to the President of the United States, to each United States Senator from South Carolina, each Member of the House of Representatives of Congress from South Carolina, the Senate of the United States and the House of Representatives of the United States.

Mr. THURMOND. Mr. President, with regard to the concurrent resolution, I should like to say that 75 percent of the persons employed in industry in South Carolina are employed in the textile industry, and that the textile industry pays 80 percent of the industrial wages paid to persons in our State. We are very fearful that unless quotas are applied, as requested in the concurrent resolution, the position of the textile industry, not only in South Carolina but in the entire United States, will be jeopardized. We are very hopeful that the Secretary of Agriculture will take favorable and appropriate action, as has been asked heretofore and is requested in the concurrent resolution adopted by the Legislature of South Carolina.

IMPOSITION OF QUOTAS ON IMPORTED TEXTILE SHIPMENTS—CONCURRENT RESOLUTION OF SOUTH CAROLINA LEGISLATURE

Mr. JOHNSTON of South Carolina. Mr. President, I present, for appropriate reference, a concurrent resolution, authored by two distinguished South Carolina legislators, which has been adopted by the South Carolina House of Representatives and Senate, which memorializes the Congress to issue a directive to the Secretary of Agriculture requiring him to impose quotas on textile shipments to the United States from Japan and other foreign countries.

I should like to call to the attention of the Senate that last July I appealed to the President and to the Department of Agriculture to render aid to our textile workers and industry by putting to use section 22 of the Agriculture Adjustment Act, which empowers the President to apply textile import quotas when foreign imports threaten the existence of our cotton and textile industries.

Many months passed and no help or sympathy from this administration was forthcoming. Shortly after this session of Congress convened, the American Cotton Manufacturers Institute forwarded to Mr. Benson a petition seeking aid under this section of the law. I followed up this petition with an appeal to Mr. Benson, to give his careful consideration and sympathetic action to this petition. Only yesterday I received notice from the Department of Agriculture that it was instituting an investigation into the textile imports problem. It is gratifying that the administration has at long last recognized that a problem does exist. I sincerely hope that Mr. Benson will see the light and will recommend Presidential action before it is too late to save our textile industry.

There being no objection, the concurrent resolution was referred to the Committee on Agriculture and Forestry, and, under the rule, ordered to be printed in the RECORD, as follows:

Concurrent resolution memorializing Congress to issue a directive to the Secretary of Agriculture requiring him to impose quotas on textile shipments to the United States from Japan and other foreign countries

Whereas the General Assembly of South Carolina is greatly concerned over the alarming number of cheap-labor goods and garments being shipped into this country from Japan and other foreign countries; and

Whereas the importation of these cheap-labor goods and garments is threatening the textile industry and the economy of this and other States: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That Congress be memorialized to issue a directive to the Secretary of Agriculture requiring him to use the authority he possesses under section 22 of the Agricultural Adjustment Act to impose quotas on textile and apparel shipments to the United States from Japan and other foreign countries; be it further

Resolved, That copies of this resolution be forwarded to the President of the United States, to each United States Senator from South Carolina, each Member of the House of Representatives of Congress from South Carolina, the Senate of the United States, and the House of Representatives of the United States.

RACE RELATIONS IN THE UNITED STATES—RESOLUTION

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by the White Plains Ministerial Association, of White Plains, N. Y.

This resolution presents a fine and temperate analysis of the serious questions which now confront us in regard to civil rights. This association includes members from many denominations. Therefore, I would like to include not only the resolution itself, but the names of the men who formulated this resolution.

There being no objection, the resolution and list of members were ordered to be printed in the RECORD, as follows:

THE CHURCH IN THE HIGHLANDS,
White Plains, N. Y., December 19, 1955.

Senator HERBERT LEHMAN,
Senate Office Building,
Washington, D. C.

DEAR SENATOR LEHMAN: The following resolution of the White Plains Ministerial Association, White Plains, N. Y., is herewith presented for your consideration:

"The White Plains Ministerial Association, at a special meeting held on December 15, 1955, wishes to affirm its deep distress at the present situation of acute tension over policies with regard to race relations in the United States. We are sorely grieved at the chain of tragic events produced by this tension, such as the killing of Emmett Louis Till on August 29, and the murders of Rev. George W. Lee on May 7 and Lamar Smith on August 13 because they refused to give up their right to vote. The continuation of such acts of violence against persons and property, and the attempted intimidation of the Negro race have produced anguish not only among their victims but among good Americans everywhere, including many of their relatives and friends in our own city of White Plains, some of whom have brought the extremity of the situation to our attention.

"We appreciate the difficulties involved in the present situation, particularly as questions of school integration, fair employment, and the right to vote on the part of the Negroes come face to face with long established social traditions in certain sections of the country, but we deplore any resort to threat and violence, and pray that these questions may be faced in the spirit of conciliation and good will.

"We would especially commend many civic and religious leaders and groups of the South for their courageous stand in behalf of better relations between the races, and express our sincere hope that southern citizens themselves will increasingly lead the way to sanity and balance in this issue of such crucial importance to us all, nationally and internationally.

"We extend to those who have suffered and are suffering our deep concern and compassion.

"We respectfully and earnestly call upon the executive branch of the Federal Government and its Justice Department to take

whatever steps are necessary to insure the protection of all our citizens from mob rule and violence, and the impartial prosecution of offenders against the spirit of American justice.

"We humbly acknowledge that violations of human rights are not confined to any one section of the country. They place upon us all the obligation to repent and devote ourselves afresh to the attainment of just and righteous relations among all the peoples of our Nation."

On behalf of the White Plains Ministerial Association, I remain,

Respectfully yours,

NEHEMIAH BOYNTON III,
Secretary-Treasurer.

The following are the members of the White Plains Ministerial Association who have approved the foregoing resolution and authorized the use of their signatures to it:

Rev. Norman Andre, Trinity Lutheran Church, 188 Orawaupum Street.

Mr. Fred R. Bentley, Y. M. C. A., 250 Mamaroneck Avenue.

Dr. James A. Davidson, First Baptist Church, 79 Maple Avenue.

Dr. Arthur W. Evans, Chatterton Hill Church, Chatterton Avenue.

Rev. C. Ronald Garmey, St. Bartholomew's Church, 82 Prospect Street.

Rabbi Max Gelb, Temple Israel Center, Old Mamaroneck Road.

Rabbi Murray Grauer, Hebrew Institute of White Plains, 20 Greenridge Avenue.

Rev. Ralph W. Gullette, Mount Hope A. M. E. Zion Church, 99 Main Street.

Capt. Edward M. Allen, Salvation Army, 13 Orawaupum Street.

Rev. Robert W. Putsch, Ridgeview Congregational Church, Ridgeview Avenue.

Dr. Emanuele Santi, Castle Heights Methodist Church, 1 North Church Street.

Rabbi David Greenberg, Westchester Reform Temple, 1 Jane Street, Hartsdale.

Rabbi Lawrence Schwartz, Rabbi Kenneth Stein, Jewish Community Center, 252 Soundview Avenue.

Dr. Walter L. Scranton, Rev. William Marlowe, Memorial Methodist Church, 273 Main Street.

Rev. Thomas H. Slater, Bethel Baptist Church, 1 Fisher Avenue.

Dr. Arthur S. Wheelock, Rev. Nehemiah Boynton III, Church in the Highlands, Bryant and Longview Avenues.

Rev. William T. Young, Calvary Baptist Church, 120 Brookfield Street.

Rev. Wilfred Boughton, St. Martha's Episcopal Church, Edgepark Road.

RESOLUTION OF SHEYENNE VALLEY ELECTRIC COOPERATIVE, INC.

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by the Sheyenne Valley Electric Cooperative, Inc., of Finley, N. Dak.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas our Senators from North Dakota, both Senator BILL LANGER and Senator MILTON YOUNG, have continuously supported favorable legislation for rural electrification in the past; and

Whereas it is very important to the Sheyenne Valley Electric Cooperative's existence that these two Senators continue to support this type of legislation; and

Whereas these two able, honest men have been and will, from past record, continue to support the rural electrification members of North Dakota: Now, therefore, be it

Resolved, That we, the board of directors of Sheyenne Valley Electric Cooperative, Inc., Finley, N. Dak., express our gratitude and thanks to these two great Senators who have unselfishly given their all for the rural and urban people of North Dakota.

Respectfully submitted.

SHEYENNE VALLEY ELECTRIC COOPERATIVE, INC.,
JULIUS ANDERSON,
President, Board of Directors.

HYDROELECTRICAL PLANT AT GARRISON DAM, N. DAK.—RESOLUTION

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD resolutions adopted by the State Water Conservation Commission in the State of North Dakota, together with letters to me transmitting the same.

There being no objection, the letters and resolutions were ordered to be printed in the RECORD, as follows:

STATE WATER CONSERVATION COMMISSION,
Bismarck, N. Dak., September 30, 1955.

Hon. WILLIAM LANGER,
United States Senator,
Washington, D. C.

DEAR SENATOR LANGER: Enclosed herein is a resolution passed by the members of the North Dakota State Water Conservation Commission at their regular meeting held on September 23, 1955. The resolution pertains to the completion of the hydroelectric plant at the Garrison Dam located near Riverdale, N. Dak. It requests that the remaining two units of the powerplant be installed as soon as practicable.

Your kind consideration of this resolution will be greatly appreciated by the people of North Dakota and the other States that are benefited through this project.

Sincerely yours,

STATE WATER CONSERVATION COMMISSION,
MILO W. HOISVEEN,
Chief Engineer, State Engineer.

RESOLUTION OF NORTH DAKOTA STATE WATER CONSERVATION COMMISSION REQUESTING AND URGING THE EARLY COMPLETION OF THE MAXIMUM POWER FACILITIES AT THE GARRISON DAM

Whereas the huge multipurpose Garrison Dam and reservoir project on the Missouri River in North Dakota is now entering the final stages of construction; and

Whereas the project includes a hydroelectric plant designed to accommodate 5 power-generating units of 80,000 kilowatts capacity each, of which 3 are planned for initial installation in the next year, the remaining 2 units to be installed as and when increased power demand may require and budgetary provision therefor has been made; and

Whereas the 1st session of the 84th Congress again affirmed the position of previous Congresses—that the Garrison Reservoir was authorized to be constructed and operated at a maximum normal pool elevation of 1,850 feet, mean sea level—and directed that it be completed to operate at that height in order that the maximum benefits for which it was authorized may be obtained from the project; and

Whereas statements and testimony of qualified witnesses appearing before committees of Congress have agreed that there is a rapidly developing need for additional power capacity to meet an increased demand for power production in the Missouri River Basin, and they have urged that such need and demand be first met by the early installation of the two final authorized power-generating units in the Garrison Dam powerplant, where room for them has been provided, and where an adequate water supply for their operation will soon become available with an 1,850-foot operating reservoir level; and

Whereas it further appears from hearings before committees of the current Congress that the Bureau of the Budget has anticipated such additional power need and has indicated that extra power units could be installed faster and cheaper in the powerplant at the Garrison Dam, where space therefor has been provided, than at another point in the basin where a second powerplant would have to be built: Now, therefore, be it

Resolved by the North Dakota State Water Conservation Commission, in regular meeting held in the State capitol, Bismarck, N. Dak., August 23, 1955, That the United States Army Corps of Engineers, the Assistant Secretary of Interior for Water and Power, and the Bureau of the Budget be, and they are hereby, petitioned and urged to forthwith develop, approve, and recommend adequate estimates for the planning, designing, construction and installation of the 2 final, of a total of 5, authorized 80,000-kilowatt power units in the Garrison Dam powerplant, and the North Dakota Members in Congress are hereby respectfully requested to do everything possible to obtain such estimates and to vigorously support their approval in the next session of Congress; and be it further

Resolved, That copies hereof be mailed to the President, the Assistant Secretary of the Interior for Water and Power, the Chief of Engineers, the Director of Bureau of the Budget, Senators WILLIAM LANGER and MILTON R. YOUNG, and Representatives USHER L. BURDICK and OTTO KRUEGER, all of Washington, D. C.

STATE WATER CONSERVATION COMMISSION,
Bismarck, N. Dak., September 30, 1955.

Hon. WILLIAM LANGER,
United States Senator,
Senate Office Building,
Washington, D. C.

DEAR SENATOR LANGER: Enclosed herein is a copy of a resolution passed by the members of the North Dakota State Water Conservation Commission at their regular meeting held on September 23, 1955. The resolution pertains to the excellent and sympathetic manner in which this committee conducted hearings in Devils Lake on September 20 and 21, 1955. All those present were impressed by the friendly manner in which the hearings were conducted.

With the kindest regards,

Sincerely yours,

STATE WATER CONSERVATION COMMISSION,
MILO W. HOISVEEN,
Chief Engineer, State Engineer.

RESOLUTION OF NORTH DAKOTA STATE WATER CONSERVATION COMMISSION COMMENDING SUBCOMMITTEE OF HOUSE COMMITTEE ON THE JUDICIARY FOR HOLDING HEARINGS IN NORTH DAKOTA

Whereas a subcommittee of the Committee on the Judiciary, House of Representatives, 84th Congress, 1st session, composed of the Honorable Thomas J. Lane, of Massachusetts, chairman; the honorable Edwin E. Willis, of Louisiana; and the Honorable Usher L. Burdick, of North Dakota, accompanied by General Counsel Walter R. Lee, did on September 20–21, 1955, conduct hearings in Devils Lake, N. Dak., on H. R. 6421, sponsored by Congressman BURDICK, for the relief of certain individuals whose land was flooded by action of the Federal Government in the Lake Alice area in Ramsey County, N. Dak.; and

Whereas the holding of such hearings in Devils Lake was a great convenience to the claimants who wished to attend, and a substantial saving of time and money to the witnesses; and

Whereas it was developed at such hearings that the affected and contributing areas need to be further surveyed and investigated in

order to determine what measures for the future protection from recurring floods should be proposed, toward which investigational work the current Congress appropriated $10,000 to the Corps of Engineers for the initiation thereof: Now, therefore, be it

Resolved by the North Dakota State Water Conservation Commission in regular meeting assembled in the State capitol, Bismarck, N. Dak., this 23d day of September 1955, That our Congressman, the Honorable USHER L. BURDICK, be, and he is hereby, commended for inviting, and the chairman, the Honorable THOMAS J. LANE, be, and he is hereby, commended for scheduling and holding the hearings in Devils Lake, and all the members of the subcommittee are commended for the sympathetic manner in which the proceedings were conducted, for their personal interest in the plight of the claimants, and for taking time to visit flooded areas; and be it further

Resolved, That the subcommittee be, and it is hereby, requested to use its good offices to urge the Corps of Engineers to present adequate estimates, and the Bureau of the Budget to approve and recommend the same for appropriation by the next session of Congress, for the early completion of the needed and necessary surveys, investigations, and reports, already initiated, to the end that the claimants may know as soon as possible what remedial measures may be proposed for their future security from recurring damages by flooding; and be it further

Resolved, That copies hereof be mailed to the members of the subcommittee, to the North Dakota Members in Congress, and to the several individuals listed in said bill.

DEVASTATION RESULTING FROM DISASTROUS FLOODS AND OTHER NATURAL CAUSES — RESOLUTION

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by the Loyal Order of Moose, together with a letter to me transmitting the same.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

SUPREME LODGE OF THE WORLD,
LOYAL ORDER OF MOOSE,
Mooseheart, Ill., October 25, 1955.

Hon. WILLIAM LANGER,
United States Senator,
Washington, D. C.

DEAR SENATOR LANGER: The attached is a copy of a resolution unanimously adopted by the Supreme Lodge of the World, Loyal Order of Moose, during our convention which was held in Philadelphia, Pa., August 26–September 1, 1955.

Your endorsement of our request will be sincerely appreciated and at the next session of Congress we trust that the suggested legislation will receive your support.

Sincerely yours,

GEORGE EUBANK,
Supreme Secretary.

RESOLUTION MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO TAKE COGNIZANCE OF THE ACUTE PROBLEMS ATTENDING THE RECENT DEVASTATION RESULTING FROM DISASTROUS FLOODS AND OTHER NATURAL CAUSES IN THE NORTHEASTERN STATES AND ALONG THE ATLANTIC SEABOARD AND TO LEND SUPPORT FOR APPROPRIATE ACTION TO MAKE AVAILABLE ALL NECESSARY FUNDS TO AID THE STRICKEN AREAS, TO HAVE FLOOD CONTROL AND OTHER PREVENTIVE MEASURES OF THE FEDERAL GOVERNMENT SURVEYED, AND TO FINANCE THE CONSTRUCTION OF PROTECTIVE WORKS RECOMMENDED TO FORESTALL THE RECURRENCE OF THESE CALAMITOUS VISITATIONS UPON THE AMERICAN PEOPLE

Whereas there has been repeated recurrence of those natural phenomena in the form of hurricane tides, concentrated rainfalls and heavy snows which have caused hundreds of deaths and billions of dollars of property damage; and

Whereas the Federal Government has long recognized the need for and consistently carried out flood control and small watershed development programs, including measures to conserve precious water resources and preventive measures to safeguard our citizens and communities against the damages and dangers of disastrous floods; and

Whereas the efficacy of such programs has been forcefully demonstrated by such instances as those in the Connecticut River Basin where the construction of a single reservoir in the present area of concentrated rainfall is credited with having saved $11,500,000 at a cost of only $3,275,000; while the completion of small levy projects in the same locality is credited with having saved lives and an estimated $33 million of property at an approximate cost of only $20 million; and

Whereas there has been a regrettable reluctance upon the part of recent Congresses to appropriate the necessary funds required to construct recommended and authorized flood-control and watershed projects which, in the latest disastrous instances, might have resulted in the saving of hundreds of lives, the prevention of inventory and property damage and serious injury to important industrial concentrations for the production of essential defense and civilian needs: Therefore be it

Resolved, That the Congress of the United States be memorialized to take cognizance of the acute problems presented and to lend its support to secure appropriate action toward the attainment of the following goals:

1. That the Secretary of the Army, the Secretary of the Interior, and the Secretary of Agriculture instruct the Corps of Engineers, the Bureau of Reclamation and the Soil Conservation Service to undertake immediate investigations of the problems of protecting the cities and towns and other areas of the United States which have suffered recurrent damages from floods, including a study and reappraisal of reports, surveys, and recommendations that have already been prepared;

2. The authorization to construct, operate, and maintain such flood control dams and other protective devices as such investigation, study, and surveys may recommend and the States and municipalities within the affected areas shall approve and accept; and

3. Authorization to the appropriate agencies of the Federal Government to enter into agreements with the States and municipalities of interest to share the cost of construction and upkeep of such protective works; and be it further

Resolved, That the Congress urge upon the Secretaries of the Army, Department of the Interior, and the Department of Agriculture that they proceed with all expedition to complete such flood-control programs as have been recommended, approved and for which the required funds have been appropriated; and be it further

Resolved, That the Senators and Representatives in the Congress of the United States be, and they hereby are, respectively requested to urge upon Congress the expeditious passage of such legislation as may be needed to make all funds available as may be required to aid the stricken States, cities, and towns suffering from the latest flood disaster, and such additional funds as may be required to finance the protective works and other flood-control measures already recommended or which may in the future be recommended by the Corps of Engineers, the Bureau of Reclamation, and the Soil Conservation Service, approved by the Congress, and the States and municipalities of interest; and be it further

Resolved, That the supreme secretary of the Loyal Order of Moose be, and he is hereby directed to transmit copies of this resolution to the President of the Senate, the Speaker of the House of Representatives, the Secretary of the Army, the Secretary of the Interior, the Secretary of Agriculture, and to the Senators and Representatives in the Congress of the United States.

RAY V. GIBBENS,
Supreme Governor.

Attest:

GEO. EUBANK,
Supreme Secretary.

EXTENSION OF SUGAR ACT—RESOLUTION OF GARRISON DIVERSION CONSERVANCY DISTRICT, NORTH DAKOTA

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by the Garrison Diversion Conservancy District, North Dakota, together with a letter to me transmitting the same.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

GARRISON DIVERSION
CONSERVANCY DISTRICT,
Bismarck, N. Dak., November 30, 1955.

Senator WILLIAM LANGER,
Senate Office Building,
Washington, D. C.

DEAR SENATOR LANGER: Enclosed herein is a copy of a resolution passed by the board of directors of the Garrison Diversion Conservancy District on November 2, 1955, relative to the reenactment of the Sugar Act.

The board of directors of the conservancy district would appreciate having your favorable consideration of this resolution in connection with the reenactment of the Sugar Act at the coming session of Congress.

Yours very truly,

VERNON S. COOPER,
Secretary-Treasurer.

RESOLUTION, REENACTMENT OF SUGAR ACT ADOPTED BY BOARD OF DIRECTORS OF GARRISON DIVERSION CONSERVANCY DISTRICT, NORTH DAKOTA, NOVEMBER 2, 1955

Whereas the Sugar Act of 1948, as amended, will expire on December 31, 1956, and consequently its protective provisions will apply only to sugar refined from beets grown in 1955 and sold in 1956; and

Whereas reenactment of the Sugar Act, with retention of protective quota provisions, as well as provisions designed to bring about a parity price for sugar beets produced in domestic areas, is essential; and

Whereas the sugar-beet crop is a major and important crop on irrigation projects in that it furnishes a reliable cash crop badly needed on both new projects to meet high development costs and on old projects to meet the increasing expenses of irrigation farming; and

Whereas growers of sugar beets have been subjected to severe restrictions under the Sugar Act of 1948, as amended, to participate in the expanding market for sugar in this country; and

Whereas in North Dakota, it is proposed to irrigate up to 2 million acres of land under the Garrison diversion project on which land the sugar-beet crop could be an important crop and would provide new irrigation farmers with a cash crop needed to better assure the development and operation of these new irrigated farms; and

Whereas the Garrison Diversion Conservancy District was created by the North Dakota Legislature for the purpose of promoting the development of the Garrison diversion project: Now, therefore, be it

Resolved, That the board of directors of said Garrison Diversion Conservancy District hereby expresses its support of legislation which will:

1. Provide sugar quotas that will provide an opportunity for farmers on new, as well as established, irrigation projects, who desire to

add the beet-growing enterprise to their farming program.

2. Provide sugar quotas to domestic beet areas that will restore full opportunity for full production among established beet growers.

3. Provide that in sugar-quota allocations such division of the steadily increasing American market be made as will create a basis for additional sugar-processing facilities in areas adapted to beets and in which farmers indicate a desire to grow beets; be it further

Resolved, That copies of this resolution be sent to each Member of the congressional delegation from North Dakota and to the chairman of the Senate Finance Committee and the chairman of the House Committee on Agriculture.

GARRISON DAM, N. DAK.—RESOLUTIONS OF GREATER NORTH DAKOTA ASSOCIATION

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD resolutions adopted by the Greater North Dakota Association, together with letters to me transmitting the same.

There being no objection, the letters and resolutions were ordered to be printed in the RECORD, as follows:

GREATER NORTH DAKOTA ASSOCIATION,
Fargo, N. Dak., December 12, 1955.

Hon. WILLIAM LANGER,
United States Senator,
Senate Office Building,
Washington, D. C.

DEAR SENATOR LANGER: Enclosed is a resolution unanimously passed by the board of directors of GNDA pertaining to the early completion of the maximum power facilities at the Garrison Dam.

It is respectfully requested that you seek to advance the ideas contained in the resolution.

Yours very truly,
HOMER W. LUDWICK,
Executive Secretary.

RESOLUTION OF GREATER NORTH DAKOTA ASSOCIATION REQUESTING AND URGING THE EARLY COMPLETION OF THE MAXIMUM POWER FACILITIES AT THE GARRISON DAM ON THE MISSOURI RIVER

Whereas the huge multipurpose Garrison Dam and Reservoir project on the Missouri River in North Dakota is now entering the final stages of construction; and

Whereas the project includes a hydroelectric plant designed to accommodate 5 power-generating units of 80,000 kilowatts capacity each, of which 3 are planned for initial installation during next year, the remaining 2 units to be installed as and when increased power demand may require and budgetary provision has been made therefor; and

Whereas the 1st session of the 84th Congress again affirmed the position of previous Congresses—declaring that the Garrison Reservoir was authorized to be constructed and operated at a maximum normal pool elevation of 1,850 feet mean sea level—and directed that it be completed to operate at that height in order that the maximum benefits for which it was authorized may be obtained from the project; and

Whereas statements and testimony of qualified witnesses appearing before committees of Congress have agreed that there is a fast-developing need for additional power capacity to meet an increased demand for power production in the Missouri River Basin, and they have urged that such need and demand be first met by the early installation of the two final authorized power generating units in the Garrison Dam powerplant, where room therefor has been provided, and where an adequate supply of water for their operation will soon become available with the 1,850-foot operating reservoir level; and

Whereas it further appears from hearings before committees of the 84th Congress that the Bureau of the Budget has anticipated such additional power need and has indicated that extra power units could be installed faster and cheaper in the powerplant at the Garrison Dam, where housing space for them has been provided, than at another point in the basin where a second powerplant would have to be built: Now, therefore, be it

Resolved by the board of directors of the Greater North Dakota Association, North Dakota State Chamber of Commerce, in annual meeting in the city of Bismarck, N. Dak., November 28–29, 1595, That the Secretary of the Interior, the United States Corps of Engineers, and the Bureau of the Budget be, and they are hereby petitioned and urged to forthwith develop, approve, and recommend adequate estimates for the planning, designing, construction, and installation of the 2 final (of a total of 5) authorized 80,000-kilowatt electric power generating units in the Garrison Dam powerplant, and the North Dakota Members in Congress are hereby respectfully requested to do everything possible to obtain such estimates and to vigorously support their approval by the next session of Congress; and be it further

Resolved, That copies hereof be mailed to the President, the Secretary of the Interior, the Assistant Secretary of the Interior for Water and Power, the Chief of Engineers, the Director of the Bureau of the Budget, Senators WILLIAM LANGER and MILTON R. YOUNG, and Representatives USHER L. BURDICK and OTTO KRUEGER.

GREATER NORTH DAKOTA ASSOCIATION,
Fargo, N. Dak., December 12, 1955.

Hon. WILLIAM LANGER,
United States Senator, Senate Office Building, Washington, D. C.

DEAR SENATOR LANGER: Enclosed is a resolution unanimously passed by the board of directors of GNDA pertaining to an appropriation of Federal funds for providing replacement of municipal facilities of the city of Williston.

It is respectfully requested that you seek to advance the ideas contained in the resolution.

Yours very truly,
HOMER W. LUDWICK,
Executive Secretary.

RESOLUTION OF GREATER NORTH DAKOTA ASSOCIATION SUPPORTING AN APPROPRIATION OF FEDERAL FUNDS FOR PROVIDING REPLACEMENT OF MUNICIPAL FACILITIES OF THE CITY OF WILLISTON, N. DAK., DAMAGED, RENDERED USELESS, OR MADE NECESSARY DUE TO THE CONSTRUCTION OF THE GARRISON DAM AND RESERVOIR PROJECT ON THE MISSOURI RIVER, OR FOR REIMBURSING THE CITY THEREFOR

Whereas the operation of the Garrison Dam and Reservoir project works on the Missouri River in North Dakota to their maximum height and capacity will adversely affect, damage, and render useless many of the essential municipal facilities of the city of Williston, N. Dak., and may require additional and new facilities; and

Whereas in order to replace, relocate, and reconstruct such facilities to adequately serve the present and foreseeable needs of the municipality it will become necessary, among other things, to:

1. Relocate, alter, and reconstruct the water treatment plant;

2. Relocate, extend, alter, and reconstruct the raw water intake facilities;

3. Locate, design, and construct sewage-treatment facilities;

4. Replace, relocate, and construct the garbage dump;

5. Replace and reconstruct the powerline to the raw water intake and to the treatment plant; and

Whereas it appears that most, if not all, of the cost of providing such replacements and new facilities is the responsibility and obligation of, and should therefore be fully borne by, the Federal Government because of the construction and operation of the Garrison Dam and Reservoir project: Now, therefore, be it

Resolved by the board of directors of the Greater North Dakota Association, the North Dakota State Chamber of Commerce, in annual meeting in the city of Bismarck, N. Dak., November 28–29, 1955, That this association actively support an appropriation of Federal funds for the complete relocation, replacement, and reconstruction of the municipal facilities of the city of Williston, N. Dak., adversely affected, damaged, or rendered useless or inoperable due to the construction and operation of said public-works project, as well as for providing such new facilities as may become necessary by reason thereof, all of such replacements and necessary new facilities to be of sufficient size and capacity to adequately serve the present and foreseeable needs and requirements of said municipality, or for the full reimbursement therefor in the event said city provides such replacements and necessary new facilities; and be it further

Resolved, That copies hereof be mailed to the City Commission of Williston, the State water conservation commission, the Chief of Engineers, Corps of Engineers, United States Army; to Senators WILLIAM LANGER and MILTON R. YOUNG; and to Representatives USHER L. BURDICK and OTTO KREUGER.

POST-OFFICE SERVICE AT FORT DAVIS STATION, WASHINGTON, D. C.—RESOLUTION

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by representatives from various citizens associations in Washington, D. C., concerning restoration of full post-office service at the Fort Davis station, in Washington, D. C., together with a letter to me transmitting the same.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *December 12, 1955.*

Senator WILLIAM LANGER,
Senate Office Building,
Washington, D. C.

DEAR SENATOR LANGER: The attached resolution passed by the Committee for the Restoration of Full Post Office Service at the Fort Davis station in regular meeting assembled in Washington, D. C., on December 7, 1955. The committee is composed of representatives from the various citizens associations affected by the Fort Davis station post office changes.

We believe the resolution speaks for itself, and describes the lowest standards of postal service the Nation's Capital has ever experienced. The area effected is one of the fastest growing as well as one of the highest tax-paying areas in the District.

We request that you as a member of the Post Office and Civil Service Committee give this matter your prompt attention.

Respectfully yours,
HOWARD O. LORENZEN,
Chairman.

Whereas the service of retaining nondelivered packages has been discontinued at the Fort Davis station; and

Whereas such service has been transferred to the Anacostia station to the detriment of citizens residing in the area, who must now

travel from 1 to 2½ miles to pick up packages; and

Whereas many of the residents in the area formerly served by the Fort Davis station (both husbands and wives) are employed and are not at home during normal delivery hours, which necessitates their calling at the Anacostia station for undelivered packages; and

Whereas there are totally inadequate public and no private parking facilities in the area of the Anacostia station, so that patrons suffer grave difficulty in calling for packages; and

Whereas the inconvenience of reaching the Anacostia station by public transportation which from some parts of the Fort Davis area necessitates the use of three buses each operating on a 30-minute schedule was recognized by the initial establishment of the Fort Davis station; and

Whereas the majority of the mail carriers formerly operating from the Fort Davis station now operate from the Anacostia station, causing serious delays and inconveniences in the delivery of all classes of mail, so that mail deliveries have been as late as 5 o'clock in the afternoon; and

Whereas the interior congested condition in the sorting of mail at the Anacostia station has resulted in a delay in the receiving of mail from 2 to 5 days; and

Whereas the inconveniences and delays suffered by patrons of the Anacostia station can hardly justify the economies effected by the change in status of the Fort Davis station: Now, therefore, be

Resolved, That the Committee for the Restoration of Full Post Office Service at the Fort Davis station, in regular meeting assembled in Washington, D. C., on December 7, 1955, hereby urges that the United States Post Office Department restore full and complete service at the Fort Davis station; and further

Resolved, That a copy of this resolution shall be forwarded to the United States Post Office Department, and all members of the House and Senate Post Office and Civil Service Committees.

REPLACEMENT OF MUNICIPAL FACILITIES FOR CITY OF WILLISTON, N. DAK.—RESOLUTION

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by the North Dakota State Water Conservation Commission, supporting an appropriation of Federal funds for providing replacement of municipal facilities at Williston, N. Dak., together with a letter to me transmitting the same.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

STATE WATER CONSERVATION COMMISSION,
Bismarck, N. Dak., December 20, 1955.

Hon. WILLIAM LANGER,
United States Senator,
Washington, D. C.

DEAR SENATOR LANGER: The enclosed resolution pertains to the replacement of municipal facilities for the city of Williston, N. Dak. The facilities are required as a result of the construction of the Garrison Dam and reservoir. Your support of an appropriation permitting the replacement of these facilities will be greatly appreciated by the State Water Conservation Commission and the people being affected by these necessary alterations.

Sincerely yours,
STATE WATER CONSERVATION COMMISSION,
MILO W. HOISVEEN,
Chief Engineer, State Engineer.

RESOLUTION OF NORTH DAKOTA STATE WATER CONSERVATION COMMISSION SUPPORTING AN APPROPRIATION OF FEDERAL FUNDS FOR PROVIDING REPLACEMENT OF MUNICIPAL FACILITIES AT WILLISTON, N. DAK.

Whereas waters of the Missouri River, when impounded in the reservoir of the Garrison Dam to the maximum authorized level, will flood and render incapable of operation utilities of the city of Williston which are essential for the preservation of public welfare and protection of property therein, and without which the city can not carry on its governmental or proprietary functions; and

Whereas it is the opinion of the members of this commission that the Federal Government is, and should be, obligated to bear the cost of replacing municipal facilities adequate for the requirements of the city of Williston and the inhabitants thereof and commensurate with foreseeable future needs: Now, therefore, be it

Resolved by the North Dakota State Water Conservation Commission in meeting assembled this 9th day of December 1955, That Congress be and is hereby respectfully requested to appropriate and make available funds for the replacement of utilities and facilities now maintained and operated by the city of Williston in its governmental and proprietary capacities which facilities or utilities will be impaired or rendered useless when waters of the Missouri River will be impounded in the Garrison Reservoir at or near the authorized pool level thereof; and be it further

Resolved, That the Secretary of the commission be and he is hereby directed to mail a copy of this resolution to the Director of the Bureau of Budget, the Congressional Committees on Appropriations, the Chief of Engineers, Corps of Engineers, United States Army, to Senators WILLIAM LANGER and MILTON R. YOUNG, and to Representatives USHER L. BURDICK, and OTTO KRUEGER.

NINETY PERCENT OF PARITY—RESOLUTION

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by the Farmers Union Local of Wells County, N. Dak., which contains the names of those signing the resolution.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

VALHALLA LOCAL, NO. 67,
Wells County, N. Dak., December 10, 1955.

Hon. WILLIAM LANGER,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR: It is hereby resolved by the members of this farmers union local to command our Senators and Representatives to work for at least 90 percent of parity for all farm products. The farmer's income is getting smaller, while big business is enlarging. You should be realizing by now that we are paying more for what we buy and getting less and less for products we sell. This cannot continue for very long, or every small farmer will be driven from the farm.

RESOLUTIONS COMMITTEE,
GUST ANDERSON,
ARTHIE FINGERSON,
LYNN JORDRE,
LESTER LARSON,
President.
VERNON D. PRANKS,
Secretary.

REPORT OF A COMMITTEE

The following report of a committee was submitted:

By Mr. YOUNG, from the Committee on Agriculture and Forestry:

S. 2884. A bill to amend the wheat marketing quota provisions of the Agricultural Adjustment Act of 1938, as amended; with amendments (Rept. No. 1409).

BILLS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MURRAY:

S. 2994. A bill for the relief of Keith A. Botterud; to the Committee on the Judiciary.

By Mr. MALONE:

S. 2995. A bill for the relief of Roland F. Petersen; to the Committee on the Judiciary.

By Mr. ROBERTSON:

S. 2996. A bill to amend the Revised Statutes, as amended, relating to reports required to be made by national banking associations; to the Committee on Banking and Currency.

By Mr. AIKEN:

S. 2997. A bill to amend the Agricultural Act of 1954, as amended, by providing for the further acceleration of the brucellosis eradication program; to the Committee on Agriculture and Forestry.

By Mr. DOUGLAS:

S. 2998. A bill for the relief of Else Tove Mistach;

S. 2999. A bill for the relief of Modesto Padilla-Ceja and his wife, Maria Padilla-Toscano; and

S. 3000. A bill for the relief of Francesco Zammuto; to the Committee on the Judiciary.

By Mr. HUMPHREY:

S. 3001. A bill to stabilize the relationship between prices of manufactured milk and all milk sold wholesale by farmers; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. HUMPHREY when he introduced the above bill, which appear under a separate heading.)

By Mrs. SMITH of Maine:

S. 3002. A bill to provide for the conveyance to the State of Maine of certain lands located in such State; to the Committee on Armed Services.

By Mr. LANGER:

S. 3003. A bill to amend the Natural Gas Act; to the Committee on Interstate and Foreign Commerce.

STABILIZATION OF RELATIONSHIP BETWEEN PRICES OF CERTAIN MILK

Mr. HUMPHREY. Mr. President, I introduce, for appropriate reference, a bill to stabilize the relationship between prices of manufacturing milk and all milk sold wholesale by farmers.

Whatever the support level may be on dairy products, the slight change proposed in this measure is needed to make that support meaningful.

All the bill does is to provide as follows:

For the purpose of determining the support price, the parity equivalent of manufacturing milk shall be computed at 88½ percent of parity for all milk sold wholesale by farmers.

This does not mean supporting dairy products at 88½ percent of parity, as desirable as that might mean. All it does mean is designating within the law

a fair relationship ratio between the parity equivalent price for milk used for manufacturing purposes and the parity price for all milk sold wholesale.

The Department of Agriculture does not compute directly a parity price for milk used for manufacturing purposes, only a parity price on all milk sold wholesale. In lieu of a parity price for milk used for manufacturing purposes, USDA computes a parity price equivalent. Such parity price equivalent is computed as follows: The parity price for all milk sold wholesale multiplied by the ratio between the price for all milk sold wholesale and the price of milk used for manufacturing purposes.

Establishment of a parity price equivalent was made for the first time after the enactment of the Agricultural Act of 1949. USDA used the prices during the 30-month base period of July 1946 and December 1948 to determine the ratio, coming out with the figure of 88.5 percent which I am proposing now be maintained.

The price of milk used for manufacturing purposes during that 30-month period averaged $4.10. The price of all milk sold wholesale for the same period was $4.63. That ratio was accepted by the Department of Agriculture as a fair relationship, a ratio of 88.5 percent. On that basis the parity price equivalent for milk used for manufacturing purposes was established in April 1953, at $4.15.

Later a new ratio was calculated on the base period of 1946–53, a ratio of only 84.1 percent. In 1955, the ratio was again revised downward on the base period of 1946–54 to 83.7 percent.

The Department can and has kept the support price constant in terms of dollars and cents. However, it shows an unjustified statistical improvement to farmers by expressing its constant support price level as a percent of a lower and lower parity equivalent price for manufactured milk, which in turn is calculated from a ratio with a constantly reducing base.

All I am asking is that the ratio be restored to that originally computed, and that it be retained at the 88.5 percent, regardless of the support level established by law.

To illustrate the misleading effect of the lowering of these ratios while the actual support price remains the same, I ask that the attached table be printed at the conclusion of my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Date	Parity price for all milk sold wholesale	Base period	Ratio	Parity equivalent price	Support price	Support price as a percentage of parity equivalent	Support price as a percentage of parity for all milk sold wholesale
			Percent				
April 1953	$4.69	1946–48	88.5	$4.15	$3.74	0.90	0.80
April 1954	4.75	1946–48	88.5	4.20	3.15	.75	.66
May 1954	4.77	1946–53	84.1	4.01	3.15	.785	.66
May 1955	4.68	1946–54	83.7	3.93	3.15	.802	.67

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3001) to stabilize the relationship between prices of manufacturing milk and all milk sold wholesale by farmers, introduced by Mr. HUMPHREY, was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

DISAPPROVAL OF COMMUNIST PERSECUTION OF UKRAINIAN CHRISTIANS

Mr. HUMPHREY. Mr. President, next Sunday, January 22, 1956, will mark the 38th anniversary of the Ukrainian Declaration of Independence, proclaimed in 1918 in Kiev, the ancient capital of Ukraine. The democratic republic brought to life by this declaration was destined to fall before Communist armies a few years later, but it gained de facto recognition of Great Britain, France, and other European powers.

The brief life of the Ukrainian national republic does not diminish the significance of its existence, because the spirit which gave it birth lives on in the hearts and minds of the Ukrainians still living under Communist tyranny.

The extent of that tyranny is best exemplified in the tragic history of Ukrainian Christianity under Communist rule. In recent months statements sent to me by my fellow Minnesotans of Ukrainian descent have been a poignant reminder of the courage and faith of 20th-century martyrdom and of our casual tendency to allow such great sacrifice to go by unnoticed and unappreciated.

As a fitting testimonial to that tragic history, Mr. President, I am proud to submit for appropriate reference a resolution which will recite this history of Christian persecution during the last 35 years. The resolution asks that the Senate explicitly condemn this terror and oppression and that we call upon the State Department and the American delegation to the United Nations to ask to have this issue placed on the agenda of the next United Nations Assembly session.

The PRESIDENT pro tempore. The resolution will be received and appropriately referred.

The resolution (S. Res. 189) was received and referred to the Committee on Foreign Relations, as follows:

Whereas Christianity has existed in the Ukraine for more than a thousand years fostering in the Ukrainian people a profound faith in God and begetting in them an abiding moral force; and

Whereas, beginning in December 1917, Communist Russia has sought to extinguish Christianity from the Ukraine by terror, antireligious propaganda, and persecution of the Ukrainian people; and

Whereas the church was first attacked in eastern Ukraine, and by 1931 the Communists had completely liquidated the entire Ukrainian Orthodox Church, and had arrested and murdered over 3,000 Ukrainian Orthodox bishops and priests, and had arrested, tortured, and imprisoned hundreds of thousands of the faithful; and

Whereas, during the first occupation of western Ukraine (between 1939 and 1941), the Communists continued their anti-Christian persecutions, murdering 27 Ukrainian priests and arresting many more, even though article 123 of the Soviet Constitution, which is applicable to the Ukraine, was in effect and specifically recognizes freedom of religion; and

Whereas during the second occupation, beginning in 1945, the Communists continued the anti-Christian persecutions in the Ukraine by enjoining the legal continuance of the Ukrainian Catholic Church in the Ukraine in 1946, and imprisoning and murdering Ukrainian Catholic bishops; and

Whereas 2,000 secular priests and monks in the Ukraine have been arrested and deported to slave-labor camps for refusing to acknowledge the Patriarch of the Russian Orthodox Church as their head, such church being now subservient to the Communists; and

Whereas the Communists have exterminated all 5 dioceses of the Ukrainian Catholic Church, and desecrated 4,400 of its churches and chapels, together with 195 religious houses; and

Whereas the Communists continue to oppress mercilessly the Ukrainian laity for remaining steadfast to its Christian heritage, church, and faith: Now, therefore, be it

Resolved, That the Senate hereby expresses its profound disapproval and condemnation of the anti-Christian terror and persecution inflicted by the Communist rulers of Russia on the Ukrainian Christians; and be it further

Resolved, That the Senate requests the President to instruct our delegates to the United Nations to take whatever steps may be necessary to place this tragic record of Communist terror and persecution against the Ukrainian Christians before the United Nations for consideration and such action as may be appropriate.

RESOLUTIONS TAKEN FROM THE CALENDAR AND REFERRED

Mr. CLEMENTS. Mr. President, there are five committee resolutions on the calendar which must be acted upon by the Committee on Rules and Administration. In order to expedite such action, I now ask unanimous consent that Calendar No. 1413, Senate Resolution 184, to provide additional funds for the Committee on Interior and Insular Affairs; Calendar No. 1415, Senate Resolution 185, extending the time for filing a report by the Subcommittee on Disarmament; Calendar No. 1416, Senate Resolution 164, authorizing the Committee on Post Office and Civil Service to employ a temporary additional clerical assistant; Calendar No. 1417, Senate Resolution 154, extending the time for a study of the Government employees security program, and Calendar No. 1418, Senate Resolution 153, extending the time for an investigation of the administration of the civil-service system and the postal service, be taken from the calendar and referred to the Committee on Rules and Administration.

The PRESIDENT pro tempore. Without objection, it is so ordered.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc.,

were ordered to be printed in the RECORD, as follows:

By Mr. CHAVEZ:

Address on the major aspects of the Senate highway bill, delivered by him at Miami Beach, Fla., on January 12, 1956.

By Mr. MARTIN:

Address delivered by him, entitled "The Importance of Transportation," at parade of progress, celebrating 50th anniversary of Parish Pressed Steel Co., at Reading, Pa., on September 24, 1955.

By Mr. McCARTHY:

Statement by him concerning his views on the Harris-Fulbright natural gas bill.

By Mr. MURRAY:

Article entitled "Defender of the Wilderness," written by Senator NEUBERGER and published in the January 1956 Progressive, relating to the death of Bernard DeVoto; also an editorial entitled "Death of a Fighter," published in a recent issue of the New York Times; and an editorial entitled "A Man Who Knew the West," published in the Glasgow (Mont.) Courier, all of which pay tribute to Mr. DeVoto and his work.

DEVELOPMENT OF THE NATION'S POWER RESOURCES

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a news article entitled "Grange Keynoter Blasts Partnership on Power," written by Thor Severson.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GRANGE KEYNOTER BLASTS PARTNERSHIP ON POWER—PARLEY HEARS DEMAND UNITED STATES RUN PROJECTS

(By Thor Severson)

George Sehlmeyer, master of the California State Grange, today charged the so-called partnership program advocated by the Department of Interior for development of the Nation's power resources is a "betrayal" of the people.

Sehlmeyer, master of the Grange for almost a quarter of a century, voiced the observation in a keynote address before the organization's 83d annual convention underway in Sacramento.

In a free swinging attack, Sehlmeyer also:

1. Warned that the nervous farm market may be a storm signal of onrushing depression years, and urged President Dwight D. Eisenhower's administration to take a long, second look at the flexible price support program authored by Secretary of Agriculture Ezra Taft Benson.

ASKS FEDERAL DEVELOPMENT

2. Called for exclusive development by the Federal Government of the $225 million Trinity project, including Trinity's power facilities, and for Government construction and operation of the proposed Feather River project.

3. Urged that the Government retain full control of atomic power. Private interests, he said, may exploit atomic power, developed at taxpayers' expense at a cost of $12 billion.

4. Charged that California is 20 years late in developing a wise progressive water use policy, and pointed up water conservation as a priority issue for action by the California Legislature.

5. Alerted the Grange to the dangers inherent in the corporation farm, as far as security of the family farm is concerned, and pledged the Grange again to the family unit principle.

THREE THOUSAND FIVE HUNDRED EXPECTED

Upward of 3,500 delegates are expected to register for the 5-day convention, scheduled to end with installation of officers Friday. Sehlmeyer's keynote address was made before a convention session in the memorial auditorium.

Sehlmeyer criticized the tardiness in developing California's power resources to maximum output, and traced the delay to the doorstep of private power and private power's fight to block public development of the facilities.

"The so-called partnership program advocated by the Department of Interior is a betrayal of the best interests of the people," he charged.

"This plan is a one-sided arrangement mainly in the interest of the private utilities. Millions of dollars are spent on the construction of one project, and it does not seem reasonable water impounded by taxpayers' money should then be turned over to a private utility to generate power to resell to the people at a profit."

BLAMES DELAY ON STATE

Sehlmeyer said he believes the proposed Feather River project would be under construction right now if the State of California had not pushed plans for State development of the resource.

The State, he said, should withdraw from the project and let the Federal Government construct both the water and the power facilities.

Private interests, he asserted, are ambitious to turn the Feather River project into a State project. They seek an end to the acreage limitation, he added, and they see an opportunity to get the power.

Sehlmeyer said State construction would result in high-price water and would fall far short of getting the maximum power out of the project.

"The high cost of water from this project," he said, "is primarily due to two conditions. One, the project will not develop enough power for its own use, and, two, the interest on the bonds."

REPORT OF COMMITTEE ON SOCIAL SECURITY FOR LAWYERS

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the RECORD the report of the committee on social security for lawyers, from the Journal of the Bar Association of the District of Columbia, January 1956 issue.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT OF THE COMMITTEE ON SOCIAL SECURITY FOR LAWYERS

The board of directors at its meeting on December 9, 1955, received and considered a report from the committee on social security for lawyers dealing with H. R. 7255 as adopted by the House of Representatives on July 18, 1955. It was unanimously resolved that the report should be transmitted to the members of the association through publication in the Journal and that the board should recommend to the members that the association take a position in favor of extending the Social Security Act to self-employed lawyers along the lines proposed in H. R. 7255.

This question will be brought before the January meeting of the association for action. Action at this time is desirable since H. R. 7255 will be under consideration by the Senate Committee on Finance at the coming session of Congress.

H. R. 7225, passed by the House of Representatives on July 18, 1955, and now before the Committee on Finance of the Senate, amends title II of the Social Security Act to extend the coverage of that title to self-employed lawyers, among oher self-employed professionals (H. R. 7225, sec. 104 (d)). Thus, if H. R. 7225 is enacted, self-employed lawyers would be made subject to the tax obligations and be made beneficiaries of the retirement and survivors' benefits attendant on the Federal old age and survivors insurance program (OASI). (Exclusion from OASI coverage would be continued for physicians.)

The committee on social security for lawyers recommends (1) that the association record its support of H. R. 7225; (2) direct that its board of directors request to be heard before the Senate Committee on Finance and other appropriate committees of the Congress; and (3) designate a member or members of the association to appear and testify before such committees.

1. THE PURPOSE AND SCOPE OF OASI

The purpose of OASI is to provide protection against economic insecurity for persons gainfully employed and their families, when the earnings upon which such persons have depended for support are cut off by retirement or death. This basic purpose was reaffirmed by President Eisenhower in his social-security message of January 1954. The President pointed out that OASI had been developed in response to the need "arising from the complexities of our modern society. * * * The system is not intended as a substitute for private savings, pension plans, and insurance protection. It is, rather, intended as the foundation upon which these other forms of protection can be soundly built. Thus, the individual's own work, his planning, and his thrift will bring him a higher standard of living upon his retirement, or his family a higher standard of living in the event of his death, than would otherwise be the case. Hence the system both encourages thrift and self-reliance, and helps to prevent destitution in our national life."

The old-age insurance program was originally designed as an expression of the Nation's conviction that older retired persons should have a continuing income, their rights to which would be established by law on the basis of their earnings and contributions and would accrue without reference to a means test. When the program was first instituted, in the early 1930's, the proportion of aged men and women in the Nation's population had been increasing, and their plight had become particularly difficult. Those were depression years, when even young persons were finding it increasingly difficult to get or keep jobs and when family savings were consequently dwindling.

Later, in 1939, survivor-insurance provisions were added to the initial old-age insurance program. This was done in recognition of the problem encountered by families when the breadwinner died.

The resulting legislation constituted basically the old-age and survivors-insurance program (OASI) as we know it today, although it was thereafter further expanded by the comprehensive amendments of 1950 and 1954.

Today, 20 years after the adoption of the Social Security Act, it is estimated that 69 million workers are in covered jobs under OASI and that 7½ million beneficiaries are receiving checks under that program, totaling about $385 million each month.

Nearly 60 percent of the 14 million men and women in the United States now aged 65 and over either are getting old-age and survivors insurance benefits or are working and have acquired or are acquiring protection. About 70½ million persons have worked long enough in covered employment to be insured under the program, and nearly 30 million of them are permanently insured; whether or not they continue to work in covered employment, their families have achieved survivor protection, and they themselves will be eligible for benefits when they reach age 65 and retire. Nine out of 10 of the young mothers and children in the country have survivorship protection that will

enable them to draw monthly benefits today if their breadwinners die.

The great mass of persons engaged in gainful occupations are today covered by OASI. The bulk of those still not included are Federal employees covered by Federal employee retirement systems, both civilian and military. Others not covered by the program are self-employed physicians, lawyers, dentists, naturopaths, osteopaths, chiropractors, veterinarians, and optometrists, as well as domestic and farm workers earning less than a specified amount and self-employed persons with net earnings of less than $400 a year.

Thus, at this writing, self-employed lawyers have the questionable distinction of being one of the few groups still outside the confines of OASI. As a result of such lack of coverage many lawyers now self-employed will forfeit the benefit of contributions they may have already paid when they were employed by others, unless they are now permitted to remain under OASI in their current independent status. Salaried lawyers in commerce and industry have been covered in the program since its inception. Beginning with 1951, millions of self-employed businessmen have been included and can now boast the benefits of the program. Beginning in 1955, self-employed accountants, architects, engineers, and funeral directors were also brought within the program. Self-employed lawyers are in the very small minority of persons engaged in gainful occupations which today are still excluded from OASI.

2. THE TAXES PAYABLE UNDER OASI

If H. R. 7225 becomes law, self-employed lawyers would pay annually 3 percent only of their first $4,200 net income from covered employment, including income from their practice of law. This rate increases to 3¾ percent in 1960, 4½ percent in 1965, 5¼ percent in 1970, and 6 percent in 1975 and after. These rates are identical for all self-employed persons under OASI.

3. THE BENEFITS OF OASI

The benefits which OASI already makes available to salaried lawyers and which would afford to self-employed lawyers should H. R. 7225 be enacted, are threefold. These are summarized in graphic form in the table annexed to this report.

(a) First are the retirement benefits: These are payable to persons at age 65 if they then retire; to persons between the ages of 65 to 72 when they do retire; and to persons at age 72, whether they retire or not. To one fully insured, whose annual average earnings have not been less than $4,200, there would be payable each month (at present rates): $108.50, if the insured beneficiary is unmarried; $162.80, if he is married and his wife also has reached the age of 65; and $200, if, in addition, he has children still under 18 years of age. These retirement benefits continue until the death of the insured.

(b) Second are the survivors' benefits: These are payable, on the death of the insured, to a person's widow or surviving parents or surviving children. Where the person insured has enjoyed average annual earnings of not less than $4,200: A widow aged 65 or a widow of whatever age with a child under 18 years of age, would receive $81.40 a month; and a surviving family might be entitled to payment of as much as $200 a month.

(c) Third are the so-called lump-sum benefits: These are payable to the widow of an insured person or to anyone else who may pay the burial expenses. They are designed to defray such expenses, are limited to a maximum of $255, and are payable in addition to the survivors' benefits.

4. THE REASONS FOR COVERAGE OF SELF-EMPLOYED LAWYERS IN OASI

There are several cogent reasons for coverage of self-employed lawyers under OASI:

(a) The exclusion of self-employed lawyers from the program, as we have already indicated, results in the loss to many lawyers of valuable benefit rights for which they have already paid. So that they may gain experience before striking out for themselves, many lawyers start their professional work as employees. Because of the close relationship between legal practice and fields such as business management, real estate, finance, and politics, many also have a strong tendency to move into other lines of work. Many others have OASI wage credits as a result of services rendered in the Armed Forces. It has been estimated that about 30 percent of our self-employed lawyers at one time or other have accumulated some OASI wage credits.

By virtue of the exclusion of self-employed lawyers, these credits must inevitably be lost or curtailed. For, there are few of these persons who, before they venture into practice for themselves, have succeeded in building up the 10 years of coverage necessary to full insurance. Moreover, even those among them who have achieved the status of a fully insured person suffer a reduction in the amount of their benefit rights for each year thereafter in which they find themselves not in covered employment.

(b) The failure to cover self-employed lawyers under OASI deprives them of the very important protection afforded to survivors under that program. This is particularly significant for younger lawyers. Because of the years required for education, lawyers tend to be generally somewhat older than nonprofessional people when they begin first to earn an income. Many young lawyers starting private practice also are faced with high expenses and heavy family obligations at a time when income is relatively low. Death of the young lawyer at such a time may be catastrophic to his widow and young children.

The survivors' benefits provided by OASI would assure the lawyer's family a monthly income if he should die. For example, a lawyer with an annual net income of $4,200 or more, who has a wife and 2 children, would afford protection for them should he die in the amount of $200 a month until the elder child attained the age of 18 years. The monthly benefit would then drop to $162.80 until the younger child reached 18. After that, no benefits would be payable until the widow reached the age of 65; but, at that point, her benefits would be resumed at the rate of $81.40 a month. In addition, of course, the lump-sum death benefit—a maximum of $255—would at all times be payable to the widow upon the lawyer's death.

Considering these payments as a cumulative cash figure, the widow and children, in many cases, will receive from $20,000 to $35,000 or more in total benefits during those critical years when the children are young. (The exact amount payable would, of course, depend on the age of the children at the time of the lawyer's death.) Moreover, the widow, should she live beyond the age of 65 (with a life expectancy of 15 or more years) would be entitled to further benefits aggregating approximately $14,000.

(c) The costs of the insurance offered under OASI are substantially less than the costs of purchasing similar insurance through private insurance plans. It is, of course, difficult to present comparative costs for all varied situations. Let us assume, however, for purposes of illustration, a self-employed lawyer, aged 25 years, who begins to contribute to OASI in January 1956; who dies at the age of 34; who at the time of his death, leaves a wife and two children aged 6 and 4; and who, during the 9 years of his coverage, earns an average of not less than $4,200 a year.

Such a hypothetical lawyer would have contributed a total of $1,291.50. In return, OASI will guarantee to his wife and children, benefits aggregating $45,666.60. The cost of purchasing a $45,000 life insurance policy from a private insurance company, on the other hand, would have been $8,820.90. (These figures are obtained from an article, "Social Security as Life Insurance—as an Annuity," appearing in the March 1955 issue of the New York Journal of Dentistry.)

Let us assume that the same hypothetical self-employed lawyer retires at the age of 65. According to the same source, with a life expectancy of 13 years at that time, that lawyer would receive, for both husband and wife, a total of $25,396.80, plus a lump-sum benefit of $255, should the husband predecease his wife; a grand total of $25,621.80. For these benefits, the lawyer, during the 40 years of his coverage, would have made contributions to OASI in a total amount of $8,631. To secure a similar annuity program from a private insurance company, on the other hand, would have cost the lawyer $36,048.60. And it should be remembered that under OASI, the lawyer's family has been protected in case of his death before retirement age.

5. THE ARGUMENTS ADVANCED AGAINST OASI

Several arguments have from time to time been advanced against OASI coverage for lawyers. The most significant of these are as follows:

(a) It has been said that self-employed lawyers are less likely to retire abruptly at a given age than are most other earners; that they are more likely to retire gradually; and that, like the proverbial old soldier, some never retire. Thus, during the period from age 65 to 72, no monthly retirement benefits whatever may be payable to a self-employed lawyer. After age 72, of course, monthly retirement benefits will be payable notwithstanding the fact that the lawyer may not have retired.

The fact is, however, that in these respects, lawyers do not substantially differ from other wage earners. Older persons in all groups are more and more expressing a preference to continue working as long as they can. Slightly more than 40 percent of the men past age 65 are employed. About 60 percent of all men between the ages of 65 and 70 are employed. The average age of retired workers coming on the OASI rolls is 68 to 69.

There are, however, many causes for dependency in old age which are not within the control of the individual. Even aged lawyers become ill and disabled. Experience has shown that few retired people stop work because they want to do so. Nearly half of those who have retired have done so because of disability.

It must also be kept in mind that retirement benefits are payable at the age of 65, despite the fact that insured persons may derive an income thereafter. Income from real-estate investments, stock ownership, trust notes, partnership distributions of capital, etc., may be received without any effect whatever on OASI retirement benefits. It is only if income is earned in and as a result of employment that the benefits payable are curtailed or withheld.

Moreover, the mere fact that a retirement annuity plan may prove to be unnecessary during the 7 years from age 65 to 72 is little, if any, reason for rejecting a plan available at so low a cost as compared to the cost of private insurance programs.

(b) It has also been suggested that most lawyers are able to provide for their own retirement income through private insurance programs.

This seems questionable in light of the Department of Commerce figures relating to the income of lawyers throughout the Nation. Those statistics show that in 1947, the 73.6 percent of self-employed lawyers who were in individual practice reported, before Federal taxes, a mean net income of $5,759 per year and a median net income of $4,275 per year. Such earnings are hardly adequate to support the high cost of pri-

vately purchasing the substantial life insurance and annuities insurance which OASI affords.

Moreover, coverage under OASI does not preclude supplemental private insurance. We have already referred to the statement of President Eisenhower, in which he said of OASI:

"The system is not intended as a substitute for private savings, pension plans, and insurance protection. It is, rather, intended as the foundation upon which these other forms of protection can be soundly built. Thus, the individual's own work, his planning and his thrift will bring him a higher standard of living upon his retirement, or his family a higher standard of living in the event of his death, than would otherwise be the case. Hence the system both encourages thrift and self-reliance, and helps to prevent destitution in our national life."

OASI provides a base above which those lawyers able to do so may build a greater and more ample retirement and life insurance fund for their later years and their families.

(c) It has also been urged that compulsory coverage is a means of regimenting the profession. Frankly, the logic of this argument escapes us. Self-employed businessmen, who have been covered by OASI since 1951, have not experienced more regimentation than have lawyers during the last 4 years. We are aware of no widespread complaint by such businessmen; to the contrary, we know of many persons who seek part-time covered employment primarily, if not solely, so that they may gain the benefits of OASI.

(d) Finally, it has been stated that the sentiment among lawyers opposes coverage under OASI. The facts, however, belie this assertion.

At its February 1955 midyear meeting, the House of Delegates of the American Bar Association recorded itself as favoring voluntary coverage for self-employed lawyers. Mr. Archibald M. Mull, chairman of the Conference of Bar Presidents, there reported that the vote in bar associations was overwhelmingly in favor of voluntary coverage for lawyers. A questionnaire sent to 1,445 local bar associations disclosed that of some 366 associations which had polled their members, 264 had expressed support for OASI and 45 opposition. Of 293 associations which had not taken a poll, the consensus of their presidents or executive committees as to the opinion of members in their associations was that 222 were for and 71 against inclusion of lawyers in the program.[1]

In September 1951 Senator Henry C. Lodge took a poll of the attitude of Massachusetts lawyers toward OASI coverage and reported that 88 percent had declared themselves emphatically in favor of coverage. In June 1953, Congressman LOUIS RABAUT announced that an opinion poll of Michigan lawyers had disclosed that 2,825 lawyers favored coverage as against 1,395 who were opposed. In August 1953, Congressman KEAN reported that lawyers replying to a New Jersey law journal poll were overwhelmingly in favor of OASI coverage.

It is true that a good number of those lawyers who have expressed support of coverage in OASI would prefer voluntary as opposed to compulsory coverage. The chances of achieving voluntary coverage for the lawyer group in face of compulsory coverage for the great mass of wage earners is, however, practically nil. The Department of Health, Education, and Welfare has unequivocally opposed voluntary coverage. Similarly, the congressional committees which have considered this legislation have rejected the idea of voluntary coverage for any lawyers or other professional groups (except ministers, where questions of relationship of church to state are involved). The report of the Ways and Means Committee of the House of Representatives on the 1954 amendments reads, in part, as follows:

"Your committee is aware that some groups have expressed a preference for coverage on a voluntary individual basis. There are, however, fundamental objections to that approach. The history of voluntary social insurance on an individual elective basis in the United States and in other countries indicates definitely that only a very small proportion of all eligible individuals actually elect to participate. Those who do participate are usually not the people of below-average income who are in the greatest need of the protection afforded. Moreover, voluntary coverage attracts almost exclusively people who, because they are already old or for other reasons, can expect a large return for their contributions. This adverse selection of risks could result in a significant drain on the funds of the program.

"Your committee concluded * * * that extension of coverage on an individual voluntary basis involved grave dangers with respect to the financing of the system, as well as discrimination against the great majority of workers covered under the program on a compulsory basis. * * *

"Those who would elect coverage under a voluntary option are primarily those who could expect the largest return for a relatively small contribution. The deficit in their contributions would have to be made up by increasing the contribution rate for the covered group as a whole * * *.

"Your committee is convinced that the compulsory character of the system must be preserved, and that in the absence of overriding considerations of a special character, as is present in the case of members of the clergy, any extension of coverage must be on a mandatory basis with respect to individuals."

Voluntary coverage for the now excluded self-employed professional groups—about 350,000, including about 110,000 lawyers—would provide special treatment for these professional groups in comparison with the approximately 66.5 million wage earners and self-employed people who are subject to compulsory coverage. Voluntary coverage would be basically unfair to those covered compulsorily, since these latter would be paying a major part of the increased cost arising from the adverse selection which voluntary coverage for lawyers would produce. The American Bar Association's Committee on Unemployment and Social Security recently recognized the inequity of such a dichotomy:

"Our committee has already pointed up the unsoundness of such a provision not only from the standpoint of the social-security program, but from the standpoint of general public reaction to a request for such special treatment."

6. CONCLUSION

Your committee concludes that there is no basis whatever for excluding the legal profession from the OASI program. The benefits of protection to surviving families and to retiring lawyers are so substantial, and the costs of achieving that protection are relatively so low that to deprive lawyers of such protection seems unjust and unfair. Moreover, we must realize that, as a practical matter, we, in our status as consumers and taxpayers, are daily paying for the protection which OASI affords to the mass of wage earners and other self-employed persons in the population. Meanwhile, through our own shortsightedness, we are short-changing ourselves.

For those who may be interested in examining further into this problem, we are herewith appending a bibliography of relevant materials.

Respectfully submitted.

SOTERIOS NICHOLSON,
Chairman.
HARRY I. RAND,
Subcommittee Chairman.
MORRIS MILLER,
Subcommittee Member.
JAMES E. CURRY,
Subcommittee Member.
Committee on Social Security and Retirement Benefits for Lawyers.

Social security benefits

[Applicable to salaried lawyers who contribute on each pay day 2 percent of their salary (up to 1st $4,200 received in each year), a similar amount being paid by their employers; and if H. R. 7225 becomes law, applicable to self-employed lawyers who would pay 3 percent of the 1st $4,200 of their net earnings, when they file their tax returns]

This benefit—	Will be paid—	If at your death or retirement you are—	Amounting to—	
			This percent of benefit due	This in dollars, assuming your average monthly earnings are $350 [1]
Retirement benefit	You at age 65 if you retire then; at any age between 65 and 72 when you do retire; at 72 whether you are retired or not.	Fully insured [2]	100 percent	$108.50.
Wife's benefit	Your wife when you are receiving retirement benefits, if she is 65 or has children under 18 in her care.	do	50 percent	$54.30.
Child's benefit	Each of your children under 18 when you are receiving retirement benefits.	do	50 percent each child	$54.30 each child.[3]
Widow's benefit	Your wife if you should die, when she is 65	do	75 percent	$81.40.

[1] Average monthly earnings: Total of all income subject to social-security taxes from Jan. 1, 1951, to date of retirement or death (not in excess of $3,600 for any year before 1955, not in excess of $4,200 for any year after 1954) plus $160 for each month served in armed services in or since World War II, and divide that sum by the number of months between Jan. 1, 1951, and the date of death or retirement.

Payments are reduced if you are under 72 if earnings from any source exceed $1,200, but "earnings" do not include income from property, investments, company pensions, and other insurance. After the age of 72, benefits are payable no matter what amount is earned.

[2] Fully insured: If at age of 65 or death, the total number of quarters of coverage is at least half as many as the number of calendar quarters that have passed since Dec. 31, 1950, or since age of 21, whichever is later. After 40 quarters of coverage, you are fully insured for life. A wage-earner receives a quarter of coverage for each calendar year quarter in which he is paid at least $50 in wages. A self-employed person receives 4 quarters of coverage for the year if his net earnings are $400 or more. If his net earnings are less than $400, he receives no credit for that year. A minimum of 6 quarters of coverage is required.

[3] The maximum amount of monthly benefits payable to a family is $200.

[1] Of the 264 local polled associations which expressed support, 72 expressed a preference for voluntary inclusion and 10 expressed a preference for compulsory coverage. Of the 222 presidents and executive committees of local nonpolled associations which were in favor of OASI, 33 expressed a preference for voluntary inclusion.

Social security benefits—Continued

[Applicable to salaried lawyers who contribute on each pay day 2 percent of their salary (up to 1st $4,200 received in each year), a similar amount being paid by their employers; and if H. R. 7225 becomes law, applicable to self-employed lawyers who would pay 3 percent of the 1st $4,200 of their net earnings, when they file their tax returns]

This benefit—	Will be paid—	If at your death or retirement you are—	Amounting to—	
			This percent of benefit due	This in dollars, assuming your average monthly earnings are $350 [1]
Mother's benefit	Your wife if you should die, no matter what her age, while she has at least 1 of your children under 18 in her care.	Fully or currently insured [4]	75 percent	$81.40.
Surviving child's benefit	Each of your children if you should die, until they are 18.	do	50 percent each child with an extra 25 percent divided evenly among all children.	Assuming widow and 2 eligible children, each child: $67.90.[3]
Parent's benefit	Your parents if you should die, if they are over 65 and dependent on you and if you leave no wife or children to get benefits.	Fully insured	75 percent, each parent	$81.40 each parent.
Lump-sum benefit	Your wife (or husband) if you should die; if she does not survive you, or if she is not qualified because of divorce or separation, or if you are single, then to anyone who pays burial expenses.	Fully or currently insured	300 percent, but not over $255.	$255.
Husband's and widower's benefit.	The dependent husband at age 65 of a working woman receiving retirement benefit (see above); the dependent widower at age 65 of a working woman who dies.	Wife must be both fully and currently insured.	Husband, 50 percent; widower, 75 percent.	Husband, $53.30; widower, $81.40.

[4] Currently insured: If when you become entitled to retirement payments or at your death you have at least 6 quarters of coverage within preceding 3 years.

ALLOCATION OF URBAN INTERSTATE MILEAGE BY BUREAU OF PUBLIC ROADS

Mr. CHAVEZ. Mr. President, I should like to call to the particular attention of the Senators from Montana, North Dakota, and Kentucky, what I am about to say. I have in my hand a memorandum of additional urban mileage on interstate highway systems requested and allocated to the States by the Bureau of Public Roads, which is dated September 15, 1955.

I see that the State of Kentucky requested 17 miles, and received 12.

Now I call to the attention of the Senator from North Dakota [Mr. LANGER] that his State of North Dakota requested only 2 miles, and did not receive a single one.

The State of Montana requested 27 miles of additional urban roads. Under the law, every State or city which has a population of 5,000 or more is entitled to get an apportionment of the money which is appropriated. I tell my good friends from Montana [Mr. MURRAY and Mr. MANSFIELD] that the State of Montana requested 27 miles. Just imagine, Montana, with all its cities, made an enormous request for 27 miles! The State got 2 miles of additional urban roads.

I see present on the floor my good friend the junior Senator from West Virginia [Mr. NEELY]. I shall give him the statistics concerning West Virginia, a State which contains cities such as Charleston and other large cities. The State of West Virginia requested 55 additional urban miles, and got 5.

But the home State of the adviser to the Bureau of Public Roads, Mr. Du Pont—and I do not envy the State of Delaware, it is no doubt entitled to what it got—requested 16 miles and got 16 miles. However, Montana, West Virginia, New Mexico, North Dakota—so ably represented in part by my good friend, its senior Senator [Mr. LANGER]—and Kentucky—so ably represented in part by my good friend [Mr. CLEMENTS], who now sits near me—got very little.

Let us see how the State of Maine—so ably represented by my good friend [Mr. PAYNE]—and other States fared. I hope they fared better than New Mexico did. Maine requested, for additional urban mileage for all its cities above 5,000 in population, 36 miles. Maine was lucky; she was allowed 14 miles.

Mr. President, I ask unanimous consent to have inserted at this point in the body of the RECORD the memorandum of additional urban mileage on the interstate highway system requested and allocated to the States by the Bureau of Public Roads.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

Memorandum of additional urban mileage on interstate highway system requested and allocated to the States by Bureau of Public Roads, Sept. 15, 1955

State	Miles requested	Miles allowed
Alabama	43	43
Arizona	6	6
Arkansas	31	19
California	266	260
Colorado	17	17
Connecticut	11	11
Delaware	16	16
Florida	44	37
Georgia	75	67
Idaho	30	4
Illinois	137	114
Indiana	46	44
Iowa	72	39
Kansas	47	43
Kentucky	17	12
Louisiana	51	51
Maine	36	14
Maryland	85	85
Massachusetts	104	68
Michigan	191	113
Minnesota	79	79
Mississippi	49	7
Missouri	89	84
Montana	27	2
Nebraska	34	26
Nevada [1]	7	0
New Hampshire	7	1
New Jersey	211	150
New Mexico [1]	42	0
New York	244	191
North Carolina [1]		0
North Dakota [1]	2	0
Ohio	198	122
Oklahoma	32	26
Oregon	52	28
Pennsylvania	122	114
Rhode Island	25	21
South Carolina	42	20
South Dakota	19	11

See footnote at end of table.

Memorandum of additional urban mileage on interstate highway system requested and allocated to the States by Bureau of Public Roads, Sept. 15, 1955—Continued

State	Miles requested	Miles allowed
Tennessee	65	55
Texas	142	142
Utah [1]	0	0
Vermont	11	1
Virginia	135	100
Washington	62	39
West Virginia	55	5
Wisconsin	22	10
Wyoming [1]	0	0
District of Columbia	11	11
Total	3,109	2,308

[1] This mileage brings the total on the interstate system up to the 40,000 miles authorized by the Congress in 1944. The Bureau of Public Roads states that applications for this additional mileage received from the various State highway departments totaled 3,400 miles and that allocations were made on the basis of what the Bureau believed to be the greatest need.

The 6 States receiving no allocation are Nevada, New Mexico, North Carolina, North Dakota, Utah, and Wyoming.

Mr. NEELY. Mr. President, will the Senator from New Mexico yield before he takes his seat?

Mr. CHAVEZ. Certainly.

Mr. NEELY. Please let me inform the distinguished Senator that in the important matter to which he has referred what the Republican executive department of the Federal Government has done to West Virginia is, in the language of the famous Dogberry, as "flat burglary as ever was committed." A little more than a year from now a Democratic administration will be righting this and many other Republican wrongs.

Mr. LANGER. Mr. President, I ask unanimous consent that the distinguished Senator from New Mexico be allowed to speak 5 minutes more on this very important subject. I wish to ascertain why North Dakota received nothing. I am quite used to that, but I am interested in hearing the distinguished Senator from New Mexico tell about it.

The PRESIDENT pro tempore. Is there objection to the request of the the Senator from North Dakota? The Chair hears none, and the Senator from New Mexico is recognized for 5 minutes.

Mr. CHAVEZ. Mr. President, by authority of this body, I happen to be chairman of the Committee on Public Works. Its jurisdiction extends to rivers and harbors, navigation, public roads, and public buildings. It is a construction committee; it is not at all political, and never has been. In its work, the committee receives the aid of the distinguished Senator from Pennsylvania [Mr. MARTIN] and the distinguished Senator from South Dakota [Mr. CASE], as well as that of Senators on our side of the aisle, because roads are good for Democratic Kentucky as well as they are for Republican Illinois, and the States need roads. The idea is that, insofar as Federal construction of roads is concerned, every State shall be treated alike.

In my State of New Mexico and in other States of the West, the area of land owned by the Federal Government is tremendous. In New Mexico, approximately 63 percent of the area of 122,000 square miles is owned by the Federal Government. The cost of our State government must be met by funds raised from the remaining 37 percent. If the Federal Government would only turn over to us the area which now is federally controlled, possibly we would not request one penny, insofar as roads are concerned. I can say the same for Nevada and North Dakota, where the Federal Government owns an enormous acreage of land.

Hence, Mr. President, we think we are fair; and we think Congress has been fair in saying to the people of the country and in writing into the law that every State should be treated alike by the Federal Government. Under these circumstances, why should the Bureau of Public Roads not allow Wyoming 1 mile of additional urban mileage? It should be remembered that Congress authorized the program and appropriated for it. Kentucky requested 17 additional urban miles. With cities such as Louisville and other large cities, I do not think that is an unreasonable request; so why should a reduced mileage be allowed to Kentucky? All the States should be treated alike.

After all, Mr. President, all the States pay taxes, and young men from all the States serve in the Armed Forces, and many of them are killed on foreign fields. Why should California, which requested 266 additional miles of urban road, be allowed 260, whereas North Dakota was allowed nothing, and the small number requested by Kentucky was reduced, and the small number requested by Montana was drastically reduced? It is unfair, Mr. President.

Roads are essential, and I am in favor of the construction of roads. Our country needs more and more of them. We insist that the Secretary of Commerce and his advisers should follow the principle of equality under the law. We do not request special treatment for New Mexico; and I know that the Senators from other States do not request special treatment for the States they represent. But if Pennsylvania is allowed a substantial mileage, and if Colorado is allowed the 17 miles which she requested, why should not Kentucky or North Dakota or Montana or West Virginia receive what they are entitled to? Why should not the State of Maine be allowed more than she has received? I say to my good friend, the Senator from Maine, that the memorandum shows that Maine requested 36 additional urban miles of road—a request which I do not regard as unreasonable, in view of all the cities of over 5,000 population in Maine. However, Maine was allowed 14. It is unfair, Mr. President.

I hope this body will give serious consideration to this matter, Mr. President. There is nothing that will more effectively aid any State of the Union than more and more good roads.

I thank the Senate.

SURVEY OF PROPOSED PASSAMAQUODDY TIDAL POWER PROJECT

Mrs. SMITH of Maine. Mr. President, I ask the Chair to lay before the Senate the amendments of the House of Represenatives to Senate Joint Resolution 12.

The President pro tempore laid before the Senate the amendments of the House of Representatives to the joint resolution (S. J. Res. 12) to request the Secretary of State to arrange for the International Joint Commission, United States and Canada, to conduct a survey of the proposed Passamaquoddy tidal power project, and for other purposes, which were, on page 1, line 8, after "a", insert "final"; on page 2, line 9, strike out "be consistent with" and insert "make use of", and on page 3, after line 5, insert:

SEC. 6. Nothing in this joint resolution or the survey authorized herein shall in any way commit the Congress or the Government of the United States as to future action on construction of any such project.

Mrs. SMITH of Maine. Mr. President, I move that the Senate concur in the amendments of the House of Representatives.

The motion was agreed to.

PRESIDENT'S PRESS CONFERENCE ON JANUARY 19

Mr. PAYNE. Mr. President, yesterday, the President of the United States held his first major press conference since the beginning of his illness; and today marks the third anniversary of his inauguration. Under his leadership our Nation is today enjoying peace and prosperity. I am proud to have had a part in the election of Dwight Eisenhower to the Presidency and to have had an opportunity to support in the United States Senate his progressive program, which is the interest of all our people. The statements which President Eisenhower made yesterday are of the greatest interest to all Members of Congress and to the American people.

I, therefore, ask unanimous consent that a copy of the transcript of the President's press conference be printed in the body of the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

PRESIDENT EISENHOWER'S PRESS AND RADIO CONFERENCE, NO. 76

The PRESIDENT. Please be seated.

Well, it's good to see so many faces here again [laughter] after such a long absence from you.

Since I have last seen you, as you can imagine, I have been presented with a number of personal political questions.

One of them arises in connection with the notice I have from the State of New Hampshire that my name has been qualified for the inclusion on the list of candidates in their preferential primary.

So, I have written an answer, an answer that, in the present circumstances, seems to me to be applicable in all such cases, and I will read it to you. And have you copies for them?

Mr. HAGERTY. There will be copies.

The PRESIDENT. There will be copies, so you don't have to take this down in case you should want it verbatim.

This is to Mr. Jackson, deputy secretary of the State of New Hampshire:

"I have your courteous telegram of January 14, advising me that petitions have been filed at your office which qualify my name for inclusion on the presidential preference primary ballot of the Republican Party in the State of New Hampshire.

"Naturally, I am deeply gratified that the petitioners have expressed this kind of personal confidence in me. I do not feel that I should interpose any objection to such entry.

"However, because I must make clear to all that lack of objection cannot be construed as any final decision on my part relative to a candidacy for a second term in the office I now hold I hope that all who vote in the Republican primaries in 1956 will carefully weigh all the possibilities and personalities that may be involved.

"Freedom to select, nominate, and elect a candidate to public office is basic to our American political system. Because I deeply believe that every citizen should have the widest possible choice in expressing his own preference in such matters, I would hope that the accident of my illness and the necessary period for determining the degree of my recovery would not have the effect of interfering with the privilege of every member of our party to express his preference for the Presidential candidate of his choice.

"It would be idle to pretend that my health can be wholly restored to the excellent state in which the doctors believed it to be in mid-September. At the same time, my doctors report to me that the progress I am making toward a reasonable level of strength is normal and satisfactory. My future life must be carefully regulated to avoid excessive fatigue. My reasons for obedience to the medical authorities are not solely personal; I must obey them out of respect for the responsibilities I carry.

"The personal decision to which I refer will be rendered as soon as it is firmly fixed in my own mind. I shall strive to see that it is based as to my best judgment on the good of our country."

That is all of the answer that is being made to any political questions. I have no objections to personal questions affecting health or anything of that kind, but that is as far as personal political questions are concerned, all questions have been answered.

Question (Robert E. Clark, INS). Mr. President, I am not sure whether this infringes on the ground you are outlining here, but can you tell us whether from your experience since returning to the full burden of the White House, your health is up to carrying the burden of the Presidency?

The PRESIDENT. Well, I would think it would be premature, Mr. Clark, for me to

say that in those specific terms. I have had some quite intensive days, yesterday was, and I think that with the, by following closely, as closely as I can, the regime the doctors laid down, that so far I have gotten by very well.

Question (No name). Mr. President——

The PRESIDENT. This gentleman here.

Question (David P. Sentner, Hearst newspapers). Mr. President, what is your personal reaction to Mr. Hoover's suggestion for the appointment of an Administrative Vice President?

The PRESIDENT. Well, of course I, and I think everybody connected with the White House, are very grateful to Mr. Hoover for undertaking this study which should long ago have been made; and without any reference to any individual or to my recent illness, the staff of the White House has grown a little bit like Topsy from time to time, with the growing intricacies of Government. And what he is trying to do is to provide some of the practices of business in the Office of the President, so that the President and his chief advisers can give more time, I think, to policymaking.

Now, he told me he had no particular torch to bear for a particular name or title to the office he is holding, but he does want to put by law, if necessary, and by administrative action, greater authority in some individual to do more of the supervisory work.

But I repeat, it is necessary that the whole staff arrangement be restudied with respect to space. It would be idle just to increase staffs and have no place to put them.

So with respect to space, their fitting in with all of the agencies of Government, that is the kind of broad study that should be made.

I think Mr. Hoover's principal purpose is, in the meantime, to provide some kind of relief to future Presidents, and I think he is a man of experience and knows exactly what he is doing.

(A chorus of "Mr. President.")

The PRESIDENT. Mr. Folliard.

Question (Edward T. Folliard, Washington Post and Times Herald). Mr. President, I don't know whether this comes in the category of questions that are open, but Senator KNOWLAND said the other day that he thought that you would surely make an announcement one way or the other about your plans by mid-February. Is that——

The PRESIDENT. Well, this is what I have promised, Mr. Folliard: To make the announcement as quickly as a decision is firmly reached in my own mind.

I have no desire whatsoever to confuse the American people or to evade anything you are putting in front of me. But you can well imagine the pressures that are brought upon me every day, and I have to isolate myself from them at times as much as I can in order that I may reach a logical decision.

I will do it as soon as I can.

Question (Merriman Smith, United Press). Mr. President, there were some, after your conference with us at Key West, who got the idea from what you said down there that you had reached a tentative decision. Is that a correct conclusion from what you said?

The PRESIDENT. No.

Question (Sarah McClendon, El Paso Times). Mr. President, sir will you take steps soon to carry out the recommendations of your Water Resources Policy Committee? Will you appoint a coordinator of water resources for the White House?

The PRESIDENT. I think I put that report before Congress. I have a man now in this work as far, I believe, as deeply, as administration, administrative action, can place him, General Bragdon. But I think that anything more than he is now doing will have to be authorized by Congress.

(A chorus of "Mr. President.")

Question (Raymond P. Brandt, St. Louis Post-Dispatch). On this Dulles article in Life magazine, by Jim Shepley, was any decision reached to use the atomic bomb in those three instances?

The PRESIDENT. First of all, I am not—I have not read that article, and I have read some of the allegations that he is supposed to have made.

I am not going to take a privately written article and discuss it in detail, and thereby make of it a paper if—a paper which, if it is going to discuss those subjects, should be most carefully and properly written.

Now, another thing I am not going to do is to discuss anywhere in the world present, past, or possible future decisions and material that comes before the National Security. It is not proper to do it, and those papers are privileged, and must remain so.

Now, I don't know all of the things that are alleged to have been said. I have complete faith in Mr. Dulles. I do not know whether they were unfortunate expressions used in that article by him or by someone supposed to be reporting them. But I know he is devoted to peace. He has spent his lifetime in this kind of work. He is a man of great professional skill in the field, and to my mind, the best Secretary of State I have ever known.

Now, that is the answer to that article.

Question (Raymond P. Brandt, St. Louis Post-Dispatch). Yes. If this is within the purvue of that, can you tell us what arrangements are made to inform our allies or Congress on such a decision?

The PRESIDENT. What decision?

Question (Raymond P. Brandt, St. Louis Post-Dispatch). To go to the verge of war, and then, if necessary, go over?

The PRESIDENT. Well, I don't admit that you—you seem to me to be putting words in my mouth, Mr. Brandt.

This is what I say: That I am supporting before the world a program of peace. It is really waging peace, based upon moral principles of decency and justice and right. If you are going to do that and are not going to be guilty every time the thing looks dangerous, of a Munich, you have got to stand firmly.

You may interpret that as being at the brink of something, because the other fellow can react according to his own desires and what he believes to be his best interests.

But when it comes to the matter of war, there is only one place that I would go, and that is to the Congress of the United States, and tell them what I believe.

(A chorus of "Mr. President.")

The PRESIDENT. This gentleman here.

Question (Milburn Petty, Oil Daily). Mr. President, last February the Cabinet Fuels Policy Committee recommended against Federal control of natural gas production.

Do you favor the bill now before the Senate to accomplish that?

The PRESIDENT. You know I have been over that subject—about last June or July, early in the summer, someone here asked this question. I went into it in the greatest detail, including, I believe, some comments on the bill before the Congress where this matter is still being studied. If you will look up that answer, and I am sure Mr. Hagerty will give it to you, that is all I have to say.

Question (No name). Mr. President——

The PRESIDENT. I think Mr. White——

Question (William H. Lawrence, New York Times). Lawrence of the New York Times——

The PRESIDENT. Excuse me.

Question (William H. Lawrence, New York Times). Mr. President, have you considered what, if anything, should be done about the failure of the Constitution to specify when and by whom the disability of the President might be declared, and when and by whom it might be removed?

The PRESIDENT. Well, when you are as closely confined to your bed as I was for some time, you think about lots of things, and this was one of the foremost in my mind.

I do believe that there should be some agreement on the exact meaning of the Constitution, who has the authority to act.

The Constitution seems to be clear that Congress cannot only make the laws of succession, but it can determine what is to be done, and it says, "In the case of so-and-so and so-and-so," but it does not say who is to determine the disability of the President. And we could well imagine a case where the President would be unable to determine his own disability.

I think it is a subject that, in its broadest aspects, every phase of it should be carefully studied by the Congress, advised with by the Attorney General, and any kind of advice they want from the executive department, and some kind of a resolution of doubt reached. I think it would be good for the country.

Question (Chalmers M. Roberts, Washington Post and Times Herald). Mr. President——

The PRESIDENT. Yes.

Question. (Chalmers M. Roberts, Washington Post and Times Herald). On the foreign issue, sir, within the limitation which, I think, you have placed, I would like to ask this:

I believe you told us at the time last year that the Congress passed a resolution giving you authority to use the Armed Forces if Quemoy or Matsu were attacked, on the basis of your judgment at that time as to whether this was an attack on Formosa. The implication of the Dulles' article to which reference has been made at one point, was that you had made a decision at one time.

May I ask, sir, have you ever made a decision or is it still your position that you will make that when and if the occasion arises?

The PRESIDENT. I don't believe I will quote further or say anything further on the subject, Mr. Roberts, because, as I say, if I began to pick pieces of that article and talk about it, then I begin to make it a part of our official thoughts and records, and I am just not going to do it.

Question (Chalmers M. Roberts, Washington Post and Times Herald). Well, sir, what I was—I was sorry I mentioned the article then. [Laughter.]

What I was trying to determine, sir, was whether what you had told us previously, before this article was conceived, still stood, that you would make the decision if and when the occasion arose.

The PRESIDENT. Then, I will tell you this: I went to the Congress perfectly honest and told them that in the circumstances we couldn't tell what was going to happen, and there was no way for me to tell and for anyone else in the world, unless he is a far greater genius than I, what that attack was going to mean when it came about.

I think the character of the attack which was carried forward had to determine in the mind of a qualified person whether it was an attack all out against Formosa or whether it was strictly and completely local. So I think you are talking about a hypothetical case that did not eventuate. There is no way of making an answer to it.

(A chorus of "Mr. President.")

Question (Marvin L. Arrowsmith, Associated Press). Mr. President, to go back for a moment to your opening statement, I think you said it could be considered to have a general application.

Would that mean you have no objection to entry of your name in any of the presidential primaries in any State?

The PRESIDENT. Well, it means that I am not going to make any official objection, certainly, and the statement stands on itself, and I did mean it just that way. It would be my answer to all of these.

Question (Mrs. May Craig, New England papers). Mr. President, do you think it is right and proper that a White House physician should conceal from appropriate officials for many hours the serious illness of a

President and, too, to refrain for many hours from calling in other physicians to consult on his diagnosis and early treatment?

The PRESIDENT. Well, you are—you are asking what I assume to be a hypothetical question—[laughter]—because in my own case, in my own case, my doctor was in close contact, I think, with others very rapidly, certainly as soon as daylight came, and it was determined what to do about it.

Question (May Craig, New England papers). Sir, I understood it was as much as 10 hours.

The PRESIDENT. It may have been. But it probably may take some 10 hours to determine whether a person is suffering from having eaten some bad food or some other cause, I am not sure. I don't—I am not a doctor, you are sure of that.

(A chorus of "Mr. President.")

The PRESIDENT. I think this man.

Question (William S. White, New York Times). Without reference to anything, sir, that has been said lately by anybody else—[laughter]—I mean that seriously—would you comment in general on the state of the world, on the state of prospects of peace?

The PRESIDENT. Well, there is—we have to get things in perspective.

As you know, for some year or year and a half prior to Geneva, there was a growing pressure, probably more abroad than at home, that some so-called conference at the summit be held.

There was great doubt in this country as to the wisdom of the thing. But one point that was very important in reaching a decision, we would not have the United States placed in the position of being sort of dog-in-the-manger, going to have our way about everything or do nothing.

We felt perfectly capable of defending the principles and policies of the United States. And so that meeting was arranged with the earnest intent on our side to make every conciliatory advance that did not impinge upon the principles and values in which we believed.

Now, one thing happened that you could have expected, and which we, of course, had prophesied or anticipated, and that was that a very wave, a great wave of relief spread around, and there was great hope. And, of course, there was hope, but hope must always be tempered by the existence of facts. Those high hopes have not been realized.

So, if we compare our feelings today as to what they were, let us say, in early August, we have a feeling of great letdown. But if we go back over the period of 3 years and review the events that have come to pass, the situation is not as dark in many areas, indeed much brighter, than it was at that time.

To counterbalance that, we have had this growing tension and uneasiness in the Mideast where American policy is to be friends to all, in the certainty and in the earnest belief that only through friendship among themselves is there ever going to be any peace, prosperity, and advancement in that region.

We, of course, in that area do not look on with any great equanimity. It is bound to cause earnest throught and study all the time.

But in the whole general picture we were in a Korean war that, due to the way we were waging it, there was no chance of winning, because the crossing of the Yalu River was, apparently made a great international, would, you might say shocked international opinion.

The Indochina war was probably settled on the best basis that could be achieved.

Iran, you will remember, just 3 years ago now, every week we were expecting almost to lose Iran. That has been settled.

The British bases in Egypt were another great sore point that has been settled.

The Trieste situation, that caused all of us daily uneasiness. The first direct attempt to establish communism in our continent has been eliminated.

So, there are features that would say, as compared to 3 years ago, the situation is better and brighter. But I would not be guilty of standing before you and to say that there is any cause for complacency or any lack of fervor and study and work in trying to do better.

(A chorus of "Mr. President.")

The PRESIDENT. I think the gentleman back there with the glasses.

Question (Edward P. Morgan, American Broadcasting Co.). Sir, General Ridgway has charged in an article that during the time that he was Army Chief of Staff decisions were made regarding the size of the Armed Forces which he did not agree to, but which, it was indicated, that he did by a statement you made in the state of the Union message, saying that the Joint Chiefs were unanimous on it, and he also said that decisions were made in deference to domestic politics on these matters.

Could you comment on that, sir?

The PRESIDENT. Well, first, if ever I have made a military decision out of deference to internal politics, then I have been guilty of violating my own best determinations. I am determined never in that field to be influenced by such a thing.

Now, I just make two points: First, every sector of the state of the Union message in which this statement that I—about the unanimous decision was made—every sector of that report is sent to the department having primary responsibility in that field to check it for every fact, every item that is there, to make certain it is correct.

If there is any incorrectness in any of the matters that appear with respect to the Defense Department section, please see Admiral Radford and General—and Mr. Wilson.

And finally, one other thing: As all of you here know, since back in 1940, I have been receiving advice from every kind of military assistant. Their advice is often expressing their own deeply felt, but, let us say, narrow fears.

If I had listened to all of the advice I got duirng those years, there never would have been a plan for crossing the channel. Indeed, I think we wouldn't have crossed the Atlantic Ocean. We certainly would never have invaded Africa and the Mediterranean, and I know we never would have crossed the channel until yet.

So finally there comes places where people in authority must make decisions based on the best advice they get.

(A chorus of "Mr. President.")

The PRESIDENT. I think this man here.

Question (Charles E. Shutt, Telenews). About 3 weeks ago, sir, Premier Bulganin expressed the thought that another summit meeting might be fruitful. Would you care to express your views on that, sir?

The PRESIDENT. That is one I missed. I haven't heard that one yet. I haven't anything to say about that.

Question (Charles L. Bartlett, Chattanooga Times). Mr. President, you spoke of the pressures that are being put on you in regard to this big decision, and I wondered if you could tell us whether you are being subjected to a series of pressures from the people who come to visit you, friends and officials, or whether you are being left to make this big decision in relative solitude?

The PRESIDENT. Well, you are pressing very closely to the limits of the field that I debarred, but I will say this—— [Laughter.]

I will say this: I myself said I would seek the advice of my trusted friends and associates, and I have been busy doing it. But as that goes on, there is a flood of mail, and the mail is generally of one tenor only. I am—after all, a person, no matter how many political enemies he has, does also have lots of friends, and it is—they believe in him, and they are very anxious to express their views. So that is what I referred to when I said that.

Question (No name). Mr. President——

The PRESIDENT. This gentleman.

Question (Robert G. Spivack, New York Post). Recently you suggested a commission to study acts of violence against Negroes in certain States.

I wonder if you have discussed this with Attorney General Brownell or the FBI, and if that isn't really one of their functions?

The PRESIDENT. Well, what I want to find out is, of course, someone to try to define the lines in which Federal responsibility in the great fields of civil rights lay.

Now, I don't remember that I said "Negroes." I have forgotten some of the details of that message. But I do recall that what I was interested in is to find out where we are violating and where the Federal Government has any responsibility whatsoever.

I think Mr. Burd was next.

Question (Laurence H. Burd, Chicago Tribune). Mr. President, has any date been set for this medical examination that you will have next month?

The PRESIDENT. Thank you for asking the question. I came over from my office this morning and I knew there was something I had forgotten to do.

(Turning to Mr. Hagerty) You remember that.

No; there hasn't. [Laughter.]

Question (Clark R. Mollenhoff, Des Moines Register and Tribune). Many of the Middle Western Republicans have been suggesting price supports on hogs and prices ranging from something like $16 to $18.

I wonder if you could give us your viewpoint on the use of price supports on hogs during the present farm emergency?

The PRESIDENT. Well, it would be—I would be really answering, I think, a very serious question a little bit too rapidly.

Actually, the broad program that we proposed does have a number of features that would begin to bring in income to farmers very quickly. One of them was a renewed purchase price for governmental purchase program for hogs.

I would believe that to go in this whole perishable field and begin the business of price supports would be dangerous. I would want to study it more before expressing myself definitely on it.

Question (Merriman Smith, United Press). Thank you, Mr. President.

(Whereupon, at 10:58 a. m., the press conference was concluded.)

ACCOMPLISHMENTS OF THE EISENHOWER ADMINISTRATION

Mr. PAYNE. Mr. President, today marks the third anniversary of the inauguration of Dwight D. Eisenhower as the 33d President of the United States. It is, therefore, an appropriate time for looking back very briefly on 3 years of accomplishments of the Eisenhower administration as well as for looking to the future to see what course the Nation is taking under the President's leadership.

The past 3 years have been good years for America. They have brought prosperity at home. More than 65 million Americans are gainfully employed, the greatest employment record in our history. Personal income after taxes is up 8 percent, and gross national product, construction starts, business investment, and production have all increased substantially in the past 3 years. Problems remain, as they always do, in the form of depressed areas suffering from the decline of certain industries and in a continuation of the decline in farm income

which has been in progress for many years. But programs have been developed by the administration to deal with these problems and a significant broadening of these programs has been recommended to the Congress this year.

The administration has made the greatest revision of tax laws in our history; social security coverage has been extended; the minimum wage has been increased; and it is estimated that the budget will be balanced in both fiscal 1956 and 1957. Along with this progress, controls on our economic life have been eased, reflecting this administrations' conception of its role as a regulator rather than a director of the economic climate in which free men live and work.

Along with prosperity, America is enjoying peace under the Eisenhower administration. The war in Korea has been ended, and the Free World under United States leadership has made significant gains in strengthening itself in the face of Communist imperialism. Here again, of course, problems remain, and new problems continually arise. But they are being met by this administration with patience, courage and determination.

Now what of the future? Today, perhaps more than ever before in our history, we have a crying need for two strong and alert political parties. The peril to the Nation and, indeed, to Western Civilization itself is so great that in the years to come it is essential that in our political life we act with responsibility and maturity in facing the hard decisions which alone can promote peace and security in the world and stability and freedom at home.

In 1790 Edmund Burke, one of Britain's greatest conservatives, set a policy for his party which, in my mind, perfectly expressed the philosophy of the Eisenhower administration—Burke said:

> The answer to world revolution is not outbidding it with leftism of our own, nor by reactionary rightist tyranny, but by conserving the free institutions of the west.

"Conserving the free institutions of the West." What did this mean to Burke and what does it mean today to the Eisenhower administration? The conservative seeks to preserve the human and ethical values of the West, as well as the social, cultural, and political traditions which hold together the civilization which western man has labored to build throughout the course of history. But—and this is essential to true conservatism—the conservative conserves discriminately. As has been said by others, he realizes that change is the law of life and adjustment to it the condition of life. Theodore Roosevelt believed that the promotion of social and economic justice and reform was the "highest and wisest conservatism." And so in our own national life today we observe that the Federal Government comes to play a larger role as economic interdependence and urban industrialization increase. The Republican Party under President Eisenhower has been and shall continue to respond quickly to the needs of our society simply because this is essential if we are to preserve the fundamentals of our economic and political way of life. But we should do this in such a way as to strengthen and preserve that which conservatives should hold more precious than all other values; namely, the dignity and fundamental rights of the individual man.

The same conservative philosophy, with its accent on constitutional democracy, liberty, and the rule of law, which motivated Abraham Lincoln motivates President Eisenhower today. Times may have changed, but principles have not. The conservative philosophy of President Eisenhower, nobly expressed and wisely practiced, is the creed best adapted to sustain a free and rational society in these days when our civilization is under such a powerful attack from both within and without. President Eisenhower has in 3 years pointed the way to the future with new vision and high courage. It is now up to all Americans to work unceasingly to translate that spirit into action which will enable the Federal Government to serve the people wisely and well and to build for them and their children an even happier and more secure future.

On this third anniversary of President Eisenhower's inauguration, I know all Americans join in congratulating him on a job well done and wishing him continued success in the future.

MALADMINISTRATION IN OFFICE OF COLLECTOR OF INTERNAL REVENUE, PHILADELPHIA, PA.

Mr. WILLIAMS. Mr. President, on Thursday, January 12, I placed in the RECORD the report of a grand jury in the city of Philadelphia, calling the attention of the Congress to certain conditions existing in the revenue office in that city.

Since that date another case has developed, in which a second individual has gone for 10 years without filing any tax returns. The question is raised again as to what connection he might have had with any of the officials of the Department.

I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks the article entitled "Second Lawyer Here Fails To File Tax 10 Years," published in the Philadelphia Inquirer of January 19, 1956.

The PRESIDENT pro tempore. Is there objection?

Mr. LANGER. Mr. President, reserving the right to object—and I shall not object—I should like to know the system employed by the individual who did not file a tax return for 10 years.

Mr. WILLIAMS. He merely followed the system of not reporting. Whether or not there was collusion between him and the officials is a question which is unanswered. The same question was raised in the previous case, which, the Senator from North Dakota will remember, was called to the attention of the Congress last week. The other individual had gone for a period of 8 years without filing an income tax return, during which time his income was more than $1¼ million.

The grand jury made the specific charge in their report that the fact that he was not filing tax returns was known to the top officials in the Revenue Service in 1949. In 1955, when it was discovered, nothing had been done about it. Even then the discovery was not made by the Bureau.

The grand jury suggested that there may be need for correction of the revenue laws, as well as need for a complete overhauling of the Department, to see why such administrative laxity was permitted.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Delaware?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SECOND LAWYER HERE FAILS TO FILE TAX 10 YEARS

The Government yesterday accused a Philadelphia lawyer of failing to file income-tax returns for the last 10 years on income of $144,800 in a tax case paralleling the sensational disclosures of huge tax delinquencies amassed by the late Lemuel B. Schofield, another lawyer.

This development promptly brought a comment from L. Alfred Chamberlain, Internal Revenue Service commissioner for this region, that he had never been informed of this case, even though he had been here since last September.

PROSECUTION LIMITED

Clarence J. Corcoran, 53, of 1414 Clearview Street, a Democratic campaign contributor and former jobholder in the State inheritance tax bureau, was charged with failing to file income-tax returns from 1945 through 1954 by United States attorney W. Wilson White in United States district court.

Criminal information was filed against Corcoran only for the years 1952 and 1953, White explained, because the statute of limitations barred prosecution beyond 3 years ago.

White said Corcoran voluntarily went into the tax office here and presented his returns for 10 years, admittedly owing the Government tax money but offering no remittance. He appeared with the returns 10 days after the bizarre Schofield disclosures.

White said no action was taken on the 1954 return since the time lapse between the due date, April 15, and the date of filing 4 months later was not sufficient to bring a criminal charge. He asked the court to set $500 bail for Corcoran when he surrendered.

White said the 2 charges called for a maximum penalty of 1 year in prison on each count and/or a $1,000 fine on each count.

The Corcoran case erupted on the heels of last week's demands by United States Senator JOHN J. WILLIAMS, Republican, of Delaware, that the Treasury Department furnish Congress with a complete report and that those responsible for the Schofield fiasco quit or be fired.

The criminal information—which bypasses necessity for a warrant and is sent directly to the Federal grand jury for possible indictment—was filed specifically against Corcoran for not filing his 1952 income of $9,951 and his 1953 declared gross income of $4,850, White said.

Edgar A. McGinnes, district director of the Internal Revenue Service here, declined to comment on the Corcoran case on the basis that it is now before the courts.

Asked to discuss generally the system which made possible the delinquencies, McGinnes again refused to elaborate, asserting the matter came "too close to touching upon national policies of the Department," adding that he was not at liberty to discuss such matters.

POINT CONCEDED

Queried on White's statement that Corcoran voluntarily reported the delinquencies

and was not found out by the Service, McGinnes said:

"We will not dispute that."

White explained that the voluntary, if belated, filing of the delinquent returns did not under the law prevent prosecution for willful failure to file returns when due. Commenting on the case, Chamberlain, the regional commissioner, said:

"This is the first time I have heard about it. However, I will check it thoroughly, with the added intent to see if there are any other such cases. When I arrived here in September and was apprised of the Schofield matter, I was led to believe there might be others."

VIOLATORS HUNTED

Chamberlain said that since the Schofield case, some temporary procedures have been started designed to uncover cases similar to those of Corcoran and Schofield.

A search now is being conducted through the tax files of other attorneys in this area, a spokesman for the IRS disclosed. To date, 45 tax returns of lawyers have been scanned. The findings were not announced.

Corcoran, a native of Wilkes-Barre, came here in 1930. In 1937, then active in 50th ward Democratic politics, he was named an assessor in the Philadelphia office of the State Inheritance Tax Bureau at $3,750 annually. He rose to the position of chief appraiser at $5,000 a year. He was fired in September 1943, after a Republican victory. In the fall of 1945 he was listed as having contributed $1,000 to the Democratic city committee.

Mr. WILLIAMS. In this same connection, there was published in the Philadelphia Inquirer of today, January 20, 1956, an editorial entitled "Schofield Case No. 2 Shows Need for Drastic Probe." In this editorial the Philadelphia Inquirer insists that some action be taken to find out the full extent of this scandalous situation. Let me quote from the last paragraph of the editorial:

The need is to find out. The need is for an inquiry which will cover up no one, hide no names, save no faces. If necessary, let Congress do that job.

I am in complete agreement with that statement.

I ask unanimous consent that the editorial be printed in the RECORD at this point as a part of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SCHOFIELD CASE NO. 2 SHOWS NEED FOR DRASTIC PROBE

Discovery of a new Schofield case, in which a local attorney is charged with failing to file income-tax returns over a 10-year period, underlines what the Inquirer has said before on the need for a thorough inquiry and housecleaning in the Internal Revenue Service here.

The attorney, Clarence J. Corcoran, is stated to have gone voluntarily to the tax office to present returns for the 10 years, but offering no remittance.

So, here is another instance in which the Bureau itself did not discover a tax situation which had continued for a decade. This is pretty hard to explain to the wage earner and salaried employee—who has his tax taken out of his pay even before he sees it.

As the grand jury found in the Schofield case, there is urgent need for better procedures. But no procedure is much better than the vigilance of the men in charge of administering it. Even under existing procedures there is no conceivable excuse for failure to spot tax delinquencies over a 10-year period.

One can only wonder: how many more such cases as this lie hidden? How many more exist without the knowledge or even the suspicion of tax officials?

We are told that "some temporary procedures have been started to uncover similar cases." But why temporary procedures? Why should not the uncovering of such cases be a permanent policy?

It is no wonder that United States Attorney W. Wilson White said of the recent grand jury report that it was presented to reveal not only a "very mysterious case," but "deplorable conditions" in the Internal Revenue Service.

The shocking impact of this second Schofield case makes it all the more imperative to fix responsibility. As we said before, "even if these people cannot be prosecuted under the statute of limitations—they certainly ought to be fired." Perhaps in this second case the statute of limitations may not apply.

The need is to find out. The need is for an inquiry which will cover up no one, hide no names, save no faces. If necessary, let Congress do that job.

Mr. WILLIAMS. Certainly an inquiry into conditions of this office is long overdue. The officials who are responsible, and who knowingly permitted such conditions to exist, even if they have been removed from the Federal payroll, should be identified, even though the statute of limitations may have run. If they are still on the Federal payroll they should be fired. Certainly the taxpayers in that area have a right to know what action is being taken. They have a right to know whether or not these officials are still on the payroll, and if so, why they are kept there. I hope the Treasury Department will recognize this request and issue a complete report as to conditions and what action has been or is being taken.

If such a statement is not available then I think Congress should recognize its responsibility and take the appropriate steps to place the responsibility.

Mr. LANGER. Mr. President, will the Senator yield?

Mr. WILLIAMS. I yield.

Mr. LANGER. I wish to compliment the distinguished Senator for bringing this subject to the attention of the Senate again and again. He has done an excellent piece of work. If there is to be an investigation, I hope the distinguished Senator from Delaware will be chairman of the subcommittee making the investigation.

Mr. WILLIAMS. I thank the Senator from North Dakota.

The PRESIDENT pro tempore. Is there further morning business? If not, the Chair lays before the Senate the unfinished business.

AMENDMENT OF THE NATURAL GAS ACT, AS AMENDED

The Senate resumed the consideration of the bill (S. 1853) to amend the Natural Gas Act, as amended.

Mr. DOUGLAS obtained the floor.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. DOUGLAS. Mr. President, I ask unanimous consent that I may yield to the Senator from Montana such time as he may require, with the understanding that I shall then be entitled to the floor at the conclusion of his statement, and at the expiration of such further time as I may yield to other Senators.

The PRESIDENT pro tempore. Without objection, it is so ordered.

A REVIEW OF FOREIGN POLICY IS NEEDED

Mr. MANSFIELD. Mr. President, the Secretary of State has set in motion a review and reappraisal of the foreign policy of the United States. I do not know whether that was his intention when he gave an interview to a reporter for Life magazine. It seems to me that if it were, he might have found a more appropriate method. If he wished to discuss the achievements of American foreign policy with the public, he had only to request an open hearing with the Committee on Foreign Relations. He had only to call a press conference or to ask for time on radio and television.

An article in Life magazine—with all due respect to that eminent publication—is hardly the best way to lay before the country and the world an accurate picture of the inner workings of our foreign policy. Nor is it the best way to expose the inner workings of the mind of the Secretary of State—if that was the intention—especially since the article is not even over his signature. How is one to know at what point the Secretary's interpretation of events ends and that of the writer begins? No matter how able the Life writer, such an article was bound to produce violent reactions both at home and abroad. It has already had that effect and we have not yet seen nor heard the end of it.

Whatever the Secretary's intentions, and I have no doubt that they were honorable, one result is already apparent. The wheels of review with respect to American foreign policy have begun to turn both here and abroad. I regret that the review has begun in this roundabout and indirect fashion. I cannot say, however, that I am sorry that it has begun. It is long past due.

It is past due because everywhere in the world situations are changing rapidly while our policies have drifted along in the unchanging pattern of the past. I do not quarrel with the fundamental quality of these past policies. Most of them, like the Marshall plan for economic aid, military containment in Western Europe, and point 4, were devised during a Democratic administration, with the help of Republicans like the present Secretary of State. They were bold, intelligent, and effective policies at the time they were established. They stemmed the tide of the Soviet advance toward the Middle East and in Western Europe. They prevented Communist totalitarianism from spilling over into the western Pacific. In so doing, they served the interests and safeguarded the security of the United States. They achieved this without bringing on the atomic holocaust of world war III.

But a foreign policy effective once is not a foreign policy effective forever. For 3 years we have lived on borrowed time in foreign relations. We have been carried along; we have been supported by the momentum of the ideas and the strenuous efforts previously put forth.

I have searched the records and I have failed to find one major new approach to the situation abroad in the past 3 years. There is a Policy Planning Board in the Department of State whose function it is to lend creative direction to the conduct of foreign policy. Where is that direction? Has it been asked for? It has been conspicuous by its absence. There are advertising gimmicks; there are new words; there are louder words which fewer and fewer people heed. But what does it all add up to—a continuance of policies devised long before the present administration took office, now dressed up in the diplomacy of the brink.

When these policies were first established there was a strong justification for them in the situations which existed abroad. A war of great devastation, which had shaken free governments to their foundations had just been concluded. The threat of Communist subversion and aggression to them was immediate and overwhelming. If they had fallen before this totalitarian onslaught, the danger that this country might suffer the same fate would have been multiplied many, many times. It was in our national interest to act with economic aid, with military assistance; and we so acted. The response of the American people to the challenge to freedom from Communist totalitarianism was sensible, determined, and noble. So, too, was the reaction of the free nations of Europe. They supported fully the leadership of the United States because our policies did fit the situations which developed after World War II. They supported our leadership because it was clearly and unequivocally directed to the preservation of peace and human freedom—not to world war III or the chaos which lies beyond.

In some respects, in some areas of the world, the problems today are similar to those which confronted the previous administration. When past policies are employed, selectively and judiciously, to meet these problems, I see no reason to oppose their continued use. But in many parts of the world the situation has changed. New forces are on the march in Asia and Africa in the wake of the Bandung Conference last year. A Soviet diplomatic offensive, spearheaded by Messrs. Khrushchev and Bulganin, is in high gear in Asia, and has jumped the wall of containment in the Middle East. The German and Japanese situations are in a perceptible transition. North Africa is in turmoil, and the reprecussions push France closer and closer to political disaster. Western Europe, groping toward unity, is in a decisive struggle at this moment with its inner forces of disunity.

Nothing has been settled in Korea. The offshore islands may yet lead us into a military involvement with Communist China, if not to world war III itself. In Indochina, there has been some improvement, but even there the danger of catastrophe is by no means yet passed.

Mr. President, all of these situations bear a direct or indirect relationship, a dangerous relationship, to the security of the United States and to the welfare of the American people. The relationship may not be so readily apparent, it may not seem so real as some of the domestic questions which we face, like the budget or lower taxes or better roads or the protection of our natural resources. But it is nonetheless real. Unless our foreign policies meet these international situations effectively, they will, sooner or later, exact from the people of every State in the Union, from all the people of the United States, a terrible price, an inconceivably greater price than we have paid for past wars. In a nuclear age, the price will be calculated not only in hundreds of billions of dollars, but more important, in the lives of countless millions of our citizens, military and civilian alike. We shall deal with these internatonal situations soberly and intelligently and well, or we shall leave a heritage of a shattered civilization to terror-stricken, haunted generations who will come after us.

In striving to meet the problems which confront us in the world, there is one factor which I believe we must bear constantly in mind. It is the factor of our own limitations. Despite their importance to us, situations elsewhere are not completely within our control. What we do or fail to do with respect to any one of them is only one factor. We may do all that we are capable of doing and still find that they work out against our immediate interests. There are human limitations and they are just as applicable in foreign relations as in any other field of human endeavor. I do not believe the policymakers—either Democratic or Republican—have always appreciated that factor. In their anxiety to do something, they have often fallen into the erroneous assumption that dollars are the answer, or a better Voice of America, or more military aid, or this, that, or the other. There are no panaceas. There is no easy way out, there is no cheap way out, there is no sure way out of our difficulties. Gimmicks, no matter how clever, are rarely the answer. There are times when to do less is better than to do more.

That there are limitations on what our influence abroad is, does not, however, excuse those responsible for the conduct of foreign policy from doing everything possible to make it most effective. The limitations are not an invitation to irresponsible drift, dodge, or defeatism, just as they are not a sanction for persisting in policies—even those conceived under a Democratic administration—which may have become outdated.

In some situations these policies are still useful and are still necessary to the interests of the United States. In others, they are less effective or no longer effective and may even have become detrimental to our interests.

What we need, what the American people need, is a clear-cut honest understanding of the actual situations which confront us in various parts of the world and the policies which we are pursuing in dealing with them. We need to determine, the American people need to know, whether these policies are indeed the most effective available to us.

That is why I welcome the initiative of the Secretary of State in touching off a review of foreign policy by his interview in Life magazine, much as I differ with the propriety of the means he has chosen or with his interpretation of recent history.

General Ridgway's article in the Saturday Evening Post has raised other questions involving the capacity of the Armed Forces to meet the commitments of policy which we have undertaken. These questions, too, will need to be examined by the appropriate congressional committees as well as by Secretary Wilson and Admiral Radford. Let me say at this point that there is a great deal of difference in the propriety of a former Chief of Staff or even an ex-Secretary of State setting forth his views in an informal fashion and the present incumbents doing the same. In the case of former officials, they speak for themselves alone. What this administration has yet to learn is that when its officials speak, they speak for the entire Nation. Nor does it help matters for the President to issue disclaimers after the words of his subordinates, civilian and military alike, have done the damage.

I think the review of policy which has now begun should proceed not only in the executive branch, but in Congress—particularly in the Senate—and in the country at large. Some will say that an election year is not the time for it. They will say that under the pressure of politics, "bipartisanship" will give way. If bipartisanship means anything, it means the exercise of political restraint in matters which affect the vital interests of the Nation. It is not a device to club political parties into submissive speechlessness. It is not a muzzle which requires Congress, especially the Senate, to remain silent while situations are allowed to develop abroad which threaten the peace and welfare of the Nation as a whole.

I have been for a long time deeply disturbed by the tendency over the past 3 years on the part of the executive branch to abdicate or evade its duties in foreign relations. I have more than once spoken out on this phenomenon and in defense of the prerogatives of the President. I should be equally disturbed, however, if under the guise of bipartisanship, the Senate were expected to abandon its constitutional responsibility in matters of foreign policy.

The national interest will not be served in the Senate or elsewhere by a bipartisanship of silence when international developments demand discussion. It will be served only by the acceptance of that added measure of responsibility which rests on each of us in the executive branch, in the Congress, and in the country at large in questions involving the relationships of this country to others. It is the responsibility to think and to act as Americans rather than as Democrats or Republicans. That responsibility is with us at all times, no more, no less, in an election year than in any other.

A Republican majority controls the administration. A Democratic majority is in control of Congress. Let the Republican majority act with a sense of responsibility in this election year; the Democrats will do the same. The record

of this body during the past year bears out that statement. The Senate has functioned under the outstanding leadership of the Senator from Texas [Mr. JOHNSON] and the Committee on Foreign Relations under the chairmanship of the esteemed and statesmanlike Senator from Georgia [Mr. GEORGE]. I can think of no measure of major importance in foreign relations, sought by the President, which has been denied him by action of the Democratic majority in this Congress or by the Democratic minority in the last Congress. I can think of several which were saved for him by action from this side of the aisle.

Recently, within a 30-day period, several incidents have occurred which throw doubt on the capacity of the administration to operate with the same sense of responsibility. On December 13, 1955, congressional leaders of both parties were summoned to the White House from their homes to be consulted and briefed on the budget for foreign aid for the coming year. They were told by the Secretary of State that additional funds would be sought for economic aid. But they were told nothing of any anticipated increase in military aid by the Secretary of Defense. Two days later, after the congressional leaders returned to their homes, the newspapers carried the story that Secretary Wilson would seek $2 billion in additional military assistance.

Not long after this we learned through the newspapers, and then from the President's message, that the administration intended to put foreign aid on a permanent long-term basis. What congressional leaders were consulted on these plans?

Then came the Life magazine story, sanctioned by the Secretary of State, which extolls the achievements of a Republican administration in foreign policy in a partisan publication in an election year.

These incidents, Mr. President, are, in my opinion, examples of how not to act with a sense of responsibility in foreign relations.

And others seem to be coming. More and more administration leaders are getting into the political game in foreign relations and we are now even promised the spectacle of the Secretary of State taking the stump.

If national interest requires us to rise above political considerations in matters of foreign policy—and it does—it also requires us to undertake a vigorous review of that policy. It requires us to make an unremitting search for facts and ideas which may guide us in dealing with difficulties abroad. Nowhere is this more essential than in the Senate of the United States. Unless the search goes on continuously in this body, how are we to discharge our constitutional duty of advice and consent in foreign relations? The Senate's role in foreign relations, no less than the President's, is not a right; it is not a privilege; it is a constitutional obligation which cannot be abandoned for any reason whatsoever without undermining the foundations of our system of government.

For my part, I intend to raise the issues of foreign policy on the floor at intervals throughout this session. I hope to do so in the spirit of national responsibility and without challenging the integrity or the patriotism of any individual or the political party now in control of the executive branch of the Government. I will be only too glad to give credit where credit is due. By the same token, however, I do not propose to ignore or to gloss over the shortcomings, weaknesses, and inadequacies of foreign policy as I see them.

Within the next week or two, I expect to examine on the floor of the Senate the situation in southeast Asia. At appropriate intervals thereafter, I intend to raise for discussion, in turn, the growing crisis in Western Europe, the problem of north Africa, of Latin America, of continental Africa, of the Far East, and other areas of the world. My purpose in doing so is not to criticize for the sake of criticism, but to seek to understand and, where possible, to try to contribute to an improvement in the course which we are now following.

The Senate's role is to advise as well as to consent in foreign policy, and this administration is deeply in need of advice. Many of us have traveled abroad in recent months. We have had an opportunity, through the press, to keep up with developments. All of us, and the executive branch as well, should profit from a free and frank discussion of these developments. We might help, at the same time, to clarify the understanding of the American people as to the issues which confront us abroad.

Out of this review could come new ideas to fill the vacuum, to stop the dangerous drift which has settled over our foreign policy. We are in danger of finding ourselves pursuing ever more feverishly a policy with fewer and fewer understandable objectives, a policy stricken with a poverty of ideas.

The challenge to the Senate and to all of us, as Americans, is to clarify our objectives in foreign policy and to end the poverty of ideas by which we pursue them.

Mr. JACKSON. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. JACKSON. I wish to commend the junior Senator from Montana for a very fine, constructive statement on foreign policy. I might add that such a statement from him is not unusual, because the Senator always makes constructive comments on foreign policy.

I may also say that, in my judgment, the junior Senator from Montana has laid down a high standard of conduct, which should be pursued and followed by the executive branch of the Government and by Congress. Certainly today the world situation is such that if a proper debate is carried on in Congress, it cannot help but assist in reaching and solving some of the problems which confront us.

I think it is quite clear, too, that when we discuss foreign policy, we should make certain that we have an adequate military inventory with which to back up our foreign policy. If we do both of these things concurrently, I believe we can make a great contribution to the security of our country.

I wish to commend the junior Senator from Montana for his excellent presentation of the issues and for following the standards of conduct which should be followed in this kind of discussion.

Mr. MANSFIELD. I thank my friend, the distinguished Senator from Washington. I wish to commend him for the fine work he has been doing in trying to bring home to the American people the dangers which confront us at present.

I am delighted to note that Admiral Radford, in an address before an American patriotic group on yesterday, echoed the words of the junior Senator from Washington when he said that we should not underestimate the capabilities or the potentialities of the Russians, especially in the fields of technology and nuclear energy.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. SALTONSTALL. I, too, commend the Senator from Montana for discussing these questions on such a high plane on the floor of the Senate, and I hope he may continue to do so.

I should like, however, to take issue with him on one matter, particularly, which he mentioned in his speech. On page 7 of his statement he stated:

> I have been, for a long time, deeply disturbed by the tendency over the past 3 years on the part of the executive branch to abdicate or evade its duties in foreign relations.

Mr. MANSFIELD. That is a correct quotation from my statement.

Mr. SALTONSTALL. I do not agree with the Senator in that statement. I believe the President, in his atomic energy speech before the United Nations, assumed leadership and responsibility, as he did also by attending and speaking forthrightly at the Geneva conference last year.

I think the present administration has tried to do its utmost to discuss with groups of both parties some of the immediate foreign policy questions which have arisen. In my opinion that is not an evasion of responsibility. I consider it to be the duty of the President to try to formulate our American policy.

I call the Senator's attention to one other point which he mentioned in his speech, that concerning the budget. I was one of those who were present at the conference at the White House, which, as I recall, was a closed conference. It was my understanding that the Secretary of Defense, at that meeting, said he expected to spend a little more money this year, or some more money this year. At that time he did not know the exact amount because he did not have the figures with him, and the budget had not been finally prepared. So I think the exact amount had not been determined at that meeting, although the Secretary of Defense did say that he intended and expected to spend a little more money.

At the top of page 9 of his statement, the Senator from Montana said:

> The administration intended to put foreign aid on a permanent long-term basis.

It is my understanding, in that instance, that a different emphasis has been placed on the word "permanent." If my memory serves me correctly, I believe it was suggested that there would be the possibility of considering foreign aid on more than a 1-year basis. I did not understand that the word "permanent" was used. I do not remember that it was. So I think I would take issue with the Senator from Montana as to whether at that time or at any other time it was said that our foreign aid was to be on a permanent, long-term basis, rather than that in certain instances or certain periods it might be better to extend such aid for one or more years. That, of course, is an issue which we can debate in the future.

In concluding, I wish to commend the Senator for stating that it is his intention to make additional speeches of this type. I hope I shall be present to hear them. However, I wished to point out where I disagree with the Senator from Montana, without going into an extended debate at this time.

Mr. MANSFIELD. I appreciate the statement of the distinguished Senator from Massachusetts, and I should like to make a few comments in answer to the questions he has raised.

I think the President did not assume his full responsibility at the time of the passage of the Formosa resolution last year. He asked Congress for power which he already had.

As to the additional $2 billion requested by the Department of Defense for military foreign aid, I do not consider $2 billion to be a small sum or a small additional increase. Certainly the senior Senator from Massachusetts—and I take his word completely, I assure him—is the only one of the leaders who were at the White House conference at that time who recalls Mr. Wilson making such a remark.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. MANSFIELD. If I may answer the Senator's question first, then I shall be happy to yield.

So far as the last question raised by the Senator is concerned, as to the administration's intention to place foreign aid on a permanent long-term basis, to me, 10 years does not seem to be foreign aid on a temporary basis. There was no indication that even at the end of 10 years foreign aid would be done away with altogether.

I am in favor of foreign aid on a reasonable basis. I do not think that in the field of foreign aid we ought to keep alive temporary agencies, as has been done under both Democratic and Republican administrations. I believe the administration of foreign aid should be placed in the State Department, where it belongs, because foreign aid is a part of our foreign policy and as such should be administered by the department charged under the Constitution with the execution of policy in that field.

Now I am glad to yield.

Mr. SALTONSTALL. I wish to reply to the last point first. I have not understood that the request of the Secretary of Defense was for foreign aid on a permanent basis, nor have I ever heard that it was to be on a 10-year basis. But I did understand that in certain instances—and the Senator from Montana, who has traveled widely, is familiar with this aspect—some of the aid for certain purposes, such as for construction, under conservation policies, cannot be completed in 1 year. That, as I understand, is what the administration has in mind.

I agree that this is a policy which should be debated. I think it is a policy as to which the word "reasonable" is better than the word "permanent."

As to the previous remark about the Secretary of Defense, I do not think I disagree with the Senator from Montana as much as he indicates. Two billion dollars is a large amount. What I tried to say was that at the White House meeting the Secretary of Defense spoke on an expenditure basis. The exact amount of the appropriations and the additional amount required for the additional expenditures he expected to make were not discussed. However, my memory may be fault.

Mr. MANSFIELD. The Senator from Massachusetts has a point. It is true that the entire sum would not be appropriated this year. But once an authorization has been made, as the Senator knows, the appropriations usually follow.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. FULBRIGHT. First, I wish to join in commending the Senator from Montana for making a very able statement. Being a member of the Committee on Foreign Relations with the Senator, I have long since come to regard him as one of the best informed, most forward-looking, and discriminating Members of the Senate in the matter of foreign relations. He has made a deep study of that subject and has specialized in foreign affairs. So I think that what he says deserves very serious consideration by the Senate and the country.

I wish to ask the Senator from Montana if he feels that the administration, especially the Secretary of State, has presented to the Senate and the country the true state of our relations with foreign countries, or has the Secretary made those relations appear to be better than they really are.

Mr. MANSFIELD. The Secretary of State has painted a picture which, in my mind, is a little too rosy. I feel that we have never faced such a difficult situation as we confront today, in the entire period since the end of the Second World War.

I think, furthermore, that the American people are entitled to know the truth. They should be told that they face years of tension; that, if I may repeat myself, there is no easy or cheap way out of the difficulties which confront us; and that politics should take second place in relation to the welfare and security of our country.

Mr. FULBRIGHT. Mr. President, will the Senator from Montana yield further?

Mr. MANSFIELD. I yield.

Mr. FULBRIGHT. I agree with the Senator; it seems to me that one of the most dangerous things we could do at this time would be to create the impression that the dangers were past or that they were less than they actually were, because that would have a direct bearing upon our capacity to support adequately a program in which I know the Senator, and I am sure the administration, are interested.

Mr. MANSFIELD. That is true.

Mr. FULBRIGHT. What seems to me especially unfortunate is, on the one hand, to paint a rosier picture than the facts warrant, and, on the other hand, to ask for very substantial increases in appropriations. How can those two aspects be reconciled?

Mr. MANSFIELD. The two do not jibe.

Mr. FULBRIGHT. The two do not jibe, and to me it seems incredible that we are to be told, on the one hand, that everything is going well, and on the other hand, that we have to have a permanent program, with very large increases in funds. If we cannot get a more realistic picture from the administration than that, it makes the job of the Congress an impossible one.

Mr. MANSFIELD. It does, because we have to depend on the administration to furnish the details and the facts. If we do not have access to them, we cannot act on the basis on which we should act, and on the basis on which every Member of the Senate believes he should act. I would far rather prefer to have the true status laid before us, so we can act accordingly, and so that when we go to our respective States we can tell the people what the situation is, not only from our own viewpoint, but from the viewpoint of the administration, which, although it is Republican, represents the country.

Mr. FULBRIGHT. If there is anything to a bipartisan policy, it means cooperation between the administration and the legislative branch, so that the people of the country may be enlightened and their support enlisted. The Senator from Montana and I do not get the same attention in the press as does the administration, and if we tell the people one story and the Secretary of State tells a different story, it creates an impossible situation for us.

Mr. MANSFIELD. That is true, but in cases of that kind, we will have to tell the story as we see it.

Mr. FULBRIGHT. The Senator from Montana and I usually agree on matters of this kind. I can think of no instance when we have not agreed. I feel that if the country is not told the full truth about such matters, it makes it more difficult for us to perform our function. I think the administration must keep in mind that it cannot have the Secretary of State speaking one way in his speeches, and then come before Congress and ask for a program which he supports by different assumptions. I think the facts to a great extent should control what the Secretary says. I have reference to what is happening in France, for example. Is not the situation there very serious?

Mr. MANSFIELD. It is far more serious, I think, than the American people know, especially when we realize that there has been an increase in the Communist Party membership in the Na-

tional Assembly from 98 to 151, when we see an increase in numbers and in power of a party which believes in nonpayment of taxes, and when we consider complications in north Africa, the Saar, and elsewhere. We must admit that in that area, which is the heart of NATO, we have a very complex situation. We have invested billions in France, because it is the capstone of the NATO organization. It is common knowledge that we have pipelines, concentrations, and airfields there, in order to strengthen Western Europe, because we recognize that our security interests are tied to that area. Now we are confronted with the results of an election in France which has made a bad condition worse. We cannot ignore it. We cannot laugh it off. We have to create a policy in accordance with the realities of life.

Mr. FULBRIGHT. The Senator has said it very well, indeed. The fact of the matter is that, together with the developments in the Middle East, there has been created a situation which is far more serious than anything we have had since World War II, except for the actual fighting in Korea. Yet the impression is left that things are going well, and the publication of an article, such as was recently published in a magazine, which implied that things are going well, is a very great disservice to the formulation of such a bipartisan policy as should receive the support of this country.

Mr. AIKEN. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. AIKEN. When the Secretary of State comes before a committee and gives us to understand that the non-Communist world is stronger than it was before, it seems to me it is not very fair for his opponents to pick out one piece of the non-Communist world, which may be a weak spot, and point out that weakness, and thereby make out the Secretary of State as a liar. His representation to our committee was that the non-Communist world as a whole was stronger. I believe it is stronger. Most of the countries are stronger economically than they were. I do not think it is quite fair to pick out a particular spot of the non-Communist world and point out its weakness. Even France is stronger economically, and has not changed much politically. France is weaker as far as its colonies are concerned, of course, but I do not think anyone should pick out one bad spot and say the Secretary of State does not tell the truth.

The PRESIDING OFFICER (Mr. LONG in the chair). The one-half hour which was yielded by the Senator from Illinois has expired.

Mr. AIKEN. May I ask unanimous consent that I may be yielded 1 minute more?

Mr. DOUGLAS. Certainly.

Mr. AIKEN. I shall not take it.

Mr. MANSFIELD. The Senator from Illinois consented to yielding to the Senator from Vermont.

The PRESIDING OFFICER. The Senator from Illinois has yielded 1 additional minute in addition to the time heretofore yielded.

Mr. DOUGLAS. Mr. President, I am glad to yield additional time to the Senator from Vermont.

Mr. MANSFIELD. Mr. President——

Mr. AIKEN. Very well; then I shall use the 1 minute. I have felt at times that the Secretary of State was somewhat apprehensive in coming before the committee, for fear that what he might state in confidence, and what might be of a critical nature, might appear in the newspapers the next day, or as soon as his statements could get into print thereafter. I believe that is a situation which should be cured. However, I think that because of the Secretary's broad statement that the non-Communist world is stronger, it is unfair to pick out one spot and say he is wrong.

Mr. MANSFIELD. Mr. President, I may say that was only one illustration. One could pick out scores of spots. Take the Middle East. I understand it is ready for eruption at any moment.

The PRESIDING OFFICER. Does the Senator from Illinois care to yield further?

Mr. DOUGLAS. I yield.

The PRESIDING OFFICER. How much additional time does the Senator yield for this subject?

Mr. DOUGLAS. Mr. President, I yielded previously for a half hour. I shall be glad to yield such an additional period of time as the Senator from Montana may care to have.

Mr. MANSFIELD. May I have 5 minutes?

Mr. DOUGLAS. Yes.

Mr. HUMPHREY. Mr. President, will the Senator from Montana yield to me?

Mr. MANSFIELD. I yield to the Senator from Minnesota.

Mr. HUMPHREY. I think the address delivered by the Senator from Montana is an excellent one. I was not here to hear it. However, I had a copy made available to me and have read it. It was prepared and delivered in a temperate and very thoughtful manner. It certainly exhibits the finest type of mature and enlightened bipartisan consideration.

The Senator from Montana is respected by all his colleagues for his unusual grasp of the problems of foreign relations. We are deeply indebted to him. I believe he has brought to our attention a galaxy of problems, far beyond any 1 or 2 which may be pointed out.

I notice that the Senator from Montana commented most politely and in a most friendly manner on the article in Life magazine, which in the past few days has been the subject of discussion. I think his comment was most appropriate, and was very temperate and moderate.

Is he aware of the fact that only a few days ago the Secetary of State said that about the first of December he talked with the man who wrote the article entitled "How Dulles Averted War," which was published in Life magazine?

Mr. MANSFIELD. Yes, I am.

Mr. HUMPHREY. Is the Senator from Montana aware of the fact that on November 28, the Secretary of State opened his press conference by referring to the subject of bipartisan discussion of our foreign policy? Does the Senator from Montana recall that?

Mr. MANSFIELD. No; I am sorry that I do not.

Mr. HUMPHREY. Let me refresh the Senator's recollection by quoting, for example, what Mr. Dulles had to say on November 29, as reported by the Associated Press:

> Foreign policy will no doubt be debated during the Presidential campaign. Such debate should be welcomed so long as it is constructive and conducted in such a manner as not to endanger our Nation.
>
> It needs to be remembered that those hostile to the United States and its ideals are not going to take a vacation so that we here can safely concentrate on a domestic political battle. We should not encourage them to become bolder, calculating that the months ahead, because they are an election period for us, would provide unusual opportunities for them.
>
> Our Nation will need the same bipartisan unity which in the past has given authority, vitality, and much success to our foreign policies. The need for such bipartisanship has been increasingly recognized during the postwar decade, and last year bipartisanship reached a new high.

This is what I wish particularly to invite to the attention of the Senator from Montana:

> It is to be hoped that partisan debate will not disrupt or disparage this process which is necessary to give to United States foreign policy the stability required if our friends abroad are to depend upon it and if our enemies abroad are to respect it.
>
> I know that no American will deliberately imperil his Nation. But that peril could result from careless or uninformed indulgence in partisan excesses.

Is not that a statement of philosophy and purpose with which we can agree?

Mr. MANSFIELD. It is a statement of philosophy and purpose with which the Democratic Party has agreed since the Eisenhower administration has been in office during the past 3 years; and that is one of the things which makes me proud to be a Democrat, because during that period we have acted as a responsible opposition party.

Mr. HUMPHREY. I certainly concur in that statement, and I believe that our record of support is indicative of its accuracy.

The Senator from Montana may be interested in the following:

The Secretary of State, after concluding his formal statement, answered questions from the newsmen at the conference. In answer to one question, he said:

> Well, now let me tell you this: I am going to try as hard as I can to avoid myself getting drawn into what could reasonably be regarded as a partisan position. I think that the job that I have is pretty much of a full-time job, and I'm trying to handle it in the way which will best serve the interests of all the American people.
>
> So, I shall avoid, as far as I possibly can, getting drawn into any aspect of partisanship.

That was on November 29. Yet a few days ago the Secretary of State said to a newspaperman that he gave his interview to the Life magazine reporter on about December 1. How does that jibe, in terms of what we call a considered, moderate, mature, bipartisanship spirit of unity and cooperation?

Mr. MANSFIELD. Let me say to the Senator from Minnesota that I do not think the facts jibe; but I wish to repeat what I said in the course of my speech, namely, that I believe the Secretary of State is an honorable man.

Mr. HUMPHREY. Indeed he is.

Mr. MANSFIELD. He probably did not realize what he was doing. It is hard to understand, when we consider the stature of Mr. Dulles' mind.

On the ticker, this morning, I read something to the effect that a friend of Mr. Dulles is supposed to have said that Mr. Dulles should speak "off the cuff," and should not carefully prepare his speeches, because it is in his carefully prepared speeches that he seems to say the things which cause, shall we say, some discussion.

Mr. HUMPHREY. I noticed that in his remarks today, the Senator from Montana said:

> Nor is it the best way to expose the inner workings of the mind of the Secretary of State—if that was the intention—especially since the article is not even over his signature. How is one to know at what point the Secretary's interpretation of events ends and that of the writer begins?

I gather that the Senator from Montana is of the opinion that there might have been a slight partisan tinge to the article; is that correct?

Mr. MANSFIELD. I would not care to disabuse the Senator's mind in that respect.

The question in my mind is why the Secretary of State gave the interview leading to the publication of the article, and what was the need for it.

Mr. HUMPHREY. That is the point.

Mr. MANSFIELD. The Secretary of State could have told the story to the Foreign Relations Committee or to the press, or he could have obtained time on the radio or television for that purpose. There are all kinds of ways by which the Secretary of State could have carried his message to the people, who would have been glad to hear from him, as they always are. I do not know why the Secretary of State gave the interview to a particular magazine, or what the need for it was. Those are the questions which arise in my mind.

Mr. HUMPHREY. Yes.

Is it not particularly interesting to ask why that was done, inasmuch as only 2 days before that interview, the Secretary of State said:

> I am going to try as hard as I can to avoid myself getting drawn into what could reasonably be regarded as a partisan position. * * * So I shall avoid, as far as I possibly can, getting drawn into any aspect of partisanship.

Let me ask my colleague from Montana this question: Is it not correct that the criticism of the article is not a criticism of what the Secretary of State said before the Foreign Relations Committee or what he said in his public speeches which have been reported as official on the part of our Government; but is not the criticism as to the manner and the timeliness of what was said and what was written?

I think the Senator from Montana will agree that more security information was revealed in the Life magazine article than we have heard before the Foreign Relations Committee, particularly as relating to the use of atomic weapons. Am I correct in that observation?

Mr. MANSFIELD. I would say the Senator from Minnesota is eminently correct. So far as I know, no Member of the House or the Senate had that information at his disposal. It was news to me, and it disturbed me.

Mr. HUMPHREY. In other words, the Senator from Montana did not hear, for example, that we were in the process of considering the use of nuclear weapons in some of the instances which were revealed in the article; is that correct?

Mr. MANSFIELD. That is correct; I did not hear of that at all.

Mr. HUMPHREY. The Senator from Montana attends regularly the meetings of the Foreign Relations Committee, does he not?

Mr. MANSFIELD. I do.

Mr. HUMPHREY. I gather that the attendance of the Senator from Montana at the committee's meetings is one of almost 100 percent regularity.

Mr. MANSFIELD. Not quite.

Mr. HUMPHREY. Is it not fair to observe that in the publication referred to, there were revelations which went beyond anything we have ever heard in the Foreign Relations Committee, on those particular topics?

Mr. MANSFIELD. To the best of my knowledge, that is correct. If there was any truth to that particular assertion, I would think it would be highly super-secret-confidential, so that it would not be made public anywhere, at any time.

Mr. HUMPHREY. Does the Senator from Montana recall that any particular security information has ever been "leaked" from the Foreign Relations Committee?

Mr. MANSFIELD. I certainly do not.

Mr. HUMPHREY. Does the Senator from Montana recall in recent days receiving from the Foreign Relations Committee any particularly high-level security information?

Mr. MANSFIELD. No. As a matter of fact, anyone who reads the press of this country has a fairly good knowledge of what the state of affairs of the world is; and very little in addition to that is to be obtained from the Foreign Relations Committee.

Mr. HUMPHREY. I thank the Senator from Montana; he has rendered a great service.

The PRESIDING OFFICER (Mr. FULBRIGHT in the chair). The 5 minutes yielded by the Senator from Illinois to the Senator from Montana have elapsed.

Mr. LONG. Mr. President, I should like to ask several questions of the Senator from Montana.

Mr. DOUGLAS. Mr. President, I yield 2 minutes for that purpose.

The PRESIDING OFFICER. The Senator from Montana may proceed for 2 additional minutes.

Mr. LONG. Mr. President, will the Senator from Montana yield to me?

Mr. MANSFIELD. I yield.

Mr. LONG. Did the Senator from Montana ever have it called to his attention, or come to his knowledge, as a member of the Foreign Relations Committee, that on three different occasions the United States had taken certain steps which were such that, if the Communist world had taken a corresponding additional step, world war III would have started?

Mr. MANSFIELD. No.

Mr. LONG. Does not the Senator from Montana, as a Senator of the United States who serves on the Foreign Relations Committee, a committee which certainly is as well qualified to have access to secret information as is any other body of men in America, believe that if the Secretary of State had felt that affairs had developed to such a point that one more forward step by either side would have brought on world war III, it would have been well to inform the members of the Foreign Relations Committee, the elected representatives of the people of the United States?

Mr. MANSFIELD. In my opinion it would have been mandatory to inform the Congress of the United States.

Mr. LONG. If we had reached the point where world war III was on the verge of beginning, and where a simple additional step by our prospective enemy would have meant that world war III was underway, and if the Congress, the elected representatives of the people—even the committees best qualified to keep a secret—were not to be informed of this situation, might it not have been possible that the reason might be that we might not want the Communists to know precisely the inner workings of the minds of the members of the administration at that particular point?

Mr. MANSFIELD. That is possible.

Mr. LONG. Can the Senator think of any other conceivable justification?

Mr. MANSFIELD. I cannot.

Mr. LONG. If that were the case, then can the Senator tell me what purpose there might be now in explaining to the Communists exactly how our minds were working in arriving at the decision that we felt that we had reached a point beyond which we could not go?

Mr. MANSFIELD. We get back to the original question; namely, Why was the article published? What was the reason for it? I do not know.

Mr. LONG. Does the Senator believe we would find it helpful in arriving at our decisions if we had similar information as to what was the situation at that point in the minds of those in the Kremlin and those at Peiping?

Mr. MANSFIELD. Yes.

Mr. President, I thank the Senator from Illinois [Mr. DOUGLAS], who has been so gracious, and from whom I have taken so much time.

Mr. DOUGLAS. Mr. President, I should like to yield to the Senator from West Virginia [Mr. NEELY] for 15 minutes. I am sure that when the Senator from West Virginia requests 15 minutes, he will not take more.

With the understanding that I do not lose my right to the floor, I am glad to yield to him at this time.

The PRESIDING OFFICER. Without objection, it is so ordered.

SECRETARY DULLES' FOREIGN POLICY INTERVIEW WITH THE PRESS

Mr. NEELY. Mr. President, let me sincerely thank the eminent Senator from Illinois for the fifteen precious minutes he has graciously granted me. His generosity will not be abused by an attempt to extend my allotted time into a trespass on eternity—a "sad offense" which is habitually committed in this Chamber with the regularity and persistency of the rising and the setting of the sun.

Mr. President, a nationwide newscast last Tuesday night by the Columbia Broadcasting Company's preeminent analyst and commentator, Mr. Eric Sevareid, is in simplicity, logic, and importance comparable to Lincoln's Gettysburg Address and in eloquence to Bryan's Cross of Gold convention speech. Mr. Sevareid began with his usual "Good evening," but his pertinent remarks might well have been captioned "How Imbecilic Can an American Secretary of State Be?" or in Ciceronian paraphrase, " 'How far, oh Mr. Dulles, will you continue to abuse the patience' of the American people, offend their allies, distress their friends, and delight their foes by 'darkening counsel by words without knowledge,' propriety or commonsense?" Mr. Sevareid's notable commentary, with which he brilliantly illuminated the latest indiscretion of the confused and bungling Mr. Dulles, is as follows:

Good evening. Secretary John Foster Dulles faced several hundred reporters this morning, explanatory statement in hand. This was probably the first time that the Washington news corps—much of it at least—has felt downright sorry for Mr. Dulles, who possesses a very tough carapace. The incredible snafu of the Life magazine interview had Mr. Dulles in an excruciatingly painful position, produced by a combination of forces: Mr. Dulles' own desire to counter criticism of his foreign policies, mounting since the Mid East situation began to fall apart; the eagerness of his personal press agent to picture his chief as the single savior of world peace; the desire of the Luce publications to strike a blow for the administration this election year; and the innocent, black-and-white view of history held by the magazine writer.

The outcome to date includes a sharp weapon placed in the hands of Russia's propagandists; fear among neutral governments; consternation among friendly governments; a political windfall for the Democratic Party, and more certainty than ever that foreign policy will be a hot campaign issue this year; and it included this morning's unhappy spectacle of the able, dignified Secretary of State trying bravely to undo the worst of the damage, in a shaky voice. He was the picture of a man who had been led to disaster by his best friends, his closest advisers, and his own ego—a man who knew all this and knew he could only reduce the damage, not repair it.

The most important thing he did this morning was to make it clear that deliberately moving to the brink of war in a gamble to stay an aggressor's hand was not his policy; that is what the article had made his policy appear to be. He denied that the now celebrated line was his own words, by saying he, himself, would never have put it quite that way. But even if Mr. Dulles did use those words he cannot possibly have meant them as they were interpreted by the world. Obviously no man in his right mind would, in this hydrogen age, deliberately seek to push his country to the brink of war. Nor was Mr. Dulles responsible for the sweeping conclusions made by the magazine writer himself, or for the stark headlines which said, "Three Times at Brink of War: How Dulles Gambled and Won." The current joke here is that a Democratic gremlin is writing headlines for Mr. Luce's Republican magazines. For no headline could give people less peace of mind about the conduct of those life-and-death affairs.

But Mr. Dulles is responsible for the sweeping claims that our threats to use atomic bombs preserved the Korean armistice, stopped the Reds from taking all of Indochina and prevented a Red attack in the Formosa Strait. He is responsible for implying the Government had definitely decided to use the bombs and to attack China proper if the Reds did not pause. If the Reds knew such a policy decision had been taken in any of the three instances they knew more than the American people, press, or Congress, or our allies.

On one other aspect Mr. Dulles was not convincing this morning. His implication that the Life interview was no different from other private talks he has had with other writers. In fact, this interview and article were most elaborately arranged; there were not 1, but 4 sessions between Dulles and the writer and it was all tape-recorded. Mr. Dulles' press officer, furthermore, reviewed the article before publication, apparently failing to detect the enormous charge of dynamite it contained, including the explosives handed, gratis, to the political opposition.

This is Eric Sevareid in Washington.

Mr. President, ever since the days of Thucydides it has been an axiomatic truth that "history repeats itself." Mr. Dulles in his interview, which appeared in a recent issue of the nationally circulated magazine mentioned by Mr. Sevareid, has, so far as ultimate consequences are concerned, repeated one of the most regrettable oral transgressions in the political history of the United States. The precursor of our erring Secretary's latest deplorable deliverance is as follows:

In the Fifth Avenue Hotel in New York City on the 29th of October 1884, the Reverend Samuel D. Burchard, as spokesman for a number of clergymen who had gathered to assure Mr. James G. Blaine of their support of his candidacy for President, said:

We are Republicans, and don't propose to leave our party and identify ourselves with the party whose antecedents have been rum, Romanism, and rebellion.

Concerning this disgraceful nonsense a distinguished commentator says:

There is good reason to believe that the phrase "rum, Romanism, and rebellion," which Blaine failed promptly to repudiate, lost him the Presidency.

In that case the utterance of a stupid blabbermouth enabled Grover Cleveland to carry New York by 1,047 plurality, win the State's entire electoral vote, and consequently gain the world's greatest honor—the Presidency of the United States. In 1884 Burchard's foul and foolish words, which were of only national significance, defeated a Republican candidate for President. Mr. Dulles' equally foolish words, which are of great international concern, will, in cooperation with numerous other well-known causes, in 1956, defeat another Republican candidate for the highest office in the land.

The American people have been greatly alarmed by the Secretary's assertion that during the past three years we have three times been on the brink of war which, if it had occurred, would have inevitably been fought not by the outmoded methods of the past but with annihilating atomic and hydrogen bombs. Thus we have from Mr. Dulles a new revelation of the value of the Republican promises of security and peace by which millions of Americans were humbugged into voting for Mr. Eisenhower in the latest presidential election.

In the circumstances, Mr. Dulles has, by means of his interview, given the kiss of death to the next Republican presidential candidate as certainly as the Reverend Samuel D. Burchard gave it to James G. Blaine 72 years ago.

At the ballot box next November, regardless of the names of the presidential nominees, the people will, by a majority of many millions, say to the Republican Party as the Almighty said to Belshazzar: "Thou art weighed in the balances, and art found wanting. Thy kingdom is given to the" candidate of the illustrious Democratic Party founded by Thomas Jefferson, vitalized by Andrew Jackson, liberalized by Woodrow Wilson, and immortalized by Franklin Roosevelt and Harry Truman, and thereafter the American people will once more be able to

AMENDMENT OF THE NATURAL GAS ACT, AS AMENDED

The Senate resumed the consideration of the bill (S. 1853) to amend the Natural Gas Act, as amended.

Mr. DOUGLAS. Mr. President, before I begin my address, I should like to ask unanimous consent that one of my assistants, Mr. Riddle, be permitted to sit on the Senate floor to assist me.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOUGLAS. Mr. President, at the conclusion of the session yesterday I started to point out some of the extraordinary contradictions in the claims made by the proponents of the bill. I pointed out that the eminent sponsor of the bill, the junior Senator from Arkansas [Mr. FULBRIGHT], argued that his bill was intended to protect the consumer. I pointed out that the claim was echoed in part by the floor manager of the bill, the junior Senator from Oklahoma [Mr. MONRONEY].

As I said, I am sure these Senators made their statements in good faith. They are sincere men and splendid Members of the Senate. However, I also pointed out that in the areas where gas is produced the producers and the big oil and gas companies were being told that this was a bill which would result in a huge increase in the gas prices in the field, which would redound to their

benefit. If time permitted, I could document that statement in great detail from speeches and newspaper articles.

That indicates the dual nature of the discussion which has been carried on. In the back rooms and in the boiler rooms, word is being circulated that the pending bill will allow gas prices to go up very greatly. It is that statement which is mustering behind this bill the economic power which the big oil companies are throwing into it.

At the same time, out in front very fine gentlemen are saying, and saying in all sincerity, that this is a consumer's bill, and thus seek to soften the opposition of the consumers of the country to this measure.

I point out this conflict so that we may get behind the verbal protestations which are being made and into the essence of what is being proposed.

There is another very interesting contradiction which has developed. My good friend the Senator from Arkansas [Mr. FULBRIGHT] argued at great length that his bill would provide more effective controls than those provided by the present act, and that the indirect controls sought to be placed on the pipelines were for the purpose of preventing their "passing unreasonable market prices" on to the distributing utilities, and that such indirect controls would be more effective than direct controls on the producers.

He argued, in effect, therefore, that his bill would make controls more effective.

The Senator from Arkansas, as I shall try to show, is mistaken in that point of view, though I am sure he is honestly mistaken.

However, the senior Senator from New Hampshire [Mr. BRIDGES], the chairman of the Republican Senatorial Policy Committee, in his speech on the floor in support of the bill, stated very clearly on Tuesday afternoon that this was a bill to remove controls. He regarded controls as un-American and improper, and welcomed the fact that the bill would remove them. They cannot have it both ways, Mr. President.

In this respect the analysis of the senior Senator from New Hampshire is much more to the point than the claims of the junior Senator from Arkansas. The pending bill would, as the senior Senator from New Hampshire asserted, take off controls on the price at which natural gas enters the pipelines for ultimate distribution to the consumers of the country.

In rising to oppose the Harris-Fulbright bill I speak for 21 million American families who cook with natural gas or heat their homes with natural gas, or heat water with natural gas, or, upon occasion, operate their refrigerators with natural gas. I speak for those 21 million American families who comprise approximately 80 million American citizens. Those families, who include nearly half of our total population, have, at a conservative estimate, $11 billion of their money invested in gas furnaces, gas hot-water heaters, gas stoves, and some gas refrigerators. In 1954 they paid at least $1,400,000,000 a year to the local gas companies for the gas which they burned.

I should like to point out that these families are of all economic levels. They cut through all economic strata; they include the poor, the middle class, and the well-to-do. They are a cross section of the Americans who live in the towns and cities of our country. They can be described, if any group can be so described, as Mr. and Mrs. John Q. Public. In speaking for them, I believe I am speaking for the true principles of the Democratic Party of which I am proud to be a member, because, historically, the Democratic Party has always tried to protect consumers; it has always tried to build purchasing power from the bottom up, rather than allowing it to concentrate at the top and trickle down. So, therefore, while I do not question the motives of any man, I do wish to say, in spite of the assertions which may be made, that I am not only speaking in behalf of these families, but I am speaking in behalf of the traditions of my party.

While my chief concern is for this one-half of our entire population, who may be called the residential consumers, I am also interested in protecting the legitimate interests of the small shopkeepers and restaurant owners who use gas for heating and cooking and in the industrial plants which, requiring great heat, burn gas as a fuel. Finally, the local gas distribution companies are finally waking up to the fact that the big increase in the price of gas, which this bill will cause, will hurt them. Most of the local companies have, therefore, joined our ranks and we are glad to have them.

Let me say immediately that of course I hold no grudge against the men in Congress who are pushing this bill, nor do I against the interests which stand behind them and which furnish the main driving force for this measure. I recognize that many people in the great oil and gas producing States of the Nation, such as Texas, Oklahoma, Louisiana, and Kansas, would benefit from this bill. While the major benefits will go to the big oil companies and to the pipelines, it is true that under the royalty system for leases that a little of the fat, about one-eighth, will drop down from the tables of the wealthy few into the mouths of farmers, stockmen, and landowners generally. Since this is a real world, it is only natural for the Senators from these States to support this bill. In so doing, they are furthering the economic interests of many of their constituents, and it would be political suicide for them to do anything else.

Furthermore, I am convinced that they believe in the righteousness of their cause, so that they probably feel like crusaders going forth to battle for their people. I do not question their sincerity, and I do not question their motives; I merely wish to say to those Senators that they should not forget that they have large numbers of consumers within their States, in all cases probably, many times more consumers than producers, that the consumers within their States will be hurt by this bill, and that the consumers of their States also have interests which should be represented.

I would call to the attention of the Senate and of the country that we want to deal fairly with the oil and gas producers and with the people from the gas producing States. No one plans to confiscate their property. No issue of nationalization is involved. We want the oil and gas fields to continue under private ownership. We want them to make a fair return on the actual capital they have invested. We would be willing to give them a higher rate of return than is allowed to the electrical companies, for example, because we recognize that there is a certain degree of risk in drilling for oil and gas which is not present in building a powerhouse or constructing a dam. Let not these bogies and ghosts therefore be paraded across the Senate floor. They have no substance and merely divert attention from the real issues.

All we want is to protect the approximately 80 million ultimate consumers from an unreasonable increase in the price of gas. We should recognize from the very start that the consumers of gas do not have the competitive protection which they have in the case of such other commodities as coal, oil, wood pulp, and so forth. In those cases, the distributors and consumers have alternative methods of transportation at their disposal so that if any one producer tries to hold them up, they can buy from others and if one distributor gouges them, they can turn to another. For they can use railroad, water, or truck transportation to tap other suorces of supply if any one group boosts the price unduly. This makes coal, oil, and so forth largely competitive products.

The 21 million householders, however, have no such protection. Once they are hooked up to gas, they must keep on with it. The marriage is indissoluble. When the rates go up steeply, as they will under this bill, all the householders can do is to bear it. But they will do so without a grin.

It is because the gas industry is noncompetitive that regulation is necessary to protect the public interest. Half a century ago, we found this to be true of gas disrtibuted and indeed generally manufactured locally. The consumers could not switch from one gas company to another.

Duplicate gas mains running down the same street were impossible. Because there could be only one set of gas mains it was provided that a company had to have a certificate of convenience and necessity in order to install a gas main. It has been said on the floor of the Senate that the reason why we have regulation of the retail price of gas is because the States, or, in some cases, localities, issued certificates of convenience and necessity. This is a superficial view of the situation. The certificates of convenience and necessity were issued because there could be only one set of gas mains. It was the fact that the industry was noncompetitive that led to the requirement of certificates of convenience and necessity and to the regulation of rates. Since competition could not work, the States gradually created utility commissions to deal with this problem

and with the sister commodities of electricity and telephone service.

I once lived in a city where there were two telephone companies, and I had difficulty because some people were not on my line. I think 46 of the 48 States have State utility commissions, one of the exceptions being the State of Minnesota.

Then, as natural gas came in, we found the same thing to be true of pipelines. Where these lines crossed the State boundaries, State control was impossible. There were two decisions, the Missouri-Kansas decision of 1924, and another decision in 1927, Public Utilities Commission against Attleboro Steam and Electric Co., which provided that, according to the interpretation then given by the Court, States could not regulate the price of gas in interstate commerce.

So in 1938 Congress passed the Natural Gas Act, regulating the transportation and sale for resale of gas shipped across State lines.

As the Supreme Court has decided in the Phillips case, this act not only gave the Power Commission the right but, in fact, imposed on it the duty of protecting the consumer from unfair prices charged at the points where the gas entered the pipeline to move into interstate commerce.

It is this protection granted to the consumers by the Natural Gas Act of 1938 which the current Harris-Fulbright bill (S. 1853) would remove. The current bill is indeed virtually identical with the Moore-Rizley bill, which even the Republican-controlled 80th Congress refused to enact, and it is actually worse than the Kerr bill which, though it passed Congress in 1950, was vetoed—very courageously—by President Truman.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. PASTORE. Is it not a fact, under the interpretation of the Supreme Court in the Phillips decision, handed down in June 1954, that the Court did not say the Federal Power Commission shall have supervision over the wells themselves? All the Court said was that when the gas was sold for resale in interstate commerce, only then did the Federal Power Commission have jurisdiction. In other words, the proponents of the bill would have us believe that the Federal Government is going to step in and control the whole production industry. All the Phillips case holds—and I know the Senator from Illinois will correct me if I am in error—is that once the producer dedicates his gas by agreeing to sell it for resale in interstate commerce, then, and only then, does the Federal Power Commission have jurisdiction.

Mr. DOUGLAS. The Senator from Rhode Island is absolutely correct. The production and gathering of gas, and the regulation thereof, are not under the jurisdiction of the Federal Power Commission. That power rests with the State.

I shall now briefly summarize the reasons why Senate bill 1853 is a bad bill, why it would gouge the consumers of this country of $600 to $900 million a year, and would raise the valuation of the known gas reserves by from $12.5 billion to $30 billion; why the arguments in its support are hollow; why effective regulation is necessary, and how this can be obtained. After I have given this brief preview of my argument, I shall then take up the case point by point and in some detail as befits so important a measure.

I shall be glad to yield for questions on facts as I treat and develop them, and I shall yield for questions on policy. However, I should prefer to postpone yielding on policy until I have finished a given section or subsection of my speech. However, I shall be glad to yield at any time for questions on the interpretation of facts or allegations of the inaccuracy of facts.

Let us consider these points one by one.

First. Competition in the purchase and sale of gas in the field is not adequate to protect consumers. The gas pipelines and the gathering lines are so costly that once they are laid, they cannot be shifted. Moreover, in order to justify constructing and bringing the pipelines into a gas field and laying the lines, there must be such huge known reserves of gas that the pipelines are forced to go to the big producers for this gas. The little producers are of little initial help to them, and of very little ultimate help. As a matter of fact, evidence submitted by the industry itself shows the various long pipelines are primarily dependent upon a relatively small number of producers for their gas. The great desirability of gas to the householder as a fuel is forcing the pipelines to secure more and more gas. But, in doing so, they are being held up by the producers for higher and higher prices, in many cases up to 20 and 21 cents a thousand cubic feet, instead of an average of about 10.7 and, in some cases 30 cents.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. I do not wish to interrupt unduly, but this is in point with what the Senator from Illinois has requested.

Is not the 20-cent offers for gas to the producers largely to the foreign producers, such as in the case of the Illinois company which is now seeking a vast amount of Canadian gas, at a rate of 20 cents-plus at the point of delivery at the international boundary?

Mr. DOUGLAS. The Senator from Oklahoma is mistaken. We have many contracts, which I shall present, which show that the contracts being signed or renegotiated run very high and are around the figure which I have quoted.

I hold in my hand an exhibit on current contract prices in the southern Louisiana fields, submitted in the matter of the Union Oil Co. of California, et al, docket Nos. G–43341 and G–43342. The exhibit contains an analysis of contracts entered into during 1952–53, and indicates that 60 percent of them, as of June 7, 1954, were at the rate of 16 cents or above, and that 25 percent were at 19 cents and above. I will hand the exhibit to the Senator from Oklahoma. I think he will find that I have made a rather temporate statement.

Mr. MONRONEY. The question I addressed to the Senator—and I do not propose to interrupt unduly——

Mr. DOUGLAS. We should get the facts.

Mr. MONRONEY. I appreciate the great amount of research which the Senator from Illinois has done. Believe me, I have attempted to do research on our side of the case. We are both interested in presenting the complete facts, not simply the obvious statistical matter. We wish the whole subject to be developed. I have done that, and I know the Senator from Illinois has also.

I am interested particularly in the quantities of gas as related to the total output, because I am certain the Senator will agree with me that a contract which would add only a small percentage to the total amount of gas which runs through the pipelines would not be genuinely indicative of the going rate for natural gas.

I think it is highly important that as we consider the delivery of, let us say, a trillion cubic feet of gas—which might include some gas at 4 cents, some at 6 cents, some at 8 cents, some at 10 cents, and some at 12 cents—we reach an average. For the southwestern part of the country, it is about 9½ cents, while the national average at present is, I think, 10½ cents.

Mr. DOUGLAS. It is 10.7 cents.

Mr. MONRONEY. That includes the high cost Appalachian gas and the gas bought in small quantities, such as the Iroquois gas, about which the distinguished and well-informed acting chairman of the subcommittee spoke the other day.

As the pipelines seek to acquire a quantity of gas for certain specific needs, they are willing to pay a higher rate per thousand cubic feet for still uncommitted gas which can be obtained without incurring the expense of building additional gathering lines, than they would for the gas which accommodates the bulk of their supply.

Has the Senator from Illinois any knowledge of the quantities of gas which are being acquired in these exorbitant contracts at a 19-cent rate? I think it is important to the case that that information be given. If the Senator could supply the information as to quantities, I think it would help to indicate whether the gas rate is in fact going to become 19 cents.

Mr. DOUGLAS. In the figures for the southern Louisiana field, which I submitted, I covered the point that 60 percent of the contracts were for more than 16 cents.

Mr. MONRONEY. That is as to the number of contracts. I am interested in the volume of gas in relationship to the pipeline capacity for which the price has been fixed. In other words, a small quantity of gas properly located on the pipeline would command a better price than would gas 50 miles away, which would require additional gathering facilities.

Mr. DOUGLAS. I think it will be found that the pipelines which go into southern Louisiana buy the major portion of their gas from the large producers. Therefore, there were not many

small producers to be dealt with. In fact, the contracts to which I have referred are for large quantities of gas. They are not a few selected or unusual contracts for small amounts at high prices.

The situation, further, is different in southern Louisiana, for example, than it is in Pennsylvania, West Virginia, and Ohio. There are 3,500 small producers in those fields. But in the territory of the State of the Senator from Oklahoma and in the States of Louisiana and, largely, Texas, it is the large producers who have the reserves.

Mr. MONRONEY. I am very familiar with the Oklahoma situation. It depends on the field. If a gas field has been discovered and developed by a large company, obviously there would be a larger amount of gas than there would be in a field which had been discovered as an oil field, later drilled deeper and found to be a gas field, and there would then be in the field a dozen, two dozen, or more small producers.

Let me further state what I am sure the Senator from Illinois recognizes. The long pipelines that must get gas in huge quantities to supply Chicago, and the industrial fuel used by Chicago and other places, do not wish to deal with a small well owner who is producing a small amount of gas in connection with oil operations.

Mr. DOUGLAS. I am not saying they should not do that, but what the Senator has stated confirms my statement that it is the big producers with whom the pipelines are dealing. Once contracts for higher prices are made with a certain producer, under the escalation clauses and under renegotiation, those prices become virtually universal.

Mr. MONRONEY. But the Senator knows that under the Fulbright bill renegotiated contracts are subject to the same tests as are favored-nations contracts—the test that the price must not exceed the reasonable market price arrived at by the Federal Power Commission.

Mr. DOUGLAS. If the Senator will permit me to say so, no greater hoax has ever been perpetrated on the Senate of the United States than has the term "reasonable market price." "Reasonable market price" is defined as "reasonable market price." Then "reasonable market price" is further defined as "reasonable market price."

It reminds me of Gertrude Stein, who acquired a great reputation by writing the sentence, "A rose is a rose is a rose." I may say to the Senate that the Senator from Oklahoma and the Senator from Arkansas have outwritten Gertrude Stein, because they define a reasonable market price as "a reasonable market price is a reasonable market price is a reasonable market price is a reasonable market price." There is no more sense to that than there is to the sentence about the rose.

Mr. MONRONEY. Will the Senator yield further?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. If what my distinguished friend has said is correct, then the Federal Government for 160 years has been perpetrating a fraud upon all the people from whom it has acquired land in condemnation suits, because that land has been acquired, against the wishes of the citizen owners, at reasonable market price. It is just as easy, indeed far easier, to establish reasonable market price than it is to take the two imponderables which have been discussed—the intangible of determining what is a reasonable return according to the Federal Power Commission, and the other intangible of determining the cost of producing gas, since gas production is so intermingled with the production of oil and with the cost of discovery of oil, and with lease cost and development cost, that by comparison the Siamese twins were completely separate.

Mr. DOUGLAS. I shall be glad to yield on these points when I come to them.

Mr. MONRONEY. I am sorry.

Mr. DOUGLAS. I know how these matters run together, but I wish to say the Senator from Oklahoma is confusing the standards used in public condemnation proceedings, the reasonable market price principle, with the standards used when a public industry is being regulated.

I yield to the Senator from Rhode Island, who stood a while ago seeking to be recognized.

Mr. PASTORE. I think the Senator has touched on the point I had in mind. When I rose it had not been touched on. The fact of the matter is, as the distinguished Senator from Oklahoma has brought out, that the quantity of gas involved makes little difference. The whole habit and practice in the field has been to follow the third party favored-nations clause. It makes no difference, with respect to a new company, whether there is much or little gas involved. The question is how much the company has to pay for it. When that clause comes into play as soon as the gas is paid for, ipso facto the price goes up all over the field. That is the important thing.

Mr. DOUGLAS. I have conducted a survey of 2,100 contracts made by pipelines of producing companies in the field, the contracts being from the 1st of January 1953 to the 1st of July 1955, plus a cross section made in the past. I found that in 70 percent of the cases the contracts have most-favored-nation clauses, and that almost all others have renegotiation clauses. And in virtually every case the contracts are renegotiated up to the level of the most recent and highest price.

Mr. PASTORE. Will the Senator yield on that point?

Mr. DOUGLAS. I yield.

Mr. PASTORE. In his very intense and, I know, far-reaching research, has the Senator ever found a favored-nations clause that regulated the price downward?

Mr. DOUGLAS. None, out of the 2,100.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. Would the Senator say that the study to which he refers is a study of the contracts which were put into the record of the hearings by him?

Mr. DOUGLAS. No.

Mr. MONRONEY. They are the only ones we have had a chance to check.

Mr. DOUGLAS. I hold in my hand an analysis. There are four sets of figures. One is a list of 247 contracts, which I put in the hearings last June. There is another list of 1,600, which we made in the last few days. In the tabulation sheets which I hold in my hand there is an analysis of about 160 contracts of the Lone Star Co., which go away back into the past. In addition I have studied the contracts of 2 other companies, bringing the total of contracts to 2,100.

Mr. MONRONEY. Lone Star is an intrastate company.

Mr. DOUGLAS. But it has recently become an interstate company. When it became an interstate company it had to file all its past contracts, and it was that very fact which enabled us to go into the past.

As to the assertion of the Senator from Oklahoma that the older contracts did not contain most favored nation clauses, I am sorry to say that his assertion turned out to be incorrect. Most of the old contracts have been renegotiated and now contain most favored nation clauses.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. Will the Senator say how many of these contracts, which we have not been able to examine——

Mr. DOUGLAS. The Senator can get them.

Mr. MONRONEY. Will the Senator from Illinois tell the Senate at this time the number of contracts which contain third-party favored-nations provisions, such as are condemned by the distinguished Senator from Rhode Island [Mr. PASTORE]? Let us know how many contain the third-party favored-nations provision. The Senator from Illinois has the statistics, while I do not.

Mr. DOUGLAS. I wish to say to the Senator that I also regard second party favored-nations clauses as poor.

Mr. MONRONEY. But the Senator from Rhode Island had a different view of them.

Mr. DOUGLAS. No.

Mr. MONRONEY. I think the RECORD will show that the Senator said they were not so bad, but that the vicious contracts were the third-party favored-nations clause contracts.

Mr. PASTORE. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. PASTORE. When I spoke about the second party favored-nations contracts, I remember saying I was rather luke-warm toward them, and I did not want to make an issue of them, but the thing that disturbed me, and the kind of contract at which I was aiming my fire was the very vicious third party favored-nations contract, which I think ought to be outlawed by statute.

Mr. MONRONEY. That is why I am trying to get the Senator from Illinois to tell us how many of the contracts contain third-party favored-nations clauses.

Mr. DOUGLAS. I think the Federal Power Commission does not distinguish

between second party and third party favored-nations clauses. In my own view they are almost equally bad.

Mr. MONRONEY. Of the 247 contracts which the Senator put in the record in the Committee hearings only four contained third party favored-nations clauses, which the distinguished and able acting chairman of the committee has so properly condemned. All of these contracts provide for renegotiation and under the bill this makes them subject to the approval of the Federal Power Commission as are new contracts and limits them to reasonable market prices.

Mr. DOUGLAS. We can have a detailed discussion of these points when I come to them, but I will say that second party favored-nations clauses are bad, too.

As I have said, most existing contracts have so-called escalation clauses under which previously agreed upon rates are revised upward to the level of prices in the new contracts which are being made in the general field or area. The last price, therefore, becomes the predominant price—or the marginal price becomes also the average or prevailing price. That is my first point.

My second point is this. Average prices in the field or at the wellhead were, in 1954, about 10 cents per 1,000 cubic feet—M c. f.—an increase of almost 12 percent in the principal producing fields, in the Southwest, in the previous 6 years.

(At this point Mr. DOUGLAS yielded to Mr. MORSE, on whose request House bill 7871 to amend the Small Business Act of 1953, was considered debated, and passed. Mr. MORSE's remarks and the debate and proceedings which ensued, were, on request of Mr. MORSE and by unanimous consent, ordered to be printed in today's RECORD at the conclusion of Mr. DOUGLAS' speech.)

Mr. DOUGLAS. I may remark parenthetically, in this connection, that this afternoon I have been confirmed in my opinion that there are two types of time—clock time and senatorial time. I yielded earlier in the afternoon for a half hour to the Senator from Montana [Mr. MANSFIELD], and that stretched itself to 45 minutes. I yielded for 10 minutes to the Senator from Oregon [Mr. MORSE], and that ran for 35 minutes. I marvel at the ability of my colleagues to treat time in such an expansive way.

I love all my colleagues. I have great affection for them. But I must regretfully say that after my experience this afternoon, I shall be compelled to refuse to yield the floor further until a quarter of 6 this evening, when I shall be prepared to yield temporarily to those who wish to introduce new business. I trust this action will not be regarded as uncooperative on my part, but the experience this afternoon has been interesting, and makes me want to have senatorial time more closely approximate clock time.

The Senator from Oklahoma has questioned my analysis of the 247 contracts which I placed in the Senate hearings around page 1600. He has said that according to his analysis only four of the contracts contain third-party, most-favored-nation clauses.

I may say that the Federal Power Commission staff makes no breakdown, so far as I can determine, as to whether these contracts contain third-party favored-nation clauses. I have just phoned them to establish that fact. Seventy-one percent have most favored-nation clauses, but the Commission's analysis does not cover the question as to whether the contracts contain second- or third-party clauses.

To my mind, there is simply a difference in degree between the two types of favored-nation clauses. A second-party, favored-nation clause is terrible. A third-party, favored-nation clause is outrageous. The only difference is in the degree of badness.

I opened my copy of the Senate hearings to my analysis page 1600; and while the information there is inadequate for a complete analysis, it appeared to me as though the first 16 contracts set out, on pages 1600 and 1601 alone, contained third-party, favored-nation clauses. But I shall await with interest the detailed examination and reading of those 257 contracts by the junior Senator from Oklahoma. I should like to see the proponents produce and point out the third-party, favored-nation clauses which they say occur in only 4 out of 247 contracts.

As I have already said, the average prices in the field or at the wellhead were, in 1954, about 10 cents a thousand cubic feet, which was an increase of almost 120 percent in the principal producing fields in the Southwest in the previous 6 years.

These price increases could only have occurred under contracts in which a large proportion had escalation, renegotiation, and most favored-nation clauses, all of which not only permit but "trigger" price increases.

The chart which I have placed on the wall shows the weighted average unit cost paid by 17 interested pipelines for natural gas purchased from southwestern independent producers, and also the rates by years from 1946 onward, and indicates an increase of a little more than 120 percent from 1946 to 1954.

In 1955, the average price rose to 10.7 cents a thousand cubic feet. I should like to have the proponents of the bill take notice that the representatives of the oil and gas producers are saying that rates should go up to 15, 20, and 25 cents a thousand cubic feet. Although the average rate in 1954 was 10 cents a thousand cubic feet, a 15-cent rate is common, and would almost certainly be the new minimum if S. 1853 were passed.

A 20-cent rate is being paid even now in some cases and would, sooner or later—in my judgment, sooner rather than later—become the prevailing price. In fact, a 25-cent rate is quite possible. If the Fulbright bill passes, these prices will become the prevailing prices because of the renegotiation and escalation provisions which are common in most all gas contracts, and because of these same provisions, further increases will follow.

These new rates will be increases of 5, 10, and 15 cents, respectively, over the present average—1954—of 10 cents per thousand cubic feet. Since the total utility sales of natural gas now amount to a little over 6 billion thousand cubic feet a year, this means that each cent of increase will amount annually to $60 million. Natural gas utility sales were 58,014.1 million therms in 1954—see Gas Facts, 1954 page 102, table 81. The preliminary figures for 1955 as prepared by the American Gas Association and published in the January 2 issue of the Oil and Gas Journal show natural gas utility sales of 62,908.1 million therms. It is, perhaps, an underestimate to use the figure of 6 billion thousand cubic feet in computing the increases in cost which will arise if this bill is passed, for sales may be even greater by the time the legislation could become effective. A 10-cent increase would increase the cost to the consumers by at least $600 million more per year and a 15-cent increase would cost them at least $900 million more per year. That would be the amount of the increased annual income to the gas and oil producers in the field.

Let us now consider the increased valuation of the reserves. At the end of 1954 the gas producers reported that the proved recoverable reserves of natural gas amount to 211 trillion cubic feet—See Gas Facts, 1954, page 9, table 2—or 21 times the total annual flow—total production in 1953 was 10.6 billion thousand cubic feet and the preliminary figures for 1954 were 11 billion thousand cubic feet, see Gas Facts, 1954, page 24, table 15. Even if we take only the gas sold by utilities—about 6 billion thousand cubic feet—an increase of 10 cents per thousand cubic feet would, as we have said, send up the value of the reserve by 21 times $600 million or by $12.6 billion. The increase in the value of the reserves would be at least $18.9 billion if the price per thousand cubic feet went up by 15 cents or to a new average of 25 cents. Further gains might be made from the increased price on intrastate sales. Applied to all reserves, these increased field prices would boost the value by almost $30 billion. Furthermore, since the known reserves are constantly increasing, this factor also would send the whole figure upwards.

Mr. President, as I pointed out in the colloquy with the junior Senator from Oklahoma [Mr. MONRONEY], the gas sold by the utilities is only about 60 percent or less of the total flow.

Mr. LONG. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. LONG. The Senator from Illinois realizes, does he not, that almost half of the natural gas consumed is consumed within the producing States?

Mr. DOUGLAS. That is the point I have been trying to make, although only 20 percent of the gas sold by utilities stays in the original state.

Mr. LONG. The Senator is not urging, is he, that the Federal Power Commission either could or should have the power to control the gas rates within the producing States?

Mr. DOUGLAS. No. I am saying that if the price of natural gas as it enters the pipeline for interstate commerce is increased, it will be found that the price

will go up within the consuming States as well. So there will be a general increase in the price of gas for intrastate use as well as for interstate use.

Mr. LONG. The Senator knows that gas prices already have gone up within the producing States, just as prices as a whole have gone up across the Nation.

Mr. DOUGLAS. I am saying that prices will go up still more. In slang parlance, "You ain't seen nothin' yet."

Mr. LONG. The reason why prices have risen up to this point is based upon a law of economics which I know the Senator has taught from time to time to many students of economics. The Senator certainly is an eminent economist, and he must have explained that when there is much bidding for a given commodity the price tends to go up.

It was the consumers in States such as the State which is represented, in part, by the Senator from Illinois who came to the South and Southwest seeking natural gas, and who bid the price up. We did not ask them to bid the price up.

Mr. DOUGLAS. I am not trying to locate the original sin in this matter; I am simply saying, as I shall develop more fully, that a seller's market exists, in which the pressure for gas is such that the price will be bid up on new increments. This will extend, because of favored-nation clauses, to past amounts under old contracts. The result will be that unless there is effective regulation the consumers will be forced to pay everything the traffic will bear.

Mr. LONG. Mr. President, will the Senator yield?

Mr. DOUGLAS. In just a moment. On a commodity such as gas we say that the proper price is, not what the traffic will bear, but a fair and just price.

Mr. LONG. The Senator certainly knows that natural gas is in competition with other products, and gas consumers are in competition among themselves for the product. They may not realize it, but those who do not have gas today would like to have gas.

Mr. DOUGLAS. Is the Senator from Louisiana saying that if the price of gas becomes too high they will turn to coal or oil?

Mr. LONG. Or else not buy it. Persons buying gas do not have to buy it, do they?

Mr. DOUGLAS. There is no legal compulsion for them to buy it. My good friend from Arkansas made the statement in committee that they do not have to buy gas; they can get something else; but he has not made that statement since. Now I find my good friend from Louisiana making the same statement. I am going to show my friend that there are 15 million consumers who heat their homes with gas who have gas furnaces at an average cost of $500. Millions of persons have gas ranges which cost, on an average, $175. Millions have gas hot water heaters which cost, on an average, $150. Many persons have gas refrigerations, at an average cost of $150.

Mr. LONG. Will the Senator yield?

Mr. DOUGLAS. Not at this time. I am in the full flight of my figures. There is an average investment of $500, and in the case of families who heat their homes with natural gas, the average investment is probably close to $1,000.

Now the Senator from Louisiana has nerve to say on the floor of the Senate that those consumers can discount all that equipment and turn to coal or oil as fuel. He is just like Marie Antoinette, who, during the French Revolution, when someone told her the populace in the streets have no bread, said, "Let them eat cake." What the Senator from Louisiana is saying is, "Let them discard gas and take coal and oil."

Mr. LONG. Will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. LONG. I am not saying at all what the Senator has interpreted me as saying. If the gas producers had known that the law would be that which the Senator is contending for, the consumers in his State would not be getting natural gas. Those who were producing the gas for the Senator's State were doing so under a contract with a stipulated price, and the contract further stipulated that if the price should rise or become more favorable in their State, the producers would get the benefit of the increased price. That was the reason why they were willing to commit their reserves for 20 years, notwithstanding the court decision which appears to force them to deliver their reserves after the 20 years. The Senator surely realizes that many of them who had such contracts would not have been willing to sell to Illinois or other States if they had known that there was going to be a welshing on the contracts. The Senator wants to avoid the terms of the contract, and it was under those terms that the gas was committed to interstate commerce.

Mr. DOUGLAS. The Senator from Louisiana misunderstands the entire nature of the 1938 law. He misunderstands the court decisions that have been made since the law was enacted. The principle of regulation by the Federal Power Commission of the price of gas as the gas enters the pipelines has been the historic policy of the Government since 1938. Producers who sold the gas did so under the laws of the country, and if they misinterpreted the laws we must say, regretfully, it is too bad, but we cannot alter the laws of the country because certain people misinterpret them. But why, if they misunderstood the law, did they try to change the law three times—under the Moore-Rizley bill, the Kerr bill, and now the Fulbright-Harris bill.

Mr. LONG. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. LONG. If a seller sells his gas under a contract that provides he will get 10 cents a thousand cubic feet for the first 5 years, and then after that he will get 15 cents, and the Federal Power Commission regulates the rate later and tells him he will get only 10 cents after 5 years, can the Senator from Illinois tell me the seller has not bargained for a 15-cent rate, and can the Senator assure me he would have contracted to sell the gas had be been told he would have to sell it at 10 cents a thousand cubic feet after 5 years?

Mr. DOUGLAS. Neither the Senator from Rhode Island [Mr. PASTORE] nor I object so much to the escalator step provisions, but what we do object to is the favored nations provisions. Many of the renegotiation provisions virtually require the writing of a new contract, and the terms of a new contract usually embrace the most recent prices paid.

Mr. LONG. Will the Senator yield further?

Mr. DOUGLAS. I yield.

Mr. LONG. The Senator well knows, just as the Senator from Louisiana knows, that if a person is selling any other kind of fuel, he sells it on a day-to-day basis, whether that fuel be coal or pine knots. He sells that fuel at the going market price at the time. The gas producers did not care to sell their gas for a 20-year period, but they were forced to do so by the Federal Power Commission. Why? Because in order to amortize the investment on pipelines, the pipeline companies had to be able to assure themselves of the supply over a long period of time. Therefore, the producers were compelled to commit their gas over a period of many years, and were not able to sell it on a day-to-day basis.

As far as I am personally concerned, I should be satisfied to enter into an agreement whereby all pipelines would be made common carriers, and allow consumers to purchase direct from producers. I predict that if that were done consumers would pay more than they do now, because each producer could bargain with many buyers, instead of having a producer deal with only one pipeline. The producer could sell to all.

Mr. DOUGLAS. I may say to my good friend that what he persists in doing is to treat gas the same as coal or other fuels. I have tried, the Senator from Rhode Island [Mr. PASTORE] has tried, and the Senator from Michigan [Mr. POTTER] has tried to make it clear that the fuels are not the same; that in the case of other fuels there are alternative methods of transportation which permit the bypassing of a particular consumer or distributor and going to others, because these other fuels may be transported by barge, truck, railroad, or other means, so that competition can be brought into play. That certainly works in the coal industry. It does not work too well in the oil industry, because the same people who control oil control gas, but it works in the case of coal. In the case of gas there is involved the laying of distributive mains, the pipelines, and the gathering lines at the other end. There are no alternative methods of transportation.

Mr. LONG. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. LONG. Because of the great admiration I have for the Senator from Illinois, I am distressed to find him so completely in error in the assumption he has made. The Senator knows as well as I do that the price of gas at the well is less per B. t. u. than is the price of coal or oil. What is the reason? Because there is only one way to get the gas out of the well, and that is by laying pipelines, at great expense.

Therefore the person who produces the gas is in no position to get it to the market. If the Senator from Illinois cares to go with me to the State of Louisiana, I will show him, in Louisiana, gas burning in the air because it cannot be sold. Some of the producers would be glad to accept almost any price but they are unable to get their gas to market. Almost all producers have to accept a much lower price for the B. t. u. value of the product. They have to accept it because they are not in a position to bargain with different consumers, and transport it to market.

Mr. DOUGLAS. The Senator has stated the purpose of the advocates of the bill, which is that the producer of gas should get for that gas absolutely all that the traffic will bear, up to the equivalent fuel costs of coal and oil.

Mr. LONG. Now the Senator from Illinois is ducking the argument.

Mr. DOUGLAS. No; I am not.

Mr. LONG. The point we were getting to was whether the gas producer gets a better price because there is only one way he can transport his fuel. I believe the Senator from Illinois is ready to agree now that the producer gets a lesser price because there is only one way he can transport his fuel. He is at a disadvantage.

Mr. DOUGLAS. No. He was at a disadvantage in the 1930's and perhaps in the early 1940's, when there were no pipelines there, and when the gas was being flared; that is true. But the demand for gas is such that the consumers are constantly putting pressure on the pipelines, and the pipelines are constantly putting pressure on the producers; and the result is that the producers now hold the aces in the deck.

Mr. LONG. Mr. President, will the Senator from Illinois yield further to me?

Mr. DOUGLAS. Of course.

Mr. LONG. Again let us face the actual argument that is developing between the two of us. As one who represents a gas-producing State, I have no regret and no argument about the fact that gas sells at a price far below the value it actually has. It will continue to sell for far below that price. But when the Senator from Illinois argues on the floor of the Senate that a gas producer gets more money because there is only one way—and a very expensive way—to get the gas from the well to the consumer, the Senator from Illinois is arguing against the facts. The producer actually receives much less; and the figures show that gas at the wellhead, per B. t. u.—in other words, in terms of the heating value of the gas—as compared to oil or coal, sells for only a fraction of the amount which could be obtained at the mouth of the mine for coal or for any other fuel at the point produced. The facts to substantiate that point are available.

Mr. DOUGLAS. Of course, the important point is the comparative amounts of consumption.

Mr. LONG. No, Mr. President. The Senator from Illinois has a chart showing the low price for which gas for industrial-sales purposes is sold. So far as other fuels are concerned, it makes no difference in price whether coal, oil, wood, or any other fuel is to be used for industrial purposes or any other purposes. The purchase is made at the mouth of the mine for the same price, regardless of the purpose the purchaser has in mind or the use which will be made of the fuel.

Mr. DOUGLAS. Mr. President, I wish to proceed with my remarks. However, what the Senator from Louisiana really is arguing for is to have the producer allowed to get all that he can obtain; that is true. We accept that principle for nearly all commodities, when there is approximately full competition, because we believe that competition will keep the price down to a proper figure. But when there is no competition, society has come to believe that the person who holds the whip hand should not be allowed to obtain everthing the traffic will bear, because that would give him more than the so-called just rate of return.

Let me refer to the definition given by the Senator from Oklahoma [Mr. MONRONEY], the floor leader on the other side of this debate. He was arguing for "reasonable market price," which is the standard of the Fulbright bill, and which I believe the Senator from Louisiana supports. On page 539 of the CONGRESSIONAL RECORD for January 16, 1956, we find the following in the first column:

> The reasonable market price is established on the basis of a situation in which supply and demand are in balance, not a situation in which there is an extreme scarcity or where there is an extremely high demand.

I would accept that; but the point is that gas does not conform to it. Instead, the situation is one in which the quantities supplied to most sections are below the quantities demanded, with the result that if there is no regulation, the price will be bid up to a tremendously high point.

I think there is no doubt that if controls are removed, as the sponsors of the bill believe should be done, the price will rise to 20 cents per thousand cubic feet, and that will mean $600 million a year in increased consumer costs and a windfall of $12.6 billion to the producers in the increased value of their gas reserves. The point is that these huge sums will go to the large gas and oil producers, who already have more favors from the Government than does any other group, and who already are extremely prosperous and extremely powerful, and do not need this additional reward.

Mr. LONG. Mr. President, will the Senator from Illinois yield further to me?

Mr. DOUGLAS. Of course I yield.

Mr. LONG. The Senator from Illinois, able economist that he is, of course now is departing from what he tells us when he teaches us economics.

Mr. DOUGLAS. I do not think the Senator from Louisiana can justify that statement.

Mr. LONG. The Senator from Illinois tells us that the larger the supply of a given commodity, the lower the price; and that if the supply is increased to meet the demand, there tends to be a fair price; and that as the supply continues to increase, there is a lower price. That is in accordance with the economics I learned in college.

Mr. DOUGLAS. Yes; other things being equal; but that must always be taken in conjunction with the demand. Supply is not an absolute quantity; it is relative to demand.

Mr. LONG. Certainly the Senator from Illinois knows there are vast quantities of potential reserves not yet discovered and not yet developed, but which would be discovered and developed, provided industry felt that it could get a fair price for the product when it developed it.

For example, the Senator from Illinois was one of those who participated in the tidelands debate. During that debate, I heard references made to figures which sounded too high to me. Nevertheless, the Senator from Illinois had some geologists support his position that on the Continental Shelf of the Gulf of Mexico there were enormous reserves of gas. I believe the Senator from Illinois said there was enough gas there to heat the United States for between 500 and 600 years, and that all the gas was owned by the Federal Government.

Mr. DOUGLAS. I do not know about the cost of extracting the gas from the Continental Shelf; but I wish to say that those who reproach the liberal forces of the country for making an unsuccessful fight on the offshore oil bill forget the fact that it was because of our struggle that we redeemed the Continental Shelf to the people of the United States. Louisiana, Texas, and California claimed out to the 3-mile limit, or in some cases the 3-league limit; but we put up such a fight that beyond that point we saved the Continental Shelf for the United States. Then it was discovered that the major portion of the oil and gas, at least off the coast of Texas, presumably is to be found beyond the 3-league limit. So I wish to state that there never was a more fruitful debate, lasting for a month on the floor of the United States Senate, than the one some of us made; and history will show that we saved the people of the United States at least $50 billion. We intend to fight, this time, to save the people of the United States $30 billion. That is worth debating a month; and I am ready to debate it for at least 3 weeks, myself. [Laughter.]

Mr. LONG. Mr. President, will the Senator from Illinois yield further to me?

Mr. DOUGLAS. I am glad to yield.

Mr. LONG. Certainly the Senator from Illinois knows that no one ever proposed, and there was no proposed legislation, including the bill the Senator from Illinois filibustered——

Mr. DOUGLAS. I did not filibuster. A filibuster is an attempt to prevent a vote. I did not try to do that, but I did attempt to alert the public to the issues involved.

Mr. LONG. Certainly the Senator from Illinois knows that none of those bills would have caused any State government to own or possess the Continental Shelf.

Mr. DOUGLAS. There was a studied ambiguity in the original bill introduced by the then senior Senator from Oregon, Mr. Cordon, which looked as if it gave

the outer Continental Shelf to the States.

Mr. LONG. As one who served on the committee, I must say that I never saw any provision of any bill which would have undertaken to cause the States to own the Continental Shelf. If the Senator from Illinois will check on that, I believe he will find that he was also in error in making that particular statement, because in no tidelands bill was it ever stated that the States would own the Continental Shelf.

Mr. DOUGLAS. There was language leading in that direction.

I was merely trying to show that the fights have not been wholly in vain.

Mr. LONG. That is a statement with which we perhaps disagree.

Let me ask the Senator from Illinois whether he agrees that if the vast reserves he discussed during the debate on the tidelands bill are developed—the almost unlimited reserves, almost beyond the imagination of the mind of man—there will be plenty of gas for use throughout the Nation. There will be no scarcity of gas in the foreseeable future; and that certainly for our lives and the lives of our children there is no potential shortage of gas, if the amount of gas the Senator from Illinois tells us we have is developed.

Mr. DOUGLAS. The greater the killing, then, for the big oil and gas industry. I stated that they would get an increased writeup on only 211 billion thousand cubic feet of gas. But if they are going to get it on 500 billion thousand cubic feet, that amounts to $50 billion. It seems that the amount at stake in this bill is even greater than I thought.

Mr. LONG. Does not the Senator realize that those producing gas are not going to ship it outside the State if they can get a better price in the State than outside the State? They would not be shipping the gas they are now shipping to Illinois if they had been told they would be subjected to the kind of regulation the Senator is proposing. Does it not stand to reason that as gas reserves are developed, they will be held off the market? Gas producers will develop oil instead of gas. They will await the day when they can sell their gas within the producing State. States which are now producing gas are using half of it. Industries are looking for greater reserves. Louisiana, a relatively small State, is one of the foremost producing States, producing almost as much gas as any other State. There is a scarcity of reserves for industry, which is looking for more gas. Yet as time goes by, reserves can be found if the sale is there for the gas. When the Senator tries to impose the dead hand of Federal regulation upon the gas industry when gas is exported, he will simply increase the market for gas within the State, and it will not be exported to other areas, which could well use the product.

Mr. DOUGLAS. The Senator's argument is very interesting. Now he is saying that there is a plenitude of gas. There are oceans of gas, gas beyond the dreams of man.

Mr. LONG. Except in the mind of the Senator from Illinois.

Mr. DOUGLAS. Only a day or two ago the Senator's colleagues were arguing that there was no gas, that there were no reserves, that things were tightening down. The Senator cannot have it both ways. The proponents of this bill cannot say on Friday that there are enormous reserves, after having said on Thursday that there are no reserves.

Mr. LONG. Did not the Senator from Illinois make exactly the same argument in the tidelands oil debate? Is he not guilty of the same inconsistency? In the tidelands debate the Senator from Illinois told us that we had gas enough to last us for the better part of a thousand years.

Mr. DOUGLAS. No. I was speaking of oil. I was not speaking of gas. I merely threw in gas and sulfur as by-products. That bill smelled of sulfur and brimstone, and so does this one.

Mr. LONG. I shall be glad to produce for the Senator, tomorrow or any other day, if I may have a few moments to look them up, his figures on gas on the Continental Shelf.

Mr. DOUGLAS. There may have been such figures, but I was primarily interested in oil. The oil and gas producers are virtually the same crowd.

Mr. LONG. It is very difficult to keep the Senator on the same subject for long. I should like to keep him on the same subject long enough to pin him down.

Mr. DOUGLAS. I am pinned.

Mr. LONG. The Senator from Illinois is the statesman who stood here in the Senate and told us of reserves of gas beyond the imagination of man.

Mr. DOUGLAS. Reserves of oil.

Mr. LONG. He made that statement in the very same position in which he now stands.

Mr. DOUGLAS. The Senator from Louisiana now says that that statement is true.

Mr. LONG. The Senator from Illinois is the man who told us about the enormous reserves.

Mr. DOUGLAS. What the Senator from Louisiana is saying is that that was a true statement.

Mr. LONG. I assume the Senator from Illinois was sincere when he made the statement

Mr. DOUGLAS I was quoting geologists, including some from the Standard Oil Company of New Jersey.

Mr. LONG. Today the Senator from Illinois stands in the same place and tells us that there is a great scarcity of gas, and that that is why he is fighting the bill.

Mr. DOUGLAS. There is a present scarcity of gas relative to demand.

Mr LONG. Perhaps the Senator is willing to clarify the apparent inconsistency of which he accuses me.

Mr. DOUGLAS. There are latent supplies of gas.

Mr. LONG. Enormous latent supplies.

Mr. DOUGLAS. There are enormous latent supplies which are not yet proved, so to speak.

Mr. LONG. If the Senator's type of price control is applied to the gas industry, such latent supplies will never be available to States outside the producing areas.

Mr. DOUGLAS. There was more drilling in 1955 than there was in any preceding year. The industry is more prosperous than virtually any other American industry. These producers are giants.

Mr. LONG. Has the Senator examined the figures with respect to the increase in reserves available?

Mr. DOUGLAS. During 1954?

Mr. LONG. Yes.

Mr. DOUGLAS. Those figures are very interesting. The reported reserves increased by about the same amount as the flow, by about 10 billion thousand cubic feet. There was a slight gain, I think of 300 million thousand cubic feet. So that the reserves at the end of the year were slightly more than at the beginning of the year. The two figures are approximately the same.

Mr. PASTORE. Mr. President, will the Senator yield to me?

Mr. DOUGLAS. Let me reply further to the Senator from Louisiana.

I am told—and I think this is correct—that there was a very good increase in new reserves, but that reappraisal of the old reserves by the big companies reduced the annual increase somewhat. I do not know why this was done. I make no charges, but I do not think it is as yet firmly established that there had been errors in the past estimation of reserves. Furthermore, I think it will be found that, in general, the oil reserves are developed by the big companies in the ratio of 12 to 15 times the annual yield, so they keep the reserves at a constant level.

Mr. LONG. Mr. President, will the Senator further yield?

Mr. DOUGLAS. I yield.

Mr. LONG. Did it occur to the Senator that there might be a tendency on the part of individuals who discover a deposit in which both oil and gas exist to develop only the oil, and wait until they can find a satisfactory market for their gas, the reason being that one would not want to be placed under a Federal price control system, and would therefore prefer not to sell in the interstate market, but would prefer to wait until he could sell on the intrastate market?

Mr. DOUGLAS. The other day I introduced into the RECORD figures on drillings. Even with respect to developmental drillings of gas wells which were completed as gas wells, the number in 1955 was much greater than that in 1950, and represented a decrease of only about 4 percent from 1954. So the Senator from Illinois and his supporters are making mountains out of 1 or 2 molehills. The full weight of the figures is that there has been an increase in drilling, with respect to both oil and gas.

That is the reason why the business is expanding. The companies are prosperous. They have the most liberal tax provisions ever granted to any group. They have a depletion allowance of 27½ per cent. They may write off their intangible drilling and development costs. These are in addition to normal expenses such as depreciation and interest. Good heavens. What else do they want? We have given them our cloak, our shoes, and our shirt. Do they want our trousers too? [Laughter.]

Mr. LONG. If the Senator wishes to pick out gas producers——

Mr. DOUGLAS. They are big gas producers.

Mr. LONG. I assume the Senator is speaking of the oil and gas companies, because in many instances they are the same.

Mr. DOUGLAS. That is correct.

Mr. LONG. Today in many cases the producers are the large oil companies. It is true that they are prosperous today; but is not that true of others? Are not others prosperous?

Mr. DOUGLAS. We want everyone to be prosperous.

Mr. LONG. Does the Senator contend that the profit margins of large oil companies are any greater, generally speaking, than those of General Motors?

Mr. DOUGLAS. Is the Senator from Louisiana saying that General Motors should be taken as the standard? We trust that in the long run competition will reduce the profit margin of General Motors.

Mr. LONG. There is much greater competition among gas producers than among automobile manufacturers. Is it not true that there is a far greater number of gas producers than there are producers of automobiles?

Mr. DOUGLAS. But who finances the drillings?

Mr. LONG. I assume that almost all the 8,000 producers are capable of obtaining sufficient financing, either on their own account, or from banks, to enable them to drill.

Mr. DOUGLAS. Just a moment. The Senator refers to 8,000 producers. There are 8,000 alleged producers 2,443 of them do not produce enough even to make a showing in the statistics compiled by the Federal Power Commission. Of the 5,557 which are reported, it will be found that there are about 4,625 which sell less than 100,000 thousand cubic feet.

I shall introduce later in my speech a table, from which I shall now speak. It indicates that 4,625 out of the 5,557 producers who report to the Federal Power Commission sell less than 100,000 thousand cubic feet. The price of that gas averages 10 cents per thousand cubic feet. That means that 4,600 producers had a business of less than $10,000 a year.

Mr. LONG. Is not the Senator from Illinois encouraged, as an advocate of small business, to know that there are 4,625 small-business men in the gas business?

Mr. DOUGLAS. I am delighted. I wish there were more. However, this is the interesting thing about it. They sold less than 2 percent of the gas. Seventy percent of the gas was sold by the 35 big producers.

Mr. LONG. By the 35 big ones?

Mr. DOUGLAS. What the Senator from Louisiana is trying to do is to take the big producers and dress them up in oil-soaked overalls, and he is trying to take the big Wall Street companies and make them a part of the chorus in the opera.

Mr. LONG. Did I understand the Senator to say that 35 companies produce 75 percent of the gas?

Mr. DOUGLAS. I believe it is 70 percent.

Mr. LONG. If we take those figures as being correct—and I do not care to dispute them at this time—I would suggest that we compare those figures with the production of automobiles.

Mr. DOUGLAS. The Senator from Illinois will go into that question later. I shall point out the concentration of the long pipelines is much greater than shown by these figures. Furthermore, the big producers have much of the reserve gas. In order to put a gas line into operation, it is necessary to sign up the large producers.

If a pipeline needs large quantities, it must go to the large producers for reserves. They are the ones who get the cream and hold the whiphand. It is not the little fellows. It is not the 4,625 little fellows or the 5,360 little fellows. It is the 197 big boys who sell 90 percent of the gas, particularly the 35 big ones who sell 70 percent of the gas.

Mr. LONG. In the automobile industry, which, after all, is a much larger industry than the gas industry, there are only 5 companies which produce 100 percent of the automobiles. The Senator from Illinois is worried about concentration in an industry in which 35 percent of the companies produce 70 percent of the product. He points to thousands of small producers in the industry who produce small amounts of gas. I ask him whether that is not a healthy condition for an industry to be in.

Mr. DOUGLAS. The Senator from Louisiana is a very subtle and powerful thinker. However, I believe he has made an error in reading the testimony of Mr. Boatwright. That is not saying anything against Mr. Boatwright. If we take the figures in the electric-power industry, we find several hundred electrical distributing companies in that field. Does that mean that there is great diffusion in the electrical industry? Does that mean that there is perfect competition in the electrical industry? It does not. What we find there is a series of local monopolies. What I am saying is that in the field of gas we have a series of quasi-monopolies. They are not absolute monopolies; they are quasi-monopolies. The Senator from Louisiana is a sufficient scholar to know that "quasi" means "almost" or "near." They are quasi-monopolies. The conditions of free and equal competition, as defined by the floor leader for the Senator's bill, namely, equal competition, with neither side having the whip over the other, does not exist here.

Mr. LONG. Mr. President, will the Senator yield again?

Mr. DOUGLAS. It is a pleasure to yield to my friend from Louisiana.

Mr. LONG. Does not the Senator from Illinois know that it does not require tremendous intelligence for a person to go into the gas or oil producing business? As a matter of fact, many of the people who have made some of the greatest successes in that business had no formal education.

Mr. DOUGLAS. That does not mean they do not have intelligence.

Mr. LONG. No. However, it is possible to go into the gas-producing business with a relatively small amount of capital, compared with most other industries.

Mr. DOUGLAS. However, most of the reserves, or almost 70 percent of them, are in the hands of the 35 companies.

Mr. LONG. Would the Senator be pleased to know—and I am sure he would—that there are literally hundreds of people in Louisiana—and I speak only for the State because I am familiar with it—that there are literally hundreds of people in the State—and I am sure there are many others in other States—who are ready today to go out and drill a gas well if the Senator can find them some leases on which it looks as though they may have a good prospect of discovering gas? Is that not different from a great many industries in which there is required an enormous concentration of capital? I have in mind particularly the automobile industry. I would advise the Senator, if he is thinking of starting a new business, to consider the gas business, before he considers going into the automobile business or, for that matter, even the appliance field.

Mr. DOUGLAS. I have troubles enough without going into any business. Mr. H. L. Hunt has never taken me into his confidence with respect to the proper location of wells.

I may say to my good friend from Louisiana that, while he may be speaking of the teeming hundreds or thousands of people who are in the gas and oil business, the statistics indicate that there are only 254 producers of natural gas in Louisiana, whereas there are 486,000 consumers, or about 2,000 times as many consumers as producers. I say to my friend, of whom I am very fond, as long as he is so much concerned with the little man, as his father was concerned with the little man, although I did not always agree with him, he should, in the words of Thomas Wolfe, "Look homeward, angel, to these consumers."

Mr. LONG. As a matter of fact, I had some experience with the problems of government as it relates to the industry, both on a State and National level, and I have been both for and against the position advocated by the gas and oil producers depending upon the particular issue.

Mr. DOUGLAS. Let it be said for the Senator that he wears nobody's collar.

Mr. LONG. Nevertheless, when the Senator points to figures, he is not showing us the figures on royalty owners. Those figures would run into many thousands.

Mr. DOUGLAS. The Senator may not have been on the floor when I pointed out that under the royalty system about one-eighth of the fat drips down from the table of the big boys into the mouths of farmers and stockmen, who are crouched underneath the table. That is what happened to Lazarus, who sat at the table of Dives. The crumbs which Dives did not eat fell into the mouth of Lazarus. Lazarus got his royalty, and I suppose that fact attached him emotionally to Dives. However, that is not a very healthful condition.

Mr. LONG. I must have read a different Bible. I was under the impression that the rich man did not give

Lazarus the crumbs. Nevertheless, the Senator will find that thousands who do have some gas production do find it of sufficient interest to them that they become very much interested in it. Some of the royalty owners were only 40-acre farmers, who find their income from gas to be substantial and large enough to be very important to them.

Mr. DOUGLAS. That is correct. Of course that is true. That furnishes a part of the driving force behind the bill. However, the diffused interest of 21 million residential and commercial consumers is more important than the interest of the 35 big producers.

Mr. LONG. Where the Senator from Illinois is making his mistake in his effort to obtain very cheap gas for those outside the producing States is that he fails to realize that within the producing States gas will simply not be made available for shipment at the price at which the Senator would like to obtain it.

As long as there is a tremendous market for the gas within a producing State, the producers will not sell the gas for a low price outside the State if they can get a better price within the State.

Mr. DOUGLAS. We want the gas companies to get a fair and just price. We are not interested in driving a hard bargain. We want them to get a just and fair price. We do not want them to get more than a fair price, or an unjust price. If they get a fair price in interstate commerce, they can get a fair price in intrastate commerce.

But if the price is boosted to an unfair level in interstate commerce, then the intrastate price will also go up. So we are trying to defend the consumers in Louisiana.

Mr. LONG. The history, thus far, has been that gas was selling at a lower price within producing States than outside those States, including large consuming areas such as Illinois which wanted to buy gas shipped in pipelines. At that point they were the ones who ran up the price of gas in order to have the gas available. If the Senator from Illinois is successful in what he is trying to do, far from obtaining sufficient gas it will simply mean that the price will be better within producing States. Whoever heard of price control working when a producer was privileged to sell his gas without such price control?

Mr. McNAMARA. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. McNAMARA. I think in line with what the Senator from Louisiana is saying, it is interesting to know that the State of Michigan has many customers for gas who are not being supplied, but, despite that fact, the Panhandle Pipeline Co. ran a pipeline under the Detroit River to Windsor, Canada, to sell gas there. So the company is not concerned with the demand of the customers in Michigan, but is selling the gas where it can obtain a higher price.

Mr. LONG. I was saying that so long as there is price control in one market and no control in the other, gas companies will sell in localities where there is no price control.

Mr. McNAMARA. The point I was trying to make was that the argument which has been made, that they are going to go on strike and going to withhold the gas, is not a logical argument. They are already shipping gas out of this country so as to keep the price up to the consumers who are already short. The companies are enjoying the shortage.

Mr. LONG. I think the Senator will agree with me that if a person is in position to sell his gas for a better price outside the United States than inside the United States, he will do so. We will simply find that the gas will not be made available to the interstate market.

I am glad the Senator from Michigan came to my aid and documented the argument which I have been making. The producers in the United States will sell their gas within the producing State or they will ship their gas to Canada, and the producers in Canada will ship their gas to the United States if there is Federal regulation of the interstate market.

Mr. DOUGLAS. Is it not true that sales of gas by the big producers in Louisiana, Texas, and Oklahoma, to be put to such local uses as the manufacture of carbon black, tend to be at a lower price than the sales of gas to pipelines to be shipped in interstate commerce?

Mr. LONG. The Senator is 30 years behind times. That was true 30 years ago. New interests are coming to Louisiana seeking access to gas supplies. At the present time, I am familiar with at least one particular aluminum concern looking for additional gas reserves so that additional industry can be brought into an area. Obviously, if the law is not amended the industry must locate inside a producing State, because it is only in a producing State that they can obtain the enormous gas reserves necessary to operate the aluminum industry.

Mr. DOUGLAS. Is it not true that the average price received by the producer for local sales tends to be at a lower price than the price he receives for gas sold to transmission companies for resale?

Mr. LONG. Not now, no. Naturally, any gas producer would sell his gas wherever he gets the best price. That is the experience of Louisiana, and I assume that Texas and Oklahoma have the same experience.

If a consumer undertakes to come into a producing State and buy gas at a higher price, naturally the gas producer immediately asks those who wish to purchase within the State the same price, so that the price has gone up to all. Under long-term contracts there is still a quantity of gas contracted for sale years ago in connection with which the producer did not have the good judgment to recognize that the price would go up in order to insist upon a price adjustment.

Mr. DOUGLAS. Is the Senator ready to say that the Louisiana producer receives more for the gas he sells locally than for the gas which goes into pipelines and is transmitted?

Mr. LONG. Based on a contract entered into today, a contract for sale within the State would bring every bit as good a price as would a contract for sale outside the State.

Mr. DOUGLAS. That is very interesting.

In 1953 the producer sold to pipelines and to local utilities 5.1 billion thousand cubic feet. Then came the decision of the Supreme Court in 1954 which the proponents of the bill have said had such a bad effect. But did that decrease the amount of gas sold to the pipelines? Not at all. They sold to the pipelines and to local utilities a little over 6 billion thousand cubic feet, approximately one-half billion more than they sold the year before. It has been increased by approximately a billion thousand cubic feet in the past 2 years. Hundreds of thousands, indeed, probably millions of consumers have put in natural-gas appliances, and are now buying natural gas. The producing companies did not have to sell to the transmission companies to supply those consumers. It must indicate that they are not only expanding their local sales, but their interstate sales, and that the threat that if we do not give them 20 cents per thousand cubic feet, they will turn their gas into carbon black, does not hold.

Mr. LONG. The Senator knows that I never suggested that. The only gas that is being turned into carbon black, so far as I know, is "sour" gas, namely, gas that can not be used commercially. The point I am making is that gas in my State is selling at as good a price as it is selling outside the State. The price regulation which the Senator is advocating has never yet been imposed. The Senator knows that when it is imposed there will be an early stop put to the exportation of new reserves to which he is referring.

Mr. DOUGLAS. In this whole connection the Senator assumes that the Federal Power Commission would use its powers injudiciously or unfairly. It must be assumed that the Federal Power Commission would take into consideration a price sufficient to get gas to move. In order to do that it does not have to recognize "reasonable market price." It can still operate in terms of a just and fair price.

Mr. LONG. I would be curious to know what is the Senator's formula for arriving at reasonable market price.

Mr. DOUGLAS. I do not have to settle all the problems of valuation in the world to know that this egg smells bad. Some of the issues can be put up to the Federal Power Commission.

Mr. LONG. Does the Senator know what he is advocating? In other words, I can say what a fair return means as applied to a utility. It means 6 percent return on invested capital. What does the Senator's formula mean?

Mr. DOUGLAS. A fair return to the producer, in my judgment, would be appreciably more than 6 percent, because there is a risk of drilling a dry hole.

Mr. LONG. What would a fair return be?

Mr. DOUGLAS. I am not on the Power Commission, but I should say that a group of reasonable men could fix a rate of return which would be adequate. Mr. Draper, who has fought the bill, has

said that the rate of return, in his judgment, should be above 6 or 6½ percent. I do not know what it should be. As a horseback opinion, based upon such knowledge as I have, I would be ready to allow 8 percent or 8½ percent. But I do object to 16 percent, 20 percent, 40 percent, and so on. That I do object to.

Mr. LONG. Suppose a man drills with the chances being 9 to 1 that he will not discover a well.

Mr. DOUGLAS. The 9-to-1 figure has been advanced previously; but if we consider recent data on drillings, taken from Gas Facts, we find that the ratio is that about one-sixth of the wells come in.

Mr. LONG. Has it ever occurred to the Senator from Illinois that he is proposing a formula which might work all right on some large companies and yet would put thousands of small producers out of business? A large corporation might be able to live under the Senator's formula; but if a small producer missed in the drilling of one of those wells, he would be out of business.

Mr. DOUGLAS. The Senator from Louisiana is familiar with an alternative proposal which the Senator from Illinois has introduced in Congress and which is before the committee, and which it is his present intention to offer as an amendment in the nature of a substitute, namely, to exempt producers of less than a certain amount of gas. Under the proposed legislation, regulation would be applied to about 197 producers.

Mr. LONG. Based upon certain production?

Mr. DOUGLAS. That is correct.

Mr. LONG. If the Senator succeeds in accomplishing his purpose, any corporation which is 5 times that size will break itself up into 5 corporations, in order to avoid price control.

Mr. DOUGLAS. Yes, that thought has occurred to me, but I think such action could be detected.

Mr. LONG. What would prevent a large corporation from selling to five different corporations? Assume a large company sold to five different corporations. Why should it not receive the same benefits that other smaller corporations would receive?

Mr. DOUGLAS. I would exempt the companies which did not produce more than 2 billion cubic feet, or 2 million thousand cubic feet, which would be an annual business of around $200,000 at present prices.

Mr. LONG. Why could not a corporation which had an annual business of $1 million simply sell its assets to 5 different corporations; and if that were done, why should not all 5 corporations receive the same benefits as were received by the other small corporations?

Mr. DOUGLAS. I think that could be detected as a collusive sale and penalized as such.

Mr. LONG. Assume that the sale was not collusive. Assume that the corporation simply found it did not care to do business in any other fashion. Why should it not receive the same benefits as others who were already exempt?

Mr. DOUGLAS. If the big companies could do that, they would not oppose my bill. But the fact that they are opposing my bill, I think, indicates that my proposal would be a restraint upon them.

I feel certain that the big companies have representatives in the gallery and that they are listening to this debate very carefully. There are many segments of Washington who, I assume, are listening to the debate.

Mr. LONG. If the Senator is successful in his proposal, I can assure him that this is one of the results he can anticipate.

Mr. DOUGLAS. Then I am sure they would support my bill. But they are not supporting it. They are insisting on the Harris-Fulbright bill instead. So evidently they believe my limitation would be successful.

Mr. LONG. Can the Senator tell me what harm there could be in allowing a large corporation to sell its gas on a competitive basis?

Mr. DOUGLAS. This is the point: For the sake of ease in administration, the law has always permitted classification. For instance, under the minimum wage law, enterprises employing fewer than eight employees are exempt, because otherwise it is thought that administration would be difficult.

Exemptions were granted under the social security law and similar acts. So in order to facilitate administration, legislatures have granted exemptions on the basis of size, and the courts have upheld such exemptions.

I remember a 1915 decision of the Supreme Court of the United States which was handed down by Mr. Justice Hughes, who was a member of the Court before he ran for the Presidency. I think the case was Miller against Wilson. The decision upheld a California 8-hour law for women and was confined to manufacturing. The question was raised as to why the law should not apply to other branches of industry as well; that it was class legislation, and its application was limited too narrowly.

The Supreme Court ruled that the legislatures had the power to classify, could deal with proximate issues, and could deal with evils which they regarded as the greatest, without taking in everything under the sun at one time.

I could cite offhand other issues. I think a similar issue was raised in the case of Bunting against Oregon. I think the same issue was involved in social security cases and fair labor standards cases.

Mr. LONG. Might I predict that even though the Senator's amendment might make his proposal somewhat more workable, he would still fail to achieve the objective he is seeking, when he attempts to obtain gas on a regulatory basis, limited to an 8-percent return.

Mr. DOUGLAS. I said that was an offhand, horseback opinion. I think that figure might be adequate. But it might be 9 percent or 10 percent. I am not qualified to pass on what is a fair return.

Mr. LONG. The point I am trying to make could be very simply illustrated.

Mr. DOUGLAS. All I am saying is that the return should be just and reasonable. We shall have to trust the Commission to determine what is just and reasonable. The Senator asked me what my ideas were. I said that, offhand, I thought the return would not be less than 8 percent. It might be more. But let us put that question to the group which has the power to act. We do not have to know what the precise decisions of the administrative body should be in order to give the administrative body the power to act. That is the whole essence of administrative law.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. In a moment. I am now in full flight. [Laughter.]

All Congress knows when it passes these bills is that competition does not work perfectly in a given industry; that a completely unregulated price will not be just and reasonable. So it provides the administrative body with terms which that administrative body can use, after due study, to arrive at a just and reasonable conclusion.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I now yield to the Senator from Rhode Island; then I shall yield further to the Senator from Louisiana.

Mr. PASTORE. Would the Senator from Illinois anticipate that the Federal Power Commission would institute a rate which would put a producer out of business or discourage him from searching or exploring for more gas and oil?

Mr. DOUGLAS. No, I would not. As a matter of fact, I should say that the Federal Power Commission has been so intimidated by the gas and oil interests that the errors which have been made have been in favor of the gas and oil interests. That has been true under the administration of my party as well as under the present administration.

Mr. PASTORE. Mr. President, will the Senator further yield on that point?

Mr. DOUGLAS. I yield.

Mr. PASTORE. I call the Senator's attention to the testimony of General Thompson, on page 54 of the report of the hearings. I asked General Thompson this question:

> Have we any comparative figures to show for the same period of time just how much drilling took place insofar as natural gas is concerned during the period that we were under Federal power regulation as against an equivalent period before Federal power regulation?

Mr. DOUGLAS. That was the question asked by the eminent Senator from Rhode Island.

Mr. PASTORE. Mr. Thompson answered:

> Mr. Chairman, the decision came down last June. The drilling of last year was pretty well planned the year before because in the appropriations everybody plans about a year ahead for his drilling. So the effect would not have anything to do with the drilling of last year.
>
> But as far as drilling for gas is concerned—

And this, I think, is important—

> hardly anybody drills for gas. They get gas accidentally when they are looking for oil.

Fundamentally, we have instituted as part of our governments and law, insofar as internal revenue is concerned, the regulation that oil drillers are allowed a depletion credit of 27½ percent. At

that great rate of depletion, does the Senator from Illinois imagine for one moment that whatever we do here in allowing the Federal Power Commission to regulate the prices of natural gas is going to discourage this great search for oil, in the hope of getting advantage of the 27½ percent depletion allowance?

Mr. DOUGLAS. No, I do not; and the Senator from Illinois will later introduce evidence to indicate that the industry pays a smaller fraction of its net profits in taxes than does virtually any other industry in the country. The industry is already receiving favors from the Government almost beyond human measure, and I think it has inducement enough.

Mr. PASTORE. As a matter of fact, I think the characterization which was made by the distinguished Senator from Illinois, when he testified before our committee, was to the effect that they will be searching for oil as they are searching for uranium.

Mr. DOUGLAS. I do not know that I said that, but I should like to have said it.

Mr. President, I have completed 3½ pages of my prepared speech, and I hold in my hand 150 pages. I would call the attention of the Senate to the fact that thus far most of the time has been taken up in colloquy, and I shall be glad to entertain further colloquy, because the Senator from Illinois feels in good form today, and had a good night's sleep, and he is going to recuperate over the weekend and will be ready next week to make the remainder of his speech. So I say to my friend from Louisiana that I shall be very glad to have colloquy and exchanges with him.

Mr. President, as I was saying when I was interrupted some time ago, if the Harris-Fulbright bill passes, the pipeline companies will have no inducement to keep the gas prices down, since, if they go up, the pipeline companies will be able to charge more to the distributors and the distributors will have to unload on the consumers. In fact, the pipelines will want gas prices to go up. For if they do, the pipelines will get more for the 22 percent of the gas which they produce themselves. Therefore, not only will the pipelines have no inducement to keep producers' prices down, for these can be passed on, but they will have a positive inducement to let the big producers force up the prices, for then their own production companies will be assured of a correspondingly higher price and they will make bigger profits.

In fact, the pipeline companies will be able to pass on the so-called reasonable market price, or they will be able to pass on what they are paying. "A reasonable market price is a reasonable market price is a reasonable market price," and the attempt to control the profits which producers receive by attempting to control the price which the pipelines can pass on—which is the Harris-Fulbright device—is illusory. It will not work. In all probability, it is unconstitutional. It is ineffective. But not only will the pipeline companies be indifferent as to whether the price which they will have to pay will go up; they will be actual accomplices in wanting the price to go up, because we should never forget that the pipelines produce approximately 21 percent of the gas which they transmit. The more they pay the so-called independent producer, and the higher the established market price, then the higher the price which they can charge for the gas which they themselves produce and put into the system.

If the pipeline companies now pay 11 cents a thousand cubic feet, let us say, and later they pay to the independent producer 20 cents, that price becomes the reasonable market price, and the gas which they themselves produce will be charged in at 20 cents. So the more pipeline companies pay the independent producer, the more they will themselves get. Therefore, they will not be free bargainers; they will be accomplices in trying to raise the price which they pay to the producer, and they will not be able to, and will not wish to, defend the ultimate consumer.

Mr. LONG. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. LONG. Actually, it seemed to me it would be just as well for those in the pipeline business to divest themselves of their gas holdings, based on what the Senator from Illinois has said. They would then be in a position to treat all producers alike. The Senator knows that when the so-called Kerr bill was before the Senate, the distinction was very clearly made that the bill applied to those who were selling at arm's length.

Mr. DOUGLAS. The so-called independent producers. That is why this bill is worse than the Kerr bill.

Mr. LONG. It seems to me that if the Kerr bill had passed, those who had gas reserves would certainly not have developed additional reserves; if capital went into the industry, it would go in as independent capital rather than as pipeline capital.

Mr. DOUGLAS. The Kerr bill treated the independent producer more liberally than it did the pipeline company. The pipeline companies would undoubtedly still further have divested themselves of their producing properties, which they have done to some extent, anyway.

Mr. LONG. As a matter of fact, it seems to me it is very difficult to regulate pipelines properly when the pipelines own gas reserves, especially if one recognizes the fact that gas reserves should not be regarded as a public utility. But the Senator seems to believe that gas producers should be treated as public utilities, so I do not know why he is so much concerned about the pipeline company which owns its own reserves.

Mr. DOUGLAS. Under the Harris-Fulbright bill the pipeline company not only has no inducement to keep down the price which it pays to the producer; it has every inducement to increase the price. So we do not have the normal protection of a buyer. The consumer does not have the normal protection of a buyer which he does in the case, for instance, of coal merchants or wood pulp merchants, and so on.

I thank the Senator for bringing the point out even more emphatically than I was able to do.

Mr. LONG. Under the bill, does not the Federal Power Commission retain the right to pass on the reasonableness of all new contracts?

Mr. DOUGLAS. It has the power, ostensibly, to prevent a pipeline company from passing on a price in excess of what is judged to be reasonable. In the first place, I say "reasonable" is simply the existing price. That definition is defective.

Mr. LONG. Reasonable market price.

Mr. DOUGLAS. Reasonable market price.

Second, the pipeline will have the inducement to allow the producers to send up the market price, because the higher the price is brought up, the more the pipeline will get out of its own production.

Third, if the Federal Power Commission should summon up its courage and issue an order restraining a pipeline company from passing on more than a given price, I doubt whether any court in the country would hold that restraint to be constitutional, because the pipeline company would have made the contract, would have agreed to the price, and the price would have been paid. Then to prohibit the company from passing on an expense which it had incurred, in a field over which the Federal Government would have divested itself of authority, I think would be held by every court in the land to be confiscatory and the taking of property without due process of law, and, therefore, in violation of the fifth amendment, because the fifth amendment covers many things.

Mr. LONG. Does not the Senator from Illinois and I agree that the ideal situation is one in which the pipeline company does not own its own reserves, but in which the pipeline is a common carrier, and is regulated as a common carrier, under standard common carrier regulations?

Mr. DOUGLAS. I heard the very eminent Senator from Arkansas make an argument about 2 days ago that the pipeline companies should develop reserves; that is why they should be given greater powers than given under the Kerr bill. Now the Senator from Louisiana is coming back to the Kerr bill. Does the Senator from Louisiana wish perhaps the substitution of the Kerr bill for the Harris-Fulbright bill?

Mr. LONG. No; I am content to support either of them. I think both are good bills.

Mr. DOUGLAS. I will say that the Kerr bill, monstrosity that it was, was not as deformed as the Caliban that now is being foisted upon the American people.

Mr. LONG. Under this bill, is it not the responsibility of the Federal Power Commission to look for the very type of situation the Senator from Illinois is suggesting? In other words, if a pipeline has a large amount of reserves, is it not the responsibility of the Federal Power Commission to look carefully at any contract by which the pipeline company might undertake to pay a higher

price than the one it is paying for its present supply of gas?

Mr. DOUGLAS. Under the bill, it cannot pass on more than a reasonable market price.

Mr. LONG. That is correct.

Mr. DOUGLAS. But the reasonable market price will be established by agreement between the producers and the pipeline companies; and once it is established, it can be applied to the regular production. I am saying that in that event, gas-purchase contracts where as little as possible is paid for the gas will be changed to ones in which as much as possible is paid.

Mr. LONG. Is it not true in most cases that a pipeline having considerable reserves will be subject to close scrutiny, in the case of the situation the Senator from Illinois has in mind, wherein the pipeline is in a position to obtain more, and that the Commission will have the responsibility of looking very carefully, to make sure that the pipeline is not receiving a higher price than the one received in areas where the price can be held down?

Mr. DOUGLAS. Mr. President, the Senator from Louisiana seems to be in favor of control, except he favors inadequate and ineffective control after the price has been paid, instead of direct and effective control. Why not let the dog have some teeth, instead of extracting all its teeth and turning loose a toothless and ineffective canine for the job of regulation?

Mr. LONG. Do I correctly understand that the Senator from Illinois is fearful that a pipeline will pay a gas producer more than the pipeline is actually in position to write off as an expense? Is that what the Senator from Illinois is arguing against now?

Mr. DOUGLAS. Oh, no. I am saying that since the pipeline can mark up its own production to the price it pays to the independent producer, its net income will increase, the more it pays the independent producer; and therefore in this transaction we do not have the ordinary desire of a purchaser to keep down the price, and therefore the pipeline becomes an accomplice of the producer, rather than a defender of the ultimate consumer.

Mr. LONG. But in the instance in which a pipeline is purchasing for a large number of consumers, assuming that the pipeline owns no reserves of its own, which I understand is the case——

Mr. DOUGLAS. It is true of some pipeline companies; I believe it is true, or largely true—I say this subject to correction—of the transmission of the Tennessee Gas Pipeline Co. But it is not true of all pipelines. I think the record shows that 21 percent of all gas transmitted by pipelines comes from the pipelines' own fields. So it is not a negligible factor.

Mr. LONG. Yes. Nevertheless, a pipeline dealing with its own customers, and not having any reserves of its own, is able to obtain for the customers a much better price than the one the customers could obtain for themselves, in a case in which 10 or 15 customers were trying to purchase gas. Obviously, a producer who has several prospective purchasers for his product is able to bargain one of them against another, and thus is able to obtain a higher price than the one he could obtain if he had only one prospective purchaser with whom to deal.

Mr. DOUGLAS. Is the Senator from Louisiana saying that the pipeline companies should give up their function of purchasing gas, and should merely become circular railroads, so to speak, through which the gas purchased by industrial consumers and local distribution companies would move? Is that what the Senator from Louisiana is saying?

Mr. LONG. It has been argued that that would not be practicable. Nevertheless, it always seemed to me that if it could be worked out from a practical point of view, it might be desirable to let the pipelines simply transport the gas, in the same way that the railroads transport any other product, and let the gas be purchased at the end of the pipelines.

Mr. DOUGLAS. Until the Senator from Louisiana writes that into the Natural Gas Act, I think we must proceed on the assumption that the pipeline companies will be purchasers not merely transportation agencies.

Mr. LONG. That is true.

Mr. DOUGLAS. Since that condition obtains, the Fulbright bill presents them with an opportunity to raise the market price of gas; that is all. It would be better to regulate the price at which the independent producers sell their gas to the pipelines—I refer to the big producers—and also the price the transmission companies charge.

Mr. President, let me say that I have enjoyed very much this colloquy with the able Senator from Louisiana.

The big companies in the oil and gas industry are therefore playing for enormous stakes in seeking the passage of this bill. This explains why they have raised a war chest of at least $1,500,000 to promote the Harris-Fulbright bill, and indicates the nature of the campaign we have seen and may expect.

Thus far, Mr. President, I have developed, or tried to develop, two points.

Now, I come to my third point, in summary:

We can expect that almost the full burden of these increases will fall upon the householder. Industrial rates and particularly interruptible industrial rates are already competitive with coal and oil and were on the average in 1953, 24.7 cents per thousand cubic feet for firm industrial and 21 cents per thousand cubic feet for interruptible industrial.

The nature of those two demands is shown in connection with the last chart to which I have referred. The interruptible industrial supply of gas, as I explained the other day, is sold in the summer months and in the late spring and early fall months, when home heating by means of gas decreases to virtually nothing. At that time the gas transmission companies and gas distribution companies have on their hands large quantities of gas for which there is no residential demand. At other seasons of the year there is a large residential demand for the gas, but not at those seasons. So those companies have to find customers who will take those large quantities of gas off their hands. Therefore, they sell the gas, at "dump" rates, to a few industrial firms. These firms have alternative fuel systems. During the winter months they will burn coal or fuel oil. During the summer months they will burn natural gas. The large companies have developed methods of burning coal and fuel oil which make those fuels competitive with the interruptible gas. If the rates for interruptible gas go up by 5 cents per thousand cubic feet, or by 10 cents per thousand cubic feet, then it will be found that the industrial firms which already have on hand their alternative fuel systems, will largely—I do not say they will do so wholly—turn to the use of oil and coal for the summer months, as well as for the winter months; and then the local gas companies will be "all dressed up with no place to go."

This means that if they are to recoup themselves they will have to unload upon the residential consumer not merely the average increase in the field price of gas, but the average increase plus the increase in the cost of the gas which otherwise would have gone for interruptible uses, which now would have to be purchased, and which could not be used for industrial purpose. Therefore the residential consumer would have to pay his burden, and a large part of the burden of the interruptible service as well. Even when purchases of the interruptible gas can be slowed down during the summer months, the overhead required will have to continue, in the form of gas mains and gas services equipped to take the full winter load, but utilized only at those times, and operating with a low load factor during the summer months and a high idle overhead.

That means that, to the degree that the higher cost of industrial gas is used and passed on in the form of a higher price, for the products of industry, the consumers will bear this cost indirectly. To the degree that it is shifted to the residential users, it will be passed on directly. In one event or the other, it will be the consumers who will bear the burden. I think it is this very fact which has led, in part, to the opposition of the distributing companies to this bill. This argument has been developed very cogently by Mr Arthur K. Lee, a utility operator from my own city of Chicago. He has written an exceptionally able pamphlet on this very subject. As a matter of fact, he devised the chart a large reproduction of which I have placed in the back of the chamber.

I point out that while the industrial consumers—perhaps I should say the interruptible industrial consumers—have alternative fuel systems, so that they can switch from one to the other, residential consumers have no such protection. They are tied to gas furnaces, in which they have invested an average of $500. They are tied to the gas range, in which they have invested $200 or $250.

They are tied to the gas hot water heater. They are tied, in some cases, to the gas refrigerator. They have a large

investment. They cannot switch to alternative fuels. I think it will be found that some of the small industrial purchasers who do not have devices for generating heat from coal as efficiently as it is done by the big concerns will not be able to make the transition, and that they will bear a part of the burden.

In order to make the record clear, I should like to put my analysis in somewhat more detailed form.

For some reason the American Gas Association did not publish figures for interruptible gas sales in 1954, so that the 1953 figures are the latest available. Increases of 5, 10, and 15 cents per thousand cubic feet in the field would therefore amount to increases of 24, 48, and 72 percent in the interruptible rate using 1953 figures.

If such increases as these were imposed, the gas companies would lose this interruptible business. For the industries would shift completely during the summertime to the alternative fuel which they now use for the winter months, namely coal, and in some cases oil. Something of the same sort would happen in the case of ordinary industrial gas and other large-scale consumers.

In order to recoup for their increased costs, the distributive companies would directly or indirectly have to throw almost all of the increase upon the householders whose rates would go up not by 5, 10, or 15 cents per thousand cubic feet but by 10, 20, or 30 cents per thousand cubic feet, or by an average of 14, 28, or 40 percent. It would almost certainly be greater than the first of these percentages, might well be 30 to 40 percent, and would almost certainly be from 25 to 30 percent. As residential and commercial consumers now spend on the average of about $80 per year for natural gas, if the full burden of the $600-million increase fell on them, the cost to them would be an additional $30 per year or a percentage increase of 37½ percent. Thus, the present consumers would have little protection. They would not want—and most could not afford—to scrap their existing investment in gas furnaces, gas hot-water heaters, gas ranges, and so forth, which average over $500 per household and total over $14 billion for the country. In addition, the discomfort of burning coal and the labor in keeping the fires going would be a great deterrent. New households would, moreover, be discouraged from using gas, and the gas companies and the young housewives would lose here.

Fourth. As I shall show, these gains are not necessary to induce adequate exploration and they would yield a grossly and improperly high rate of earnings to the gas producers. The wellhead prices should, instead, be regulated by the Federal Power Commission in order to protect the consumers.

By exempting about 5,360 producers who sell less than 2 million thousand cubic feet and confining regulation to some 197 producers who sell 90 percent of the gas to the pipelines for resale, the administrative work can be lightened and the small producer freed from the redtape of Government regulation. At the same time the consumers are protected.

The argument that the Commission should or could protect the consumer by granting the producer the "reasonable market price," is ridiculous. Even if we take the standard of "reasonable market price" as applying directly to the producer, which it does not, the market price which would be taken as reasonable would be fixed under the quasi-monopolistic conditions which have been described. The actual field prices under this rule would be taken to determine what the reasonable field prices should be. This is circular reasoning with a vengeance and assumes what it was supposedly intended to find out. The Commission, however, should give a fair rate of return upon the actual investment which should be higher in the field of natural gas than that permitted for the electrical industry.

On this issue the interests of the consumers far outweigh those of the producers and the general national welfare would be best served by defeating the Harris-Fulbright bill (S. 1853) and giving instead a clear mandate to the Power Commission to get on with its proper work of regulation.

If I may summarize my argument—although this is only the beginning of it—and give a preview of what I intend to prove, I am convinced that the proposed exemption from Federal regulation of interstate sales of natural gas by nontransporting producers would, without justice or reason, add hundreds of millions of dollars a year to the bills of the Nation's gas users.

I believe that the legitimate interests of natural-gas producers can be fully protected under fair and reasonable regulation of those interstate sales.

I believe that consumers can be adequately protected by exempting the little producers who sell only about 10 percent of the gas in interstate commerce.

And I know that the widespread publicity campaign of the oil and gas industry, that competition can be relied upon to protect the consumer against exorbitant prices, is not supported by the evidence. It ignores the basic and decisive fact, which cannot be emphasized too often, that, unlike coal, oil, cheese, milk, beer, potatoes, copper, and other commodities to which the industry literature mistakenly compares gas, there is only one feasible method of distribution of gas, namely, the pipelines and the local gas mains. And it ignores the inevitable and demonstrated result that once the lines are laid, the homes hooked into the utility systems, and the cooking and heating appliances bought, the chances for the users of gas to get any real protection against unfair producers' prices by competition are nil. I shall develop these points more fully as this debate continues. I have made only a beginning this afternoon.

This drive for exemption which will permit nontransporting producers to charge all that the traffic will bear was first stopped in 1948 when the Senate Interstate Commerce Committee in the Republican 80th Congress decided that the Moore-Rizley bill, which closely resembled the pending Harris and Fulbright measures, was against the public interest and therefore did not bring it out of committee. The exemption drive was stopped again in 1950 by President Truman's courageous veto, only to be revived once more by the Federal Power Commission's regrettable decision in the Phillips case in 1951, when it ceded jurisdiction, instead of exercising it. The Supreme Court in 1954 reversed the Commission and once more upheld the Federal authority to protect consumers by regulating these producers' interstate sales. Now I hope the Senate will again disapprove the measures designed to reverse that basic decision and will decide to permit the Federal Power Commission, however unwilling and hesitant it may be, to get on with the job of fair and reasonable regulation to protect the 80 million users of natural gas.

I thought I would make more progress this afternoon than I have. Therefore, I wrote in my prepared statement that my remarks today would deal with at least three issues which I believe are basic to a consideration of the Harris-Fulbright bill to amend the Natural Gas Act. I should amend that statement to say that my remarks during the coming few days will deal with these issues. These issues include the following:

BASIC ISSUES BEFORE CONGRESS

My remarks today will deal with at least three issues which I believe are basic to a consideration of the Harris-Fulbright bill to amend the Natural Gas Act, which is now before the Senate. These issues include the following:

First. Does the public interest require that the prices charged by producers for natural gas sold in interstate commerce for resale be subject to regulation by the Federal Government?

Second. If the public interest requires such regulation, what type of control should be applied, and should it be applied to all producers?

Third. Should natural-gas pipeline companies owning natural-gas reserves through leaseholds and gas rights be allowed to include in operating expenses the market value of the gas they produce from such reserves?

These three basic issues are not the only issues involved in the proposal to amend the Natural Gas Act which is now before the Senate; however, they are among the main issues which I believe are of vital concern to natural-gas consumers, as well as its producers, transporters, and distributors.

With regard to the first issue, it is my firm conviction that Federal control of the prices charged by natural-gas producers selling in interstate commerce for resale is necessary in the public interest. In that connection may I point out that even the President's Cabinet Advisory Committee on Energy Supplies and Resources Policy recognized that some degree of control is necessary. Likewise the bill as introduced by the Senator from Arkansas [Mr. FULBRIGHT] and as reported by the committee, also recognizes, at least in theory, that the Federal Government should have some authority with respect to the prices paid by pipeline companies for gas purchased from other producers, in order to protect the consumers' interest. Based upon my

own study of this entire question, I firmly believe that unless the Federal Government controls the prices charged by producers for sales of natural gas in interstate commerce, the intent and purpose of the Natural Gas Act is nullified and Federal and State natural-gas rate regulation will become a useless exercise in futility.

PURPOSE OF NATURAL GAS ACT

The intent and purpose of the Natural Gas Act is plain. Congress passed the act because it was clearly apparent to the Members of that body in 1938 that Federal control of the natural-gas industry was necessary to secure reasonable rates for natural gas in the consuming areas. State regulatory commissions found themselves helpless to control the cost of natural gas at the city gate—that is, at the receiving end—to the distributing utilities because these sale transactions were in interstate commerce and beyond the reach of State authority. Municipalities and State commissions asked Congress to place Federal control over the previously unregulated interstate sales so that reasonable rates for natural gas could be secured for the consumer.

NATURAL GAS ACT PROVIDED EFFECTIVE REGULATION

Congress responded to these requests for legislation by passing the Natural Gas Act. The Federal Power Commission took this new jurisdiction and proceeded to fix just and reasonable rates. This action resulted in lower consumer rates in many cities and towns of the Nation. Table No. 1, which follows, summarizes the rate reductions which the Federal Power Commission—with its will to protect the public interest still strong as it was at that time—secured through proceedings under the Natural Gas Act. While a good many of the reductions listed, which total $43,345,000 on an annual basis, were secured only after formal proceedings and in some instances litigation, there were a number of rate reductions made voluntarily as a result of informal negotiations.

Mr. President, I ask unanimous consent that the table I have in my hand be printed in the RECORD at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE I–1.—*Reductions effected by Federal Power Commission in the interstate resale rates of natural gas, 1938–52*

Company	Rate reduction (annual basis)	Effective date	States where ultimate consumers live
1. Natural Gas Pipeline Company of America	$6,508,000	Sept. 1, 1940; Sept. 20, 1942	Kansas, Nebraska, Iowa, Illinois, and Indiana.
2. Hope Natural Gas Co	3,610,000	July 15, 1942	Ohio and Pennsylvania.
3. Canadian River Gas Co. et al	2,086,000	May 13, 1942	New Mexico, Colorado, Wyoming, Kansas, Nebraska, Iowa, Illinois, and Indiana.
4. Panhandle Eastern Pipe Line Co	5,094,000	Nov. 1, 1942	Kentucky, Kansas, Missouri, Illinois, Ohio, Indiana, and Michigan.
5. Interstate Natural Gas Co	1,100,000	June 15, 1943	Louisiana, Mississippi, Alabama, Georgia, Arkansas, Tennessee, Illinois, and Missouri.
6. Cities Service Gas Co	4,446,000	Sept. 1, 1943	Oklahoma, Kansas, Missouri, and Nebraska.
7. Lone Star Gas Co	2,071,000	May 15, 1942	Oklahoma and Texas.
8. El Paso Natural Gas Co	526,000	Nov. 1, 1942	Arizona, New Mexico, and Texas.
9. United Gas Pipe Line Co	1,862,000	Apr. 1, 1943	Alabama, Mississippi, Florida, Louisiana, Texas, Georgia, Tennessee, Arkansas, Missouri, and Illinois.
10. Northern Natural Gas Co	2,287,000 1,880,000	Feb. 1, 1943 November 1947	Iowa, Kansas, Minnesota, Nebraska, and South Dakota.
11. Memphis Natural Gas Co	353,000	July 26, 1943	Tennessee, Arkansas, Louisiana, Mississippi.
12. Mississippi River Fuel Corp	790,000	Jan. 20, 1946	Arkansas, Illinois, and Missouri.
13. Penn York Natural Gas Corp	53,000	Mar. 15, 1946	New York.
14. Southern Natural Gas Co	1,200,000	May 1, 1946	Alabama, Georgia, and Mississippi.
15. Ohio Fuel Gas Co	636,000	May 15, 1946	Indiana and Ohio.
16. United Fuel Gas Co. and Cincinnati Gas Transportation Co.	1,753,000	Sept. 1, 1946	Kentucky, Ohio, and West Virginia.
17. Tennessee Gas Transmission Co	850,000	Apr. 1, 1947	Mississippi, Tennessee, Kentucky, West Virginia, Ohio, Pennsylvania, and New York.
18. Atlantic Seaboard Corp	167,000	April 1947	Kentucky, West Virginia, Virginia, Maryland, and Pennsylvania.
19. Kansas-Nebraska Natural Gas Co	187,000	Oct. 1, 1947	Kansas and Nebraska.
20. Northern Natural Gas Co	1,880,000	November 1947	Iowa, Kansas, Minnesota, Nebraska, and South Dakota.
21. Kentucky-West Virginia Gas Co	424,000	Nov. 1, 1948	Pennsylvania.
22. United Natural Gas Co	252,000	Jan. 1, 1950	Pennsylvania and New York.
23. Colorado-Wyoming Gas Co	357,000	Nov. 26, 1950	Colorado and Wyoming.
24. Colorado Interstate Gas Co	2,973,000	Sept. 15, 1952	Do.
Total	43,345,000		

Mr. DOUGLAS. Mr. President, now I should like to pass to a discussion of the main characteristics of the gas industry. Let us start where the gas is used. The proponents of the pending bill would have us believe that the only type of gas used locally is residential gas. The charts and tables which they have put up in the Chamber compare the price in the field with the price at the city gate and with the price paid by the residential customer, and the prices shown are 10 cents, 25 cents, or 30 cents, and the prices of $1.51, $3.01, or $3.64. Those are the comparisons they make.

THE MAIN CHARACTERISTICS OF THE GAS INDUSTRY

1. THE CONSUMERS AND DISTRIBUTORS

There are three main classes of users, residential users. commercial enterprise, and industrial users. The industrial users divide themselves into two groups, the interruptible and the noninterruptible. Gas for residences is used primarily to heat dwellings, to heat water, and for cooking, with some used for refrigeration.

Since heating is the most important of these uses, this means that this type of demand is high in the winter months and dwindles away to almost nothing in the summer, and to very low levels in the last spring and early fall. It is well illustrated by the chart on display in the Chamber which shows the seasonal rise and fall in the residential use of gas.

The industrial demand is of two main types; namely, interruptible and firm. The gas for interruptible industrial use is sold almost exclusively during those months when the residential demand is either low or nonexistent. It therefore is designed to fill up the seasonal valleys in residential demand. This also is clearly shown by the large chart. The industrial plants which burn gas on this basis for heat and power, therefore, use alternative fuels such as oil and coal at other seasons of the year. They have these alternative fuel systems existing side by side and can switch from one to another according to whether gas or fuel oil or coal is the cheapest.

The sales of firm gas to industry are mostly to utilities in the South and Southwest for the purpose of generating electrical power. I do not say all the sales are for that purpose.

I say the major portion of them is for that purpose.

Over 95 percent of all the gas sold to consumers is now natural gas, and this percentage has increased markedly in the last 25 years. Last year 21.2 million out of the total of 26.5 million residential gas customers used natural gas, or 80 percent of the total.

May I say at this time that this is the difference between the figure of 21 millions for the number of families using natural gas and the figure of 26 millions which has been used before. The figure of 26 millions is correct for all types of gas and the figure of 21 millions is correct for natural gas.

I have tried to restrict my statement to the consumers of natural gas.

This was an increase of 1.5 million residential customers over the number using natural gas in 1954. Manufactured gas, which was dominant in the East a half century ago, has been steadily losing ground.

Let us now see the relative quantities of natural gas which were bought by the main types of customers in 1954.

Mr. President, I ask unanimous consent that the table which I have prepared be printed in the RECORD at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Customer	Number of customers for natural gas	Millions of thousand cubic feet [1]	Utility revenues
Residential	19,720,000	1,783.0	$1,436,653,000
Commercial	1,572,000	491.0	303,923,000
Industrial	82,000	3,241.0	767,212,000
Other	25,000	286.8	68,522,000
Total	21,399,000	5,801.4	2,576,310,000

[1] These computations are from Gas Facts and are on the basis of 10 therms per thousand cubic feet.

Mr. DOUGLAS. Mr. President, in brief, the table shows that residential customers bought approximately 1.8 billion thousand cubic feet, for which they paid $1,437,000,000; that commercial customers bought 491 million thousand cubic feet, for which they paid approximately $304 million, and that industrial consumers bought 3,241,000,000 thousand cubic feet, for which they paid approximately $767 million. It will thus be seen that while the residential customers were 92 percent of the total number of consumers they purchased only 31 percent of the natural gas sold but paid 56 percent of the revenues. The situation was reversed in the case of the industrial users, who consumed 56 percent of the gas but contributed only 30 percent of the revenues. This shows how much higher the rates are for residential than for industrial gas. This point will be developed in greater detail later. If, indeed, we separate the natural gas bought by industry into the 2 categories of firm and interruptible, we find from the 1953 figures, which are the last available, that in that year the firm gas came to 1,634.4 million thousand cubic feet, for which $402,959,000 was paid, while the interruptible gas sold amounted to 1,332.7 million thousand cubic feet, for which $279,177,000 was paid. As we shall see, this indicates a dump rate for the interruptible gas which is appreciably lower than for the firm industrial rate. The disparity in rates between the residential and the interruptible industrial gas is therefore even greater than was indicated by the 1954 figures, which do not differentiate between the two types of industrial gas.

All these local sales of natural gas are made by distributing companies of various sizes, varying from large concerns, such as Consolidated Edison of New York City, United Gas Improvement of Philadelphia, and Peoples Gas of Chicago and its suburbs, to smaller gas-utility companies. These companies bear the cost of laying the local mains which bring the gas to the customers and which for the Nation amount to nearly 300,000 miles. They also pay for hooking up the household appliances or industrial burners with these mains. The average current cost for connections with a given house is estimated at $500 per unit, although some years back, in a period of lower costs, the outlay per house was probably around $200. In view of the attacks which the big producers are now making upon the local distributors, these facts need to be borne in mind, including cost of inspection. They show the heavy expenditures which the local utilities have to make. This is particularly great in such places as Manhattan, where the distributing mains have to be laid through rock, and, therefore, have a much higher cost than in many other localities.

The total receipts of the local gas companies in 1954 amount to $2,576,310,000. As we have said, the residential customers paid $1,436,653,000 of this, while the commercial customers paid $303,923,000, and the industrial plants $767,212,000. Miscellaneous receipts of $68,522,000 completed the total.

Out of this total, the local companies had to pay production costs for the gas which they manufactured, plus the prices charged them by the pipelines for the natural gas delivered to them, plus the distribution and administrative costs connected with bringing the gas from the gates of the cities and towns to the ultimate consumers in their homes, stores, and factories, plus a return on their invested capital.

I hold no particular brief for these companies but I would point out that they are subject to State regulation on the prices which they charge. They, at least, differ from the big producers in that they are not proposing that they be exempted from regulation. No doubt most of them try to have very soft and favorable regulation, and I have fought many battles in Illinois with Mr. Insull and his successors in an effort to get fair and reasonable regulation.

I think, Mr. President, I can speak on this point with a certain degree of propriety, because for some years I gave 5 percent of my income, which was not large, and 10 percent of my time, in an effort to get adequate regulation of electricity and gas rates in my city, and I bear upon myself the honorable marks of battle, and I am very glad that I made the fight. So, let no one charge me with being an apologist for the local distributing company or of advocating soft regulation. We should strengthen our efforts to get effective regulation on the State level. But the Fulbright bill does not do anything to help this need within the States. What it does is to let the big producers charge all the traffic will bear. But, while I am no apologist for the distributing companies, I want to say this for them. They have never had the nerve to claim that theirs was a competitive industry or to try to repeal the regulatory laws now on the books. That extraordinary performance is reserved for the big producers who are now vigorously attacking the local distributors in a vain effort to divert the attention of the public from their own gains—a purely diversionary tactic.

Let us now turn to the present investment which consumers have made in the various types of household appliances. I am presenting these in great detail in table II (1). These figures, compiled in great detail during these last few weeks by the gas distributing companies of the Nation, furnish almost unique information.

I shall, however, give merely the nationwide totals in my verbal presentation and allow the more minute details to be revealed by the major table II (1), which I ask unanimous consent to have inserted in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE II–1.—*Estimated residential gas customer investment in major gas appliances*

Geographical area	Thousands of residential gas customers, 1955 (estimated)	House heating		Gas range		Water heater		Refrigeration		Total investment, millions of dollars	Investment per customer with range at $175 and refrigerator at $250	Investment per customer with $50 added for incidental appliances

Source of material: Gas Facts, 1955 (AGA); Economics of Gas House Heating and Related Load Characteristics (AGA), 1950 Survey by Bureau of Labor Statistics.

Mr. DOUGLAS. Mr. President, I think this table is unique in that it brings together for the first time the number of residential customers of gas for household purposes and the investments which have been made in each of the appliances, classified for the United States and for various regions.

In summary, the 26.5 million residential consumers in 1955 had a total investment in major gas appliances of $14,396,000,000 or an average of $542. This is a large sum to the typical family, being 13 percent of the average family income, or the entire pay check for the average family for almost 7 weeks. When the price of gas goes up, if this bill is passed, all the householder and his wife can do is to

wince and bear it. He is not going to scrap his investment in a gas furnace, hot-water heater, or gas range. If he did, it would take every bit of money the average family earns for 2 months or more.

The totals by the separate types of appliances are as follows:

Appliance (1)	Number of households (2)	Investment (3)	Average investment per household (4) = (3) ÷ (2)
House heating	15,212,000	$7,834,000,000	$515
Gas ranges	20,797,000	3,640,000,000	175
Water heaters	15,270,000	2,521,000,000	165
Refrigerators	1,605,000	401,000,000	250

For those families who have all 4 of these appliances, the average investment is, therefore, approximately $1,100.

It may well be that there are 15 million families who have at least 3 appliances; namely, those who heat their homes with gas, who cook with gas, and who heat their water with gas.

The figures I have given are for all families using gas and, hence, include the approximately 5 million families who use manufactured gas. The average investment for the 21 million families who use natural gas is probably higher than for those who use manufactured or mixed gas. This is true for a number of reasons. First, the families using natural gas have, on the average, been using this gas for a shorter period of time than the other group and, hence, have bought their appliances more recently and at a higher price level. Secondly, a very high proportion of the families using natural gas do so for heating purposes—and the necessary gas furnaces involve a cost which is three times that of the average range or hot-water heater, which tends to be all that the residential consumers of manufactured gas use.

Not many consumers of manufactured gas will be found who heat their houses with manufactured gas. Such gas is used chiefly for cooking—for boiling eggs in the morning—and sometimes for heating water. It is not usually used for heating homes. As a result, the consumption of manufactured gas per household tends to be lower.

Since it is the eastern cities which consume a larger proportion of manufactured and mixed gas, I submit that this, perhaps, may be one of the reasons why the average price per thousand cubic feet in those cities seems to be higher than it is for the rest of the country. I do not say it is the sole reason; I say it is a reason. The very eloquent exponents of the bill did not mention that fact.

Also, of course, it should be realized that natural gas must travel a longer distance to get to the East and New England than it does to St. Louis or Kansas City.

Taken all in all, it is probably safe to say that the nearly 15 million families which use natural gas for house heating have an investment amounting to an average of approximately $1,000 and which may run as high as $1,100. This is 25 percent of the income of the average American family and represents the entire paychecks of such families for 3 months of a year. These families are indeed the ultimate captive customers of the gas producers, and they are tied to the latter by a venture of fortunes which they cannot break. They have made their heavy investments because of the present rates and have given these appliances as hostages to fortune. Their marriage with gas, as I have said, is virtually indissoluble. But once this bill is passed, they will be caught—or, in slang language, they will be "hooked." The cash nexus, to use Carlyle's phrase, is virtually unbreakable. We who are opposing this bill are trying to protect them, and we submit that the 21 million families who use gas for one purpose or another, the real John Q. Publics of America, deserve more consideration than the oil-rich men, most of them northern absentees, who dominate the oil and gas producing States of the Southwest.

I may say again that the small industrial users are also, in many cases, captive consumers along with the residential consumers.

THE PIPELINES

Thus far I have discussed the local distribution of gas. Now I shall come to the pipeline companies which bring the gas to the city gates, for distribution by local distributing companies.

The local distribution companies buy their natural gas from long-distance pipelines. This gas is delivered to them at the points of connection between the principal distribution gas mains and the long-distance transmission or pipelines. In the case of the local distribution companies, this point of connection is called the city gate. Thus, Joliet is the city gate for the natural gas which enters the Chicago area.

The interstate transmission of natural gas is almost completely dominated by 17 pipeline companies.

We hear it said there are 130 pipeline companies. Yes, I guess there are. But 17 pipeline companies buy 96 percent of the gas which moves in interstate commerce. Really, when we come right down to the point, there are three pipelines that do not transport much gas in interstate commerce. So instead of 17, the figure actually is about 14.

These 17 companies purchase 96 percent of the natural gas which the so-called independent producers sell to the pipelines which then resell to the distribution companies and they to the ultimate consumers. The pipelines also make some direct sales to industrial companies. Since these are not sales for resale, they are not regulated by the Federal Power Commission.

The most important of these long-distance pipelines are the United Gas Pipeline Co.; the Texas Eastern Transmission Corp.; the Michigan Wisconsin Pipeline Co., about which I shall say more later; the El Paso Natural Gas Co.; the Natural Gas Chicago District Pipeline Co.; Northern Natural Gas Co.; the Texas Gas Transmission Co.; Cities Service Gas Co., and so on.

These pipeline companies own, in all, approximately 68,000 miles of transmission mains, of which 17,000 miles are 10 inches or under in diameter; 21,000 miles from over 10 to 20 inches, inclusive; and 30,000 miles of over 20 inches in diameter.

When I come to a discussion of my figures on the cost per inch diameter of gas mains, Senators will see the enormous investment in the gas mains, and will understand that once the gas mains have been laid, nobody will tear them up in order to go to another source; and that, in effect, is the sole and exclusive means by which gas can be taken from the well, put into the pipeline, and carried through the pipeline to the local distributing company.

These pipeline companies get their gas in turn from two sets of sources, namely, first, the so-called, independent producers—approximately 79 percent or roughly four-fifths of the gas destined for interstate resale comes from this source; second, from wells which either the pipelines or their affiliates and subsidiaries own—these furnish about 21 percent or one-fifth of the total supply. Pipelines also buy a smaller quantity from other pipelines which is included in the 79 percent.

Even the big producers admit that under the present law the Federal Power Commission can control the price at which this second type of gas is charged into the system, namely, gas coming from the wells which the pipelines or their subsidiaries own.

The Kerr bill of 1949–50 did not propose to change this feature of the law but aimed to free from regulation the sales by the nontransporting producers. But the present Harris-Fulbright bill, like its grandparent, the Moore-Rizley bill, aims, however, to abolish effective regulation for both sources of gas, merely requiring the pipeline companies to charge in the gas they produce at a reasonable market price, which, if it means anything, means the prevailing price paid to the so-called nontransporting producers. Since the latter price will be unregulated under the Fulbright bill, this means that the chargeable price of the natural gas produced by the pipelines will also, in effect, be unregulated.

It is very hard in this discussion not to repeat points which one has made. But I remember a saying by Dr. Johnson, the English lexicographer, who declared that men need not so much to be informed as to be reminded.

I should like to remind the Senate, at least through the printed pages of the CONGRESSIONAL RECORD, that under the terms of the Harris-Fulbright bill, the more the pipelines pay to the so-called independent producers, the more they will charge in the gas which they produce themselves.

So we do have an actual inducement to raise the price which they pay for the gas which they buy.

THE PRODUCTION OF NATURAL GAS

Mr. President, let me now turn to the production of natural gas. The last year for which complete production figures for all aspects of natural gas are available is 1953. There are some later data for some aspects of production, which I shall provide for the RECORD, but as the figures are complete for 1953, I shall begin with that year and later shall introduce some material for 1954 and even for 1955.

In 1953 the production of natural gas in the United States was 10.6 billion thousand cubic feet, according to the 1954 edition of Gas Facts. Of this total production, 1.4 billion thousand cubic feet was used for repressuring which left a net production figure of 9.2 billion thousand cubic feet in that year. Losses and waste amounted to 841 million thousand cubic feet, so that marketed production was only 8.4 billion thousand cubic feet. Of this amount, 1.47 billion thousand cubic feet was used in the field, another 123 million thousand cubic feet was added to underground storage, and 240 million thousand cubic feet was lost in transmission. Other uses took 500 million thousand cubic feet, leaving a balance available for sale of 6 billion thousand cubic feet.

The producers in the field sold 900 million thousand cubic feet directly to industrial companies, leaving 5.1 billion thousand cubic feet sold by utilities and pipelines. Of this amount, about 4.2 billion, or around 80 percent, was shipped across State lines.

This is the point of the discussion which I had with the Senator from Oklahoma [Mr. MONRONEY] a few days ago. It may be true that 50 percent of the so-called marketed production is used in interstate commerce, but only about one-third of the gas available for sale is in intrastate commerce. That fact needs to be noted. And of that sold to utilities and pipelines 80 percent moves in interstate commerce.

Mr. President, I have an additional table as a footnote in my statement, which I ask unanimous consent to have printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Production and disposition of natural gas, 1953

	Thousand cubic feet
Gross production (AGA)	10,645,798,000
Less used for repressuring (AGA)	[1] 1,438,606,000
Total	[1] 9,207,192,000
Net production (B. of M.)	9,238,540,000
Less losses and waste in the field (B. of M.)	841,624,000
Marketed production (B. of M.)	8,396,916,000
Use:	
Field use (AGA)	1,470,000,000
Net input to storage (AGA)	123,000,000
Losses in transmission, etc. (AGA)	240,000,000
Net imports and exports (AGA)	19,000,000
Compressor fuel (AGA)	230,000,000
Used in manufacture of mixed gas (AGA)	179,000,000
Unaccounted for (AGA)	92,916,000
Balance available for sale	6,043,000,000
Sales:	
Sold by producers (AGA)	903,000,000
Sold by pipelines and local utilities (AGA)	5,140,000,000

[1] The Bureau of Mines and the AGA figures for net production vary by some 31 million M c. f. See 1954 Gas Facts, pp. 24 and 121.

Mr. DOUGLAS. Mr. President, for 1954 we have primarily used figures from the Bureau of Mines, which are given in a table.

I ask unanimous consent to have the table printed in the RECORD at this point as a part of my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Production and disposition of natural gas, 1954

	Thousand cubic feet
Gross production (AGA)	11,014,000,000
Less used for repressuring (AGA)	[1] 1,399,000,000
Total	[1] 9,615,000,000
Net production (B. of M.)	9,468,113,000
Less losses and waste in field (B. of M.)	723,567,000
Marketed production (B. of M.)	8,742,546,000
Use:	
Field use (B. of M.)	1,457,000,000
Net input to storage (B. of M.)	102,000,000
Net imports and exports (B. of M.)	22,000,000
Losses in transmission (estimated)	249,546,000
Compressor fuel (estimated)	240,000,000
Used in manufacture of mixed gas (estimated)	180,000,000
Balance available for sale	6,492,000,000
Sales:	
Sold direct by producers (estimated)	886,000,000
Sold by utilities	5,606,000,000
Gas entering interstate pipelines (FPC)	5,837,273,000
Net input to storage	79,771,000
Export to Canada	6,131,000
Company use	332,990,000
Loss and unaccounted for	122,946,000
Balance available for sale	5,295,435,000
Total utility sales natural gas	5,605,900,000
Natural gas component mixed gas (estimated)	180,000,000
Add allowance for losses and company use (estimated at 3 percent)	173,500,000
Total utility gas requirements	5,959,400,000
Volume of gas supplied through interstate lines	5,295,435,000
Utility sales volumes supplied from production or by purchase from producers	663,965,000
California	296,278,000
Other States	367,687,000
California utility sales 3 percent	756,518,000
Received from El Paso Natural	460,240,000
Supplied by producers	296,278,000

[1] There is again a minor discrepancy amounting to 147 billion cubic feet between the Bureau of Mines figures for net production and the preliminary figure published in the 1954 Gas Facts, p. 24.

Mr. DOUGLAS. Mr. President, the sales by utilities amounted to 5.6 trillion cubic feet, of which 4.7 trillion were shipped across State lines.

The latest preliminary information, reported in the Gas and Oil Journal for January 2, 1956, is that 6.2 trillion cubic feet of natural gas were sold by utilities in 1955. The increase of utility sales in the last 2 years has been at the rate of one-half trillion cubic feet per year.

The figure indicates the expanding market that has been going on during this time, and it indicates that gas has been available for this expanded market. Furthermore, it indicates the gas has been available for the expanding volume of interstate sales. Interstate sales, not merely intrastate sales, have been increasing. The idea that gas available for regions outside the Southwest has declined is not well founded; the supply has been expanded.

These figures I have cited may seem cumbersome and unnecessary, Mr. President, but they are very important for a number of reasons. They are important to make it clear just what is really meant when we talk about "regulating the production" of natural gas. In fact, no one is advocating the regulation of the natural gas producers—at least, none of us are. What is being regulated and should be regulated is the sales of natural gas for resale in interstate commerce. That is the point at issue.

Individual producers use and sell natural gas in a variety of ways. First, a number of them sell directly to utilities within the States where the production is located. Although these are sales for resale, they are not regulated by the Federal Power Commission because they are not in interstate commerce. Second, a large number of sales are made directly to industry within the boundaries of the State in which production takes place. These sales are not regulated by the Federal Power Commission, for they are neither sales for resale nor are they in interstate commerce. As is clear from the figures which I gave in the beginning, a large proportion of production is used for repressuring, used in the field, lost or wasted, and so on. There is a third general use for natural gas which is not regulated by the Federal Power Commission. Finally, producers of natural gas sell to interstate pipelines, and to some utilities, for resale in interstate commerce. These are the only sales which are supposed to be regulated by the Federal Power Commission and which the Supreme Court, in the Phillips decision, told the FPC to regulate, under the clear terms of the Natural Gas Act of 1938.

That distinction is very necessary. No Federal authority tells the producer what he is supposed to do. No Federal agency tells him what investment he should make, how much gas he should produce, or what use he should make of the natural gas he produces. But if the producer decides to sell his production for resale in interstate commerce, then those sales, and only those sales, are to be regulated by the Federal Power Commission. There has been a great deal of misinformation on this point, and I hope we can all agree that what I have outlined here is, in fact, true.

In 1954, which is the latest year for which reliable data on this point are available, there were 5,557 so-called in-

dependent producers who sold natural gas in interstate commerce. The figure was not 8,000, as the big producers have tried to make us believe. The total sales in interstate commerce for resale of these 5,557 producers amounted to approximately 4.7 billion thousand cubic feet in that year. In tables which I shall introduce later I shall give considerable detail about who they are, the amounts they produce, and their average sales, among other information. In the meantime, I desire to give some specific figures about them which are drawn from the tables which I shall introduce at a later point in my remarks.

Of these 5,557 producers who sold natural gas for resale in interstate commerce in 1954, only 197—or 3.5 percent of their number—sold 89.52 percent, or virtually 90 percent of the natural gas for resale in interstate commerce. The remaining 5,360 producers—or 96.5 percent of their number—sold only 10.48 percent of the gas. Each of these 5,360 little producers sold less than 2 million thousand cubic feet of natural gas in that year for resale in interstate commerce. Under the bill which I introduced, S. 1926, and which I intend to offer as a substitute for the Fulbright bill, the sales for resale by these companies would be exempted from regulation by the Federal Power Commission.

Of the 197 big producers who sold more than 2 million thousand cubic feet in 1954, the top 35 sold 70 percent of all natural gas for resale in interstate commerce in 1954. The biggest 22 producers sold 54 percent of all natural gas in interstate commerce for resale. These big companies are the ones which, in the main, will gain from the bill. They are companies with household names, and include Phillips Petroleum, four Standard Oil companies, Shell Oil, Gulf Oil, the Texas Co., Cities Service, Union Oil Co., and the Sun Oil Co., among others.

These few big producers dominate the production of natural gas, as is clear from the figures and the nature of the industry. Ten of them are on the list of the first 20 biggest industrial corporations in America.

In all this complexity of figures we should remember that the increases in price charged for gas as it enters the pipeline will be passed on to the final price paid by all who use it, whether within the State of entry or without, whether consumed by individuals or industries, or whether sold directly by pipelines or sold to utilities for resale. As I shall show, the residential consumer in the households will have to bear the major amount of the burden.

Mr. President, I should like to introduce for the RECORD a compilation of some very interesting figures on the amount of gas shipped in interstate commerce from various States and the amount of receipts of natural gas brought into the individual States, so that we may see which States are the producing States and which are the consuming States. I ask unanimous consent that the table for 1953, which is as accurate as the figures from Gas Facts and the Federal Power Commission make possible, be printed at this point in the RECORD. We have made a similar study for 1954 from Bureau of Mines figures, which shows substantially identical results.

The PRESIDING OFFICER. (Mr. BIBLE in the chair). Without objection, it is so ordered.

The table submitted by Mr. DOUGLAS is as follows:

Interstate shipments and receipts of natural gas, classified by States, 1953

State	Number of producers [1]	Interstate shipments, M c. f.	Percent of total interstate shipments	Number of consumers	Interstate receipts, M c. f.
I. GAS-PRODUCING STATES EXPORTING MORE NATURAL GAS THAN IS IMPORTED					
Kansas	228	295,677,000	7.10	440,900	174,520,000
Louisiana	254	772,025,000	18.54	486,200	80,974,000
Mississippi	22	121,832,000	2.93	192,600	86,032,000
New Mexico	271	232,257,000	5.58	113,500	52,688,000
Oklahoma	229	261,940,000	6.29	499,700	26,863,000
Texas	829	2,218,689,000	53.30	1,683,400	104,347,000
Wyoming	19	36,030,000	.86	49,900	2,999,000
Total	1,852	3,938,450,000	94.60	3,466,200	528,423,000
II. GAS-PRODUCING STATES IMPORTING MORE GAS THAN IS EXPORTED					
Alabama	[2]	45,000	[3]	236,900	139,890,000
Arkansas	27	1,441,000	.03	209,900	142,014,000
Colorado	17	19,434,000	.47	253,300	108,035,000
Illinois	[2]	1,000	[4]	895,700	363,609,000
Indiana	[2]	861,000	.03	291,800	112,825,000
Kentucky	251	43,667,000	1.05	311,000	80,739,000
Maryland	14	653,000	.02	429,900	30,426,000
Michigan	[2]	45,000	[3]	1,193,800	195,385,000
Montana	80	536,000	.01	85,100	6,684,000
New York	12	103,000	[2]	2,097,600	209,273,000
North Dakota	[2]	36,000	[2]	12,800	3,181,000
Ohio	54	44,000	[2]	1,792,400	421,241,000
Pennsylvania	993	36,396,000	.87	884,900	312,570,000
Utah	2	10,000	[3]	94,700	28,546,000
Virginia	2	3,632,000	.09	261,300	29,592,000
West Virginia	1,424	117,892,000	2.84	312,800	119,970,000
Total	2,876	224,796,000	5.40	9,363,900	2,303,980,000
III. STATES WHICH EXPORT NO NATURAL GAS					
Arizona				177,000	73,709,000
California				3,319,800	357,108,000
Connecticut				132,000	6,402,000
Delaware				[4]	2,138,000
District of Columbia				181,700	13,658,000
Florida				15,700	19,670,000
Georgia				262,200	124,793,000
Idaho					
Iowa				273,100	109,197,000
Maine					
Massachusetts				527,700	19,435,000
Minnesota				329,800	105,462,000
Missouri				655,500	179,027,000
Nebraska				218,200	77,122,000
Nevada				[5]	
New Hampshire				26,700	921,000
New Jersey				283,900	62,850,000
North Carolina				37,400	6,885,000
Oregon					
Rhode Island				20,600	690,000
South Carolina				13,600	9,115,000
South Dakota				34,600	13,963,000
Tennessee				205,100	109,023,000
Vermont					
Washington					
Wisconsin				414,500	39,616,000
Total	[6] 62			7,129,100	1,330,784,000
Grand total	[7] 4,790	4,163,246,000	100.00	19,959,200	[8] 4,163,246,000

[1] Source: FPC study.
[2] No breakdown available. Are included in total of 62 for group III.
[3] Less than 0.005 of 1 percent.
[4] Not available.
[5] Nevada acquired natural gas 1954, although none is reported for 1953.
[6] No breakdown available.
[7] Includes 435 duplications of producers who operate in more than 1 State.
[8] Includes 59,000 M. c. f. for which no breakdown is available.

Source: Gas Facts, 1954.

Mr. DOUGLAS. Mr. President, I also placed the table in the CONGRESSIONAL RECORD last week, as I recall. The table shows some very interesting things, and I should like to comment on some of the figures which are revealed in it.

In the first place there are only 7 States, out of the 48 States plus the District of Columbia, which in 1953 exported more natural gas than they imported. The most notable State is, of course, Texas, which exported 2,218,689,000 thousand cubic feet—or thousand cubic feet—of gas, and imported only 104,347,000 thousand cubic feet.

Then we have Louisiana, which exported 772 million thousand cubic feet and imported only approximately 81 million thousand cubic feet.

Other exporting States were Kansas, Oklahoma, and New Mexico, while Mississippi and Wyoming were small net exporters. These are the seven exporting States whose producers would gain by the passage of the gas bill.

Even here, Mr. President, I should like to call attention to the large number of consumers of gas in the seven co-called gas exporting States.

For example, as I mentioned earlier this afternoon, in the State of Texas there are 1,683,000 consumers of natural gas, and only 829 producers. It has

always seemed extraordinary to me that there is a tendency to consider the producing interest of a State, and to ignore the consuming interest of a State. If the pending gas bill passes Congress and is signed by the President—and I say God forbid that it should be—and we have an increase of 10 cents a thousand cubic feet, while it may actually benefit the 829 producers in Texas it will injure the 1,683,000 consumers in the State of Texas. In the State of Louisiana—so well represented by both its able senior Senator and its able junior Senator, both of whom are good friends of mine—there are 486,000 consumers, as compared with only 254 producers. It seems to me that the interests of the nearly half a million consumers should be considered in this matter, and not merely the interests of the 254 producers, because the half million consumers in Louisiana will pay more if this bill passes.

Similarly, in Kansas there are 441,000 consumers and only 228 producers.

In Oklahoma there are almost precisely half a million consumers, and only 229 producers.

I urge that these figures be studied by Members of this body from the exporting States, to see where the real interest of their States actually lies. If these figures are studied, I think they should produce a change of attitude on the part of many Members of the Senate from such States.

There are 16 States which, while they exported some gas, imported appreciably more gas than they exported. Those States are Alabama, Arkansas, Colorado, Illinois, Indiana, Kentucky, Maryland, Michigan, Montana, New York, North Dakota, Ohio, Pennsylvania, Utah, Virginia, and West Virginia. The figures for some of these States are very interesting. The figures for the State of Arkansas are extremely interesting.

There are only 27 producers in the State of Arkansas, and they shipped out 1,441,000 thousand cubic feet, only three one-hundredths of 1 percent of the total amount of gas which crossed State lines. However, they imported 142 million thousand cubic feet, or 100 times as much as they exported.

It is sometimes forgotten that Arkansas is a great gas-importing State. I wish that were better understood and were more fully appreciated. In addition, there were 210,000 consumers in the State, who burned gas either to heat their homes or to heat water or to cook with. Thus there are 210,000 consumers in Arkansas, but only 27 producers.

The State of Colorado has 253,000 consumers and 17 producers, with imports of more than 5 times the quantity of gas which they exported.

In the State of Pennsylvania—part of the old Appalachian field—there are a great many small producers. There are 923 producers. Nevertheless, this State imports approximately 9 times the amount of gas which it exports.

Ohio, with 54 producers, has nearly 1,800,000 consumers, and imports approximately 10,000 times as much gas as it exports.

West Virginia, which has more than 1,400 very small producers, represents about a standoff. It imports slightly more gas than it exports, but it has 313,000 consumers.

I hope these figures will give Senators from these 16 States a little sense of proportion. I hope they will be studied carefully. Although not many of those Senators are present at this time in this Chamber, I hope they will read the figures in the CONGRESSIONAL RECORD, and will study them carefully.

There are 26 States, if we include the District of Columbia, which export absolutely no gas whatever, but which import large quantities of gas. These are: Arizona, California, Connecticut, Delaware, District of Columbia, Florida, Georgia, Idaho, Iowa, Maine, Massachusetts, Minnesota, Missouri, Nebraska, Nevada—the State is so well represented by the distinguished Senator [Mr. BIBLE] who now is presiding over the Senate, and we hope will join us in the position we take regarding this bill—New Hampshire, New Jersey, North Carolina, Oregon, Rhode Island, South Carolina, South Dakota, Tennessee, Vermont, Washington, and Wisconsin.

There are 6 of those States which imported no gas in 1953. I shall comment upon those States in a moment. What I should like to point out is that in the 26 States, if we include the 6 which consume no gas, there are more than 7 million consumers. I hope that the real interest of the people of those States will be studied.

There is a tendency on the part of some persons in the six States referred to—namely, Idaho, Maine, Nevada, Oregon, Vermont, and Washington—which import no gas to say that they are not concerned in this struggle. Let me say that these six States imported no gas in 1953, but I understand that the State of Nevada now has some gas. They might do it in the future. They may get the benefit of gas in the future if the prices are kept down. If prices are increased, then the chance of their getting the benefit of natural gas will be greatly reduced. I trust that argument will sink home with Senators from these six States.

I should like to point out in this connection that the prices of gas and oil are interconnected, and that if the price of gas rises as a result of this bill we may expect, in all probability, an increase in the price of fuel oil, so that States which at the moment seem to be economically remote from this struggle will be very seriously affected. I call this fact also to the attention of the 12 distinguished Senators who represent those States.

In all, there were some 19.9 million households in 1953 and some 21 million households in this country in 1955 which burned natural gas. There were just under 5,000 producers in 1953 and 5,557 producers in 1954 who sold gas in interstate commerce for resale. Later in the debate I shall have more to say about who some of these producers are.

The truth is that although there are 5,000 producers, the vast majority of them are small producers who can produce very little gas. Twenty-three hundred of them are in the States of Pennsylvania and West Virginia, in the so-called Appalachian gas field, which is now a relatively small field, quantitatively speaking.

I now turn to another topic, namely, the price of natural gas at the wellhead, the city gate, and to the consumer.

THE PRICE OF NATURAL GAS—WELLHEAD, CITY GATE, AND CONSUMER PRICES

The advocates of the Harris-Fulbright bill have been charging that the prices paid to the producers in the field form only a small fraction of the final prices paid by consumers in the cities. In attempting to prove this point, the representatives of the big producers, such as Dr. John Boatwright of Standard Oil and my good friends in the Senate who are sponsoring this bill have stressed the comparison between field prices and residential rates, particularly in the large Northeastern cities, where the residential rates per thousand cubic feet are very high—testimony by John S. Boatwright, Senate hearings, pages 209–213. This argument is largely followed by the majority of the Senate Interstate and Foreign Commerce Committee—report on amendments to the Natural Gas Act, pages 45–67—who devote 22 pages of their report to these comparisons or twice as much space as is given to the substance of their report. Comparisons, for example, are being frequently made in the discussion between average field prices of 9, 10, and 11 cents per thousand cubic feet of natural gas and average delivered residential prices per thousand cubic feet of $1.36 in Philadelphia, $2.42 in New York, $3.01 in Boston, and $3.64 in Providence—Boatwright, page 212. The conclusion which is attempted to be drawn from all this is that we should disregard the prices which the big producers receive in the field and concentrate our attention instead on the prices which the distributing companies charge to the householders at the far end of the gas lines.

At least two initial comments should be made about these price comparisons. The first is that the average residential rate for the country is much lower than these high Eastern rates which have been quoted. We may also find that the difference in average rates per household are very much less between cities. I am investigating this point and hope to have some material to present on this point later in the debate. The second point is that if we take the commercial and industrial prices as well as the residential into consideration, we will find that the average price to all consumers is very much below the residential average, and that field prices form a very considerable proportion of this composite average. Also, some of the cities, particularly in the Northeast, use mixed

gas, which is more costly, rather than pure natural gas.

Let us take each of these points in turn, beginning with the average field prices of natural gas for the last 17 years. The basic facts are that the average for 1955 was 10.7 cents per thousand cubic feet, or an increase of 5.8 cents over the 1938 price and 4.2 cents in 1950. Incidentally, the results prove that I am a pretty good prophet, for when I was debating the Kerr bill in 1950, I stated that failure to regulate the price of gas in the field would cause prices to go up by 5 cents per thousand cubic feet in a few years. The increase in 5 years was 4.2 cents which meant that my prophecy was 84-percent accurate. By the time this debate is concluded in a number of days, it will probably be still closer to 100-percent accurate.

Mr. President, I have a table which I ask to have printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Average field (or wellhead) price, cents per thousand cubic feet [1]

1938	4.9
1940	4.5
1945	4.9
1946	5.3
1949	6.3
1950	6.5
1951	7.3
1952	7.8
1953	9.2
1954	10.1
1955	10.7

[1] Source: Gas Facts, 1954, table 16, p. 27; supplemented for 1954 and 1955 from Bureau of Mines, Information Service Release, P. N. 91645, Jan. 2, 1956.

Mr. DOUGLAS. We have an average price in the field of 10.1 cents for 1954 and 10.7 cents for 1955.

Now let us see the average price for all natural gas consumed by residential users. This was 77.4 cents per thousand cubic feet in 1953 and 80.6 cents in 1954—source, computed from Gas Facts 1954, table 81, page 102, and table 102, page 126. These averages are very much lower than the specific high figures for the big eastern cities which have been cited.

But we should also take into consideration the average prices paid by commercial and industrial users which go to help make up the composite average. In 1953, the average commercial price was 59.2 cents per thousand cubic feet, and in 1954 it was 61.9 cents—source, computed from Gas Facts 1954.

For industrial users, the average price is lower still. In 1953, it was 24.7 cents per thousand cubic feet for firm gas and 21.0 for interruptible gas—source, computed from Gas Facts 1953, table 82, page 110, and table 105, page 132. The combined industrial average in 1953 was 22.8 cents per thousand cubic feet. No separate quantity or price figures for interruptible or firm gas are given for 1954, but the combined industrial average was 23.7 cents per thousand cubic feet. The relation of these various prices to one another is shown on one of the big charts on display in this Chamber.

Let us now combine these figures and get a composite average price for all consumption. This, of course, takes into account the relative quantities of each type of service. It is a simple figure of the total receipts from the sale of natural gas by the distributive companies divided by the total number of thousands of cubic feet of such gas which were sold.

Mr. President, I ask unanimous consent that a table showing these figures be printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Year	Average price per thousand cubic feet of natural gas obtained by local distributors	Percent which field price forms of average consumer price
	Cents	*Percent*
1938	32.7	15
1940	32.6	14
1945	30.1	16
1946	31.2	17
1949	33.8	19
1950	35.4	18
1951	37.3	20
1952	39.8	20
1953	42.3	22
1954	44.4	23

Mr. DOUGLAS. The table shows that the figure representing the average price per thousand cubic feet of natural gas obtained by local distributors was 44.4 cents for 1954, whereas I have shown that the average price in the field was 10.1 cents.

This table shows that in 1954, the average field price of natural gas formed 23 percent of the average price obtained by the local distributors. This percent has been increasing over the years from 15 percent in 1938 up to 18 percent in 1950, to the 1954 figure of 23 percent, instead of 10 percent or less, as has been claimed. Instead of a dollar and a dime the figure is a dollar on the one hand and a quarter on the other. Much has been made of the argument that this percentage increase is no more than a tip. Although one tries to be generous, it cannot be said that 25 percent is the ordinary tip. Gas producers are doing better than is commonly believed. I may say that this percentage has been increasing over the years. It was 15 percent in 1938. It went to 18 percent in 1950, and has gone up to 23 perecnt in 1954. It will be interesting to see what the figure for 1955 is.

But to the field prices are, of course, added the transmission costs of the pipelines plus the amounts allowed them on their investment by the Federal Power Commission. It should of course be realized that the delivered prices at the city gate are subject to regulation by the Federal Power Commission.

Table II–1 shows the average "city gate" price per 1,000 cubic feet of natural gas which was paid by the local distributors to the pipelines by years from 1949 to 1954.

Mr. President, I ask unanimous consent that a table showing these figures be printed in the RECORD at this point as a part of my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE II–1.—*Payments by local distributors to pipelines and transmission companies for natural gas at the city gate, for the United States, 1949–54*

Year	Quantity sold, M c. f.	Total amounts paid by distributing companies to pipelines for natural gas	Average price paid by distributors to pipelines for natural gas, per M c. f. (cents)	Percent of average utility price received by pipelines
1949	2,931,240,000	$491,860,000	16.8	50
1950	3,678,930,000	633,055,000	17.2	49
1951	4,276,560,000	798,720,000	18.7	50
1952	4,749,140,000	1,002,722,000	21.1	53
1953	5,401,960,000	1,277,516,000	23.6	56
1954	5,773,640,000	1,436,816,000	24.9	56

Mr. DOUGLAS. This table shows that in 1954, the average price paid by the distributors to the pipelines was 24.9 cents per thousand cubic feet. Since the average field price in that year was 10.1 cents, this meant an average markup for long-distance transmission of 14.8 cents per thousand cubic feet. I think this was about 1½ cents per 100 miles of pipeline.

Since the average delivered retail price of natural gas for all consumptive uses in 1954 was 44.4 cents per thousand cubic feet, this meant that the cost of the gas to the distributors was 56 percent of the final price and the local markup was 19.5 cents per thousand cubic feet, or 44 percent. I do not know whether or not the average distributive costs of 19.5 cents per thousand cubic feet and a local markup of 44 percent are in fact reasonable, but the place to decide that question is before the various State utility commissions and not the United States Senate. We can do nothing about it. Those are matters for States to regulate. The proponents of the bill are not proposing that we should have national regulation of the distributive rates; nor are the opponents of the bill advocating it. Those are matters for State regulation. As I have said, as a citizen and local official I have fought to keep some of these gas rates down and effective citizen action is needed on local as well as national levels. Let us remember, however, that the local markup covers the expense of nearly 300,000 miles of distributive mains plus the cost of connecting the householders to these mains plus the overhead and administrative costs of inspecting, billing, collecting and managing, plus a return on investment, and is supposedly regulated.

It is also interesting to analyze by sections of the country, the "city gate" prices which are paid by the distributors. This is done in table II–2.

Mr. President, I ask unanimous consent to have the table printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE II–2.—*Payments by local distributors to pipelines and transmission companies for natural gas at the city gate, by regions, 1954*

Region	Quantity sold, M c. f.	Total amounts paid by distributing companies to pipelines for natural gas	Average price paid by distributors to pipelines for natural gas, cents per M c. f.
New England	59, 350, 000	$30, 000, 000	50. 5
Middle Atlantic	727, 260, 000	263, 543, 000	36. 2
East North Central	1, 264, 800, 000	350, 180, 000	27. 7
West North Central	529, 880, 000	133, 803, 000	25. 3
South Atlantic	801, 530, 000	229, 614, 000	28. 6
East South Central	645, 110, 000	146, 442, 000	22. 7
West South Central	923, 830, 000	117, 504, 000	12. 7
Mountain	675, 960, 000	133, 731, 000	19. 8
Pacific	145, 920, 000	31, 999, 000	21. 9

Mr. DOUGLAS. Mr. President, if I were trying to take up time unnecessarily, I would go over each one of the figures. In order to facilitate the development of my argument, however, I am having these tables put into the RECORD in their totality. Then I shall comment on them. I shall try not to utter an irrelevant sentence. However, the subject needs careful consideration.

It will be noticed that the New England utilities pay the highest price of all for natural gas delivered to them, namely 50.5 cents per thousand cubic feet, or twice as much as the countrywide average of 24.9 cents. The Middle Atlantic utilities had to pay 36.2 cents per thousand cubic feet or almost 50 percent more than the nationwide average. On the other hand, the West South Central utilities, which are very close to the gas fields, paid only 12.7 cents per thousand cubic feet, or about half as much as the nationwide average, and only a quarter of the New England rate and one-third of the Middle Atlantic rate. It should be understood, of course, that the delivered price at the city gate includes the prices paid in the field; so the pipeline charges are the residual left between these two rates. They are, therefore, relatively low close to the fields and much higher farther away. This is simply commonsense.

These facts, therefore, present a very different and more balanced picture from that which the advocates of this bill have painted. They justify a very close scrutiny of producer prices and their regulation along with transporting and distribution charges. Higher prices exacted by the producers in the field will have to be passed on to the pipeline companies, and they in turn will have to pass it on to the distributive companies, and they to the consumers at the end of the line, or to change the metaphor, at the bottom of the pyramid. The 21 million householders and the consumers of the industrial products which have used gas will ultimately bear the heavy burden and if we pass this bill and it is signed, its advocates and supporters will be responsible for these heavy charges.

Mr. President, there has just been handed to me a poem by an anonymous poet, who was apparently inspired by the catchy rhyme of the Senator from Oklahoma [Mr. MONRONEY] about a dollar and a dime. The poem reads:

Six percent on a dollar
Is more than a hoot or a holler,
But 16 percent on a dime
Makes you rich in a much shorter time.

A footnote indicates that the 16 percent referred to in the poem is the Phillips rate of profit shown in an FPC study submitted by Commission Buchanan.

I do not know whether the ananymous poet is as good a rhymster as the distinguished Senator from Oklahoma. However, I believe the poem, inadequate as it may be, describes the situation more accurately.

Now I shall begin a brief discussion of the legal history of the issue.

A BRIEF DISCUSSION OF THE LEGAL HISTORY OF THE ISSUE—THE HARRIS-FULBRIGHT BILL IS AN ATTEMPT TO SUPERSEDE THE DECISION OF THE SUPREME COURT IN THE PHILLIPS CASE

The advocates of the Harris-Fulbright bill are, in effect, proposing to overrule and supersede the 1954 decision of the United States Supreme Court in the Phillips case—*Phillips Petroleum Co. v. Wisconsin et al.* (347 U. S. 672). In that case the highest Court in the country held that the Natural Gas Act of 1938 required the Federal Power Commission to regulate the price at which the natural gas was sold to the pipeline companies in interstate commerce for resale. In so doing, the Court was merely upholding a previous decision by the United States circuit court of appeals.

Many advocates of the bill exempting these sales from regulation are trying to reargue the case decided by our highest courts. They are still contending that the Court was mistaken in its interpretation of the 1938 act and that their proposed exemption merely restores this act to its real meaning and is in conformity with the actual intent of Congress in passing the measure.

I do not intend to argue this point at any great length. Suffice it to say, these same contentions were made in great detail by the oil- and gas-production industry before both the circuit court of appeals and the United States Supreme Court, and in both instances the courts rejected these arguments. It should in all conscience be enough for us that the Supreme Court has passed on the question of existing law. Much as we may value our legal judgment and acumen, we should not set ourselves up as a super-Supreme Court. We were never intended by the framers of the Constitution to be that. If the advocates of the Harris-Fulbright bill want to repeal or vitally alter the 1938 Natural Gas Act, let them be frank enough to say so. But I hope they will not try to excuse themselves by saying that they are merely restating the meaning of the original act and rescuing it from the maltreatment and misinterpretation of our highest courts.

I am sorry to say that that is exactly the contention which has been made by some of the Senators who have spoken on the floor of the Senate in behalf of the pending bill.

But while a lengthy anaylsis would be inappropriate, it may be worth while to summarize briefly the reasons why the decision in the Phillips case was sound and well taken.

The best way to do this is to cite the salient passages in the 1938 Natural Gas Act and see what they mean. Section 1b of that act provides that it "shall apply to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas"—Fifty-second United States Statutes at Large, page 821, 1938; title 15, United States Code, section 717 (6). These functions of regulating the sales in interstate commerce of natural gas for resale for ultimate public consumption were thus confided to the Federal Power Commission.

What needs to be especially noted is the fact that the Federal Power Commission was given jurisdiction not only over "the transportation of natural gas in interstate commerce" but also over "the sale in interstate commerce of natural gas for resale." The sales of natural gas by producers to pipelines which cross State lines are obviously sales in interstate commerce, and if it is then resold by the pipeline companies to the local distributors for ultimate public consumption, as it in fact is, it is quite obviously also a sale for resale. The plain commonsense use of the English language therefore confirms the interpretation of the Supreme Court. Were not powerful economic groups interested in avoiding regulation, the plain meaning of these words would be unquestioned.

But the big producers have tried to alter this meaning. They lay their emphasis upon the exemption later in the same paragraph of "the production or gathering of natural gas." They argue that the sale of the gas to the pipeline is an integral part of the physical processes of production or gathering and hence cannot properly be regulated by the Federal Power Commission. This contention that a sale of gas which will then move through pipelines into interstate commerce and for resale to the consuming public should not be treated as a real sale but rather as a part of "production or gathering" is quite extraordinary.

Mr. President, I now come to a very vital distinction.

Production and gathering are physical processes which are clearly distinguishable from the economic and legal transactions of sale. Sale—and consumption—is in fact the ultimate purpose of all natural gas operations. To assert that this ultimate purpose, this economic and legal transaction, is a mere "incident" of production or of gathering, is to reverse the proper relation or relative importance of these separate factors. Perhaps the whale could swallow Jonah, but I doubt that Jonah could swallow the whale. And the Court believed the same.

Furthermore, the physical processes of production and gathering in the States or origin, like distribution and retail sales in the States of consumption, were clearly within the power of the States to regulate. Wholesale sales in interstate commerce were on the other hand ruled by the Supreme Court at an early date to be outside the power of the States to regulate—see *Missouri* v. *Kansas Natural Gas Co.* (265 U. S. 2981 (1924)); *Public Utilities Comm.* v. *Attleboro Steam & Electric Co.* (273 U. S. 83 (1927)).

I think, perhaps, the ruling in those cases has been somewhat changed by a later decision of the Supreme Court, about which I shall comment later.

There was and is therefore under our Federal system a great difference in the legal status of production and gathering, on the one hand, and sales in interstate commerce for resale, on the other hand. It was this very gap in regulation which led to the Natural Gas Act—the gap created by the illegality of State efforts to regulate interstate wholesale sales, and the lack of any exercise by Congress up to 1938 of the Federal power to regulate such sales. This gap in control over these sales was cited over and over again in the reports and in the debates leading to the adoption of the Natural Gas Act in 1938.

To yield to the claim that the act's exemption of production and gathering—which the States can and do regulate—carried with it the sales in the field in interstate commerce for resale—which the States could not regulate—would have recreated the very gap which Congress said it intended to close. The court explicity rejected this argument. And unless we too reject it by defeating this bill, we shall recreate the gap in the consumers' protection which the Gas Act was intended to plug.

Sound legislative interpretation thus supported and supports the commonsense conclusion that the economic and legal transaction of sale cannot and should not be shanghaied out of the regulatory power of the Federal Government under the cloak of production and gathering.

Mr. President, I now wish to dwell briefly on the question of State rights. I only wish that Senators from south of the Mason and Dixon's line were present.

PHILLIPS DECISION NOT A VIOLATION OF STATES RIGHTS

Some have asserted that retention of this Federal power to regulate interstate gas sales is an interference with States rights. But Judge H. Lester Hooker, chairman of the State Corporation Commission of Virginia, in his testimony before the Senate committee, hearings, page 447, completely dispelled the fog of this illusion.

After reciting his own long advocacy of States rights, Judge Hooker said:

> When the Federal Government fixes that price, it does not deprive the State of origin of any right, because that State has no right to fix that price. The sale is a transaction in interstate commerce.

He further pointed out that the absolute minimum of power that can be delegated to the Federal Government is the power to settle controversies between the States. Even the Articles of Confederation did this. Judge Hooker made it clear that the consuming States are not claiming the right to fix the producers' prices.

New York, New Jersey, Virginia, Illinois, Massachusetts, Rhode Island, and Connecticut are not claiming the right to fix the prices which the producer may obtain. What Judge Hooker said was this:

> They are claiming that here is an obvious conflict of interest among the States and that it is the duty of the Federal Government to provide an impartial tribunal in which that conflict of interest can be peaceably adjuciated. The whole issue is whether the price should be fixed by an interested party or by a disinterested umpire (hearings, p. 447).

Mr. President, our basic principles of allocation of power between the Federal and State governments are therefore fully supported by the court's ruling in the Phillips case. To supersede the court would violate those principles.

THE INTENT OF CONGRESS

But the intellectual contortions which the advocates of this bill go through are even more remarkable, when they attempt to interpret the legislative history of the Natural Gas Act.

In the hearings some of the witnesses, with great solemnity, cited testimony before a congressional committee in 1936 by Mr. DeVane, then solicitor of the Power Commission, to prove that the 1938 act was not intended to give that Commission jurisdiction over the proper price of natural gas as sold to the pipelines. In so doing, they gloss over the fact that Mr. DeVane's testimony was not only given 2 years before the passage of the Gas Act, but was also on a very different bill which was never passed. The 1936 bill, H. R. 11662, 74th Congress, 2d session, merely sought to give the Federal Power Commission jurisdiction over the interstate transportation of natural gas and hence only covered long-distance pipelines. There was no language in the 1936 bill which could be interpreted to cover the sale by the producers of natural gas to the pipelines.

I hold in my hand a copy of H. R. 11662, 74th Congress, 2d session. I read the salient passage:

> The provisions of this act shall apply to the transportation of natural gas in high pressure mains in interstate commerce, and to natural gas companies engaged in such transportation, but shall not apply to the distribution of natural gas moving locally in low pressure mains or to the facilities used for such distribution or to the production of natural gas.

Therefore, when Mr. DeVane was asked whether this bill covered regulation of the price at which natural gas could be sold by producers to pipelines, he, of course, said, "No." That bill did not refer to anything except to transportation charges and pipelines. But the bill which was passed was a very different bill, and it had a very different coverage.

When the 1937 bill, H. R. 6586, 75th Congress, 1st session, came before Congress, it was a very different measure. I hold in my hand a copy of that bill, which contains very specific language by which the Federal Power Commission was to have jurisdiction over the sale of natural gas in interstate commerce for resale to the public, while natural gas was also defined to include persons engaged in the sale of natural gas in interstate commerce for resale to the public. Let me read section 1 (b):

> The provisions of this act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption, for domestic, commerical, industrial, or any other use, and to natural gas companies engaged in such transportation for sale. It shall not apply to facilities used for such distribution or for the production or gathering of natural gas.

In other words, the coverage of the 1937 bill was virtually identical with the coverage as contained in the act which was finally passed, and included not merely transportation, as provided for in the bill upon which Mr. DeVane commented, but it also included the sale for resale of natural gas in interstate commerce.

So it has been a great mistake to quote the DeVane testimony as though it interpreted the content of the 1938 act. Mr. DeVane was talking about an entirely different bill, a bill which was limited exclusively to the transportation of natural gas.

The 1938 bill and act referred not merely to that, but to the sale for resale of natural gas in interstate commerce for ultimate public consumption. So I regret greatly that the DeVane citation should be brought forward in an attempt to give credence to this wrong interpretation of the bill.

Mr. President, I have on the floor of the Senate additional material for use in my discussion of the bill, but I understand the junior Senator from Wisconsin is present and wishes to have me yield to him so that he may make a brief speech.

I shall be very glad to yield to the Senator from Wisconsin, provided it is understood I do not yield my right to the floor, and that upon the convening of the Senate at its next session, and following the conclusion of morning business, I will still hold my right to the floor.

Mr. CLEMENTS. Mr. President, that is the understanding which the leadership had earlier today. As a matter of fact, it goes as far back, I understand, as yesterday.

The PRESIDING OFFICER. Without objection, it is so ordered.

SMALL BUSINESS ADMINISTRATION DISASTER LOANS

During the delivery of Mr. DOUGLAS' speech,

Mr. MORSE. Mr. President, will the Senator from Illinois yield for brief remarks on a parliamentary problem confronting me, if it is understood that my remarks will appear in the RECORD following his?

Mr. DOUGLAS. I yield.

Mr. MORSE. I wish to state a parliamentary problem which confronts me: The Banking and Currency Committee

has made a unanimous report on a flood-disaster-loan amendment to a Small Business Administration bill. I am sure this matter will be noncontroversial. It is of great importance that the bill be passed by the Senate, because the House of Representatives has already passed a companion House bill, and it is urgent that there be a conference between the two Houses not later than Monday, and possibly even this weekend.

With the understanding that consideration of the bill will not take a considerable length of time, will the Senator from Illinois extend me the great courtesy of permitting me to ask unanimous consent for the present consideration of Calendar 1424, House bill 7871, with the understanding that in doing so he will not lose his right to the floor? Let me say that this has been cleared with the majority and minority leadership of the Senate.

Mr. DOUGLAS. I shall be glad to consent. I am sure the Senator from Oregon will not take an undue amount of time.

Mr. President, am I correct in my understanding that the debate which will ensue will appear in the RECORD following my remarks on the natural gas bill?

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MORSE. Then, Mr. President, I ask unanimous consent that the unfinished business be temporarily laid aside, and that the Senate proceed to the consideration of Calendar 1424, House bill 7871, to amend the Small Business Act of 1953.

The PRESIDING OFFICER (Mr. BIBLE in the chair). Is there objection to the request of the Senator from Oregon?

There being no objection, the Senate proceeded to consider the bill (H. R. 7871) to amend the Small Business Act of 1953.

Mr. MORSE. Mr. President, there lies on the desk of each Senator the unanimous report of the Banking and Currency Committee on Senate bill 2960, as well as a copy of the bill itself. There also is on the desk of each Senator a copy of House bill 7871, the House version of the Senate bill. I ask unanimous consent that all after the enacting clause of House bill 7871 be stricken out, and that there be inserted the text of Senate bill 2960.

The PRESIDING OFFICER (Mr. MCNAMARA in the chair). The question is on agreeing to the motion of the Senator from Oregon.

Mr. LANGER. Mr. President, may we have an explanation of this matter?

Mr. MORSE. The explanation is to be found on page 6 of the committee report, from which I now read:

SUMMARY

In brief, this bill makes the following changes in existing law:

1. It combines the disaster loan fund (now $25 million) of the Small Business Administration and the business-loan fund (now $150 million) into a single fund to be used for both disaster loans and business loans.

2. It increases this total fund by $35 million, thus raising the combined fund from $175 million to $210 million.

3. It fixes a maximum interest rate of 3 percent on (*a*) disaster home loans; (*b*) direct disaster business loans; and (*c*) the Small Business Administration's share of disaster business loans made in participation with private lenders.

4. It fixes a maximum term of 20 years for both disaster home loans and disaster business loans.

5. It makes a technical change in the structure of section 207 of the Small Business Act of 1953, as amended, which change has no substantive effect.

The Small Business Administration agreed with us that the change needs to be made.

I read further from the committee report:

The committee wishes to stress the urgency of this legislation and to urge its prompt and favorable consideration by the Senate.

House bill 7871 has been passd by the House of Representatives; but the House bill does not include provision for a combination of the funds, but calls for a larger authorization, two matters which the Senate committee feels can best be ironed out in conference. That is why we wish to have an early conference.

Mr. FULBRIGHT. Mr. President, will the Senator from Oregon yield to me?

Mr. MORSE. I yield.

Mr. FULBRIGHT. As chairman of the Banking and Currency Committee, I wish to say we had a full consideration of this matter in the committee. There was no opposition by any member of the committee on either side. Approval was voted under what we might term an urgency condition, because the money is very badly needed now for use in connection with the disasters which have afflicted both the west coast and the east coast.

As chairman of the committee I wish to back up the Senator from Oregon, who is handling this measure. I hope there will be no objection.

Mr. ANDERSON. Mr. President, does not the Senator from Oregon think this is an unusual way for us to proceed? All Members were assured that no legislative business other than the natural gas bill would be considered today by the Senate.

Mr. MORSE. On yesterday we discussed this matter on the floor of the Senate, and I announced that this measure would be brought up today; and the leadership assured me that they would have no objection to having it brought up today, but they wanted to clear it with their party members on the committee. That clearance was obtained; and these bills are on today's calendar, following that previous notice.

Let me say to the Senator from New Mexico, to give some idea of the urgency of this matter, that, counting the known demands from past disasters, the Small Business Administration is now $23,300,000 in deficit on disaster loan money; and it has demands for loans for flood victims, both in the Northeast and in California, Oregon, and Nevada. The Small Business Administration is using for disaster purposes regular small-business loans, at 6 percent interest, but each loan contains a provision that when the Congress makes the money available it will revert to 3 percent.

I do not know of any matter which could be of more urgency than this one when we realize that the flood victims need these loans at once.

Mr. ANDERSON. I understand that the amount of money granted for disaster loans is $25 million; but now the Small Business Administration is throwing the $150 million for business loans into the fund for disaster loans. Is not that correct?

Mr. MORSE. This bill makes it a combined fund.

Mr. ANDERSON. That will make the entire $150 million available for disaster loans, will it not?

Mr. MORSE. We would add an additional amount.

Mr. ANDERSON. But the whole $150 million will thus be available for disaster loans, will it not?

Mr. MORSE. Let me call attention to the following language on page 3 of the committee report:

We do not look upon this combination merely as a safety factor to insure adequate funds for disaster loans, but we view it also as a way to insure adequate funds for regular small business loans. We believe that the combination of these two funds creates a total pool of lending authority for both purposes and that such a pool of lending authority could fulfill an increased need for either disaster loans or business loans until such time as the Congress could act and determine whether the total pool should be increased. We must emphasize that this action should in no way result in a reduction in funds available for regular business loans. If such were our desire we would not recommend a $35 million increase in the combined fund.

Let me also say to the Senator from New Mexico that in part the negotiations in the conference will be over the amount and also over the question of whether the two funds should be combined. The House version of the bill differs in those two respects.

Mr. ANDERSON. I renew my inquiry as to whether or not this proposal would increase the disaster loan fund from $25 million to $210 million. There is a $175 million overall fund, and there is $35 million additional——

Mr. MORSE. It means that in the face of a great disaster if the Small Business Administration felt that loans should be made immediately for disaster relief purposes, they could make loans, until such time as they could come before Congress and ask for additional funds.

Mr. ANDERSON. But the proposal would increase the disaster fund from $25 million to $210 million.

Mr. MORSE. If they wanted to use all the money for disaster loan purposes.

Mr. ANDERSON. I think that is a great deal of money to be dealt with in a measure which is suddenly brought up on the floor, without a quorum call.

Mr. FULBRIGHT. It is not exclusively for disaster loans, but it could be so used. The bill would have to go to conference. Why does the Senator see anything wrong with it?

Mr. ANDERSON. I think it is a very unusual procedure to bring up in this manner a bill involving $200 million.

Mr. FULBRIGHT. This is not all new. One hundred and seventy-five million dollars is already committed.

Mr. ANDERSON. Not for disaster loans. Twenty-five million dollars is committed for disaster funds.

Mr. FULBRIGHT. That is correct.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. PASTORE. First of all I wish to compliment the distinguished chairman of the subcommittee who is handling this measure. We have dealt with this situation for a number of months, and we know how desperate the situation is. There have been several conferences in my State with representatives of the Small Business Administration. We were told that the claims were so numerous, and the money became so quickly tied up, that really no further relief could be afforded by the Small Business Administration.

Those who have suffered the greatest in my State are the small-business people. If they must borrow this money without this pending measure the interest will be 6 percent and not 3 percent. That is our dilemma. In order to cure the situation speedily, and allow opportunity for adjustment later, we propose to amend the act and allow an additional fund of $35 million, so as to cope with the situation. I think it is a fair procedure and that it meets the emergency situation, which requires emergency action. I do not see any harm that could result. As a matter of fact, I am surprised that it required as long as it did before we reached this measure. I should not like to see the bill delayed further.

Mr. MORSE. I assure the Senator from New Mexico that the testimony of the Small Business Administration before the committee was that in their opinion the total of $175 million would be adequate if they could get permission to use this additional fund for flood disaster relief purposes. They do not expect the requests for disaster loans to exceed the amount the Senate committee is asking for. In fact, they did not ask for that much. But we did not share the view of the Small Business Administration. We felt that we ought to have money in reserve to be used for disaster loan purposes if it should become necessary. On the other hand, the House did not even share our conservatism in this connection. The House provided in its bill for a sum substantially higher than the $35 million recommended by the Senate committee.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. ANDERSON. The bill would have to go to conference. How much is provided for in the House bill?

Mr. MORSE. The final figure on the House side was $100 million in addition to the present $25 million.

Mr. ANDERSON. So if we allowed an authorization of $150 million, plus $100 million, plus $25 million, we would get up to $275 million.

Mr. MORSE. On the basis of the House bill.

Mr. ANDERSON. That is a fair-sized sum of money to be appropriating here late in the afternoon, without adequate consideration.

Mr. MORSE. Mr. President, there is no combination feature in the House bill. Only a part of the money is designated for flood disaster relief, and the remainder is earmarked for small-business loans.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. FULBRIGHT. Is it not true that this is only an authorization?

Mr. MORSE. That is correct.

Mr. FULBRIGHT. The Appropriations Committee will still have an opportunity to examine the subject. This authorization bill is merely an effort to get the program underway.

The majority leader [Mr. JOHNSON of Texas] referred to this bill the other day before he left the city. Senators will recall that he made reference to it as being an emergency measure.

Mr. MORSE. The RECORD will show that I engaged the majority leader and the minority leader [Mr. KNOWLAND] in colloquy on this question, and they both assured me that they would consider the request and give it clearance, which they have done.

Mr. LANGER. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. LANGER. I thank the distinguished Senator from Oregon for his very excellent presentation of this subject, and for his explanation of the bill. I think it should be passed quickly.

Mr. MORSE. The Senator is very kind.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. ANDERSON. One of my interests—and probably my only interest—is that we have had a rule in connection with consideration by unanimous consent of bills on the calendar, that no measure involving more than $1 million would be passed by unanimous consent. But here we are dealing, by unanimous consent, with a measure which could involve $200 million.

Mr. MORSE. Yes.

Mr. ANDERSON. I could call for the regular order, which I do not desire to do. I am merely trying to say that I feel that a measure which involves perhaps as much as $200 million is dealing with a pretty fair-sized sum of money.

Mr. MORSE. I thought the majority leader put it pretty well the other day. I explained the situation. I have paraphrased very accurately what the CONGRESSIONAL RECORD will show. The majority leader said, "Whenever the Banking and Currency Committee brings to the floor of the Senate a unanimous recommendation and urges emergency consideration, it will have a persuasive effect with me."

I am sure the Senator from New Mexico has the same high regard for the members of the Committee on Banking and Currency that the majority leader has, and I have.

Mr. ANDERSON. I do not think that enters into the question at all.

Mr. MORSE. It enters into it only to this extent, I say most respectfully: We considered this question with the greatest care. We would not be asking for this extraordinary procedure—and I agree that, under the rules of procedure in the Senate, it is extraordinary—if it were not for the fact that thousands of families who need this assistance have great humanitarian rights in connection with the very early consideration of the bill. They need the money. I do not mind being called out of bed at 3 o'clock in the morning on an emergency. I was called out the other morning because the Rogue River was again approaching a flood crest. The entire area from which people were once evacuated is about to be evacuated again.

We have before us a bill which will not involve a single wasted dollar. The Small Business Administration is not going to grant loans which do not meet the loan requirements. The human factor buttresses the position of the Banking and Currency Committee and justifies the action requested.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. PASTORE. I wish to say for the benefit of Members of the Senate that we may live to regret what we do in connection with the natural gas bill which we have laid aside, but we shall never regret anything we do in the way of favorable action upon the pending bill providing relief for the victims of disastrous floods.

Mr. FULBRIGHT. The Senator has not given up; has he?

Mr. LEHMAN. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. LEHMAN. I was not present in the Chamber when the motion was made, and I did not have an opportunity to listen to the remarks of the distinguished Senator from Oregon. However, I think I am more or less of an authority in the matter of disaster insurance. I served as acting chairman of the Banking and Currency Committee at the time when hearings were held in nine different localities on this question. I personally had an opportunity to observe much of the damage, not only in my own State, but in other States. We went through the Northeastern States, and down to North Carolina, and conducted very exhaustive hearings. The damage which was done and the losses incurred by small-business men were appalling. The damage, in dollars and cents, amounted to between $1 billion and $1,800,000,000. The exact amount has not yet been determined. In many cases the houses and possessions of the victims were completely wiped out. The houses are gone. Many of their personal effects have been lost. Their furniture is gone. The only thing they have left is the mortgage, which will have to be paid.

Mr. MORSE. And the will to carry on.

Mr. LEHMAN. And the will to carry on.

So I very much hope that the bill will be passed. I am sure the Banking and Currency Committee will have under consideration broader legislation with regard to disaster insurance. In the meantime this bill serves a very real purpose. The funds have been exhausted for some time. This device had to be used in order to take care of at least some of the loan applications which were made.

I join the Senator from Oregon in a very definite and urgent plea that the bill be passed as promptly as possible.

Mr. MORSE. I thank the Senator.

Mr. CLEMENTS. Mr. President, will the Senator yield?

Mr. MORSE. I yield to the Senator from Kentucky.

Mr. CLEMENTS. It is my understanding that yesterday the agreement which was made was that if there should be any objection to the bill on the part of any Member of the Senate, the bill would not be taken up before Monday. I regret that I was absent from the Chamber when the Senator from Oregon moved to lay aside the unfinished business and take up this bill.

I should like to inquire now if there is any objection on the part of any Member of this body to consideration of the bill this afternoon. It is my understanding that if this measure is passed, it will have to go to conference, and that the report of the conferees will be brought back to this body for action at a later date.

Mr. MORSE. Mr. President, my reply to the Senator from Kentucky is that if there is such an understanding, I want such understanding made a part of the RECORD. Had I known of any such understanding, I would have made a statement at the time I asked for unanimous consent. If the Senator from Kentucky tells me that there was such an understanding, it is good with me. Let me tell the Senator from Kentucky my understanding.

The Senator will recall that I sought first to have the bill considered yesterday. We pursued the possibility of having it considered yesterday. I talked with the leadership on both sides. It was decided that the committee report should be printed first, and that I should renew my request today. It was my understanding that the leadership would then meet to consider the request and decide whether or not to give the bill clearance. I told the Seante my understanding. I think the notation on the desk of the minority leader, which I checked before I made my request, will show that the bill was cleared for action today.

I wish to assure the Senator from Kentucky that it is perfectly agreeable to accept the proposal, if there are any objections, to let the bill go over until Monday. But I want to assure the Senator that I knew of no such understanding yesterday, because no such understanding was expressed to me. If such a conversation was had I did not hear it, because I was seeking to get an agreement to take up the bill yesterday and, if it could not be taken up yesterday, to have it considered today.

But let me say, on the merits of the matter, that we need this weekend to consider the bill in conference so it can be approved by both Houses of the Congress early next week. I think it would be most unfortunate to delay further a bill to which I do not believe a single Member of the Senate objects.

Mr. CLEMENTS. It is not the desire of the acting majority leader to labor any particular point about the matter, but it is my understanding that on yesterday it was determined that a report should be made available today so that each Member of the Senate would have an opportunity to study the report and then opportunity would be afforded for any individual Member to voice his objection to it today.

Mr. MORSE. That is correct.

Mr. CLEMENTS. If any objection were made, we would take the bill up on Monday. I can assure the Senator that the acting majority leader has no objection to action on the bill today, but if any Member of this body desires it to go over until Monday I think he should have the right to express himself.

Mr. MORSE. I certainly would not have objected to that yesterday, nor do I object to it today.

Mr. CLEMENTS. That is the reason I asked the question whether there was any Member who, after studying the report, had any objection to having the bill taken up today. If there were objection, I think the Senator from Oregon would be one of the first to withdraw the request.

Mr. MORSE. There is no question about that. What I wanted to make clear for the RECORD was that when I report to the Senate I always report with complete accuracy, so far as my understanding is concerned. When I reported to the Senate it was on the basis of the conversation which I thought I had with the leadership yesterday; and I did not recall that there was any agreement about taking up the bill on Monday if there was objection to it.

Mr. CLEMENTS. Although, evidently, the Senator from Oregon did not have knowledge of that agreement, I can assure him that such was the agreement among the leadership.

Mr. MORSE. I am willing to accept the agreement here and now.

Mr. CLEMENTS. I wish to impress upon the Senate what I consider to be the importance of time in this matter and the importance of passing the bill so that it can go to conference. Whether it be taken up today or on Monday, it is an important measure upon which the Senate should take prompt action.

Mr. WATKINS. I have not had any instructions from the minority leader.

Mr. MORSE. It is in typewriting on the Senator's desk.

Mr. WATKINS. One of the staff members said the bill would have clearance with the majority leader.

Mr. ANDERSON. Mr. President, will the Senator from Oregon yield?

Mr. MORSE. I yield.

Mr. ANDERSON. I have gone through the discussions. I do not object to the measure being considered. What I have tried to say, over and over again, is that a figure of $150 million of business loans was fixed. It is possible to use every dollar for flood relief only. There are other parts of the United States where small business loans are worth while and are needed. If it is not intended to use some of the money in that way it is not necessary to provide that the whole $150 million can be taken away from the Small Business Administration.

I know that many persons have been asking about the importance of the Small Business Committee, and now it is proposed to turn the money for small-business loans entirely to flood relief.

Mr. MORSE. It may appear that way, but that is not the fact. When we reach the point where what we consider to be the allotment for disaster loans is being exceeded, the Senator will find me asking for additional authorizations.

Mr. ANDERSON. Did not the Senator say there was a $23 million deficit?

Mr. MORSE. But terrible flood disasters which have hit the Northeast and are now hitting the west coast. Let me give the Senator this hypothetical case: Suppose, God forbid, that tonight there should be a great earthquake on the west coast and that San Francisco should become a shambles. We would want the administration to proceed forthwith and use what funds it had in the jackpot, and then we would ask for additional funds.

Mr. ANDERSON. I should think that would be something with which the Red Cross would deal first.

Mr. MORSE. Not by means of loans. The Small Business Act as it was originally passed provided for three things: First, so-called regular small-business loans going to businesses which have not suffered disaster; second, small businesses which have been wiped out by a flood or hurricane; and, third, homeowners whose homes have gone down the river as a result of a flood.

Mr. PASTORE. Mr. President, will the Senator from Oregon yield?

Mr. MORSE. I yield.

Mr. PASTORE. While the law spells out the reasons for which the fund can be used, has the appropriation in the past ever been tied down to so much for this and so much for that? Can they spend all the money for any purpose? Have they under existing law the authority to use the entire appropriation of $150 million for disaster purposes and to rehabilitate small business?

Mr. MORSE. No. The difficulty is that when they use the business loan funds for disaster-loan purposes, the interest rate has to be 6 percent.

Mr. PASTORE. We wish to have the money loaned for disaster purposes at 3 percent.

Mr. MORSE. That is correct.

Mr. ANDERSON. The present law limits the outstanding disaster loans to $25 million.

Is the report incorrect?

Mr. MORSE. No. The amount authorized to be used for disaster loan purposes at 3 percent interest is $25 million.

Mr. ANDERSON. Then the statement in the report is incorrect.

Mr. MORSE. No. What the Small Business Administration has done is to take other money available for regular small business loans and to lend that money to small-business men who have been wiped out by disaster, but lending that money at 6 percent. They have done that with the understanding that when Congress authorizes additional money for disaster loan purposes, the Small Business Administration will rewrite those loans at 3 percent.

Mr. ANDERSON. As I understand, the present law limits the aggregate amount of the loans to $25 million. Is that correct?

Mr. MORSE. That is correct.

Mr. ANDERSON. An aggregate total of $25 million, interest or not. Is that correct?

Mr. MORSE. That is correct.

Mr. ANDERSON. They have already loaned $23 million more than that. Is that correct?

Mr. MORSE. Twenty-three million, three hundred thousand dollars, if we count the present known demand for disaster loans.

Mr. ANDERSON. Why should there be a limitation in the act, then?

Mr. MORSE. That is why we are proposing a combination of the two funds, so that we will not get into that situation again.

Mr. ANDERSON. I should like to make it clear that I am not trying to sabotage the proposed legislation in which the Senator from Oregon and the Senator from Rhode Island are particularly interested. However, I should like to have some assurance that when the bill emerges from conference, the result will not be a stopping of the normal functions of the Small Business Administration.

Mr. MORSE. Certainly not.

Mr. ANDERSON. The Senator from New York [Mr. LEHMAN] stated that the need was not $150 million but $1.8 billion. I would appreciate some assurance that the whole $150 million will not go down the river.

Mr. MORSE. The paragraph I read to the Senate a few moments ago gives such assurance I believe. I want to be very clear in stating that the purpose of the proposed legislation is not to bring to an end the regular small-business loans. The combining of the two funds is not for that purpose. It is not for the purpose of denying regular small-business loans. What we are saying is that we want the Small Business Administration to be put in such a position that, in the event a disaster occurs, it can use the money which has not been loaned. In other words, we want the administration to be able to use the money for the time being for disaster purposes, until such time as Congress may authorize additional funds. I am sure the Senator from New Mexico agrees that under such circumstances Congress will authorize additional funds.

Mr. PASTORE. I do not understand why the Senator from New Mexico takes the position that all this money will go down the river. What has gone down the river is the businesses that have been caught in the flood. What we are trying to do is to lend some money to small businesses so that they may rehabilitate themselves. If they were to secure loans under the regular procedure, the interest rate would be 6 percent for any money small businesses borrowed. All we are trying to do is help such small businesses to obtain loans at 3 percent interest.

All one has to do to understand what this is all about, is to visit the areas where small businesses have been lost because of flood conditions.

In Congress we have been appropriating billions of dollars to rehabilitate the economies of foreign countries, and we do not wink an eyelash when we do it. Yet when it is proposed to provide $35 million to help small-business men in New England, some of us seem to be overcautious about it. I am surprised.

Mr. LONG. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. LONG. First I should like to say that some of us who come from States like Louisiana, have a great deal of sympathy for anyone who suffers flood damage. We have sustained billions of dollars in flood damage in our area. We fully understand the problem.

However, in approaching this problem, if we are to pass legislation to make more funds available for disaster loan purposes, why does not the Senator propose legislation to replenish the funds available. Why do we not put more money into the Small Business Administration for disaster loans, without taking money away from what would be available for small businesses generally?

Mr. MORSE. I make two points. We heard the Small Business Administrator testify before our committee. He said that from the standpoint of the efficiency of his agency and from the standpoint of what he considered to be sound administrative policy, he would like to have the two funds combined, so that when a situation such as this arises, the administration could make loans for disaster purposes at 3 percent, and not go into the red, so to speak, on disaster loans. We thought he was sound in his position. We asked the administrator if it would make it easier for the Small Business Administration to make the 3-percent loans—we believe we should not be charging disaster victims 6 percent—and it was the Small Business Administration recommendation that we incorporate it in the bill. That is the story, plus the fact that the Small Business Administration felt it needed a safety valve in this proposed legislation.

Mr. ANDERSON. The Administrator of the Small Business Administration made the same recommendation, to combine these loan funds, a year ago, did he not?

Mr. MORSE. Yes; and they passed such a measure.

Mr. ANDERSON. The House rejected it. Therefore we will do in connection with this proposed emergency legislation what the House has refused to do. In other words, we are trying to club them into it now by way of flood relief legislation.

Mr. MORSE. No; we are going into conference. Let me tell the Senator from New Mexico what we did in the closing hours of the last session. We did not go into conference on this matter. We merely decided, because we were up against the deadline of adjournment, that for the time being we would accept the House version. That is what we did.

Mr. LONG. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. LONG. I should like to ask why we cannot find some way of simply providing a reserve for emergencies in this type of situation, and avoid the possibility every time a flood strikes a section of the country of exhausting the fund set up for small business loans, thus requiring small business to wait until Congress meets again. Why not set up a reserve to meet such emergencies?

Mr. MORSE. The Senator may not recall, but when the matter first came up in the early days of the session I pointed out on the floor of the Senate that this proposed legislation is not the permanent answer. I pointed out that we need sweeping legislation on the whole subject of disaster loans, in order to meet disasters which occur from time to time.

In a colloquy with the Senator from Connecticut [Mr. BUSH], I said we would have to have a much broader disaster loan bill. It was pointed out that we also needed some legislation which would provide for the building of public works which would prevent the floods in the first instance.

What we are dealing with here is merely a little piece of emergency legislation, which is necessary to make available to the Small Business Administration money with which to help the needs of fellow Americans who right now need these loans. They will not get the loans unless this legislation is enacted. Let us pass the bill now to meet the present emergency, and then proceed with the type of legislation which the Senator from Louisiana has in mind. I would be happy to have him introduce such a measure, and I would be happy to be a cosponsor with him of it.

Mr. LONG. The Senator from Oregon is a member of the committee considering such proposed legislation. He is in a position to steer such a measure through the committee. I would be happy to have him introduce it.

Mr. MORSE. The Senator from New York is working on proposed legislation which meets many of the suggestions of the Senator from Louisiana, and I am proud to be a consponsor of it.

Mr. LEHMAN. Mr. President, I assure the Senator from Louisiana that the Committee on Banking and Currency is very much alive to the necessity of sweeping legislation which will make it possible for the victim of a disaster to obtain funds with which to rehabilitate himself and property which has been damaged. At the present time it is quite difficult to obtain any insurance against floods or high water.

Mr. LONG. While we are on the subject, I should like to say that the idea of raising small-business loans to 6 percent has always seemed to me to be ridiculous. However, that is only one more phase of the administration's policy of raising interest rates. While this administration has been in power, the interest rates on everything have been raised. Personally I do not agree with that philosophy.

The PRESIDING OFFICER (Mr. MCNAMARA in the chair). The question is on agreeing to the motion of the Senator from Oregon [Mr. MORSE], that all after the enacting clause in H. R. 7871, be stricken and that there be inserted in lieu thereof the text of S. 2960.

The motion was agreed to.

The amendment to the House bill is as follows:

That subsection (b) of section 204 of the Small Business Act of 1953, as amended, is hereby amended to read as follows:

"(b) The Administration is authorized to obtain money from the Treasury of the United States for use in the performance of the powers and duties granted to or imposed upon it by law, not to exceed a total of $310 million outstanding at any one time.

For this purpose appropriations not to exceed $310 million are hereby authorized to be made to a revolving fund in the Treasury. Advances shall be made to the Administration from the revolving fund when requested by the Administration. This revolving fund shall be used for the purposes enumerated subsequently in section 207 (a) and (b). Not to exceed an aggregate of $210 million shall be outstanding at any one time for the purposes enumerated in section 207 (a) and (b) (1). Not to exceed an aggregate of $100 million shall be outstanding at any one time for the purposes enumerated in section 207 (b) (2) and (b) (3). The Administration shall pay into miscellaneous receipts of the Treasury at the close of each fiscal year, interest on the net amount of the cash disbursements from such advances at a rate determined by the Secretary of the Treasury, taking into consideration the current average rate on outstanding interest-bearing marketable public debt obligations of the United States of comparable maturities."

SEC. 2. The proviso in paragraph (1) of subsection (b) of section 207 of the Small Business Act of 1953, as amended, is hereby amended to read as follows: "*Provided*, That no such loan including renewals and extensions thereof may be made for a period or periods exceeding 20 years: *And provided further*, That the interest rate on the Administration's share of loans made under this subsection shall not exceed 3 percent per annum."

SEC. 3. (a) Subsection (b) of section 207 of the Small Business Act of 1953, as amended, is hereby further amended (1) by striking the word "and" which follows the semicolon at the end of paragraph (3); (2) by striking the period at the end of paragraph (4) and inserting in lieu thereof "; and"; and (3) by adding at the end of such subsection a new paragraph as follows:

"(5) to further extend the maturity of or renew any loan made pursuant to this section, beyond the periods stated therein, or any loan transferred to the Administration pursuant to Reorganization Plan No. 2 of 1954 for additional periods not to exceed 10 years, if such extension or renewal will aid in the orderly liquidation of such loan."

(b) Subsection (f) of section 207 of such act is hereby repealed.

The PRESIDING OFFICER. The question is on the third reading of H. R. 7871.

The bill was ordered to a third reading, read the third time, and passed.

The PRESIDING OFFICER. Without objection, the title will be amended to read: "An act to amend the Small Business Act of 1953, as amended."

Without objection S. 2960 is indefinitely postponed.

ORDER FOR RECESS UNTIL MONDAY

Mr. CLEMENTS. Mr. President, I ask unanimous consent that when the Senate completes its work today, it stand in recess until 12 o'clock noon on Monday.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL MONDAY

Mr. CLEMENTS. Mr. President, pursuant to the order previously entered, I now move that the Senate stand in recess until Monday.

The motion was agreed to; and (at 6 o'clock and 8 minutes p. m.) the Senate took a recess, the recess being, under the order previously entered, until Monday, January 23, 1956, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate January 20 (legislative day of January 16), 1956:

IN THE ARMY

The following-named officer under the provisions of section 504 of the Officer Personnel Act of 1947 to be assigned to a position of importance and responsibility designated by the President under subsection (b) of section 504, in rank, as follows:

Maj. Gen. James Edward Moore, O15650, Army of the United States (brigadier general, U. S. Army), in the rank of lieutenant general.

The following-named persons for appointment in the Regular Army of the United States, in the grades and corps specified, under the provisions of section 506 of the Officer Personnel Act of 1947 (Public Law 381, 80th Cong.), Public Law 759, 80th Congress, and Public Law 36, 80th Congress, as amended by Public Law 37, 83d Congress, and Public Law 294, 84th Congress:

To be captain

Smith, Charles M., DC, O966974.

To be first lieutenants

Domnitz, Jack, MC, O4055392.
Farrell, Virginia M., ANC, N900594.
Goska, Francis A., DC, O2274597.
McHughes, Lee M., JAGC, O2264176.
Noonan, Roger G., DC, O2274609.
Vielhaber, David P., MSC, O2203084.
Waldron, Charles A., DC, O1766718.

To be second lieutenants

Beitzel, Barbara A., AMSC, J100198.
Patterson, William J., MSC, O2271711.

The following-named persons for appointment in the Medical Corps, Regular Army of the United States, in the grade of first lieutenant, under the provisions of section 506 of the Officer Personnel Act of 1947 (Public Law 381, 80th Cong.), subject to completion of internship:

Dunbar, John D.
Jones, Richard E., O2275358.
Longway, Ralph E., O2275391.
Sacks, Josiah, O2275583.
Shaw, Glenn R., O2275349.

The following-named officer for appointment, by transfer, in the Regular Army of the United States, with specification of branch, arm, or service, in the grade specified:

To be first lieutenant

Hawkins, Lewis L., O66986.

The following-named persons for appointment in the Regular Army of the United States, in the grade of first lieutenant, under the provisions of section 506 of the Officer Personnel Act of 1947 (Public Law 381, 80th Cong.):

Bruen, John D., O1936201.
Leach, Anthony J., Jr., O1936328.

The following-named distinguished military students for appointment in the Regular Army of the United States, in the grade of second lieutenant, under the provisions of section 506 of the Officer Personnel Act of 1947 (Public Law 381, 80th Cong.):

Carson, Lawrence E.
Haynes, Richard E.
Pace, Donald L.

EXTENSIONS OF REMARKS

Bernard DeVoto

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Friday, January 20, 1956

Mr. MURRAY. Mr. President, last November this country lost a great conservationist and historian with the death of Bernard DeVoto. He was perhaps the most articulate spokesman among those who treasure and have long fought to preserve our natural resources.

I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an article by the distinguished junior Senator from Oregon [Mr. NEUBERGER], which appeared in the January 1956 Progressive under the title "Defender of the Wilderness," and article entitled "Death of a Fighter," written by John B. Oakes and published in the New York Times, and an editorial entitled "A Man Who Knew the West," from the Glasgow (Mont.) Courier, all of which pay tribute to Mr. DeVoto and his work.

There being no objection, the article and editorials were ordered to be printed in the RECORD, as follows:

[From the Progressive of January 1956]

DEFENDER OF THE WILDERNESS

(By Hon. RICHARD L. NEUBERGER, of Oregon)

Bernard DeVoto once told me that, above and beyond everything else, he would like to have been with Lewis and Clark on that first of all treks across our continent. This privilege having been denied him, he did the next best thing. He became the principal defender of the realm Lewis and Clark explored. Let some greedy looter touch so much as one pine grove or a single foaming waterfall, and DeVoto was off to the rescue—armed with a portable typewriter that shot dum-dum bullets.

He voted and he paid his taxes in Massachusetts, on the edge of the Harvard yard. He frequented the magazine offices, publishing houses, and broadcasting studios of Manhattan Island. He was an intellectual and a sophisticate, and he never made any bones about it. Yet, when he died suddenly this past November, the deepest sorrow must have been in the far-off mountain ranges and lonely canyons of the West. This might have astonished him, for once he wrote:

"I have nothing to do with the West. I broke the story of the attempted land-grab in 1946 and, because at that time I happened to be the only slick-paper journalist who was a qualified conservationist, the spotlight has been on me ever since. * * * I do go West a lot. I love the country. I have a lot of friends out there."

Thus did he play down his role as protector of the wilderness. But others knew that role for what it actually was. After DeVoto's death, at the early age of 58, the

former Chief of the United States Forest Service, a lean man named Lyle F. Watts, said to me, "He was our best friend, because he wasn't afraid of anybody or anything, and because he could command an audience. Our natural resources are a whole lot less safe today, now that he is dead, than they were last night, when Benny DeVoto was alive."

DeVoto had a profound faith in the average person's love of this land and its bounty. He visited my wife and me in February of 1954, a few weeks before I filed for United States Senator. Over broiled Chinook salmon from the Columbia River at lunch, we wondered if a Democrat could get elected in the State of Oregon, where it hadn't been done since 1914. My adversary was to be the incumbent Senator, who had sponsored the surrender of the oil tidelands, the relinquishment of public grazing and timberlands, and the yielding up of Hells Canyon.

After DeVoto had bidden goodby to us and walked down the steep steps in front of our old frame house, he abruptly turned on the sidewalk and puffed back up the cement steps. I came halfway to meet him. Breathing deeply from the exertion, he faced me in the bright sunlight. A faint smile creased his face, with its broad mouth and wide, flattened nose. He could not have been described by his own mother as a handsome man, yet a kind of aura lighted his eyes as he spoke.

"Be of good cheer, my friend," he said. "The American people have never yet voted to abandon their natural resources when the issue was understood by them—and they never will. Everything's going to be all right. I'm just about sure of that."

Throughout the hard, bruising Oregon campaign which followed, a stream of small checks came steadily from Cambridge. They were the result of dinner parties "for NEUBERGER," given by DeVoto and his personable wife, Avis. Often the signatures on the checks were of celebrated teachers, writers, and scientists. Some of them I knew to be Republicans. When I later asked Mrs. DeVoto about this political heresy on the part of her guests, she replied, "Oh, certainly, but when Benny told them of the grand fight you were making for conservation out in Oregon, they couldn't resist. He just melted them away, and they reached for their checkbooks."

He was that sort of man. To him, halfway measures were worse than none when the American outdoors seemed in peril. He was the first person to sniff danger when a presumably innocent bill was introduced by Senator Guy Cordon and Representative HARRIS ELLSWORTH, both of Oregon, allowing lumber companies to be reimbursed with public timber of their own selection rather than in money, when the Government took over any of their land for reservoirs, highways, or military encampments. The bill might have slipped through Congress almost without notice, had not DeVoto led off with a bristling "Easy Chair" in Harper's, warning that the legislation could give the country's biggest lumber operators a foothold in the national forests from which they might never be wrested.

II

Another writer would have let the matter go at that. But with DeVoto, who was born in Ogden, Utah, this was merely the beginning. He wrote innumerable letters about the Cordon-Ellsworth bill. He goaded groups like the Wildlife Management Institute and the National Wildlife Federation. He summoned the Wilderness Society and the Sierra Club to battle. He set up headquarters at his own expense in the Hay-Adams House, where he conferred with people, like Representative LEE METCALF, of Montana, and Senator HERBERT LEHMAN, of New York. He irritated his editors at Harper's by hammering away on the issue of natural resources, when they thought the interests of magazine circulation dictated more diversified contents in the Easy Chair.

Yet, althought the Cordon-Ellsworth bill for timber exchanges had the full backing of the Republican administration, it was voted down decisively, 226 to 161, by a Republican House of Representatives. Many Members of the House told me that a man who never participated directly in this rollcall deserved nearly full credit for the outcome. "Without DeVoto," said Representative METCALF, "the bill probably would be part of our Federal statutes right now."

Wesley A. D'Ewart, then a Republican Congressman from Montana, tried harder than anyone else to bring about passage of the timber-exchange legislation. He also was the author of a grazing bill which would have given 18,000 privileged livestock operators greater control over upland meadows in the national forests than would have been vested in 33 million Americans who enjoy using this domain for fishing, camping, hiking, and hunting. When Secretary of the Interior McKay recently appointed D'Ewart as his assistant in charge of public lands administration, DeVoto heard the fire bells clanging. He was embroiled in the battle against D'Ewart's confirmation by the Senate at the time that death claimed him. This cause, and many others, will suffer for want of his pugent phrasemaking and his boundless energy.

I have thought frequently that Benny DeVoto loved the West because he knew so much about it. Riding with him one afternoon on the Great Northern's gleaming Empire Builder, I listened to a recital of each place along the line where some mountain man had snared a beaver or hidden in the bullrushes to save his scalp. When DeVoto felt that Oregon had not properly marked historic points on the campfire trail of Lewis and Clark, the "easy chair" which ensued helped to shame our State into some corrective measures.

Perhaps DeVoto's most controversial essay appeared in Harper's in 1947, entitled "The West Against Itself." Its theme was that the major demands for exploiting the timber, minerals, water, and scenery of the West always had come from westerners, who, in turn, were under heavy political and economic pressure from absentee landlords. This exploitation contrasted with orderly development. The doctrine was hotly challenged, particularly by leading figures in the Republican Party, who kept promising a new and brighter era in Western progress if only a "dyed-in-the-wool" westerner could become Secretary of the Interior.

In January of 1953, President Eisenhower appointed as Secretary of the Interior a native of Oregon and that State's former governor, Douglas McKay. This dyed-in-the-wool Westerner indorsed the bills to give preferential priviliges in the national forests to big lumber operators. He approved the relinquishment of the tidelands oil deposits. He indorsed commercial invasion of the national park system. He led the crusade to abandon Hells Canyon to the Idaho Power Co., which is incorporated 3,000 miles away in Maine. He suggested turning over the John Day power site on the Columbia River to Pacific Power & Light, another Maine-incorporated company. He fired the career biologist heading the Fish and Wildlife Service and replaced him with a political appointee.

Westerners, looking at the wreckage of the resource program in their region, remembered DeVoto's reminder of Theodore Roosevelt, of Oyster Bay, N. Y., and of Gifford Pinchot of Connecticut and Pennsylvania, who had teamed up originally to set aside the national forests for all the people. Westerners remembered how DeVoto had told them of Franklin D. Roosevelt of Hyde Park, N. Y., who had built Grand Coulee and Bonneville Dams, and of Harold Ickes of Chicago and Oscar L. Chapman, born in Virginia, who had administered these dams in the public interest. They thought of the Westerner who was taking Hells Canyon away from them, and they wished they had heeded the warnings voiced by DeVoto.

There was a place above all others that held DeVoto's heart. On the lofty divide above the Lochsa Fork of the Clearwater River in Idaho, wavers a thin and overgrown trail. Lewis and Clark tottered along that trail when they were near starvation. Tears of excitement and high adventure filled Benny's eyes on the day he trod the trail himself. This, to him, was all that Valhalla could ever be—the wilderness, the solitudes of lodgepole pine and alpine fir, the tossing meadows of bear grass, that path where the first white men had come so long ago.

III

It was an experience he never forgot. It lived with him until his death. One memorable evening, in the spring of 1955, he recalled it to me as we ate prime ribs in the paneled dining room of the Carlton in Washington. I know that this sumptuous atmosphere faded for DeVoto, and that he was back again on the trail with Meriwether Lewis and William Clark, whose marvelous exploits of exploration are the substance of his greatest book, The Course of Empire.

DeVoto wrote: "Whenever I go back to the Bitterroots, I realize afresh that they are my country—Traveler's Rest to Lolo Pass, to Crooked Fork, to the Lochsa, and on down the works of the Clearwater.

"* * * To everyone his own desire in mountains, mountain meadows, and mountain streams, but for me the best of the West is the Lochsa country. * * * If working journalists are rewarded on the far shore, I will sometime get a long summer within a few miles of the Powell Ranger Station."

I prefer to think that courage and persistence and integrity are qualities of character which never die. The next time that I go down the Lochsa and over the Lolo Trail with his friend Bud Moore, the district forest ranger, perhaps we shall see DeVoto in faded breeches and green flannel shirt and his old logger's boots. And we shall hear him, too, in the lilting roar of the Lochsa, as it surges through the timbered fastnesses which he thought so important to save for the next generation of Americans.

[From the New York Times]

DEATH OF A FIGHTER

The cause of conservation in the United States has lost one of its most articulate, militant, and influential spokesmen with the death of Bernard DeVoto. Noted as a historian, as an editor, and as a critic, Mr. DeVoto was a fearless fighter for the things he believed in, and one of the things he believed most passionately was the preservation of America's natural resources, including its majestic scenery.

From his famous "Easy Chair" which for 20 years he occupied in Harper's magazine, he fought many a major conservation battle. As a westerner and an expert on American land policies, he was particularly well qualified to expose the efforts of some stockmen to push through a grazing bill that would have given them vested rights in national forest land. He fought the proposed invasion of Dinousaur National Monument tooth and nail; and one likes to believe that before he died he knew that that project had been defeated.

Among the last verbal bouts which he enjoyed was one with the State of Maine. He had written an article describing part of United States Route 1 running through Maine as "an uninterrupted eyesore of driveins, diners, souvenir stands, purulent amusement parks, cheap-jack restaurants," and he summarized that part of coastal Maine he had seen as "a jerry-built, neon-lighted,

overpopulated slum." Mr. DeVoto's vivid words could apply equally well to many other sections of U. S. 1, in Connecticut and New Jersey, for example. They could apply to dozens—probably hundreds—of roads in many parts of the United States, including some that formerly were among the most beautiful.

[From the Glasgow Mont.) Courier]

A MAN WHO KNEW THE WEST

The recent death of Bernard DeVoto, author and historical authority, brought to the end of his life a man who probably knew as much about our section of the West as any person in the world.

Mr. DeVoto had won a Pulitzer prize for his great book, Across the Wide Missouri. It is a definitive volume on the western fur trade. He had done other notable jobs on the West, such as his editing of the Lewis and Clark journals and his book, Course of Empire.

If one is curious about the mountain men, trappers, and Indians who were roaming this country, right where we live, early in the last century, he will get an explicit portrayal of their lives, down to minute details, in Across the Wide Missouri.

Mr. DeVoto visited here several times. We recall one occasion when he came with two Montanans who had gained prominence as writers—A. B. Guthrie and the late Joseph Kinsey Howard. Their respect for him gave evidence of his spiritual mentorship of their efforts to tell the story of our country.

So we Montanans are indebted to Mr. DeVoto in several ways. He was the kind of writer who sometimes injected himself actively into current controversies and never left anyone in doubt where he stood. Above all that, he did much to chronicle the real, unvarnished annals of a generation that bloomed and died and left its mark on the intermountain West.

The Importance of Transportation

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, January 20, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an address entitled "The Importance of Transportation," which I delivered on September 24, 1955, at Reading, Pa.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE IMPORTANCE OF TRANSPORTATION

(Address of Senator EDWARD MARTIN, of Pennsylvania, at the parade of progress, celebrating the 50th anniversary of the Parish Pressed Steel Co., at Reading, Pa., Saturday, September 24, 1955

I am highly honored by your invitation to come to the historic city of Reading, the county seat of the rich and charming county of Berks.

Courageous and God-fearing people have developed this area into an industrial and agricultural section unsurpassed by any similar area in the world.

In all the history of Berks County its many cultural institutions and its churches of every denomination have had the splendid support of the people.

We meet to celebrate the 50th anniversary of a great industry that has contributed so much to the welfare and prosperity of Berks County, the Commonwealth of Pennsylvania, and the Nation. The establishment of the Parish Pressed Steel Co. a half century ago was a notable event in our history. It was the first step in the parade of progress that has marched forward through the years.

This celebration demonstrates pride in the past and renews our faith in the future. It represents outstanding achievement under the system of free, competitive, private enterprise which is the foundation of American economic strength.

It is an example of success based on the superior skill and know-how of the American worker and American management, which have created the greatest industrial empire the world has ever known.

Today I want to direct your attention to the important place of transportation in the growth and expansion of the United States.

Transportation has always been and still is one of the big problems in America. It is a problem that we must face with the same courageous spirit that our ancestors met the difficulties of their day.

The history of transportation in America is a fascinating story. It is filled with the romance of an expanding empire of freedom and opportunity. It is the story of resolute, courageous men and women who pushed westward over the mountains and plains to open new lands, to clear the forests, and to create new communities that have become great centers of industry and enterprise. From the earliest settlements along the Atlantic seaboard, to the present time, the development of our systems of transportation has been one of the most important factors in our material, cultural, and spiritual progress. It is the foundation upon which were built the great foreign and domestic commerce carried on our rivers and harbors, our highways, railroads, airlanes, and pipelines. It made possible the development of agriculture, the opening of rich mines, oilfields, and forest resources.

In the early days the streams and Indian trails provided the only means of communication and travel. The first roads that connected scattered communities were built to accommodate horse-drawn vehicles in the unhurried pace of that day.

Military necessity was another strong influence in road development.

The westward migration brings to mind the great fleet of Conestoga wagons, which had their origin in Pennsylvania, and other covered wagons, ever moving toward the setting sun. This is an inspiring picture. It is typically American. It embodies the American spirit of self-reliance and individual responsibility. It meant hardship, privation, and often death, but it developed the greatest nation the world has ever known.

Today we have five major transportation systems in the United States: Waterways, roads, railways, airplanes, and pipelines.

There is much competition among these systems. It would be most helpful if our five methods of transportation could be coordinated so there would be less competition, but in our free-enterprise system this is almost impossible as it would involve too much governmental interference.

However, the people should demand that each type of transportation be required to bear its fair and equitable burden of taxation.

Each system of transportation has had some help from government.

Roads are entirely financed by the three levels of government.

Railroads in the early days received grants of land to aid them in their financing.

Airports are constructed from public funds.

Ports and waterways have been financed by the Federal Government.

Pipelines had some Federal help during World War II to aid in their construction. They are owned by private enterprises.

We now have invested in highways, 1931 through 1955, $75,230,000,000 distributed as follows: Federal $11½ billion; State: $43 billion; local: $21½ billion.

In waterways the Federal Government has invested, including harbors, channels, inland and intracoastal waterways, 1931 through 1955, $1,450,000,000.

In railroads we have a total of 401,539 miles, with a value of $33,581,000,000. They pay taxes of $1,261,000,000 a year. They are owned by the people.

In aircraft the total investment of public money is $2,200,000,000. The total value of scheduled and nonscheduled airlines is $1,175,000,000, and the total taxes paid by airlines is $450 million a year.

The Federal Government has not built any pipelines except during World War II—the Big and Little Inch—which were sold to private industry in 1947 for $143,127,000. Private enterprise in the last 10 years has invested almost $50 billion in pipelines for oil and gas.

The waterways of our country have always held a magnificent place in our material, cultural, and spiritual progress.

Transportation on the rivers may not be as romantic as it was at one time, yet it continues to increase in importance.

In the early days, transportation on the rivers centered around speed. Now the objective is tonnage. For example in 1953, from conservative estimates, there were 158 million tons carried on the Mississippi River system, which includes the Gulf Intercoastal Canal. This tonnage was principally bulk commodities, such as coal, steel, chemicals, and petroleum.

An ordinary towboat, pushing 9,000 tons of petroleum products form Houston, Tex., to Pittsburgh, Pa., is doing a job that would require 830 tank cars of 8,500-gallon capacity, or 1,300 tank trucks of 5,000-gallon capacity. By rail it would require 16 trains of 50 cars each. If transported by truck, it would cover 50 miles of road space.

This traffic is constantly increasing. The Army engineers' records show that in 1944 the waterways over which petroleum products and coal are transported carried about 20 billion ton-miles; in 1953, it had moved to over 33 billion ton-miles.

In 1953 the Chief of Engineers, United States Army, estimated the total cost to complete all authorized river and harbor projects presently deemed necessary in the interest of commerce and navigation at about $2½ billion.

The natural waterways in America have been a success, but there have been some notable examples of financial failure in State government construction and operation of canal systems.

The great example was the most dismal failure of the publicly owned canal system of Pennsylvania. That system started in operation about 1824. The Commonwealth of Pennsylvania offered its direct obligations in bonds to finance the construction of these canals. The total construction cost was about 33½ million; maintenance and repairs amounted to about 24½ million; interest on loans amounted to 43½ million, which made a total investment for the State of over 101 million. The State collected in tolls about 32½ million and sold the canals for $11,281,000, or a financial loss to the State of almost $60 million. That was an enormous amount of money at that time.

America has more men of know-how in the operation of business than any other country in the world, but somehow Government operation of business has been almost a complete failure. Considering living standards it has always failed any place in the world.

For a moment, let us consider our expansion in the United States, for this is the real

reason for much of our transportation difficulties.

One of the most spectacular developments has been the surprising increase in our population. According to the latest Census Bureau estimates we are now a Nation of more than 165 million people. We never expected to reach that number.

The figure represents an increase of more than 13 million, or nearly 9 percent, above the total for the last general census of 1950 and 25 percent since 1940.

Translated into terms of human needs and the American way of life this population increase has imposed upon us many great problems.

We need more schools to educate the growing army of young people. We need more hospitals. We must build more churches of every denomination. We must have more, better and safer roads to accommodate the vastly increased volume of motor traffic that crowds upon our inadequate and hazardous highway systems.

The highways are today, as always, the basic means of transportation. The other transportation systems—waterways, railroads and the air—aid and supplement the roads just as the auxiliary branches of the armed services help the doughboy gain and hold his objective.

Turning now to the present and the future, there is widespread agreement that bold, new steps must be taken to correct the deficiencies that have accumulated on our highway system during and since World War II.

President Eisenhower has proposed that bold plan.

The Nation has not kept pace with highway needs. The time has come when obsolete and dangerous roads must be replaced or rebuilt to modern standards of safety and efficiency. Larger, faster, and increased numbers of motor vehicles have added to our problem and will continue to do so. The American people now own more than 58 million motor vehicles and that figure is expected to rise beyond 81 million in the next 10 years. They now own 253,000 buses, about 10 million trucks, and 48 million passenger cars.

The trucking industry has grown to be one of the big industries of our country. Its annual gross expenditures for all purposes is about $29 billion.

The Federal Government has collected annually from taxes on gasoline, diesel fuel, lubricating oil, excise taxes on motor vehicles and tires and tubes more than $2½ billion. The Highway Act of 1954 allocated funds equivalent to all the Federal gasoline tax to the States for road construction.

For many years roads were built where there was the strongest political pressure. There was no comprehensive plan.

The plan proposed by President Eisenhower places emphasis on the national system of interstate highways. This is a specially designated network of 37,600 miles to connect 42 State capitals and 90 percent of all the cities over 50,000 population. It will have controlled access and will bypass large centers of population. It will cost about $25 billion.

The system has been carefully laid out to take care of the military, civilian defense and industrial needs of the country. When completed it will bring our people closer together and provide the means for a better understanding of our great country.

We need the roads. There is no disagreement on that score. We must have them if we are to have an expanding economy. We need them for our industrial, cultural, and spiritual advancement. We need them for national and civilian defense. We need them to reduce the frightful toll of lives taken each year by accidents on our highways. The big decision we must make is how they shall be financed. It's up to the American people to decide, for they must pay the bills.

Personally I feel the President's plan for a bond issue is sound. I do believe, however, that serious consideration should be given to the question of tolls. I believe that the collection of tolls, wherever feasible, on sections of roads, bridges and tunnels, would be advantageous to our country and fair to the traveling public. Or perhaps it might be wise to require the payment of a license fee for vehicles traveling on the interstate system. Some money should come directly from the general funds.

In the past the romance of traveling in covered wagons, stagecoaches and packet lines were adventures pictured in the famous prints of Currier and Ives and other artists. The tying together of the Atlantic and the Pacific by steel rails was acclaimed all over the world.

The first plane across the continent was hailed as an event unparalleled in transportation.

The completion of the interstate highway system will be another romantic story in American progress. I am hopeful that the next session of Congress will see the wisdom of an early start on this tremendously important project. Let me assure you that as a Member of the Senate and as the ranking Republican member of the Senate Public Works Committee, I shall do everything possible to expedite the enactment of the necessary legislation.

Again, I say, it is an honor to appear in this historic county.

Through the years you have contributed outstanding patriotic service to our Nation.

You have had a large part in building the economic strength of the United States. You have worked hard to make America.

What has made us such a great nation?

First and foremost in attributing the success of the American Republic I would place our system of government, based on God's greatest gift to mankind, freedom of the individual.

Second, I would place the sturdy courage and faith of our people—the American character based upon hard work, thrift, tolerance, love of liberty, and love of God.

These priceless endowments are the foundation stones upon which American initiative, energy, and know-how, combined with transportation, created the vast empire of industrial and agricultural production that twice in a third of a century saved the world from dictatorship.

Let us take inspiration from this parade of progress to rededicate ourselves to patriotic purpose, to face the future confident and unafraid, trusting in the mercy and goodness of God to direct the course of our Nation in the path of righteousness, justice, and peace.

Major Aspects of the Senate Highway Bill

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Friday, January 20, 1956

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a speech on the major aspects of the Senate highway bill, which I delivered before the first general session of the American Roadbuilders' Association, 54th annual convention, at Miami Beach Municipal Auditorium, on Thursday, January 12, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MAJOR ASPECTS OF THE SENATE HIGHWAY BILL

(By Hon. DENNIS CHAVEZ, United States Senator)

It is indeed a pleasure for me to be here again today to address the very fine organization which you gentlemen represent. I have known many of your members and Washington representatives for years during my service in the House of Representatives and in the Senate, where I have had the honor and privilege of serving since 1930. Your president, Jack Robertson, is a particularly good friend of mine, and the other officers of your fine association are always welcome, not only in my office but before the Senate Committee on Public Works of which I have the honor to be chairman.

I am happy to greet this exceptional group of Federal, State, and local highway officials and I know that the many heads of industry have taken time from their own pressing business to attend this important meeting.

I wish to pay my respects, too, to the distinguished guests of this convention who have come from the Republics of Central and South America. We have been working in the Senate and the same can be said for the House, I think with considerable success, to hasten the completion of the Pan-American Highway and also extend increasing technical and engineering assistance to our other friendly neighbors in the Pan American Republics. Surely it would be a wise course for our Government to expand the highway assistance program that is now under way. I feel confident that we shall take steps in this direction in the near future.

My experience in the field of highway legislation has been continuous since becoming a Member of the United States Senate in 1935, and during the more than 20 years which I have served on the committee concerned with roads many changes have taken place in the field of highway transportation, with the motor vehicle registration increasing from about 26 million in 1935 to more than 61 million in 1955, and it is estimated that the total will reach 81 million by 1965.

Until 1950 Federal assistance was provided mainly on about 234,000 miles of the primary Federal aid system which interconnected most of the principal cities which had been selected by State and Federal authorities. In 1940 $100 million was provided for the primary system and only $15 million provided for the secondary system, and $20 million for grade crossings.

World War II saw the end of the pioneering period of road building and many cities were interconnected by two-laned surface roads but they were entirely inadequate to care for the great volume of traffic which had developed.

We in Congress recognized the great importance of an accelerated road program and in the Highway Act of 1944, we authorized a greatly expanded postwar highway program of $500 million annually for 3 years and increased funds for the secondary system by tenfold, and included for the first time funds for routes within cities. There was a delay in the initiation of the program until October 1945, however, progress was slow because of shortages of manpower, materials and contractors.

The national system of interstate highways was designated in 1947. Authorization of funds specifically for this system was first made in legislation of 1952 for funds for fiscal years 1954 and 1955 and allowed $25 million for each year, which we realized was insufficient to make the needed progress. In the Federal Aid Highway Act of 1954, we authorized $875 million for apportionment to the States for each of the fiscal years 1956 and 1957, which was an increase of 52 percent over funds for the 2 preceding

years. In the 1954 act we increased the funds for the interstate system from 25 million to 175 million dollars annually and authorized the use of these funds to pay for 60 percent of the construction costs.

I feel that the statistics which I have quoted is desirable to emphasize the fact that the Congress has recognized the extreme importance of an accelerated highway program and we have realized that even the 1954 authorization is not sufficient to care for the tremendous impact of automobiles, busses, and trucks on our highways which amount to a total of more than 3,366,000 miles, of which about 235,000 miles are on the primary Federal aid system, which includes the interstate system, and about 483,000 miles on the secondary system. It is interesting to note that of the 3,366,000 miles there are more than 1,200,000 miles with no surfacing.

Although the 1954 authorization provided for matching funds up to the fiscal year ending June 30, 1957, steps were taken during the first session of the 84th Congress to authorize a greatly expanded program of road construction to enable our highly mobile economy to move about with greater ease and safety. Several highway bills were introduced and hearings were started on February 21, 1955, and extended through April 15, 1955, with about 100 persons and organizations interested in highway development being given an opportunity to be heard. Among this group many outstanding members of your own organization gave fine testimony on the problem of highway needs and the ability of our industries to carry out the program of construction.

After the many days of public hearings and numerous executive sessions by our Committee on Public Works the bill designated as Senate bill 1048 was reported and passed by the Senate with certain amendments being made on the floor of the Senate.

I want to say that in my many years of experience as a representative of my people in New Mexico and the country as a whole that the legislation which we passed in the Senate on the highway program is one of the most outstanding pieces of work that I have seen. The bill, as you know, would authorize $900 million annually for 5 years for the primary, secondary, and urban highways and $1 billion, $1.25 billion, $1.5 billion, $2 billion, and $2 billion for each of 5 years for the interstate system. We felt that the interstate system should be accelerated because of its value in serving interstate commerce and national defense but that we must not neglect the secondary system which not only means much to our national economy but also to the local economy of each State and community.

In our consideration of a program of such magnitude for the interstate system we believed that since the Federal Government would be matching on a 90–10 basis, on the interstate system, that protection should be provided for this investment, so we included a provision designed to limit weights and dimensions of vehicles. We also instructed the Bureau of Public Roads to conduct tests to determine the effect of overloading on highways. The Maryland road test and the recently completed road test in Idaho, have indicated that roads must be constructed much more substantially to withstand the impact of heavy vehicles. However, many of our existing roads are not now constructed to such standards, therefore we must not overload them. Other provisions included were designed to expedite the acquisition of rights-of-way and to take care of relocations.

One of the many items which have given me great concern over my many years of experience in highway legislation, is the effect of by-passing communities which depend on highway traffic for their livelihood. In many cases communities prefer to have main highways pass around them but they should be given consideration in the matter.

During consideration of the highway bill I pointed out that in any program of the magnitude proposed, we should insure that the workers on these projects would not be treated unfairly insofar as living wages and decent hours are concerned, however, there was considerable opposition to including compulsory labor pay standards as a part of the legislation but I was assured that such matters would be taken care of by the States and contractors and that in the construction program all workers would be treated fairly.

There are many more features of the bill which we passed in the Senate which are technical in nature and I need not dwell on them at this time, but I cannot leave you without commenting on the terrible toll of life which is taken daily on our highways and streets. In 1941 highway traffic deaths reached nearly 40,000. Then wartime gasoline rationing reduced the toll but they began to increase and in December 1951 we had our millionth traffic death. In 1954 there were more than 36,000 deaths as a result of traffic and in addition a million and a quarter people were injured, with over 100,000 suffering permanent disability. It is quite evident that our highways are not adequate to handle the terrific amount of vehicular traffic, nor to utilize the tremendous power to speed being built into our modern automobiles. The only answer is to drive carefully and work for better roads and continue to drive carefully.

Acknowledging the need for a great new system of modern roads—for the States and the cities and the counties and the hamlets—is one thing; defining the method by which we can bring this miracle to pass is something else again. It seems to me that we are possessed here with a problem that embraces our total economy and modern society—probably our defense and survival. Thus, when we speak about building roads for this country, whether it be in New Mexico or Maine, we are really touching one of the most delicate nerves of the Nation. There is absolutely no place for political bickering or a scramble for credit in the essential job to be done. The great burden will rest, as it always has, with the States and their political subdivisions. But the responsibility of the Federal Government cannot be lightly brushed aside. There is no sense in pretending that there will be any substantial difference in the saving of dollars because we shift responsibility from one government to another. There isn't anything easy or cheap in this whole road building plan. It's all going to have to be paid for and the only important question is how can it best be planned to serve the Nation as a whole? The Federal-aid program has become an old adventure, once termed radical during the administration of Woodrow Wilson. But after 40 years, the remarkable cooperative Federal-State arrangement which has been distinctive in the field of road building has proved itself beyond question. We have recently been expanding the Federal-aid program and I see no good reason for changing my view that the program should be expanded to a still greater degree.

The nub of these remarks is that, in my opinion, better highways are a desperate American need. Further, insofar as I am able to judge, our committee and the United States Senate will continue to warmly support a reasonable, workable national program to bring about a solution.

I would not want to close my speech without paying tribute to a dear friend of mine and your association who has passed away.

While Tom Keefe was well known from coast to coast among the ranks of men who serve the highway industry and the engineering profession, his friendship with key figures in the Federal Government in Washington was developed highly.

Tom built up a fabulous array of friendships, not only among the most powerful and highly placed Members of Congress but throughout the Federal executive branch. His formula for winning friends was disarmingly simple and in its philosophy mirrored the man himself. "Serve others," he would say, "without hope or desire of personal reward."

That was the credo by which this exceptional and, at times, explosive man lived and by which he was able to perform remarkable services for his country. Those who were privileged to know him well are aware of the nobility and true essence of his service and his unflagging work.

We shall look far to again find such a man. We are filled with gratitude for the unselfish help that he gave us. We miss him now most deeply. But we hope, since that is the way matters are arranged by the Highest Authority, that he is finding a richly deserved and everlasting peace.

Thomas J. Keefe, a native of West Philadelphia, lived at 4411 Bradley Lane, Chevy Chase, Md. He is survived by his wife, Elizabeth, three sons, and a daughter.

Views of Senator McCarthy on the Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, January 20, 1956

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a statement I have prepared concerning my views on the natural-gas bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR McCARTHY

Let me state why I am supporting the Harris bill which prohibits Federal control of the production of natural gas.

The primary purpose of the Harris bill is to promote our free enterprise system which has helped make America strong and free. The bill is designed—not to protect monopolies, or to gouge the public, as some people claim: But to serve the public interest. That is the point I want to emphasize. Let me first deal with several arguments of those who oppose the bill.

The opponents of the Harris bill claim that the gas-producing industry is a monopoly. This is not true. There are over 8,000 producers of natural gas, not one of whom supplies over 5 percent of the market. As a matter of fact, of the 452 manufacturing industries in the United States, all but 70 of them are more concentrated than the natural-gas industry. Beyond this, natural-gas producers must compete for the fuel market with the producers of coal and oil. The transportation and distribution phases of the industry are, in most bases, monopolies; they are and should be regulated by government. The production phase is highly competitive and thus is regulated by the free market.

Opponents of the Harris bill claim, nonetheless, that the cost of gas to the consumer is too high. These are the facts:

(1) Between 1938 and 1953 the average price of all types of gas to the home user increased only 7 percent—while the general cost of living increased 90 percent, and the costs of competing fuels, coal and oil, doubled. Moreover, the price of straight natural gas actually decreased by 7 percent.

(2) It is true that in the past 2 years consumer gas bills have gone up more rapidly than in the past. It is important to remember, however, that the field price of gas (which opponents of the Harris bill want to regulate) is only a very small part of the customer's gas bill. To illustrate this point: The cost of gas to the average Wisconsin family is $74.62 a year; but if the gas producer should give away his product, if gas were free, this average family would save only $4.96 a year. (The major portion of the consumer's gas bill goes to those who transport and distribute the gas.) We should therefore remember that the Harris bill deals with only a fragment of the problem of the rising cost of gas. Now, how does the Harris bill deal with this fragment?

The field price of gas, along with the other components of the customer's costs, has risen in the past few years. The principal reason for this recent increase is that more people are changing over to gas from other fuels, coupled with the fact that the increase in the supply of gas has not kept pace with the increase in the demand for it. Since 1945, the consumption of gas has doubled, while available gas reserves have increased by only one-third. When demand outstrips supply, prices will rise; it is the law of supply and demand. Now: Since we cannot decrease the demand for gas, the only way to check the price rise is to try to increase the supply of gas. This is what the Harris bill aims to do. One of the main reasons that supply is falling behind demand is the existence of Federal controls.

What opponents of the Harris bill either do not understand, or wish to conceal, is that Federal regulation has the effect of decreasing the supply of gas and thus of increasing the price to the consumer. The gas business is a highly risky venture: The producer, to survive, must get as high a price as the free market will allow for the gas he does find—in order to offset the tremendous losses he suffers when, as happens 7 times out of 8, he drills a dry hole. Federal regulation will discourage the investment of risk capital that is needed for new gas discoveries. We already have evidence of this. In the past 2 years, since Federal controls have been in effect, additions to gas reserves have drastically decreased. Moreover, many producers in Texas, Oklahoma, and Louisiana—instead of submitting to Federal regulation which gives them less than a fair price on sales in interstate commerce—have begun to divert their gas to local utilities and to nonfuel uses, such as the manufacture of carbon black.

If Federal controls are kept on, the present trend is bound to continue: Less and less gas will be added to present reserves, and more and more of the gas that is available will be diverted for local use in the gas-producing States. This means that the Wisconsin gas consumer will have to pay higher and higher prices for gas, and it may mean, in the not too distant future, that the gas supplied to Wisconsin and other States located at great distances from the producing areas will be cut off altogether.

The Harris bill seeks to prevent this from happening. It proceeds on the theory that the consumer's best protection against high prices is the free market. Let me add that in the event a single gas producer corners some section of the market and tries to hike his price above the market level, the Harris bill provides adequate protection. It prevents any producer from selling gas in interstate commerce at higher than the reasonable market price.

Finally, let me express my fear that Federal regulation of this competitive industry is a step toward socializing our entire economy. If gas production is subjected to Federal regulation, there is no logical reason not to regulate coal and oil production. And if all fuel production is regulated, why stop there? Why not impose Federal controls on the production of cheese and milk? To prevent socialization of our country, I believe Americans must stand together and oppose the attempts of the planners and the socialists to pick off competitive industries, one by one.

SENATE

MONDAY, JANUARY 23, 1956

(Legislative day of Monday, January 16, 1956)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

Dear God and Father of mankind, in the miracle of another dawning our glad hearts rejoice with gratitude that new every morning is the love our waking and uprising prove—as fairer than morning, lovelier than daybreak, steals upon us the sustaining consciousness that we are with Thee.

We pause at the beginning of another week, with its pressing cares and urgent concerns, which affect multitudes of individual lives, that with a sense of Thy overshadowing presence, in the secret of Thy pavilion we may take refuge from the strife of tongues. Through the lips that speak in this forum of a free land, may there be heard by a listening world the solemn summons to men of good will of all kindreds under the sun, to a new commonwealth of all peoples in which power shall be administered as a sacred trust, dedicated to the dignity of every child of Thine and to the common good.

We ask it in the name of the Elder Brother of humanity, Son of God and Son of Man, whose at last shall be the kingdom and the power and the glory. Amen.

THE JOURNAL

On request of Mr. CLEMENTS, and by unanimous consent, the reading of the Journal of the proceedings of Friday, January 20, 1956, was dispensed with.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the Senate by Mr. Miller, one of his secretaries.

REPORT OF NATIONAL ADVISORY COMMITTEE FOR AERONAUTICS—MESSAGE FROM THE PRESIDENT (S. DOC. NO. 90)

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which was read, and, with the accompanying report, referred to the Committee on Armed Services and ordered to be printed as a Senate document.

To the Congress of the United States:

In compliance with the provisions of the act of March 3, 1915, as amended, establishing the National Advisory Committee for Aeronautics, I transmit herewith the 41st annual report of the Committee covering the fiscal year 1955.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *January 23, 1956.*

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. KILGORE. Mr. President, I ask unanimous consent that the Committee on the Judiciary be authorized to meet on Wednesday next at 2 o'clock, in a room convenient to the Senate Chamber. A great number of private-claim bills are to be processed, and I should like to arrange for an afternoon meeting of the committee on Wednesday, in a room convenient to the Senate Chamber. Members of the committee have agreed to attend such a meeting if unanimous consent can be obtained to hold it.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from West Virginia? The Chair hears none, and it is so ordered.

On request of Mr. CLEMENTS, and by unanimous consent, the Subcommittee on Technical Assistance of the Foreign Relations Committee was authorized to meet during the session of the Senate today.

NOTICE OF CONSIDERATION OF TREATIES ON THE EXECUTIVE CALENDAR

Mr. CLEMENTS. Mr. President, on the Executive Calendar there are two treaties. The first is Executive Calendar No. 13, Executive F, 83d Congress, 2d session, being a protocol amending the Slavery Convention signed at Geneva on September 25, 1926. The second is Executive Calendar No. 14, Executive P, 82d Congress, 2d session, a protocol signed at Brussels on December 16, 1949, modifying the convention of July 5, 1890, concerning the creation of an International Union for the publication of customs tariffs, and so forth.

I give notice at this time that it is the intention of the majority leader to call up these treaties for consideration on Wednesday, after the morning hour, and immediately following a quorum call.

I ask unanimous consent that these two treaties be made a special order of business at that time.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE BUSINESS

Mr. CLEMENTS. Mr. President, I ask unanimous consent that there may be the usual morning hour for the presentation of petitions and memorials, the introduction of bills, and the transaction of routine business, and that any statement

made in connection therewith be limited to 2 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

PROHIBITION OF ALCOHOLIC BEVERAGE ADVERTISING IN INTERSTATE COMMERCE—PETITIONS

Mr. BUSH. Mr. President, I have received petitions from many men and women in Connecticut supporting proposed legislation to prohibit the advertising of alcoholic beverages by radio and television and in magazines and newspapers. The signatures are too many to print in the RECORD, but I should like the RECORD to show that, as of this date, 1,526 names appear on the petitions which have been sent to me and which I ask to have referred to the Committee on Interstate and Foreign Commerce.

The PRESIDENT pro tempore. The petitions will be received and referred to the Committee on Interstate and Foreign Commerce.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. KILGORE, from the Committee on the Judiciary, without amendment:

H. R. 1078. A bill for the relief of Dr. Robert C. Jalbuena (Rept. No. 1414);

H. R. 1084. A bill for the relief of Dorothy Antonia (Suk-fong) Leong (Rept. No. 1415);

H. R. 1092. A bill for the relief of George Henry Mahoney (Rept. No. 1416);

H. R. 1193. A bill for the relief of Dr. and Mrs. Ivan Pernar (Rept. No. 1417);

H. R. 1198. A bill for the relief of Kenneth K. W. Lau and Romana Say Soat Kheng, also known as Mrs. Anne Say Lau (Rept. No. 1418);

H. R. 1208. A bill for the relief of Mrs. Esther Moreno (Rept. No. 1419);

H. R. 1232. A bill for the relief of Salvador, Mercedes, and Miguel Chofre (Rept. No. 1420);

H. R. 1657. A bill for the relief of Louis B. Prus-Latkiewicz (Rept. No. 1421);

H. R. 1907. A bill for the relief of James Wilson (Rept. No. 1422);

H. R. 2049. A bill for the relief of Anastasios Seleimetzidis (Rept. No. 1423);

H. R. 2525. A bill for the relief of Madiros Kebabjian (Rept. No. 1424);

H. R. 2782. A bill for the relief of Josefa Martinez Infante (Rept. No. 1425);

H. R. 2945. A bill for the relief of Joan Frances Feeley (Rept. No. 1426);

H. R. 3188. A bill for the relief of William Lawler (Rept. No. 1427);

H. R. 4025. A bill for the relief of Mrs. Donald A. Howard (nee Miss Elsa Ursula Kuchinke) (Rept. No. 1428);

H. R. 4326. A bill for the relief of Regina Dippold (Rept. No. 1429);

H. R. 4548. A bill for the relief of Michele Pica (Rept. No. 1430);

H. R. 4612. A bill for the relief of Vladimir and Svatava Hoschl (Rept. No. 1431);

H. R. 4769. A bill for the relief of Mrs. Barbara (Pearson) Boycott (Rept. No. 1432);

H. R. 5869. A bill for the relief of Andreas (or Andrew) Voutsinas (Rept. No. 1433);

H. R. 5870. A bill for the relief of Jesajahu Braun (Rept. No. 1434); and

H. R. 7197. A bill for the relief of Mrs. Mary Christine Dowdy (Rept. No. 1435).

By Mr. KILGORE, from the Committee on the Judiciary, with an amendment:

S. 1026. A bill for the relief of Nihat Cengiz (Rept. No. 1436); and

S. 1897. A bill for the relief of Gosta Harry Roner (Rept. No. 1437).

By Mr. KILGORE, from the Committee on the Judiciary, with amendments:

H. R. 1887. A bill for the relief of Dr. Tsi Au Li (Tsi Gziou Li), Ru Ping Li, Teh Yu Li (a minor), and Teh Chu Li (a minor) (Rept. No. 1438).

DESIGNATION OF FEBRUARY AS AMERICAN HEART MONTH—REPORT OF A COMMITTEE

Mr. O'MAHONEY. Mr. President, from the Committee on the Judiciary, I report favorably, without amendment, the joint resolution (S. J. Res. 115) designating the month of February in each year as American Heart Month, and I submit a report (No. 1439) thereon.

The PRESIDENT pro tempore. The report will be received, and printed.

Mr. BARKLEY. Mr. President, on January 12, I introduced a joint resolution authorizing the President to declare the month of February American Heart Month, in order to invite the attention of the people to the ravages of heart disease. The committee has reported the joint resolution without amendment; there is no objection to it, and I have the authority of the committee to ask unanimous consent that the joint resolution be now considered.

The PRESIDENT pro tempore. The clerk will state the joint resolution by title.

The LEGISLATIVE CLERK. A joint resolution designating the month of February in each year as American Heart Month.

The PRESIDENT pro tempore. Is there objection to the present consideration of the joint resolution?

Mr. BARKLEY. There is no appropriation involved.

Mr. KNOWLAND. Mr. President, reserving the right to object, was the joint resolution reported unanimously from the committee?

Mr. BARKLEY. It was.

Mr. KNOWLAND. I have no objection.

There being no objection, the joint resolution was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Resolved, etc., That the President of the United States is authorized and requested to issue annually a proclamation designating February as American Heart Month, and to invite governors of the States and Territories of the United States to issue proclamations for like purposes; and that the President's proclamations urge the people of the United States to give heed to the nationwide problem of heart and circulatory diseases, and to support all essential programs required to bring about its solution.

The preamble was agreed to.

SUSPENSION OF DEPORTATION OF CERTAIN ALIENS—REPORT OF A COMMITTEE

Mr. KILGORE. Mr. President, from the Committee on the Judiciary, I report an original concurrent resolution favoring the suspension of deportation in the cases of certain aliens, and I submit a report (No. 1411) thereon.

The PRESIDENT pro tempore. The report will be received, and the concurrent resolution will be placed on the calendar.

The concurrent resolution (S. Con. Res. 66) was placed on the calendar, follows:

Resolved by the Senate (the House of Representatives concurring), That the Congress favors the suspension of deportation in the case of each alien hereinafter named, in which case the Attorney General has suspended deportation for more than 6 months:

T-647943, Aguiar, Atanasio Roldan or Atanasio Roldan.

ALLEGED IRREGULARITIES IN CONNECTION WITH ERECTION OF GRAIN ELEVATORS IN PAKISTAN—REPORT OF A COMMITTEE—INDIVIDUAL VIEWS (S. REPT. NO. 1410)

Mr. McCLELLAN. Mr. President, on behalf of the Senate Committee on Government Operations, I wish to submit a report and make a very brief statement regarding it.

This report on Foreign Operations Administration grain elevators to be erected in Pakistan, criticizes the actions of former Director of FOA, Harold E. Stassen, charging him with poor judgment and bad business practices, and attempting to hinder and impeded the legitimate function of the subcommittee.

Were it not for the investigation by this subcommittee, there was every indication that Mr. Stassen would have proceeded to negotiate a contract at an excessive cost of almost $1 million to the United States taxpayer, even against the advice of specialists in his own organization.

The evidence presented at the hearings indicated collusion between Mr. Alfred E. Poulsen, vice president of the Agricultural Construction Co., of Los Angeles, Calif., and Mr. Robert H. Pinner.

Mr. Pinner, an old acquaintance and former business associate of Poulsen, received his appointment as a consulting engineer to FOA on the Pakistan grain-storage program on the recommendation of Mr. Poulsen, and the evidence showed that Pinner had clandestinely passed on information to Poulsen to assist his company in preparing its bids.

The report revealed that on May 25, 1955, copies of the subcommittte's hearings were referred to the Attorney General of the United States for appropriate action on possible violations of perjury and conspiracy to defraud the Government.

Regarding the statement in the individual views to the effect that the record shows that Mr. Stassen stopped the letting of a contract in December 1954 when the first adverse claims were made, in my opinion that statement is not in accordance with the facts. The Agricul-

tural Construction Co. received notice on January 4, 1955, that the contract was to be negotiated with them. I quote:

> We take pleasure in advising you that the Pakistan Government, with the assistance of the Foreign Operations Administration, is prepared to negotiate with you a contract for the grain-storage project.

Even as late as March 28, 1955, Mr. Stassen wrote a letter to me as chairman of this subcommittee, stating that he had found no irregularities in this matter and that he intended to proceed with the negotiation of the contract.

The minority's press statement that "Mr. Stassen offered his cooperation in his first letter to the subcommittee, the only difficulty arose when he insisted that employees of FOA should have the right of counsel when summoned before the subcommittee investigators and that star chamber sessions should not be held with FOA employees" is not in accordance with the facts. The facts are set forth on page 2 of the report for all to see. There it is pointed out that it was necessary for me to write on three separate occasions requesting material and data on this matter from Mr. Stassen, and even then it was not forthcoming. In addition, Mr. Stassen was not attempting to prevent star chamber proceedings as the minority describes them, but as explained by Mr. Saccio, who was representing Mr. Stassen, the latter wished to have his own personal representative present when interviews were held with members of his agency. These men had differed with Mr. Stassen's decision and the subcommittee members felt his representative being present at such an interview was a form of intimidation. Mr. Saccio testified that Mr. Stassen felt that the operating men in the agency should not be put in a position where their further usefulness to the agency will be impaired and that Congress should receive explanations of what had been done in his agency only from him (Stassen) or his senior deputies. There was never any question raised as to whether these men could have their own private attorneys. That is specifically provided for by the rules of the subcommittee and that issue was never broached.

As a result of the subcommittee findings the International Cooperation Administration, successor to the Foreign Operations Administration, is now preparing complete plans and specifications for new bids, a step which should have been taken at the very beginning.

The PRESIDENT pro tempore. Without objection, the report, together with the individual views, will be received and printed.

THE ILLICIT NARCOTICS TRAFFIC—REPORT OF A COMMITTEE (S. REPT. NO. 1440)

Mr. DANIEL. Mr. President, pursuant to Senate Resolution 67, 84th Congress, 1st session, from the Committee on the Judiciary I submit a report containing a summary of preliminary findings and recommendations of the Subcommittee on Improvements in the Federal Criminal Code, concerning the illicit narcotics traffic. I ask that the report be printed.

The PRESIDENT pro tempore. The report will be received and printed, as requested by the Senator from Texas.

REPORT ENTITLED "REPORTS TO THE CONGRESS BY THE SECOND COMMISSION ON ORGANIZATION OF THE EXECUTIVE BRANCH OF THE GOVERNMENT" (S. REPT. NO. 1441)

Mr. KENNEDY. Mr. President, from the Committee on Government Operations, I submit a report made by its Subcommittee on Reorganization, entitled "Reports to the Congress by the Second Commission on Organization of the Executive Branch of the Government," and ask that it be printed.

This report, approved unanimously by the Committee on Government Operations, is a factual presentation of the reports to the Congress by the Commission on Organization of the Executive Branch of the Government—the last Hoover Commission — including the Commission's task force reports and appendixes.

The committee report also lists by title, author, and committee reference the 237 bills introduced in the 1st session of the 84th Congress which relate to the Hoover Commission's reports concerning reorganization of the executive branch, with a cross-reference to implementation of the 314 specific recommendations made by its 20 reports.

This report was prepared by the subcommittee staff to provide Members of the Congress with a ready reference to the Hoover Commission recommendations as related to the specific bills which have been introduced to implement them. I believe it will be of inestimable value to Members, the executive branch, and the public.

I might say in submitting this report that it is the intention of the subcommittee on reorganization to examine carefully and intensively the Hoover Commission reports which have been referred to it and the accompanying legislation which has been introduced to implement those reports, or recommendations contained therein, and to hold hearings upon those matters which would provide more efficient government and more economical operations as expeditiously as possible.

Members of the Senate may recall that the first two bills which implement recommendations of the last Hoover Commission—dealing with more efficient disposal of surplus property and improved management of Federal records—which were reported favorably by the Senate Government Operations Committee last July, were passed by the Senate toward the close of the last session of the Congress.

The subcommittee is presently holding hearings on recommendations made by the Hoover Commission, and recently elaborated upon by former President Herbert Hoover, which would relieve the President of the United States of some of his heavy administrative burden. Hearings upon this matter will be resumed tomorrow morning.

The PRESIDENT pro tempore. The report will be received and printed, as requested by the Senator from Massachusetts.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MURRAY (by request):

S. 3004. A bill to authorize the Secretary of the Interior to compromise, adjust or cancel certain debts of individual Indians and Indian tribal organizations, and for other purposes; and

S. 3005. A bill to authorize and direct the Secretary of the Interior to convey to David Peters, or to his heirs or assigns, title to land held by the United States in trust for him; to the Committee on Interior and Insular Affairs.

By Mr. FULBRIGHT:

S. 3006. A bill to provide for the liquidation of Government-held stocks of cotton, and for the natural flow of American cotton into world trade channels at competitive prices; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. FULBRIGHT when he introduced the above bill, which appear under a separate heading.)

By Mr. KNOWLAND:

S. 3007. A bill to establish an immediate program to aid in reducing the public debt by providing that certain receipts from the sale of capital assets of the Government shall be used for such purpose; to the Committee on Finance.

(See the remarks of Mr. KNOWLAND when he introduced the above bill, which appear under a separate heading.)

By Mr. STENNIS (for himself, Mr. EASTLAND, and Mr. GORE):

S. 3008. A bill relating to cotton acreage allotments; to the Committee on Agriculture and Forestry.

By Mr. SALTONSTALL (by request):

S. 3009. A bill for the relief of Kiyoshi Kinoshita; to the Committee on the Judiciary.

By Mr. CASE of South Dakota:

S. 3010. A bill to authorize the Secretary of the Army to make a monetary allowance in lieu of providing a headstone or marker for the unmarked grave of a soldier or a member or former member of the Armed Forces; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. CASE of South Dakota when he introduced the above bill, which appear under a separate heading.)

By Mr. WELKER:

S. 3011. A bill for the relief of Chan Lee Nui Sin; to the Committee on the Judiciary.

By Mr. KERR:

S. 3012. A bill for the relief of Richard Rhen-Yang Lin and his wife Julia Lam Lin and their minor child Richard Rhen-Yang Lin, Junior; to the Committee on the Judiciary.

By Mr. KERR (for himself and Mr. MONRONEY):

S. 3013. A bill to extend the rights, benefits, and privileges granted to World War II veterans to certain citizens of the United States who entered the armed forces of governments allied with the United States during World War II, and to their dependents; to the Committee on Finance.

By Mr. LANGER:

S. 3014. A bill providing for the furnishing, free of charge, of gravel from wildlife refuges to the State (or political subdivision thereof) in which such a refuge is located for public road purposes; to the Committee on Interstate and Foreign Commerce.

S. 3015. A bill to confirm and protect the right of individuals to communicate with Members of Congress; and

S. 3016. A bill for the relief of Maryland Township, Carpio, N. Dak.; to the Committee on the Judiciary.

By Mr. KEFAUVER:

S. 3017. A bill to provide for the hospitalization and treatment of members of the Coast Guard and their dependents in hospitals and other medical facilities of the Armed Forces, and for other purposes; and

S. 3018. A bill to revise section 3 of the act of January 2, 1951, relating to registration of manufacturers of and dealers in gambling devices; to the Committee on Interstate and Foreign Commerce.

S. 3019. A bill for the relief of Moshe Davidovitz and Frieda Davidovitz; to the Committee on the Judiciary.

S. 3020. A bill providing for the adoption by the Tennessee Valley Authority of measures designed to eliminate the air pollution problem in Kingston, Tenn., occasioned by the operation of steam plants by such Authority; to the Committee on Public Works.

By Mr. KEFAUVER (for himself, Mr. LANGER, Mr. WILEY, and Mr. THYE):

S. 3021. A bill to amend title 18, United States Code, to make unlawful certain practices in connection with the placing of minor children for permanent free care or for adoption; to the Committee on the Judiciary.

(See the remarks of Mr. KEFAUVER when he introduced the above bill, which appear under a separate heading.)

By Mr. JENNER:

S. 3022. A bill for the relief of Dimitrios George Kousoulas; to the Committee on the Judiciary.

By Mr. CLEMENTS (for himself and Mr. BARKLEY):

S. 3023. A bill to amend the Watershed Protection and Flood Prevention Act in order that a greater number of local organizations may qualify for assistance under the provisions of such act; to the Committee on Public Works.

(See the remarks of Mr. CLEMENTS when he introduced the above bill, which appear under a separate heading.)

By Mr. KEFAUVER:

S. 3024. A bill for the relief of Donald Shang-Peh Kao; to the Committee on the Judiciary.

By Mr. SMATHERS:

S. 3025. A bill to amend paragraph (2) of subdivision (c) of section 77 of the Bankruptcy Act, as amended; to the Committee on the Judiciary.

(See the remarks of Mr. SMATHERS when he introduced the above bill, which appear under a separate heading.)

By Mr. DANIEL (for himself and Mr. JOHNSON of Texas):

S. 3026. A bill for the relief of Annunziata Gambini and Tomazo Gambini; to the Committee on the Judiciary.

LIQUIDATION OF GOVERNMENT-HELD STOCKS OF COTTON

Mr. FULBRIGHT. Mr. President, I introduce, for appropriate reference, a bill to provide for the liquidation of Government-held stocks of cotton and for the natural flow of American cotton into world trade channels at competitive prices. I am introducing this bill at the suggestion and request of Mr. Oliver O. Scroggin, Little Rock, Ark., who has had extensive experience as a cotton farmer and broker and who has given the cotton problem serious study. I believe this proposal has merit, and I hope the Committee on Agriculture and Forestry will give it serious and sympathetic consideration.

Mr. Scroggin appeared before the Senate Committee on Agriculture and Forestry on Friday, January 20, for the purpose of explaining this proposed solution to the cotton problem.

I ask unanimous consent that a copy of a letter from Mr. Scroggin to me dated November 10, 1955, explaining the proposals embodied in this bill be printed at the conclusion of my remarks in the body of the RECORD.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 3006) to provide for the liquidation of Government-held stocks of cotton, and for the natural flow of American cotton into world trade channels at competitive prices, introduced by Mr. FULBRIGHT, was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

The letter presented by Mr. FULBRIGHT is as follows:

LITTLE ROCK, ARK., *November 10, 1955.*

The Honorable J. W. FULBRIGHT,
United States Senator,
Old Post Office Building,
Little Rock, Ark.

DEAR SENATOR FULBRIGHT: I wish to thank you for the time given me in attempting to explain a possible solution to the cotton problem. As you have suggested, I am writing a letter so you may give the ideas further consideration.

Two results are essential for the success of any program. First, the liquidation of Government-held stocks. Second, the natural flow of American cotton into the trade channels of the world at competitive prices. Any program that does not accomplish this is doomed to failure. Another factor that must be given considerable thought is, that it is impossible for the American cotton farmer to remain solvent if he is forced to buy his needs in a protected market and sell his product in a free market. Eventually he will be squeezed dry. Yet, on the other hand, if he is unable to meet his competition of foreign growths and synthetics, he cannot continue long as a cotton producer. The only possible answer is a direct subsidy to the farmer or a large reduction in the prices of the things he must buy. There must be some offset for the high tariffs and high labor costs.

Out of this crop of around 15 million bales, the Commodity Credit Corporation, through its 90 percent of parity loan, will be forced to add some 4 or 5 million bales to its already burdensome stock of more than 8 million bales. This surplus in Government hands is a threat to the entire cotton industry, and doubly so as it is politically controlled. A fixed-price loan, based on acreage instead of bales, can only add to this surplus from year to year. Cotton must be produced for consumption rather than storage.

I suggest the following as a solution:

1. Eliminate all Government loans on cotton in the future allowing American cotton to seek its own value in the markets of the world. Any loan, whether it be 75 percent or 90 percent of parity, notifies the world a year in advance the minimum price of American cotton for the coming year. This gives foreign producers and manufacturers of synthetics a big advantage.

2. Many farmers have been producing inferior cotton for the loan in preference to consumption. The Commodity Credit Corporation has several million bales of such cotton in their stocks, so I would suggest, although it is not necessary for the success of my plan, that such cotton be stockpiled under a law to the effect that none of this cotton can be sold except in time of war or a national emergency.

3. Notify the world that none of the remaining stocks can be sold except at 105 percent of parity plus carrying charges.

4. Eliminate all acreage controls in the future and allow each individual farm the right to produce as it sees fit, taking its chances on world prices.

5. The Department of Agriculture has reduced the farmer's acreage allotment the past few years in the expectation of a production of 10 million bales of cotton. In every instance the farmer has increased his yield per acre, thereby producing crops of from 13 to 15 million bales. A control of production must be in allotted bales in preference to acres. Set up a figure of 10 million bales for the coming crop and prorate to each farm its share of this 10 million bales, based on its past history of production. Pay each farm a direct subsidy, basis Middling fifteen-sixteenths, for what it receives for its share on a free market and 90 percent of parity. However, until the surplus Government stocks are liquidated, make the payment in cotton or the rights to so many pounds of cotton, basis Middling fifteen-sixteenths. These rights could readily be converted into money through sales to the cotton trade.

As an illustration: A farmer has 160 acres of good cotton land. Under the present program he is allotted 32 acres in cotton. He goes to considerable expense to increase the yield on these 32 acres, as in most instances this plot of land must carry the load for the entire farm. Due to the droughts and poor markets, his attempts at producing other crops have not been very successful. Through his increased expense he is able to produce 40 bales of cotton, of which 32 will go into American mill consumption, 2 bales are sent to the world markets on the give-away program, and the balance goes into the Commodity Credit loans. The Department decreases his acreage allotment further the coming year, so his problem of making ends meet becomes greater from year to year.

Under my plan it would be up to the farmer to decide how much cotton he wished to plant, knowing that he is guaranteed 90 percent of parity on, say 32 bales, his share of the 10 million bale allotment. Any production over the 32 bales would be sold at world prices. If the world prices and demand were good, he would increase his production, but, if poor, he no doubt would stay within the range of his allotment. This, in itself, should act as a stabilizing influence on not only American production, but foreign growths and synthetics as well.

The subsidy payment in cotton could work as follows: A printed form could be given the farmer showing he is due 90 percent of parity on 32 bales of cotton—16,000 pounds. When he sells this 16,000 pounds, the difference between what Middling fifteen-sixteenths is quoted that day and 90 percent of parity on Middling fifteen-sixteenths would be the amount due him. For instance, if Middling fifteen-sixteenths is quoted at 27.35 and 90 percent of parity is 33.52, his subsidy would be 6.18 per pound, or $988.80. This right to purchase $988.80 worth of surplus stocks at the market price from the Commodity Credit Corporation could readily be converted into cash through a sale to the cotton trade. None of the surplus stock could be sold at market prices except through payment with subsidy rights, except as follows:

6. To further expedite the exportation of the surplus stocks, allow the Commodity Credit Corporation to accept 10 percent of any sale, but not more than 10 percent, in approved foreign exchange. This will help the countries that cannot obtain dollars to pay for cotton.

7. If a farm reduced its yield below its allotted share, pay it a subsidy in cotton also, until such time as the surplus stocks dis-

appear. As in the above instance, if the farmer raised only 14 bales, he would still be entitled to his subsidy of $988.80. Perhaps it would be helpful in keeping down production to pay an additional bonus for reduced production.

Such a plan as this would improve the quality of the cotton crops. It would be very much to the advantage of the farmer to produce a higher type of cotton. As an illustration, the above-mentioned farmer plants good seed and is careful with his picking, so his crop is worth 30 cents on the market; he receives 30 cents for his crop and 6.18 subsidy, making the value of his crop 36.17. But, on the other hand, if he planted a poor quality of cotton and his crop would only bring 20 cents on the open market, the net value of his crop would be 26.18.

It is my opinion that this plan will restore the cotton economy of the South to an active expanding economy, instead of a stagnant mess.

In a few years we would have a complete liquidation of Government-held stock through normal trade channels. The cotton trade certainly is in a better position to market these stocks in an orderly manner than the Government.

The efficient American cotton farmer would regain his standings in the cotton markets of the world, and regain at least a portion of his lost markets.

There is little doubt but that consumption of American cotton would increase 5 million bales annually. The American cotton mill would be in a better position to meet the competition of synthetics and importation of finished goods.

The export giveaway program could be eliminated as there would be no need for it.

This plan would benefit all concerned—the American cotton farmer, the taxpayer, the consumer, and the entire cotton industry.

Yours very truly,

OLIVER SCROGGIN.

PROGRAM TO AID IN REDUCTION OF PUBLIC DEBT

Mr. KNOWLAND. I introduce, for appropriate reference, a bill to provide that all receipts from the sale of capital assets, which normally would be covered into the general fund of the Treasury, shall be put aside for retirement of the national debt.

Mr. President, as all Members of the Senate know, the national debt now is $280 billion. If the Federal Government should start to reduce the debt at the rate of $1 billion a year, it would take 280 years for the debt to be retired. I believe the bill I am introducing would at least assure the American people that any sale of capital assets would be used for the gradual reduction of the national debt.

Mr. President, the text of the bill is not long, and I ask unanimous consent that it be printed at this point in the body of the RECORD, as a part of my remarks.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3007) to establish an immediate program to aid in reducing the public debt by providing that certain receipts from the sale of capital assets of the Government shall be used for such purposes, introduced by Mr. KNOWLAND, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

Be it enacted, etc., That in order to establish an immediate program to aid in reducing the public debt all receipts, covered into the Treasury for deposit in the general fund and resulting from the sale, after the date of enactment of this act, of any property of the Federal Government which is considered a capital asset under proper accounting procedures, shall be deposited into a special account which shall be established on the books of the Treasury. The Secretary of the Treasury shall from time to time utilize the money in such special account for the payment at maturity or the redemption or purchase before maturity of any obligations of the United States included in the public debt of the United States. All obligations of the United States paid, redeemed, or purchased with money out of such special account shall be canceled and retired and shall not be reissued.

MONETARY ALLOWANCE IN LIEU OF HEADSTONE OR MARKER FOR CERTAIN GRAVES

Mr. CASE of South Dakota. Mr. President, I am reintroducing for appropriate reference, a bill which I introduced in the first session of this Congress. The bill would authorize the Secretary of the Army to make a monetary allowance, in lieu of a headstone, to veterans' next of kin or to kin of others entitled to a Government headstone or marker.

We have carefully rewritten the bill to conform to suggestions made by the Secretary of the Army, in his report to the Chairman of the Senate Armed Services Committee, on October 5, 1955. As you know, Mr. President, the Quartermaster General of the Army administers the supplying of Government headstones.

I should like briefly to summarize our reasons for introducing the bill: Many next of kin would like to commemorate the graves of the deceased with a little better stone than the modest one supplied by the Government. With an allowance of about $25, roughly the current cost to the Government of supplying a stone or marker, they can add a little bit and can get a larger or more decorative stone.

We believe the present program of supplying a stone should parallel the program with reference to burial costs of veterans. The Government now makes an allowance of $150 to next of kin for burial. The Government does not just provide a GI issue casket, so to speak, for the deceased. So, we feel that the Government should not just issue a stone or marker if the next of kin desire something else.

This would, however, remain a matter of voluntary option to the next of kin. Under my bill they could receive the money or accept the stone now issued by the Government. Likewise, in a national cemetery, any stone provided would have to comply with the general scheme and propriety, as regulated by the administrators of the cemetery.

I am happy to say that in its national executive committee meeting on November 17–19, the American Legion approved the proposal in this bill. I hope other veterans' groups will give it favorable attention.

The bill is commended to the Senate for its early attention.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3010) to authorize the Secretary of the Army to make a monetary allowance in lieu of providing a headstone or marker for the unmarked grave of a soldier or a member or former member of the Armed Forces, introduced by Mr. CASE of South Dakota, was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

AMENDMENT OF CODE RELATING TO CARE OR ADOPTION OF MINOR CHILDREN

Mr. KEFAUVER. Mr. President, I am about to introduce a bill, and I ask unanimous consent that I may speak on it in excess of the 2 minutes allowed under the order which has been entered.

The PRESIDENT pro tempore. Without objection, the Senator from Tennessee may proceed.

Mr. KEFAUVER. Mr. President, on behalf of myself, the Senator from North Dakota [Mr. LANGER], the Senator from Wisconsin [Mr. WILEY], and the Senator from Minnesota [Mr. THYE], I introduce, for appropriate reference, a bill to amend title 18, United States Code, to make unlawful certain practices in connection with the placing of minor children for permanent free care or for adoption. This is a matter of deep personal concern to every American who has an ounce of compassion in his being.

I refer to the plight of the many thousands of children in this Nation who are deprived each year of their God-given right to a normal upbringing under the loving care of their natural parents, for any one of a number of reasons beyond their control, and who are therefore subject to adoption.

Under our present laws, anyone who arranges to sell a car, a motorboat, or any other piece of property illicitly obtained across State lines would be subject to arrest and imprisonment. Yet, Mr. President, there are no Federal regulations governing the sale of a child, however obtained, across State lines.

Are the children of this country not entitled to at least the same measure of protection that we give to a secondhand car? Under present law, they are not. It is for this reason that I introduce the instant bill imposing criminal sanctions against persons engaged in the commercialized placement of children for adoption across State lines.

This portion of the measure is designed to combat the so-called interstate baby-selling racket.

The bill also provides for a simple, effective, and constructive method of safeguarding the natural parents, the child, and the adoptive parents against irresponsible and careless interstate placement of children, even when there is the absence of a profit motive.

Mr. President, it is a wonderful and happy development that so many fine and decent Americans are eager to invite children into their homes for adoption.

Last year, more than 90,000 adoption petitions were filed in the United States. While it is true that there are still infants who are difficult to place for reasons of racial origin or physical and mental capacities, the demand for easy-to-place infants so far exceeds the supply that a spirited competition exists in all parts of the country to obtain these children for adoption.

This situation was called to the attention of the Subcommittee To Investigate Juvenile Delinquency, of which I have the honor to be chairman.

As a result of our investigations, the subcommittee learned that a basic and tender human emotion—the urge toward parenthood on the part of couples who are deprived of children of their own—is frequently exploited by unscrupulous individuals whose only desire is for personal gain.

Mind you, Mr. President, I do not maintain that all persons engaged in the placement of children are irresponsible or motivated by profit. But there are enough unprincipled individuals involved to warrant Federal safeguards. And I am confident that well-intentioned persons who are assisting in the placement of children would welcome the establishment of standards to protect the rights of the child as well as those of the adoptive and natural parents.

Here is a typical, shocking example of the manner in which children are placed for sale:

An Oklahoma woman who testified at the subcommittee's hearings in Chicago on this subject last July admitted that she operated an interstate baby selling business from a farm in north Texas. She secured her clientele through newspaper advertisements. Her ads appeared in Oklahoma papers for more than a year. This woman has a criminal record of 27 arrests, and 7 felony convictions, including 1 for robbery.

Thirty-three States, including Texas and Oklahoma, as well as the Federal Government, do not make baby-selling a crime. Because of these wide-open loopholes in our State and Federal statutes, this female racketeer was able to operate her interstate traffic in infants until the law caught up with her. But her operations were not stopped because of her traffic in human life, but because two automatic pistols were discovered in her north Texas home—the same place she used to harbor unmarried mothers.

Had the legislation I am proposing today been then in force, she could have been removed from this nefarious racket at the very outset of her activities.

The investigations of our subcommittee revealed that during 1955, thousands of children were transported for sale—like so many sacks of flour—from State to State, in assembly-line fashion, for prices ranging usually from $500 to $3,500. In one recent case, which has just come to the subcommittee's attention, involving the placement of a child brought from Miami, Fla., to New York City, the price was $10,000.

The fact that in many cases this price was camouflaged in the guise of fictitious medical, legal, or service fees, only intensifies the seriousness of this traffic.

Law-enforcement officials at the local or State level are unable to cope with this vicious situation, either because they have no statute on which to act, or because the essential witnesses are scattered throughout the country.

It is imposing an impossible burden on a police force in a small community to ask its members to investigate and enforce a law that involves an essentially interstate situation. That is why I seek to bring before the attention of the Senate, Mr. President, a Federal law that will clearly define Federal responsibility in this area.

I wish to pay tribute to my colleagues, the Senator from Wisconsin [Mr. WILEY] and the Senator from Minnesota [Mr. THYE] for the bills which they have introduced on this subject. Also, the distinguished senior Senator from North Dakota [Mr. LANGER] has investigated and gone into the matter very thoroughly, and intends to make important proposals which would help a great deal. I am delighted to have him as a cosponsor of this measure.

I think the bill which I have introduced encompasses most of the good proposals of all previously suggested legislation.

The proposed legislation has another purpose: To insure that all children sent across State lines for permanent free care or adoption are accorded a proper degree of protection against irresponsible or careless placement.

Its requirements are simple: In all cases where children are adopted, a study must be made of the suitability of a prospective adoptive home for the child. It is important that this study be made before the child has been in the adoptive home for such a long period of time that the removal of the child from an undesirable environment would only result in tragedy.

This study now often takes place 3 months to a year after a child has been placed, when it is obviously far too late to rectify an unwholesome situation.

The proposed legislation requires that the study or investigation be made prior to the placement and transfer of the child across State lines. The study would be made by the State department of public welfare of the State in which the child will reside. This department will then determine whether the proposed placement is in the best interest of the child. If the answer is affirmative, the department will approve the child's admission into the State, for adoption. Although the passage of money or other compensation does not enter into this aspect of the bill, it is predicated on the obvious necessity to protect the child against improper placement.

The proposed legislation is also designed to give protection to children who are permanently placed, but never are adopted. Our investigations revealed that a vicious and deceitful trick is frequently employed by professional baby brokers in this connection: We found that a natural mother frequently is placed in a hospital under the name of the prospective adoptive parents, who innocently accept the proposal as one best for the child and themselves. The birth certificate then is made out in the name of the adoptive mother. There is no formal adoption in these situations. The child is thereby deprived of all the protection and security that an adoption decree would give him. These cases are occurring with such frequency that it is mandatory to root out this practice. The bill therefore covers these situations.

In conclusion, I should like to emphasize that the proposed legislation is not intended in any way to remove or interfere with the basic responsibilities of the States in dealing with adoptive matters. Already over 70 percent of the States have in operation laws regulating and controlling in some manner the importation and admission into their States of children for adoption or care. Rather, the bill is intended to combat situations which are beyond the control of the States, and to eliminate the tragic and sordid interstate traffic in children.

Mr. President, I commend the bill to the attention of the Senate. In so doing, I should like to ask, again: Are not the children of this country entitled to at least the same measure of protection that we give to a secondhand automobile?

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3021) to amend title 18, United States Code, to make unlawful certain practices in connection with the placing of minor children for permanent free care or for adoption, introduced by Mr. KEFAUVER (for himself, Mr. LANGER, Mr. WILEY, and Mr. THYE), was received, read twice by its title, and referred to the Committee on the Judiciary.

AMENDMENT OF WATERSHED PROTECTION AND FLOOD PREVENTION ACT

Mr. CLEMENTS. Mr. President, on behalf of myself and my colleague, the junior Senator from Kentucky [Mr. BARKLEY], I introduce, for appropriate reference, a bill to amend the Watershed Protection and Flood Prevention Act in order that a greater number of local organizations may qualify for assistance under the provisions of such act. I ask unanimous consent that a statement, prepared by me and my colleague, may be printed in the RECORD.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the statement will be printed in the RECORD.

The bill (S. 3023) to amend the Watershed Protection and Flood Prevention Act in order that a greater number of local organizations may qualify for assistance under the provisions of such act, introduced by Mr. CLEMENTS (for himself and Mr. BARKLEY), was received, read twice by its title, and referred to the Committee on Public Works.

The statement presented by Mr. CLEMENTS is as follows:

STATEMENT BY SENATOR CLEMENTS AND SENATOR BARKLEY

We are today introducing proposed legislation which would correct what we consider to be serious defects in the Watershed Protection and Flood Prevention Act, which is Public Law 566.

Our primary purpose in offering amendments to this law is to assure Federal participation in the cost of flood-prevention projects on small watersheds. The existing legislation, especially as interpreted by the Secretary of Agriculture in its administration, does not guarantee that the Federal Government will share in the cost of these projects. Interpretations of the intent of this legislation which have been issued by Secretary of Agriculture Benson reveal that he does not feel that the Federal Government should make a material contribution to the cost of these projects.

Congress has decided that as a matter of policy the Federal Government should recognize flood prevention and control as a national problem, and that the use of Federal funds on programs to relieve these problems is justified. That policy should be applied to the small watershed program.

This program is vitally important to the national welfare, because experience has shown that flood prevention needs to start in the upper reaches of the major rivers, on the small watersheds.

The amendments which we are offering would make specific Federal assumption of the construction cost of structural measures allocable to flood prevention. In addition, our amendments would permit the Government to share in the cost of other phases of the conservation, development, utilization and disposal of water. The present legislation is vague on this point.

The present law is too restrictive in connection with construction of reservoirs which would provide for storage of water in excess of 5,000 acre-feet. We propose that this provision be made flexible, subject to review by Congress. There can be times when it is vitally important that reservoirs to store water for purposes other than flood control be larger than 5,000 acre-feet, and it should be possible to include them in small watershed projects.

At the time of introduction of these amendments, we also wish to call attention to the fact that the budget for fiscal year 1957 submitted by the President does not contain sufficient funds to provide a realistic development of the small watershed program. Only $16 million is proposed, and that sum would provide for only 75 projects for the entire country. There could not even be that many if a reasonable share of the cost is borne by the Federal Government.

In the State of Kentucky alone there are 138 applications from local districts for small watershed projects. Obviously the approach proposed by the President would not provide for the kind of early attention to this problem which is justified because of its seriousness and the national welfare which is involved.

JOINT COMMITTEE TO STUDY MATTERS RELATING TO ELECTION, SUCCESSION, AND DUTIES OF THE PRESIDENT

Mr. GREEN. Mr. President, I submit, for appropriate reference, a concurrent resolution which provides for the creation of a temporary joint congressional committee to make a full and complete study of all matters connected with the election, succession, and duties of the President and Vice President from the time of their nomination until the termination of their terms of office. The purpose of the contemplated study is to achieve a sound basis for such remedial legislation as may be necessary to make the law certain and complete as to the Presidential election, succession, and duties.

Profound legal problems and grave constitutional questions are involved in any consideration of this phase of our system of government. While these issues are of the utmost importance, I believe they can be adequately considered by the Congress only after a thorough examination of the entire subject. To that end, I have submitted, either alone or with others, resolutions similar to the one which I now offer during each Congress for at least the last 10 years. In the 81st Congress, I sponsored Senate Concurrent Resolution 14, which passed the Senate on October 17, 1949, but died in the House of Representatives. I invite the attention of my colleagues to Senate Report No. 1096 of the 81st Congress, which favorably recommended the adoption of that resolution.

The concurrent resolution which I submit differs from those previous resolutions solely in its expansion to emphasize the necessity for defining and determining matters relating to the inability of the President to discharge his powers and duties, and to explore the best procedures for relieving the President of the vast accumulation of heavy burdens which presently fall squarely on his shoulders.

Although the subject matters comprehended by the terms of my concurrent resolution have been the cause of much speculation and discussion from time to time ever since the drafting of our Constitution, probably never before in our history has the need for their study and solution been greater.

Since September 24, 1955, when President Eisenhower was stricken with his dread illness, those issues raised by me on the floor of the Senate over many years have stood before the people of our country, and indeed the peoples of the entire world, in the sharpest focus.

On last Thursday, January 19, 1956, President Eisenhower held his first full-dress news conference since last summer. At that conference, in discussing the laws of Presidential succession and, in particular, succession pursuant to the disability of a President, President Eisenhower is quoted in the New York Times as having said:

> I think it is a subject that, in its broadest aspects, every phase of it should be carefully studied by the Congress, advised with by the Attorney General, and any kind of advice they want from the Executive Department, and some kind of a resolution of doubt reached. I think it would be good for the country.

I thoroughly concur in this forthright statement by the President. I believe the concurrent resolution which I now submit would provide the best vehicle with which to reach the desired objective. I hope my colleagues in the Congress will show their agreement with me by giving this measure early approval.

I ask unanimous consent that the concurrent resolution be printed in the RECORD at the conclusion of my remarks.

The PRESIDENT pro tempore. The concurrent resolution will be received and appropriately referred; and, under the rule, will be printed in the RECORD.

The concurrent resolution (S. Con. Res. 65) was referred to the Committee on Rules and Administration, as follows:

Resolved by the Senate (the House of Representatives concurring), That there is hereby created a joint congressional committee to be composed of 5 Members of the Senate to be appointed by the President of the Senate and 5 Members of the House of Representatives to be appointed by the Speaker of the House of Representatives. The joint committee shall select a chairman from among its members. A vacancy in the membership of the joint committee shall not affect the power of the remaining members to execute the functions of the joint committee, and shall be filled in the same manner as in the case of the original appointment.

SEC. 2. It shall be the duty of the joint committee to make a full and complete study and investigation of all matters connected with the election, succession, and duties of the President and Vice President from the time of the nomination of the President and Vice President, through the time of their election and time of their inauguration until the termination of their respective terms of office, with the purpose of making the law certain and complete as to the presidential election, succession, and duties. These matters shall include, but shall not be confined to, the following:

I. As to the election of the President and Vice President—

(1) Whether or not the President and Vice President should be elected by the electoral college, as at present, and if so whether or not the members should be legally bound to vote in accordance with their instructions.

(2) Whether or not candidates for President and Vice President should be nominated by national political conventions, as at present, and, if so, recommendations which should be made to the parties for improving the convention process, and, if not, a method which would be preferable.

(3) Whether or not provision should be made for the case where before the election of presidential electors, or after such time but before the election of President and Vice President, a candidate for the presidency or for the vice presidency dies, declines to run, or is found ineligible to take office if elected.

(4) Whether or not provision should be made for the case of the death of any of the individuals from whom the House of Representatives may choose a President whenever the right of choice shall have devolved upon it, and for the case of the death of any of the persons from whom the Senate may choose a Vice President whenever the right of choice shall have devolved upon it.

(5) Whether or not a constitutional amendment should be proposed under which failure of candidates for President and Vice President to receive a majority of the electoral votes shall be resolved by popular vote rather than by the House of Representatives.

II. As to succession to the office of President—

(1) Whether the provisions of Public Law 199 of the 80th Congress, approved July 18, 1947, relating to Presidential succession, adequately provide for all possible contingencies occasioned by the removal, resignation, death, or inability of both the President and the Vice President.

(2) Whether there are, or should be any differences between the status, powers, duties, and privileges of an elected President and of any other individual succeeding to the office of President.

(3) Whether or not the term of the Vice President or other individual succeeding to the Presidency should be limited to a duration of approximately 2 years, a new presidential election to coincide with election of Members of the House of Representatives where such individual succeeds to the Presidency during the first or second year of the term for which the President was elected.

III. As to inability of the President to discharge his powers and duties—

(1) How it shall be determined whether the President is unable to execute the powers

and duties of the office; and how the extent and duration of such inability shall be determined and defined.

(2) How it shall be decided that the inability requires the constitutional discharge by the Vice President of the powers and duties of the office of President, or results in the succession of the Vice President to the office of President.

(3) What provision should be made to determine a similar inability affecting the Vice President, or other individual, acting during the inability of the President.

(4) Whether there are, or should be, any differences between the status, powers, duties, and privileges of an elected President and of any other individual executing the office of President, during a period of temporary Presidential inability.

IV. As to the powers and duties of the President—

(1) Whether the heavy burdens of the Presidency necessitate the creation of an office of Executive Vice President; whether the establishment of such an office requires a constitutional amendment; and what powers and duties of the President should be assigned to such office.

(2) Whether the act of October 31, 1951 (65 Stat. 712) which provided generally for the delegation of Presidential functions should be modified or extended.

SEC. 3. The joint committee shall report to the Senate and House of Representatives the results of its study and investigation together with its recommendations, including drafts of any legislation recommended and of any proposed constitutional amendments considered necessary or desirable. The joint committee shall submit its final report to the Senate and House of Representatives not later than June 30, 1956, and thereupon the existence of the joint committee shall terminate.

SEC. 4. For the purposes of this concurrent resolution, the joint committee, or any duly authorized subcommittee thereof, is authorized to hold such hearings, to sit and act at such times and places during the sessions, recesses, and adjourned periods of the Congress, to employ counsel, clerical and other assistants, to require by subpena or otherwise the attendance of such witnesses and the production of such correspondence, books, papers, and documents, to administer such oaths, to take such testimony, and to make such expenditures, as it deems advisable. The expenses of the joint committee, which shall not exceed $25,000 shall be paid one-half from the contingent fund of the Senate and one-half from the contingent fund of the House of Representatives upon vouchers approved by the chairman of the joint committee. Disbursements to pay such expenses shall be made by the Secretary of the Senate out of the contingent fund of the Senate such contingent fund to be reimbursed from the contingent fund of the House of Representatives in the amount of one-half of the disbursements so made.

Mr. KILGORE, from the Committee on the Judiciary, reported the following original concurrent resolutions, which were placed on the calendar:

S. Con. Res. 66. Concurrent resolution favoring the suspension of deportation in the cases of certain aliens;

S. Con. Res. 67. Concurrent resolution favoring the suspension of deportation in the cases of certain aliens; and

S. Con. Res. 68. Concurrent resolution favoring the suspension of deportation in the cases of certain aliens.

(See concurrent resolutions printed in full, which appear under the heading "Reports of Committees.")

INVESTIGATION OF ACTIVITIES OF CERTAIN ORGANIZATIONS IN NOMINATION OR ELECTION OF MEMBERS OF CONGRESS

Mr. JENNER submitted the following resolution (S. Res. 190), which was referred to the Committee on Rules and Administration:

Resolved, That (a) the Senate Committee on Rules and Administration, or any duly authorized subcommittee thereof, is authorized and directed to make a full and complete study and investigation of organizations (other than duly organized political parties or political committees thereof) the principal purpose or activity of which is (1) to influence the nomination or election of Members of Congress, (2) to influence legislation in Congress generally so as to advance or implement an overall policy or philosophy of government to which such organization is committed, or (3) designed to, or does, affect the constitutional standing or responsibility of the Congress.

(b) Such study and investigation shall include, but shall not be limited to—

(1) the personnel, organizational structure, sources of finances and expenditures of each organization investigated by the committee;

(2) any contributions to election campaigns made by each such organization;

(3) the background of the principal individuals sponsoring or connected with each such organization;

(4) the effect, if any, on the constitutional role of the Congress produced as a result of the activities of each such organization; and

(5) the effect, if any, on freedom of individuals to elect Members of Congress resulting from the activities of each such organization.

SEC. 2. For the purposes of this resolution the committee, from the date of the adoption of this resolution until January 31, 1957, inclusive, is authorized to (a) make such expenditures as it deems advisable, (b) employ upon a temporary basis technical, clerical, and other assistants and consultants, and (c) with the consent of the heads of the departments and agencies concerned, to utilize the reimbursable services, information, facilities, and personnel of any of the departments or agencies of the Government.

SEC. 3. The committee shall report its findings, together with such recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than January 31, 1957.

SEC. 4. The expenses of the committee under this resolution, which shall not exceed $, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee.

AMENDMENT OF NATURAL GAS ACT, AS AMENDED—AMENDMENTS

Mr. LANGER submitted amendments, intended to be proposed by him, to the bill (S. 1853) to amend the Natural Gas Act, as amended, which were ordered to lie on the table and to be printed.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. KEFAUVER:

Address delivered by him at naturalization ceremonies in the United States district court, Washington, D. C., on January 10, 1956.

By Mr. WILLIAMS:

Address delivered by him before Baltimore Life Underwriters Association, Inc., and Maryland State Association of Life Underwriters, at their annual convention in Baltimore, Md., on October 14, 1955.

Address delivered by Hon. CLARENCE J. BROWN, Member of Congress, Seventh Ohio District, at the salute-to-Eisenhower dinner at Wilmington, Del., on January 20, 1956.

By Mr. HUMPHREY:

Address entitled "Political Requirements for Prosperity," delivered by him on December 7, 1955, before the Congress of American Industry, in New York City.

Letter written by him to the editor of the Minneapolis Star, on the subject of education as a Federal problem.

By Mr. LEHMAN:

Testimony by him before the Senate Judiciary Subcommittee on Immigration.

Statement by him relative to festival of music.

Address delivered by him at dinner sponsored by United Jewish Appeal, at Waldorf-Astoria Hotel, on January 21, 1956.

SECRETARY DULLES' FOREIGN POLICY

Mr. SMITH of New Jersey. Mr. President, there appeared this morning in the New York Herald Tribune a column written by David Lawrence, entitled "Korean War Called Proof of Need for Deterring Reds."

In this article Mr. Lawrence continues his discussion of the so-called deterrent policy. I feel it is a very valuable contribution to the present debate over American foreign policy.

I next wish to call attention to an article which appeared in the London Daily Telegraph and Morning Post of Tuesday, January 17, 1956. The article is on the same subject, and is entitled, "Dulles' Words and Policy." Here we have, in one of the most important British newspapers, a defense and explanation of Mr. Dulles' deterrent policy. It would appear that the people of Great Britain and their press are not in such a turmoil over the Life article as some would have us believe.

At a later date I shall have printed in the RECORD the full text of the speech recently made by Prime Minister Anthony Eden on this same matter.

I ask unanimous consent that the two articles to which I have referred be printed in the body of the RECORD in connection with my remarks.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of January 23, 1956]

TODAY IN NATIONAL AFFAIRS—KOREAN WAR CALLED PROOF OF NEED FOR DETERRING REDS

(By David Lawrence)

WASHINGTON, January 22.—If, as now indicated, there's to be a political debate in the Senate on foreign policy and the brink-of-war doctrine, the Democrats might well reread a most interesting speech that Adlai Stevenson, Democratic candidate for the Presidency, made in Chicago on September 29, 1952. Here is what he said:

"We all know that when the Communists attacked across the 38th parallel that was the testing point for freedom throughout the world.

"The men in the Kremlin thought they would be unopposed, and, if they were, the whole question of the future could be settled in one blow. If they had been allowed to conquer free people in Korea, they could have picked away at the free world and engulfed millions piece by piece, 1 by 1.

"Sooner or later we would have had to fight, and the later we made our stand the bigger and the harder the war would have been."

Significantly, Mr. Stevenson concedes that the "men in the Kremlin thought they would be unopposed" if they attacked in Korea. But why did they think so? Why weren't they warned by the United States Department of State that if they did attack, it would bring them to the brink of war?

The answer generally given is that Dean Acheson, Secretary of State in the Truman administration, did the opposite. He revealed publicly in a speech on January 12, 1950, that Korea was not within the defensive perimeter of the United States, which he defined as running from the Aleutian Islands to Japan to the Philippines.

KOREA EXCLUDED

He excluded Korea when he said that if any attack occurred on any country outside the defensive perimeter, the power of the United Nations would have to be invoked and he didn't think it had proved a weak reed to lean upon by any people who are determined to protect their independence against outside aggression.

But Soviet Russia never through the U. N., or, specifically, the United States, would intervene and it so happened that only 6 months after that speech was delivered the Moscow government's delegation happened not to be present at the Security Council meeting in New York City to exercise a veto when the U. N., on the initiative of the United States, did order collective resistance to the aggression in Korea.

Hence the Soviet miscalculated twice—about America and the U. N. itself. Had the United States, however, enunciated a policy of deterrence such as Secretary of State Dulles has been espousing, namely, to warn clearly in advance what will be done to repel aggression, it is conceivable that the Korean war might have been prevented altogether. The 140,000 American casualties might have been saved and also the millions of Korean, Red Chinese, and European casualties, to say nothing of the ten billion or more spent by the people of the United States in the Korean war.

LONDON EDITORIAL QUOTED

There is no misunderstanding of the Dulles policy by thoughtful observers in Europe. On January 17, last, in the midst of the furor over the Life article, the London Daily Telegraph was saying editorially about that article:

"No one can deny that in Korea and Indochina the Communists were challenging Western interests and that over Formosa they were threatening to do so. If the deterrent policy is not a complete sham, it therefore stands to reason that the United States was, as Mr. Dulles affirmed, brought to the brink of war. In each case the possibility of the United States declaring war in China was a major factor, affecting, if not determining, Chinese policy. To deny this or to attack Mr. Dulles for affirming it is to weaken by complication the whole conception of the deterrent policy on which the Western security rests. * * *

"But is it in substance so very different from the policy which Sir Winston Churchill was urging on the Chamberlain government in 1938—except that Mr. Dulles has a real saber to rattle, whereas Chamberlain's scabbard was empty? * * *

"Since the summit conference at Geneva it has been fashionable to talk about war having been outlawed by common consent. This gives a profoundly misleading impression. What happened at Geneva was that both sides understood each other to have renounced ambitions which might lead to war. From renewed Russian toughness it is possible that Moscow is confusing these two impressions."

HYSTERICAL OUTBURST

"No doubt, China, whose conduct in recent months has been noticeably mild, needs little encouragement to follow suit. That is why the hysterical outburst against Mr. Dulles' reference to war is doubly dangerous. If it were to confirm Russia's happy confidence that Geneva had cleared away the great deterrent, or if it were to encourage China to start probing again, then our distaste for hearing Mr. Dulles mention the awful word now might make us face the reality of war later."

The Daily Telegraph points out further that "to allow these marginal complaints" about the Life article "to provoke us into denouncing the central burden of his (Dulles') argument—that peace has depended in the past, and still depends, on American willingness to fight—is to cut off England's nose to spite Mr. Dulles' face."

The idea may be paraphrased for American domestic politics this way: for Democrats to denounce the Dulles doctrine for captious reasons and to imply an unwillingness of the United States to fight when it becomes necessary, would be to cut off America's nose to spite a Republican Secretary of State. It could push the United States over the brink into war.

[From the London Daily Telegraph and Morning Post of January 17, 1956]

MR. DULLES' WORDS AND POLICY

Anger at the brash way Mr. Dulles has recently expressed himself in Life, coupled with regret at the statement's unfortunate timing, has disguised one cardinal fact; that in substance the main offending passage simply reiterated the West's generally accepted deterrent policy. What is the essence of that policy? It is that the West, by holding itself free to launch nuclear war if and when its vital interests are challenged, hopes to deter potential enemies from further aggression. The corollary of this policy is that when hostile countries do challenge Western interests, as was certainly the case in Korea, Indochina and Formosa, we are brought just so much nearer the verge of war.

No one can deny that in Korea and Indochina the Communists were challenging Western interests and that over Formosa they were threatening to do so. If the deterrent policy is not a complete sham, it therefore stands to reason that the United States was, as Mr. Dulles affirmed, brought to the brink of war. In each case the possibility of the United States declaring war on China was a major factor affecting, if not determining, Chinese policy. To deny this, or to attack Mr. Dulles for affirming it, is to weaken by implication the whole conception of the deterrent policy on which Western security rests.

It is perfectly true that Mr. Dulles' description of diplomacy as "the ability to get to the verge without getting into the war" sounds like gratuitious saber rattling. But is it in substance so very different from the policy which Sir Winston Churchill was urging on Chamberlain government in 1938—except that Mr. Dulles has a real saber to rattle whereas Chamberlain's scabbard was empty? And are those organs of opinion which now so vehemently criticize Mr. Dulles was speaking with brutal frankness not those which found the same fault with Sir Winston before the war? There is every reason for criticizing the Secretary of State for discussing foreign policy in a mazagine article clearly designed for electoral propaganda, and for raking up the dead ashes of an Anglo-American misunderstanding over Dien Bien Phu, just before the Prime Minister's visit to Washington; but to allow these marginal complaints to provoke us into denouncing the central burden of his argument—that peace has depended in the past, and still depends, on American willingness to fight—is to cut off England's nose to spite Mr. Dulles' face. As a matter of fact, President Eisenhower's budget statement shows that he continues to be ready to shoulder this inescapable duty.

Since the summit conference at Geneva it has been fashionable to talk about war having been outlawed by common consent. This gives a profoundly misleading impression. What happened at Geneva was that both sides understood each other to have renounced ambitions which might lead to war. From renewed Russian toughness it is possible that Moscow may be confusing these two impressions. No doubt China, whose conduct in recent months has been notably mild, needs little encouragement to follow suit. That is why the hysterical outburst against Mr. Dulles' reference to war is doubly dangerous. If it were to confirm Russia's happy confidence that Geneva had cleared away the great deterrent, or it were to encourage China to start probing again, then indeed our distaste for hearing Mr. Dulles mention the awful word now might make us face the reality of war later.

ROTATING OF CCC STOCKS AS A CURB ON THE PRICE-DEPRESSING DUMPING OF CORN

Mr. HUMPHREY. Mr. President, one of the topics of great concern before the Committee on Agriculture and Forestry and also of great concern to the American farmer is the tendency on the part of the Department of Agriculture to dump supposedly deteriorating corn or other farm products on the market at distressed prices, thereby underselling farmers whom the Department of Agriculture is supposed to be protecting by means of the farm program. I have brought this matter to the attention of the Committee on Agriculture and Forestry and also to the attention of the Department of Agriculture.

I have prepared a statement on the subject, and I desire to have printed at this point in the RECORD my statement relating to the dangers involved in the dumping process in the case of so-called deteriorating or distress commodities.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ROTATING OF CCC STOCKS ASKED TO CURB PRICE-DEPRESSING DUMPING OF CORN

Curbing of the Secretary of Agriculture's authority to dump supposedly deteriorating corn or other farm products onto the market at distressed prices, underselling farmers they are supposed to protect, will be asked in the new farm bill today by Senator HUBERT H. HUMPHREY, Democrat of Minnesota.

Protesting what he termed had been a cruel hoax seriously depressing the corn market during the past year, Senator HUMPHREY said he would insist that the new farm bill contain a provision requiring the Secretary to replace by purchases of good quality stocks in the open market any commodities he is forced to sell because they are in danger of spoilage.

"The present farm law contains a necessary provision permitting the Secretary to sell rather than hold any commodities in danger of spoiling in storage," Senator HUMPHREY explained. "Nobody objects to that, but the present administration has

seized on this power as a 'dumping' vehicle to depress already low prices still further.

"The antispoilage provision was never intended as a market factor. If the Commodity Credit Corporation's holdings are acquired for the purpose of stabilizing prices, as the law requires, then these stocks should be rotated by being replaced with new commodities acquired in the open market whenever it becomes necessary to dispose of deteriorating commodities."

Senator HUMPHREY charged Secretary Benson had been endeavoring to use the "spoilage" loophole as a surplus disposal tool, regardless of the consequences on the farmer. The result, he declared, has kept the free market far below the price support levels, driving prices down to 60 percent of parity and rendering the support program on corn ineffective.

"Thousands of bushels of corn have been improperly disposed of in this way at bargain-counter prices, declared out of condition in borderline cases and yet accepted by the trade for normal feed use in direct competition with the products the farmer is trying to sell at decent prices. These supplies have sharply curtailed normal markets available to our farmers, and forced down the entire price level on corn.

"It is far from a secret in the grain trade that corn supplies labeled 'in danger of spoilage' by the Department of Agriculture are being purchased regularly by the trade and used to displace corn that would otherwise have been purchased from farmers.

"Such tactics as these, indicating the Department's willingness to undercut the market, have kept private dealers apprehensive about carrying any substantial inventories of their own, aggravating the Department's surplus problem and adding to its storage costs that otherwise would be borne by the private trade.

"In spite of all its lip service to preserving free markets, this is just one more illustration of the way the Department of Agriculture has consistently disrupted normal functions of such markets, led to administered low prices for farm products, and channeled too great a proportion of our commodities through Government hands," Senator HUMPHREY said.

"No matter what we write in the law, there will be trouble trying to stabilize farm prices as long as we have officials in the Department of Agriculture committed to lowering prices instead of encouraging higher prices. Secretary Benson talks about hopes for more buoyancy in the commodity markets as a result of new farm legislation, but there cannot be much buoyancy if traders know the Department is eager to dump its holdings and undersell the normal market at any excuse it can find."

NEED FOR FACTS REGARDING SURPLUS VERSUS INVENTORY FOR THE NATION'S NEEDS

Mr. HUMPHREY. Mr. President, in recent days and, in fact, recent months, there has been considerable evidence indicating a necessity for reevaluating or restudying our holdings of food and fiber in terms of national-security needs. I have found that the Government has never determined by means of definite figures what are the necessary reserves of food and fiber in the United States for strategic and national-security reserves.

Let me expound on this point for a moment. For example, under the Office of Defense Mobilization and the National Security Council, we have requirements for reserves of strategic metals. Those amounts of strategic metals are known, and the figures for them are ones which the Government has officially designated. But we do not have any such known requirements regarding food and fiber reserves. Therefore, we treat all the inventory or stocks of the Commodity Credit Corporation under the title of surpluses. The truth is that many or much of these commodities are not surpluses at all; in fact, at least a part of them should be designated as necessary, strategic, vital reserves in case of a great national emergency or act of nature.

Therefore, I have urged that the National Security Council determine what level of supply of various major commodities should be maintained, to be available in the public interest for immediate needs and for potential emergency needs. I have also asked that the Department of Agriculture make known to what extent its present holdings are normal inventory of the commodity trade, rather than real surplus beyond total domestic requirements, export needs, and safe reserves.

Mr. President, I ask unanimous consent that my statement regarding this particular matter be printed at this point in the RECORD. I also ask unanimous consent to have printed at this point in the body of the RECORD a letter relating to Government storage operations of grains and foodstuffs, which I have directed to the chairman of the Committee on Agriculture and Forestry. The letter deals with the commitments of the Government to the private and cooperative warehousing groups, for the storage of Government-owned commodities. The information the letter requests from the Department of Agriculture should be exceedingly beneficial to our committee and to the Senate, in the ultimate consideration of the farm bill.

There being no objection, the statement and letter were ordered to be printed in the RECORD, as follows:

JANUARY 22, 1956.

SENATOR HUMPHREY ASKS FACTS ON SURPLUS VERSUS INVENTORY FOR NATION'S NEEDS

Senator HUBERT H. HUMPHREY, Democratic of Minnesota, called upon the administration yesterday to "tell the Congress and tell the American people what is surplus and what is not in the Government's holdings of farm commodities."

He urged the Senate Agriculture Committee of which he is a member to (1) ask the National Security Council to determine what level of supply of various major commodities should be maintained as available, in the public interest, for immediate needs and potential emergency needs; (2) ask the Department of Agriculture to make known to what extent its present holdings are normal inventory of the commodity trade rather than real surplus beyond total domestic requirements, export needs, and safe reserves.

"Here we are in Congress, asked in the President's message to get rid of our surplus and cut back our agricultural production plant, without the slightest guidance from the administration as to what they mean by surplus, or what level of supply they believe should be retained in the public's interest to protect consumers against a future shortage," Senator Humphrey said.

"Instead of all the prattle about surplus to hide the failure of its farm program, it is time the administration gave us some facts about where it believes we should draw the line between safe supplies and surplus production.

"Instead of embarking recklessly on a get-rid-of-it-at-any-cost campaign, let us first find out what the Nation's needs are in terms of our growing population, our increased cattle numbers, and our possible emergency needs on the international scene."

If by surplus the administration means everything in the Government's hands, Senator HUMPHREY warned, "it is recklessly misleading the American people at the risk of stampeding us into shortages."

"The truth is that much of the Government's present commodity holdings are the normal inventory of the private commodity trade," Senator HUMPHREY said.

Senator HUMPHREY challenged the administration to reveal the decrease in inventories normally carried in private hands "since it first announced its intention to lower price support levels."

Much of the so-called surplus problem, Senator HUMPHREY said, is merely getting the private trade to "carry its own inventory, instead of having it carried at Government expense.

"Ever since this administration started lowering price supports and adopting other price-depressant policies, private commodity dealers have reduced their own normal inventories because they knew they could buy back all they wanted whenever they needed it later at lower prices from the Government.

"You cannot expect the trade to carry large inventories of its own as long as it thinks the Government might come along and lower prices. As a result, any surplus disposal program based upon domestic dumping at lower prices means the trade will be even less inclined to increase its own inventories, and our surplus will grow rather than dwindle."

The most effective "surplus disposal" policy that could be adopted right now, Senator HUMPHREY said, would be for Secretary Benson to announce he was going to ask Congress to restore 90 percent of parity for next fall's crop, but that the trade would have 90 days in which it could still buy from the Government at present support levels.

"Private traders would start rebuilding their inventories to normal levels overnight, greatly reducing the stocks in Government hands and drastically cutting Government storage costs," Senator HUMPHREY said.

"If an auto dealer were overstocked, he could not stimulate much business by publicly announcing prices would be lower 6 months from now. But he could attract business now, by revealing prices were going to be raised 6 months from now."

JANUARY 21, 1956.

The Honorable ALLEN J. ELLENDER,
Chairman, Committee on Agriculture and Forestry, United States Senate, Washington, D. C.

DEAR ALLEN: In view of the issue raised before our committee Friday about the extent to which one of our Minnesota grain cooperatives was benefiting from Government storage operations, I believe it only fair to ask that the record be completed by requesting the Department of Agriculture to provide full information on storage payments to all warehousemen in Minnesota, private as well as cooperative.

For that purpose, I urge you to have the committee staff obtain from the Department of Agriculture a complete listing which shows:

1. All the storage facilities in Minnesota approved by the Department for storage of CCC-owned commodities;

2. The total amount of storage utilized in each during the calendar year 1955;

3. The total payment to each for storage purposes during the same period;

4. Designation of which facilities have been given guaranteed occupancy contracts for such storage and which have not;

5. The amount of payment to each holder of such guaranteed occupancy contract covering space unused for storage purposes;

6. The extent to which each approved storage facility has been granted tax amortization benefits of accelerated depreciation.

Only in this way do I believe proper comparisons can be made to judge whether there is any validity to charges entered in our record pertaining to the storage benefits accruing to the Grain Terminal Association of St. Paul, one of our great Midwest cooperatives.

Furthermore, I believe the hearing transcript will show requests were made for further information about the total extent of the grain operations of this cooperative. Because it is a major competitor in the grain trade with other private firms, I do not believe it fair or just to ask the GTA to make any report of its operations not similarly requested of all its major competitors in the grain business.

To the extent that the same information is asked from any other grain handlers or dealers, I am sure officers of the GTA will be happy to provide detailed data on any of its operations to our committee.

As long as this subject of grain storage has been raised, I believe the committee should go further, looking carefully into what policies the Department of Agriculture has been following.

During the previous administration, a vigorous crackdown was made on grain handlers defrauding farmers and the Government through theft of grain. You, as chairman of our committee, were largely instrumental for exposing these thefts, and full cooperation of the Department of Agriculture was given in bringing charges against these crooked dealers. If I recall rightly, charges were filed against more than 300 grain handlers, involving some $7 million. More than 50 convictions were obtained, many others subsequently settled out of court, and some charges are still unresolved.

It is my understanding today that practically all of these same warehousemen have once again been approved by the Department for handling of Government-owned grain. The Department of Agriculture is again doing business with them. Of course, some of them went through mock reorganizations or name changes, but basically the same people are involved.

In my opinion, this situation calls for a full-scale investigation as soon as the farm bill is out of the way, either by our committee or, if you deem advisable, by the Senate's Permanent Investigating Committee.

If the information I have received is correct, it seems deplorable to me that men who defrauded the Government are now rewarded with new contracts at nearly double the previous storage fees.

It is more than deplorable when, in the face of such a situation, spokesmen for this administration have the effrontery to publicly criticize a farmer-owned cooperative on the ground that its primary interest is making money through grain storage.

Testimony of Mr. M. W. Thatcher, general manager of the GTA, flatly called such charges a lie. From my own knowledge of the situation in Minnesota, I support him most vigorously. The GTA's primary interest at all times has been the highest possible returns for its farmer members, and its dealings with the Government have at all times been as clean as a whistle.

If such charges are to be bandied about, however, it would be constructive to get the facts on the table for all to see.

Sincerely,

HUBERT H. HUMPHREY.

OPPOSITION TO THE HARRIS-FULBRIGHT NATURAL-GAS BILL—TELEGRAMS FROM MINNESOTA

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the body of the RECORD two telegrams I have received expressing opposition to the Harris-Fulbright natural-gas bill. One is from the mayor of Robbinsdale, Minn., informing me of the Robbinsdale City Council opposition, and the other is from the Hennepin County AFL–CIO Industrial Union Council.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

MINNEAPOLIS, MINN., *January 19, 1956.*

Senator HUBERT H. HUMPHREY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: The Hennepin County AFL-CIO Industrial Council is unalterably opposed to and protests the removal of governmental controls over natural gas. The resultant increase in gas rates would be felt very severely in Minnesota where many thousands of homes are heated by gas. We ask that you vote against any bill to remove governmental controls over natural gas.

ELEANOR HELMBRECHT,
Secretary-Treasurer, Hennepin County AFL-CIO Industrial Union Council.

MINNEAPOLIS, MINN., *January 18, 1956.*

Senator HUBERT HUMPHREY,
Senate Office Building,
Washington, D. C.:

The Robbinsdale City Council records its sincere opposition to the passage of the Fulbright bill, S. 1853, and solicits your support in seeing its defeat or return to committee for further hearings and amendment which would reduce the chance for any unfair rate increases to the consumers in our area. Best regards.

ROBERT A. MERWIN,
Mayor, City of Robbinsdale, Minn.

MINING PATENTS IN THE ROGUE RIVER NATIONAL FOREST

Mr. NEUBERGER. Mr. President, on January 19, the junior Senator from Arizona [Mr. GOLDWATER] criticized the coverage given by the Washington Post and Times Herald and Mr. Drew Pearson to the current congressional investigation of the manner in which mining patents in the Rogue River National Forest were granted to the Al Sarena Mining Co.

Mr. President, the national forests are the richest public lands belonging to the citizens of the United States. Their protection is an important duty entrusted by the people to the Congress. The effect on the national forests of the administration of our mining laws is far-reaching and, in a case such as that of the Al Sarena patents, deserves the careful scrutiny of responsible committees of Congress. Nevertheless, Mr. President, some Senators and Members of the other House have tried to obscure the Al Sarena case and have sought to prevent a full and complete hearing of the administration of our mining laws in that case.

As a Senator from Oregon, I am particularly concerned about the facts and conditions which have made an inquiry into the Al Sarena patents necessary. I believe the press deserves credit for having directed the spotlight of public attention to this case, and to the dangers which misuse of laws and careless procedures in granting mining patents would constitute to all of our irreplaceable national forests. As further instances of this alert interest of some segments of the press in the facts and in the important implications of the Al Sarena case, I ask unanimous consent to have included in the CONGRESSIONAL RECORD editorials about the Al Sarena investigation from St. Louis Post-Dispatch for January 16, 1956, and from the Christian Science Monitor of January 19, 1956.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch of January 16, 1956]

THE MINE IN THE FOREST

The partisan wrangling in the Senate and House subcommittees investigating the Al Sarena mining claims reflects no credit on either side.

The undisputed facts are that Secretary of Interior McKay has granted to Al Sarena Mines, Inc., of Trails, Oreg., for $1,500 mineral patents which also gave the company rights to a stand of timber in Rogue River National Forest which the Forest Service estimated was worth a quarter of a million dollars and which Republicans defending the action concede was worth $77,000.

Secretary McKay's predecessor, Secretary Chapman, repeatedly put off the Al Sarena claim. The Forest Service assayed the ore and found it not worth mining. The Bureau of Land Management of Mr. McKay's own Department made three assays with the same results.

The A. W. Williams Inspection Co., of Mobile, Ala., was chosen by Al Sarena to assay the ore. Its chief chemist and metallurgist, John A. McDaniel, testified the first assay showed "little or no mineral value." A later assay by the Mobile company showed a somewhat higher content of gold and silver. On the basis of this later assay, Secretary McKay overruled his own and the Agriculture Department's experts and granted a mining patent to Al Sarena.

Since the congressional investigation started, the Interior Department has displayed some very dubious tactics. Mr. McDaniel testified under questioning that an associate solicitor for public lands in Interior, James D. Parriott, asked him to come to his office, and discussed his testimony with him in advance. Senator SCOTT, of North Carolina, declared "the Department of the Interior is coaching witnesses."

At the hearing the same Mr. Parriott distributed to newspaper reporters a tax statement from the company under investigation, making himself an errand boy for the private interests, instead of a Government servant interested only in getting to the heart of the matter.

Still other questionable tactics earlier have been alleged. Senator SCOTT declares Clarence Davis, now Under Secretary and then Solicitor of the Interior Department, decided in favor of Al Sarena on the basis of the private company's second assay before he had even seen the report of that assay.

Mr. Davis first asserted that he had definitely seen the report. Later he changed his testimony to say he "guessed" he must have heard of its contents. A letter accompanying the report was marked received in Washington 2 days after Mr. Davis' decision.

All this suggests a puzzlingly hasty and slipshod procedure and an amazing haziness on Mr. Davis' part about the most significant single fact in his entire action.

Democrats on the subcommittee assert Al Sarena has spent only $8,000 on its mining claims, but Representative HOFFMAN, of Michigan, contends a substantial amount has been spent.

Senator NEUBERGER, of Oregon, foresees a "gigantic raid on the national forests" if the Al Sarena case is used as a precedent for the Government to overrule its own experts and grant patents on the basis of reports by assayers of the applicant's own choosing.

Here are enough facts to justify any investigating committee's digging in. The inquirers will want to know exactly how much Al Sarena has spent in developing its mining claim; how much it has already received from the sale of timber; what is the remaining stand worth.

Either the patent granted by Secretary McKay is a legitimate mining claim or it is a fraud and a giveaway of a sizable sum of the public's money. The public has a right to know which.

[From the Christian Science Monitor of January 19, 1956]

TIMBER VIA MINING CLAIMS

Under an old mining law the Al Sarena Mining Corp. of Alabama obtained since 1948 title to 473 acres of land in southern Oregon at a cost of $2,355. Following custom as well as law, it represented to the United States Forest Service that the land contained "silver and gold of sufficient value to justify a person of ordinary prudence in further expending his time and money. * * *" Thus, it gained rights to some $500,000 worth of timber.

However, it appears the Interior Department granted patents to this land over the protests of the Forest Service and Bureau of Land Management as to 300 acres of it, and that the claims had been twice refused by prior Interior Secretaries.

It is charged that the department's approval was based on findings of a Mobile, Ala., assayer (the mining company's home town), strangely chosen over assayers convenient to the claim. It is further charged that the samples against which these tests could be checked were thrown into the river, and that the then solicitor of the department issued his favorable ruling before the findings of the assayer could have reached him.

The solicitor, Clarence A. Davis, is now Under Secretary of the Interior. A Senate subcommittee is investigating the records and the charges. And observers are saying that the Al Sarena case may become as celebrated and as politically controversial as that of Dixon-Yates.

Last July the President signed an act intended to tighten up the old mining law so as to make it harder for one valuable natural resource to be exploited on what can amount to pretexts as to another. May we hope this will help to take care of the future. The charges made in the Al Serena case, impugning as they do the integrity of high officials in a Cabinet department, should be sifted thoroughly and proved or disproved.

FEDERAL ASSISTANCE TO PUBLIC SCHOOLS

Mr. NEUBERGER. Mr. President, the people of Oregon regard the education of our children as one of the most important trusts of society. For many years, they have unstintingly devoted heavy proportions of our communities' limited fiscal resources to make the standard of education in our State among the highest in the Nation. But the needs of new school construction in Oregon—estimated by the State superintendent of public instruction, Dr. Rex Putnam, at $100 million over the years just ahead—are perhaps beyond the fiscal powers of even Oregon's education-minded communities. Thus, Mr. President, the necessity and wisdom of a program of Federal financial assistance for State school construction has won widespread support in Oregon.

Other Senators, whose States no doubt are confronted with the same school emergencies, will recall that last year the administration rejected the principle of large direct Federal grants to the States for school construction, and instead offered only a program further to increase local borrowing at high interest rates—a program which was quite unacceptable to most of the Nation's education groups. At the same time, forward-looking Members of both this and the other House of Congress advanced legislation to offer real, immediate financial assistance to the States, so as to prevent a generation of American children from growing up with part-time schooling in inadequate, overcrowded, unsafe, and unsanitary buildings. Of these bills, the Kelley bill won the overwhelming approval of the House Committee on Education and Labor. This particularly pleased the present junior Senator from Oregon, who had been criticized during the 1954 campaign for his advocacy of Federal assistance to our schools.

Mr. President, all of us who are interested in early and effective action to meet the school crisis must be glad to note this year the administration's reversal of its 1955 position. The administration's belated recognition that only large direct Federal grants for State school-construction programs can meet the crisis has greatly improved chances that a good aid-to-education bill will pass at this session of the Congress.

However, although it has gone part way toward meeting the program for which the Democratic majorities in the 84th Congress have fought, the administration's bill does not go far enough toward meeting the needs of States such as Oregon. To help take care of the $100 million educational requirements forecast by the State superintendent of public instruction for the next 5 years, it would offer Oregon $2,332,000—or $11,660,000 spread over 5 years—while Oregon would have to provide matching funds of $13,390,000 or $2,678,000 annually.

It is true that, inadequate as it is, the administration plan is a step forward from its 1955 position; for it comes closer to meeting the proposals advanced last July by Adlai Stevenson in his great speech to the National Education Association, when he called for $400 million annually for school construction over the next 4 years. But as a representative of the people of Oregon, Mr. President, I must conclude that the Kelley bill reported by the House Education Committee comes closer to meeting our needs than that offered by the administration. Even that bill provides little enough in financial terms, measured against the dimensions of the need. But under it, Oregon would at least get $15,452,384 over the next 4 years—$3,863,096 annually—and would have to put up only an equal amount in matching funds.

Mr. President, under the administration bill, Oregon would receive less than it would have to raise in matching funds on the theory that it is not among the poorer States. It is true, as I have said, that the people of Oregon have done their best to find finances to pay for the educational standards which they consider so important. But to consider Oregon among the wealthier States is based on an inaccurate assessment of the nature of our resources.

In recent years, Oregon has not been a wealthy State. According to the Commissioner of Internal Revenue, internal revenue collections on a Nationwide basis decreased by 1.7 percent from 1952 to 1954, while collections in Oregon decreased by 15.2 percent. The only State to show a decline proportionately larger than that of Oregon was Wyoming, where collections fell off 16.5 percent. An analysis of this drop in Oregon tax collections, made for me by the Internal Revenue Service and by the Office of Business Economics of the Department of Commerce, brought out the fact that most of the decline was due to an abrupt drop in business income taxes, with lower individual and employment tax collections accounting for most of the rest. The records of the unemployment fund during that period tell the same story. And Oregon is only 17th among the States in average per capita income, which—while it is far from the bottom group in wealth—certainly does not make it one of the rich States of the Nation.

The fact is that Oregon's wealth lies in the natural resources, particularly the timber, within its borders. Hydroelectricity shares this value in our economy. Like many other raw-material producing and exporting areas throughout the world, Oregon may show relatively high per-capita income when the prices for its harvestable resources are high; but any slackening or interruption in the export process has immediate destructive effects on the economy of our State. We have little industry to stabilize that economy by the steady, year-round processing of our own bountiful resources.

Thus, Mr. President, I cannot agree with the administration's classification of Oregon as a State which must put up more in matching funds than it is to receive Federal assistance for its new schools. I would prefer the Kelley bill, under which Oregon would receive a greater total sum and on a 50–50 matching basis. I hope that even the amounts to be allocated under that bill, can be raised in the Senate to provide a more adequate school program for all States. However, Mr. President, the need is immediate, and thus I am pleased to be able to say that I expect to have the opportunity to support at least some bill in the Senate this year which will recognize the principle and at last initiate the process of giving Federal financial assistance to the construction of the thousands of new schools for which a generation of America's children are waiting—and let us never forget, Mr. President, that no child can stop growing older to wait for us to act.

UKRAINIAN INDEPENDENCE DAY

Mr. BUSH. Mr. President, on yesterday, January 22, thousands of Americans of Ukrainian descent observed the 38th anniversary of the independence of the Ukraine. It is a source of pride to me that New Haven, Conn., was the first city in the United States to recognize Ukrainian Independence Day. Again this year the blue and gold colors of Ukrainia

were flown over the New Haven City Hall.

Mr. President, I ask unanimous consent to have printed in the RECORD a statement summarizing the feelings of the American-Ukrainian community, and I regard it as a privilege to associate myself with the sentiments expressed therein.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

UKRAINIA'S STRUGGLE FOR FREEDOM

The centuries-old struggle for freedom and independence on the part of the Ukrainian nation constitutes an impressive chapter in the annals of human history. This indomitable will for national freedom clearly crystallized itself in the old Ukrainian Kievan state from the 9th to the 14th century, in the Ukrainian Kozak state from 1648 to 1783, and more recently in the Ukrainian National Republic from 1917 to 1920. As one of the first victims of Soviet imperialism, Ukraine, since the very inception of alien Bolshevik tyranny, has proved to be the Achilles heel of the Soviet Union. The destruction of its national churches, the horrible man-made famine of 1932–33, the mass murder at Vinnitsia in 1937–39, and the vast purges and deportations decreed by Moscow have failed to exterminate the spiritual and moral resources for national freedom in Ukraine. The historic capital of Kiev, with centuries of rich tradition and culture conserved in its vaults, still symbolizes today the indestructible hope and passion of a nation destined to be sovereign, free, and independent.

During the Second World War millions of Ukrainian patriots seized the short-lived opportunity of the German invasion to realize once again this hope, only to be frustrated in their valiant efforts by the scourge of another imperialism. But this unbending will continues to be strong and powerful in the epic struggle of the Ukrainian Insurgent Army (UPA) against the evil forces of Soviet imperialism, and in the resistance of the Ukrainian people.

As a nation of over 40 million people—the largest non-Russian nation behind the European Iron Curtain—Ukraine stands as one of our most important and natural allies in the eventual defeat of Soviet imperialism. Its historic claim to national freedom and independence cannot be ignored. Its place as a sovereign and equal partner in the mutual construction of the free Europe of tomorrow must be assured, if the foundation of permanent peace among freedom-loving nations is to be impregnable.

Mr. McCARTHY. Mr. President, 38 years ago yesterday, on January 22, 1918, the government of Ukraine issued a proclamation of independence. Shortly thereafter, Ukraine was invaded by the Bolsheviks, and was incorporated into the Communist Union of Soviet Socialist Republics.

Since that time, Ukrainian patriots have engaged in continuous and valiant underground resistance to the Soviet regime. Also the Ukrainian emigrés and others of Ukrainian descent have, in many parts of the world, continued to promote the cause of Ukrainian freedom.

On the anniversary of the declaration of Ukrainian independence, I think it is fitting that we in America commend these Ukrainian patriots, and, once again express our determination never to rest until freedom is restored to people now living in Communist captivity.

ADDITIONAL EVIDENCE OF MALADMINISTRATION IN PHILADELPHIA REVENUE OFFICE

Mr. WILLIAMS. Mr. President, the announcement last Friday by the Philadelphia Revenue Office that they had discovered nine more lawyers in the Philadelphia-Wilmington area who not only have failed to pay their Federal income taxes but also have not even been filing any income tax returns for the past several years, is more than disturbing—it is alarming.

Allegedly 3 of these lawyers live in the Philadelphia area, 2 in the Camden, N. J., area, and 4 from the Wilmington, Del., area.

This disclosure, coming as it does on top of two other cases involving nonpayment of taxes by prominent Philadelphia lawyers, raises certain grave questions which should be answered by the Treasury Department or, if necessary, by a congressional committee:

First. Is this failure on the part of these 11 lawyers to file tax returns a localized situation affecting the Philadelphia regional area alone, or can it be that this is only a part of a national pattern?

Second. Is this practice of not paying taxes one being followed just by members of the legal profession, or is it prevalent among other groups of self-employed individuals?

Third. If this is not to be considered merely a localized condition, then it is imperative that every revenue office throughout the country be immediately alerted and instructed to inaugurate a check of all self-employed individuals—attorneys or otherwise—to determine whether or not similar conditions exist throughout the country.

Fourth. Or if this is considered to be a localized situation, one confined to the Philadelphia-Wilmington area only, then it raises other questions:

a. Who as administrative officers were responsible for having allowed these deplorable conditions to develop?

b. Who are the men referred to in the grand jury report of January 6, 1956, as as having knowingly permitted Attorney Lemuel B. Schofield, the first case discovered, to get by for 10 years without filing his returns or paying his taxes, and what connection, if any, did they have with these latter named cases?

c. Are these officials still on the Federal payroll? If not, when did they leave and under what circumstances?

d. Had the Department been put on notice by their examiners, regarding the conditions in the Philadelphia office, and if so, why were the warnings ignored?

Both the Treasury Department and the Congress have a responsibility to furnish the answers to these questions without further delay.

If this be the result of administrative laxity or collusion between some official and these nontaxpayers then the public has a right to know. Those responsible should be identified and held accountable.

If failure to discover that these prominent individuals were not properly filing their tax returns and paying their taxes represents weakness in administrative practices and accounting procedures, then admit it and state what steps are being taken to see that it does not happen again.

If it represents a weakness in our revenue laws, as has been suggested by the grand jury report of January 6, 1956, then let both Congress and the Treasury Department unite in changing the law.

It is almost unbelievable that 11 members of the legal profession in one area would have deliberately refused either to file a tax return or to pay their taxes over a period of the past several years.

Certainly this could not possibly be attributed to ignorance of the law, because these men are lawyers.

Whether we like it or not, and regardless of how disturbing this whole situation may be, the problem is now before us, and both the Treasury Department and Congress must recognize their responsibility not only to clear up all questions but also to take the appropriate steps to bring to justice all those involved. In fairness to the individuals involved, before releasing any of the names I would suggest that the Treasury Department make a thorough check to make sure that their being listed as delinquent is not an administrative error or the result of improper crediting.

I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks an article entitled "Federal Grand Jury May Probe Dodging of Tax by Hundreds," published in the Philadelphia Daily News of January 21, 1956, in which is reported the case of the nine additional attorneys.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEDERAL GRAND JURY MAY PROBE DODGING OF TAX BY HUNDREDS

A Federal grand jury may be called into session soon to probe hundreds of income tax complaints against lawyers, doctors and other self-employed professional men in the Philadelphia area.

This appeared likely today as Internal Revenue Service agents dug deeper into reports that many failed to file income tax returns over a period of several years.

The Lemuel B. Schofield case, bared last summer, touched off the probe. It has been snowballing since then.

Shortly after Schofield's death last summer, it was revealed he had not filed income tax returns for 8 years. The noted criminal lawyer and former city safety director owed back taxes and penalties amounting to around $1 million.

Yesterday, L. Alfred Chamberlin, regional Internal Revenue Service Commissioner, said 9 more attorneys practicing in the Philadelphia area face prosecution for failure to file income tax returns. Their names were withheld.

The new cases do not include the Schofield nor that of a second Philadelphia lawyer, Clarence J. Corcoran. The latter was charged with failing to file returns over a 10-year span on an estimated income of $144,000.

Three of the tax-dodging attorneys are practicing in Philadelphia, Chamberlin said. Four practice in Wilmington and 2 in Camden, he said.

The probe was being broadened to include suspects in the stock brokerage and accountancy fields and other self-employed professional people. Thousands of returns of persons in this group are to be re-examined, Chamberlin said.

The area covered by Chamberlin's regional office includes Pennsylvania, New Jersey, Delaware, Maryland and the District of Columbia.

H. Leland Brown, director of the Internal Revenue Service office in Wilmington, said today the probe there was in full swing.

Asked why lawyers had been singled out, Brown replied:

"It could have been any profession. It just happened we examined the lawyer category first."

He did admit, however, that revelation of the Schofield case turned the spotlight on the attorneys.

Meanwhile, Senator JOHN J. WILLIAMS, Republican of Delaware, asked for a complete report from the Treasury Department on what he called the "scandalous situation" in the Philadelphia IRS office.

"An inquiry into conditions is long overdue," he told the Senate. He asked the Treasury to submit a report on "what action has been or is being taken."

"If such a statement is not available," WILLIAMS declared, "then I think Congress should recognize its responsibility and take the appropriate steps to place the responsibility."

INCOME TAXES BY COMPARISON—EDITORIAL FROM THE WASHINGTON OBSERVER

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a very interesting editorial which appeared in the Washington (Pa.) Observer of January 20. In the editorial, a comparison is made between income taxes for the various brackets.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INCOME TAXES BY COMPARISON

Now that it's time to file income tax returns, a few figures and comparisons are important.

First, the woman who quit the $64,000 question race this week had only $16,600 left after Uncle Sam took away her income tax.

But if she had gone on and won the $64,000, the second $32,000 would have netted her only $8,708. She would have had left out of the $64,000 only $25,308, and would have paid a total tax of $38,692.

But when the head of a household pays income tax on his earned income, interesting things may happen.

If his taxable income is $2,000, after all exemptions, he pays 20 percent, or $400. If the income goes up to $4,000, taxable, he pays $820. Another $2,000 of income and he will pay $1,300. The rate climbs progressively with income, so that $20,000 of taxable income means a tax of $6,260, or more than 40 times what the poor man with only $2,000 of taxable income is assessed.

From there it goes up rapidly. On $24,000 the tax is $7,200, on $32,000 it is $12,420, and on $100,000 it is $60,480. On $200,000 it is $145,480, and on $300,000 it is $235,480, leaving the taxpayer less than 25 percent of what he earned.

The taxpayer can keep only 9 percent of what he earns above $300,000.

Sometimes we hear that the rich should pay more of the income tax. But in view of the facts and the income-tax rates, we wonder.

For a man who earns a million, and there are said to be a few, would pay $872,480. He would have left only $127,520, less than 80 times the amount left to the man whose taxable income was only $2,000. But he earned 500 times as much. He pays 2,181.2 times as much tax.

It must be remembered that American business must be financed by those who have something left from their income after taxes. And wages are earned from business. Without business there can be no wages, and no jobs.

Some say incomes in the higher brackets should be taxed more heavily; others feel that business needs a larger margin for investment.

And we have noticed that those who cry for heavier taxes on the larger incomes also cry about heavier taxes if their own incomes creep up into higher income-tax brackets.

These figures are given so that taxpayers may make more intelligent demands, criticisms, or recommendations.

AMENDMENT OF THE NATURAL GAS ACT, AS AMENDED

The Senate resumed the consideration of the bill (S. 1853) to amend the Natural Gas Act, as amended.

THE INTENT OF CONGRESS

Mr. DOUGLAS. As the Senate was recessing on Friday I was engaged in a brief discussion of the legal history of the issue. I was pointing out that the terms of the Natural Gas Act are very clear. They state that the act shall "apply to the sale in interstate commerce of natural gas for resale for ultimate public consumption." As I pointed out, when gas enters a pipeline crossing State lines, it is obviously in interstate commerce, since, when it is sold to the pipeline, which later sells the gas, either directly to industrial consumers or to local distributing companies, it is obviously a sale for resale. Therefore, there is no doubt that the sale of gas by producers to interstate pipeline companies is a sale of gas for resale in interstate commerce for ultimate public consumption, and falls under the existing act, and is subject to regulation by the Federal Power Commission.

The attempt to say that the later exclusion from the act of the processes of production and gathering carries with it the exclusion of a sale for resale is ill-founded. Production and gathering are physical and technical processes, but a sale is an economic and legal transaction.

Although I do not intend to argue the meaning of those terms at great length, I wish to say it was commonsense for the Supreme Court in 1947, in its unanimous opinion in the Interstate case to rule that the sale by independent producers to pipelines of gas for interstate commerce was included in the act, and that it was similarly commonsense for the Supreme Court to rule as it did in 1954 in the Phillips case.

In addition to these two very important decisions of the Supreme Court, the Circuit Court of Appeals on not fewer than three occasions ruled to the same effect. Therefore, the attempt to argue that the Supreme Court in 1954 indulged in an unprecedented and unwarranted interpretation of the act does not stand up under the wording of the act and previous judicial interpretations.

If the exponents of the Harris-Fulbright bill were to say frankly that what they want to do is to change the meaning of the 1938 act, that would be perfectly understandable, and the issue could be fought out on that basis. However, to say that their proposal is to return to the original meaning of the 1938 act is incorrect and ill-founded.

In concluding my remarks on Friday, I was dealing with a small point which, however, has caused some confusion. From time to time witnesses testifying before congressional committees have pointed to a statement by Mr. DeVane, former solicitor for the Federal Power Commission, to sustain their contention that the 1938 act was not intended to cover the sale of natural gas in interstate commerce for resale.

It is true that Mr. DeVane in 1936, when asked if the bill upon which he was testifying conferred upon the Federal Power Commission the authority to regulate the price of gas under these conditions, replied, "No." Mr. DeVane did say that.

However, what the exponents of the Harris-Fulbright bill do not say is that this testimony by Mr. DeVane was given 2 years before the bill was passed, and was given in connection with a completely different bill.

At the conclusion of Friday's session, I was reading from the bill upon which Mr. DeVane was testifying, and which in its salient section 1 (b), and also in later sections, gave jurisdiction to the Commission solely to deal with transportation of natural gas, and said not a word about sale in interstate commerce of natural gas for resale.

In 1937 a very different bill was introduced, which in its original form was very similar to the act as finally passed. It conferred jurisdiction not merely in the transportation of natural gas in interstate commerce, but also in the sale in interstate commerce of natural gas for resale for ultimate public consumption.

Therefore, the attempt to quote the DeVane testimony as indicating the intent of Congress is a malformation, to put it mildly, of the actual legislative history.

I am sorry the distinguished Senator from Texas [Mr. DANIEL] inadvertently continued that contention in his speech on the floor of the Senate last week.

Perhaps the most conclusive evidence of all as to the actual intent of Congress is the colloquy which took place on the floor of the Senate during the debate on the bill between Senator Connally of Texas and Senator Burton K. Wheeler of Montana. Senator Wheeler was in charge of the bill. I read from page 9314, volume 81, of the CONGRESSIONAL RECORD for August 19, 1937. This was the question which Senator Connally, of Texas, representing a great gas producing State, asked of the Senator from Montana about the bill which the Senate was then debating:

Mr. CONNALLY. If a man should produce gas in my State and ship it in interstate commerce, then he would have to sell it at the price fixed by the Commission?

I ask Senators to listen to the reply of Senator Wheeler:

Mr. WHEELER. Exactly; at the wholesale price fixed by the Commission.

Could there be any clearer statement of legislative intent than that? That is a direct statement by the Senator in

charge of the bill, that the price of gas sold by a producer to a pipeline came under the content of the act and, therefore, under the powers of the Federal Power Commission.

That was not the only direct quotation on the floor of the Senate. Later, the great Senator from Idaho, Senator Borah, joined Senator Connally and Senator Wheeler in the discussion of the bill. I now read from page 9316 of the CONGRESSIONAL RECORD for the same day:

Mr. BORAH. If the Commission does not have power to fix the price of gas, who will fix it?

Mr. CONNALLY. Nobody, of course.

Mr. BORAH. Then it will be fixed by these combinations.

Mr. WHEELER. Exactly; and that is exactly what is happening.

The debate on the bill was therefore perfectly clear that Congress intended to give the Federal Power Commission authority to regulate the price at which gas entered interstate pipelines for ultimate resale to consumers.

As I have previously mentioned, two of the members of the Supreme Court who upheld the power of the Federal Power Commission in their majority opinion in the Phillips case were Members of the Senate at the time the final bill was introduced. Mr. Justice Black was in the Senate when the bill was introduced, and, I think, when the bill was debated, and Mr. Justice Minton, who was a Member of the Senate from Indiana, took, as the RECORD shows, an active part in the debate on the bill.

So I hope that this inappropriate quotation will be wiped off the books as being completely beside the point.

THE PHILLIPS CASE WAS NO SUDDEN ASSENTING OF FEDERAL AUTHORITY AND DID NOT CATCH THE PRODUCERS BY SURPRISE

The advocates of the Harris-Fulbright bill are obviously wrong in attempting to alter the meaning and scope of the 1938 Natural Gas Act. But their bland insistence that it was not until the Supreme Court's decision in the Phillips case that they had any idea that sales of gas to pipelines were under the jurisdiction of the Power Commission is an even more amazing argument. For while it is true, as Senator O'MAHONEY has said, that the Federal Power Commission has "wobbled all over the face of the earth" on this question, it is also true that as far back as 1947 the United States Supreme Court in the Interstate case had made it crystal clear by a unanimous opinion that the jurisdiction of the Commission covered the sale at wholesale in interstate commerce of gas destined for resale.

Mr. FULBRIGHT. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. FULBRIGHT. The Senator is well acquainted with the Chicago Sun-Times, is he not?

Mr. DOUGLAS. Yes.

Mr. FULBRIGHT. Does he regard it as a reputable newspaper?

Mr. DOUGLAS. Yes.

Mr. FULBRIGHT. Is the Senator familiar with the editorial on the gas bill which is published in that newspaper this morning?

Mr. DOUGLAS. I have not read the editorial.

Mr. FULBRIGHT. Does it not interest the Senator very much that a great newspaper like the Chicago Sun-Times differs with his interpretation with respect to the bill?

Mr. DOUGLAS. I would say that it indicates that good newspapers, like good Senators, sometimes go wrong on questions; and the Senator from Arkansas is conspicuously wrong in connection with this matter.

Mr. FULBRIGHT. I do not think the Senator should brush off my question in that fashion.

Mr. DOUGLAS. I am not brushing off the Senator's question. The Senator does not claim to be infallible, does he?

Mr. FULBRIGHT. No, but I am open to reason. I should like to pose one question to the Senator from Illinois. I recommend that he read the editorial. I hope he will not ignore it.

Mr. DOUGLAS. No; I shall read it.

Mr. FULBRIGHT. Since the editorial is in one of the great newspapers of his city, I should think the Senator would be interested in reading it.

Mr. DOUGLAS. I shall read it, I assure the Senator.

Mr. FULBRIGHT. What I hope the Senator will answer is this point—and it is made in the editorial and it has been made in other places. If the utility concept of regulation is applied to producers, how does the Senator expect the supply of gas in interstate commerce to continue? I am not referring to the production. When the question has been asked in the past it has always been said that production would continue. It is the question of interstate commerce in which I am interested at the moment. If the Senator would answer that one question for me it might cause us to reconsider our views, but I do not believe I have heard of the Senator's devoting his powerful reasoning to that particular point.

Mr. DOUGLAS. I am very glad the Senator from Arkansas now retreats from his position, because, for several days last week, the proponents of the bill said that exploration had been discouraged by the Phillips decision. Now that we have proved that exploration had not been interrupted, that there were more drillings in 1955 than in any previous year, and that exploration, both in wildcatting operations and regular drilling operations, had progressed, I am glad to see that the Senator has centered his attention upon interstate shipments. It is a great victory for our side to have the Senator withdraw from the position which he originally took.

Mr. FULBRIGHT. Of course, I do not withdraw from any such position whatsoever. The point I am making now is the same as I made then. Again, the Senator from Illinois, instead of answering my question, goes off in another direction, making fun of a supposed position which I did not take with regard to drilling. The drilling is, for purposes of interstate commerce, a quite incidental matter. The core of the matter, which the Senator from Illinois always finds a way to evade, is the dedication of the gas in interstate commerce. How does the Senator expect to make the producers dedicate the gas when it will be decidedly unprofitable to do so, relative to intrastate commerce?

Mr. DOUGLAS. I point out to my good friend from Arkansas that the prices received for gas sent to the pipelines will tend to be higher than the prices now received by the producers for gas destined for local consumption. There is already a price differential which pulls the gas into interstate transmission; and in comparing the prices received by producers for carbon black and other intrastate uses with the prices they receive for gas in interstate commerce, I think the Senator from Arkansas will find a wide differential.

Mr. FULBRIGHT. The Senator from Illinois knows that there is practically no more gas devoted to carbon black; that the real market is in petrochemicals, manufactured by such companies as Dow Chemical Co. in Louisiana, or Esso Standard in Baton Rouge; or, in my own State, Reynolds Metals, that single industry taking more than 100 million cubic feet of gas a day in Arkansas.

So the Senator from Illinois is quite out of date if he thinks that large amounts of gas are still devoted to carbon black, as was the case in the days before the completion of the great interstate lines.

Mr. DOUGLAS. Another one of the errors which the Senator from Arkansas makes is in his interpretation of the type of regulation which a conscientious Power Commission would provide under the act. Such a Commission would not fix so low a rate as to shut off in interstate commerce the gas needed for 21 million residential consumers or for the large number of industrial users. They would simply try to prevent the companies which stand in a strategic position from charging all the traffic would bear.

Mr. FULBRIGHT. If I understand the Senator from Illinois, he is now coming around to reasonable market price. That is what the bill proposes. The Senator talks about retreating from a position previously taken. He is retreating from the utility type of regulation if he adheres to his last statement.

Mr. DOUGLAS. No; I stand for a just and reasonable price.

Mr. FULBRIGHT. How under the decision of the Court does the Federal Power Commission have the discretion to allow whatever price is required to move the gas in interstate commerce?

Mr. DOUGLAS. As I read the decisions of the Court, they do not tie the Federal Power Commission to a strict, unalterable definition of the term "just and reasonable"; not at all. As I have said, if I were sitting on such a Commission—and of course I never will—I would regard a 6 percent return as inadequate in an industry which involves great risk. But the rates of return which the producers will get if the Fulbright bill should pass would certainly be unjust and unreasonable from virtually any standpoint.

If the Senator from Arkansas seems to think that the Commission should exercise reason in interpreting market price, why does he think they would not

exercise reason in interpreting "just and fair price"?

Mr. DANIEL. Mr. President, will the Senator yield for a comment on that question?

Mr. DOUGLAS. I yield.

Mr. DANIEL. I should think the reason the Senator from Arkansas might fear such action is that the Commission tried to allow a fair average field price in regulating certain producers, and only recently the Circuit Court of Appeals for the District of Columbia denied it the right to do so. The court said, in effect, "You must at least have as the point of departure the 'just and reasonable rate' which is the cost-plus price used in utility ratemaking."

So we have at times had the example of the Federal Power Commission attempting to fix a fair price or an average field price, but the court has said, "You cannot do that, because you are bound to have as the point of departure the standard utility rate base used for determining the profit allowed on utility-type services."

Mr. DOUGLAS. I have read the decision of the Supreme Court in the case to which the Senator from Texas has referred. I think it is quite apparent that what the Court said was that "just and reasonable price" should not be the sole test. But the Court did not exclude the Commission, under certain circumstances, from taking into consideration, at least as one factor, what the actual market price was.

I should furthermore like to ask, What is it the oil industry wants? They already have their dry wells written off, which is proper. They already have their intangible drilling and developmental costs written off, which is proper. But they also have a 27½-percent depletion allowance.

As I shall show somewhat later in the afternoon, the oil and gas industry pays a smaller fraction of its net profits in the form of taxes than probably any other industry in the country. Yet it wants "All this and heaven too." If it does not get sufficient incentive now, what incentive could it possibly be given?

When the Senator from Arkansas addressed his question to me, I was proceeding to the argument of the big producers in the Interstate case, when they made the same argument they later made in the Phillips case, namely, that the sale of gas which subsequently crossed State lines was outside Federal regulation, because it was an integral part of production or gathering. But the Court held—and we need not be reminded that it was by a unanimous vote—that this did not exempt such sales from being included under the provision in the 1938 act itself governing sales in interstate commerce for resale.

The Court, in an opinion by Chief Justice Vinson, held that—

> In denying the Federal Power Commission the jurisdiction to regulate the production or gathering of natural gas, it was not the purpose of Congress to free companies such as petitioner from effective public control. Exceptions to the primary grant of jurisdiction in the section are to be strictly construed. It is not sufficient to defeat the Commission's jurisdiction over sales for resale in interstate commerce to assert that in the exercise of the power of rate regulation in such cases, local interests may in some degree be affected. Prior to the decision of the Supreme Court, the Federal Power Commission and the circuit court of appeals had of course ruled similarly. There was also a court of appeals decision in 1942 to the same effect—see *Peoples Natural Gas Co.* v. *Federal Power Commission* (127 F. 2, p. 153). The Supreme Court refused to accept an appeal from this case, title 316, United States Code, section 700.

In fact it was this very ruling of the courts in the Interstate case that caused the gas-producing interests to sponsor the Moore-Rizley bill in the Republican-controlled 80th Congress. This bill aimed to do exactly what the present Harris-Fulbright bill would do, namely, first, to free from Federal regulation the sale of gas to the interstate pipelines by the so-called independent producers; and, second, to free the pipelines themselves from having the Power Commission fix the price which the pipelines were to give to gas which they produced themselves and which they took into their own long-distance lines.

The Moore-Rizley bill passed the House, but the resultant storm of indignation was so great that the bill never passed the Senate and indeed was not even brought out of committee.

But the big gas producers did not quit. They were so stirred up by the Interstate decision and by the fact that the Power Commission in a burst of courage asserted its jurisdiction, that in 1949–50 they sponsored the Kerr bill, which came before this body in the latter year. Most of us can remember that bill even after 6 years and the very vigorous debate which it occasioned. I certainly can, because for a solid month I faced the genial, brilliant, and powerful Senator from Oklahoma. The Kerr bill, however, was not quite so bad as the Moore-Rizley bill or its modern sister, the Harris-Fulbright bill, since it did not free the pipelines themselves from regulation of the prices allowed them for the gas they produced.

The Kerr bill passed the House by the narrow margin of 176 to 174, and the Senate by a vote of 44 to 38. But it was vetoed by President Truman, and no effort was made to override that veto.

But still the giant gas producers refused to quit. They induced the Federal Power Commission to refuse to take jurisdiction over the price which the Michigan-Wisconsin and other pipelines were compelled to pay to the Phillips Co. for gas which ultimately went to Michigan, Wisconsin, Missouri, and Iowa, and to certain other States as well. They thus attained by administrative refusal to act what they had sought to secure by legislation. I shall later hint at some of the reasons for this reversal of opinion on the part of the Commission.

But upon suit of the cities of Detroit and Milwaukee and the States of Wisconsin and Michigan, first the circuit court of appeals and then the Supreme Court, as I have said, reversed the decision of the Power Commission and told them to assume affirmative jurisdiction over the price at which the pipelines bought gas from the so-called independent producer—in the Phillips case, Phillips was the sole supplier—which was destined to enter interstate commerce and, by resale to distributors, to be sold to the general consuming public.

If the decision of the courts is carried out, then there must be general regulation of such prices, namely prices at which gas is sold by producers to interstate pipelines for interstate transmission and sale.

It is to escape these very consequences that the Harris and Fulbright bills were introduced, and this is why they are being pushed just as the Moore-Rizley and Kerr bills were pushed, to reverse the decision of the highest courts in the Interstate case.

In the light of the clear language of the act, the clear explanations of Senator Wheeler in Senate debate, the clear rulings of the courts in 1942, 1946, 1947, 1953, and 1954, and the previous unsuccessful drives to amend the act in 1947 and in 1950, it is difficult to understand how the producers can reasonably claim that the Phillips decision in 1954 surprised them.

WHY DID THE POWER COMMISSION WOBBLE?

It is perfectly true that the Federal Power Commission has at different times taken opposite sides on this question. In the late thirties and early forties, the supply of natural gas in the Southwest greatly exceeded the demand, with large amounts being burned or flared. It was then a buyer's market, and the Power Commission probably felt that there was little or no immediate need to regulate the price. Moreover, they were busy with transmission of pipeline gas.

For a brief period, however, they did assert jurisdiction over field prices, and were upheld by the circuit court in 1942 and again in 1946. But almost immediately afterward it, the Power Commission, then reversed itself and argued in the Supreme Court against its own decision and against the decision of the court of appeals. The Supreme Court, as I have previously stated, however, ruled in 1947 that the act gave the Commission jurisdiction. Even after the Interstate decision, the Commission did not take jurisdiction.

But after the completion of a thorough field survey, there was a change of opinion within the Commission, and the majority—3 out of 5—took a stand against the Kerr bill. President Truman reappointed one of the members of the Commission who had taken a stand against the Kerr bill.

Now pressures began to be applied against the Commission. As the senior Senator from Texas remarked with characteristic delicacy before the Senate Committee on Interstate and Foreign Commerce: "But he"—the Commissioner in question—"changed his mind, and there were changed appointments"—hearings, page 65. We all know what happened. President Truman reappointed one of the members of the Commission who had taken a stand against the Kerr bill, but the Senate refused to ratify the appointment.

Then there was a reverse switch inside the Commission which with the appointment of a new member—the new Commissioner voted against taking jurisdiction in the Phillips case—changed from a 3-to-2 majority for regulation, into a 4-to-1 majority against regulation.

One Commissioner changed his vote, and the new member, who had replaced the old member who had been against the Kerr bill, took a stand opposite to that of the member whom he replaced. Only one member of the Commission was then for regulation; Mr. Buchanan, of Pennsylvania. His term expired shortly after the new Republican administration took office. He was denied reappointment by the White House after the change of administrations, and resigned shortly before his term expired.

All of us as men know the great pressure which has been exerted by the big producers on the Commission and upon its members, and the punishment which has been meted out to those who took an opposite stand. Since this is a real world, it is not to be wondered at that the majority of the Commission have chosen to play it safe, although there have been rumbles of dissent from time to time by one of the present Commissioners, namely, Mr. Draper, one of the most experienced members of the Commission, who has also recommended against the passage of this bill.

From this summary of the legal history, it is therefore apparent that the Harris-Fulbright bill seeks to set aside a clear and repeated ruling of the Supreme Court, which affirmed the duty of the Federal Power Commission to protect the public interest by regulating sales of natural gas in interstate commerce for resale.

The frequent decisions to this effect in Congress, as well as in the courts, and the producers' own unsuccessful efforts to amend the act in this respect demolish the claims of producers that they were surprised by the Phillips decision of 1954.

And the shifts and sidesteps and reversal of form of the Federal Power Commission—whatever appeals or pressures may have produced them—are at variance with the steady line of decisions by the courts and cannot reasonably be made the basis for a claim that the consumers of gas and the distributing companies and the pipelines have lost their rights to a protection given them in the Natural Gas Act.

STATE MINIMUM PRICE LAWS

Mr. President, here is one point which I should like to make very briefly. Suppose the Harris-Fulbright bill should pass—God forbid that it should do so—what then would be the situation so far as concerns the ability of the States to regulate the prices which could be charged for the gas produced within their own borders? In my remarks of last Friday I commented on the fact that, if the Attleboro and the Missouri-Kansas decisions, rendered in the 1920's, should stand, States would not have the right to regulate the prices of gas entering into interstate commerce. But, as we all know, two principal gas-producing States, Kansas and Oklahoma, have already asserted and exercised the right, in the absence of effective Federal regulation—and we have really had no regulation—to place minimum prices on natural gas at the wellhead in specific fields. Prices fixed by the State commissions have been progressively higher. Such laws have been proposed, but not yet enacted, in other States. It should be noted that the minimum wellhead prices set by these two States—Kansas and Oklahoma, who had them—were above the average price at which natural gas sold in interstate commerce.

I should like to comment for a moment on these State minimum laws. The oil and gas industries have favored such acts. They say they are against governmental control of prices, but they have fostered, and put through two State legislatures, and may put through more State legislatures, laws fixing minimum prices. In other words, they are opposed to Federal regulation which would protect the consumer by fixing maximum prices above which they could not go, but they are in favor of State regulation which would fix minimum prices which they may receive. So I suggest the record indicates that they are not opposed to governmental control of prices; they are merely opposed to governmental control of maximum prices in the interests of consumers.

Later, I shall comment on the inconsistency of their policy with respect to State regulation of output.

But, Mr. President, a very interesting point is raised in this connection. I have read the case of Cities Service Gas Co. against Peerless Oil & Gas Co., which was handed down by the Supreme Court in 1950, in volume 340, United States Reports, page 179; volume 71, Supreme Court Reports, page 215. While there may be some dispute between attorneys as to the precise ruling of the Court, I think there is a very real possibility that the Court would have upheld the State acts, had it not been for the provisions of the Natural Gas Act of 1938; giving jurisdiction to the Federal Government over sales for resale in interstate commerce. If the power of the Federal Government to regulate sales for resale in interstate commerce is knocked out by enactment of the Harris-Fulbright bill, it is quite possible that we may then have a situation in which these prices may be fixed by the respective producing States.

In this connection, I should also like to cite the case of *Natural Gas Pipeline Company of America* v. *Corporation Commission of Oklahoma* ((1955) 349 U. S. 44; 75 S. Ct. 578). If this should be so—and I am inclined to believe that it may well be—then, Mr. President, if the Harris-Fulbright bill becomes law and if Federal control over prices charged by producers for sales in interstate commerce is withdrawn, the States may well again fix minimum wellhead prices. Such minimum wellhead prices fixed by the producing States tend to be regulation in one direction only; namely, upward.

As Judge Hooker, of Virginia, said, I too submit that Congress alone has authority to protect the consumers of the States which have natural-gas production against prices fixed at the wellhead by State authorities in the producing States. What would happen, if each State had the power to fix the prices of the products it produced, which later enter interstate commerce. Not only would Texas, Louisiana, Oklahoma, and Kansas have the power to hold up consumers in connection with the sale of natural gas, but think of the power the State of Minnesota, for instance, would have in the case of pig iron, or the power which California, Arizona, Texas, and Florida would have in connection with the sale of citrus fruits, or the power which would be placed in the hands of various localized industries throughout the country. That situation would generate a condition of commercial anarchy in which the States in which the production of certain articles was concentrated would be able to hold up the rest of the country by the threat to charge ever higher prices. As Judge Hooker, of Virginia, said—and certainly he is a loyal subscriber to what he understands to be States rights—this would expose the rest of the country to the selfish interests of the producing States; whereas granting authority to the Federal Government merely would put into neutral hands the question of the fixation of prices.

"The whole issue is whether the price should be fixed by an interested party or by a disinterested party," Judge Hooker testified.

The consuming States alone do not have the power to regulate prices under the present act. If it is repealed, it may well be that the producing States will have that power. The purpose of the present act is merely to enable a neutral authority, namely, a national authority, to take into consideration the interests of both producers and consumers.

So passage of the Harris-Fulbright bill would be a serious step backward. It was to avert precisely such commercial anarchy that the provision of conferring power on Congress to regulate commerce between the several States was inserted by James Madison into the Federal Constitution. I have read with great care the proceedings of the Constitutional Convention of 1787, and I have also read most of the Madison Papers in connection with that period.

Mr. President, I have finished my brief discussion of some of the legal aspects of the 1938 act.

THE ALLEGED COMPETITION IN THE PURCHASE AND SALE OF GAS IN THE FIELD IS GROSSLY INADEQUATE TO PROTECT THE CONSUMER—WHY A MONOPOLY POSITION IS PRESENT IN THE SALES FOR RESALE OF NATURAL GAS IN INTERSTATE COMMERCE AND WHY THERE IS LITTLE OR NO COMPETITION—THE FACTORS LIMITING COMPETITION

Now I wish to pass to another main topic, namely, the question of whether there is adequate competition in the purchase and sale of natural gas in the field, so as adequately to protect the consumer. I shall take the position, which the facts show, that a monopoly or quasi-monopoly position is present in the sales for resale of natural gas in interstate commerce, and that there is, in fact, little effective competition.

Competition in the natural gas industry is limited in all three sectors of the industry — distribution, transmission, and production. It is limited in the distribution sector because the customer has but one place to buy his gas, namely, the local gas utility. It is limited because once he invests several hundreds of

dollars in gas appliances he has no effective alternative to gas for his stove, refrigerator, clothes dryer, or furnace unless he junks his appliances and his furnace at a cost of many hundreds of dollars. As has been stated by the distinguished Senator from Michigan [Mr. POTTER], the householder is in a sense a captive customer. The very able and distinguished Senator from Arkansas [Mr. FULBRIGHT] remarked at the hearings that if the consumers did not like the price they had to pay for gas, they could turn to oil or coal. With all deference to my good friend from Arkansas, who is one of the brightest ornaments of this body and of whom we are all justly proud, that remark is very similar to that of Marie Antoinette, who, when she was told at the outbreak of the French Revolution that the populace lacked bread, replied "They can eat cake."

It is also true that the distributing company is tied to the customers, for once the distributive gas mains have been laid, at a current expense exceeding $500 per customer, they cannot be moved or changed, except at prohibitive expense on the part of the gas utility.

Mr. POTTER. Mr. President, will the Senator from Illinois yield?

The PRESIDING OFFICER (Mr. NEUBERGER in the chair). Does the Senator from Illinois yield to the Senator from Michigan?

Mr. DOUGLAS. I am very glad to yield to the distinguished Senator from Michigan.

Mr. POTTER. The Senator from Illinois was commenting on the testimony of the author of the bill, the Senator from Arkansas [Mr. FULBRIGHT], when he appeared before our committee, and said that if the gas consumers do not like the price charged for the gas, they can use oil or some other fuel.

Mr. DOUGLAS. Yes. That is a correct statement, is it not, of what the Senator from Arkansas said on that occasion?

Mr. POTTER. Yes; it is.

I assume that analogy could be carried further, and it could be argued that it is not necessary to regulate the rates charged for electricity, because if the consumers do not like the rates charged them for electricity used for lighting their homes, they can use candles or kerosene lamps.

Mr. DOUGLAS. I think that is true. Similarly, it could be argued that it is not necessary to regulate telephone rates, because the public could use carrier pigeons.

Mr. POTTER. Yes; or could talk loudly through an open window.

I think the point made by the distinguished author of the bill was that natural gas is a luxury fuel; and being such, people do not have to buy it.

However, as the distinguished Senator from Illinois has pointed out, in view of the fact that consumers have individually invested $400, $500, or more in the purchase of appliances which use gas as a fuel, the consumers cannot overnight convert to another fuel without suffering great economic hardship. Therefore, in truth, the consumer is a captive customer. Therefore he is, in truth, a captive customer.

Mr. DOUGLAS. I thank the Senator from Michigan.

If there is any doubt as to what the Senator from Arkansas said, it will be found on page 18 of the hearings.

It is impossible for there to be two local gas companies competing for business in the same town. This makes gas very different from coal or oil. That is why the local production and distribution of gas was early recognized as a public utility and why rates to the customers were fixed by public regulation rather than entrusted to nonexistent competition.

But competition is also limited, or even absent, from the transmission sector of the industry because of the huge high fixed cost investments in pipelines, because the fact that once laid the lines cannot be shifted and changed about at will, and because pipeline companies must procure a 15 to 20 years supply of gas which can only be procured from one of the few large producers who have such long-term supplies available. There is, of course, competition between and among pipelines for a supply of natural gas. But in the process of transporting gas from the wellhead to the ultimate consumer, the fact of expensive pipelines which dominate particular areas limits competition and promotes the natural monopoly which characterizes the industry.

Therefore, regulation of sales for resale in interstate commerce is essential because of the absence of competition in the distribution and transmission sectors of the industry. In addition, however, relative absence of competition at the producing end of the industry makes continued regulation of utmost importance if the consumer is to be protected against unconscionable increases. It is only the most unreconstructed producers or their representatives who continue to argue that there is competition in the transmission and distributing sectors of the business. Their main case is that competition between and among producers will protect the consumer against huge price increases.

I shall show in this section that competition is virtually as limited in the producing as in the transmission and distributing sectors of this industry. The relative absence of competition in all three sectors makes the continued regulation of sales for resale of natural gas in interstate commerce absolutely essential if consumers are not to be gouged. In this section of my speech I shall deal in the main, only with the conditions which limit competition among producers of natural gas for sale in interstate commerce. I shall first give a general summary of the many reasons why it is true that competition is absent from the producing sector, and I shall then proceed to develop each of the points further, both logically and statistically.

In the first place, the sales for resale of natural gas in interstate commerce are dominated by a very few large producers. In 1954 over one-half the sales were made by 23 producers. A total of 35 producers accounted for more than 70 percent of the sales, and 197 producers, or less than 4 percent of their number, sold 90 percent of the natural gas in interstate commerce in that year. These 197, out of a total of 5,557 producers, were the only ones which sold in excess of 2 million thousand cubic feet of natural gas in 1954. In other words, out of a total sale in 1954 of approximately 4,685,933,511 thousand cubic feet by independent producers of natural gas to natural gas companies reporting to the FPC, 4,376,631 thousand cubic feet were sold by these 197 producers.

Therefore, competition in fact is limited by the very small number of producers who dominate the sales for resale of natural gas in interstate commerce. When the big companies come before us to argue that there is adequate competition at the production end of the industry because of some 8,000 independent producers who compete rigorously between and among each other, neither their figures nor their facts approach the true state of affairs in the industry.

Competition is also limited because these producers are, in almost every case, the biggest and most profitable American corporations.

Ten of the 35 producers who sell over 70 percent of the production are among the first 20 most profitable American corporations. Their names are household terms—Standard Oil of New Jersey, Standard Oil of Indiana, Standard Oil of California, Socony Vacuum, the Texas Co., Gulf Oil Co., Phillips Petroleum, and many others.

Of course, bigness alone does not necessarily imply monoply, and it is not the fact of bigness alone which calls for the continued regulation of sales for resale of natural gas in interstate commerce. Nevertheless, the size, profits, assets, and sales of these few corporations are of such magnitude that the companies dominate the market. Only such companies can supply the huge quantities of natural gas which buyers must have for purposes of long-term continued supplies. Thus, their size alone gives them a dominating and almost unchallengable position in the industry and this limits competition.

Apart from their effect in diminishing competition, a major point concerning them is that the $600 to $900 million annual increase in gas rates which will come about if this bill is passed, and the $12.5 to $30 billion windfall in the increased value of gas reserves, will go in great part to these companies which are already among the biggest and most profitable companies in America and, for that matter, in the world.

In addition to the limited number of companies which dominate interstate sales, and their size and profitablity, these same producers and a few pipeline companies dominate the production of gas in the two major producing fields in America—the Panhandle and Hugoton fields. These few companies account for 90 percent of the production in these fields which contain 20 percent of the Nation's gas reserves. One sees in the production in these fields—which we shall challenge in greater detail—the same concentration and domination by a few companies that one sees in the production end of the industry in general.

The reserves in these fields are already committed to existing markets and are under long-term contracts. Thus, it is

impossible for new companies or existing pipelines to bargain for or obtain new gas supplies in these fields except by bidding up prices to the big producers to uncalled for levels. To this extent, also, competition is now limited.

What is true of the ownership of gas reserves in the Panhandle-Hugoton fields is also largely true of the ownership of the bulk of gas reserves in the country. As I shall show, of the 211 billion thousand cubic feet of proven gas reserves, at least two-thirds and probably 75 percent of the total are owned by a very few large producers or utilities. Most of these reserves are already committed. In addition, when new reserves are found they are committed very quickly. Therefore, very little of the potential supply of natural gas is uncommitted at a time when demand is increasing at an exceedingly fast rate. This means that a company wishing to acquire a supply of gas which is adequate for a 20-year period—some 2 trillion cubic feet, at the rate of 300,000 thousand cubic feet a day—which it must do if it is to both justify the huge financial investment required in laying pipelines and other facilities and also satisfy the FPC that it has adequate reserves which it must do to obtain a certificate of convenience and necessity, must "blast" itself into the market by offering prices higher than existing ones. This, of course, bids up prices as a whole and puts the few large producers who have such huge quantities of reserves in a position to ask and get whatever price the traffic will bear. The pipeline companies have the choice of either paying these high prices or not doing business. Given this alternative they will pay 17 cents, 20 cents, or even higher prices per thousand cubic feet for gas. The price which the pipeline companies pay can be passed on to the consumer. Not only is there this inducement to bid up prices rather than not do business, but as many of them own producing subsidiaries, they have a positive inducement to bid up the prices, for then their own companies will thus gain huge profits. The pipeline itself will not have to shoulder these added costs. These too can be passed on to the consumer and the companies can pocket these for themselves. Thus, even so-called "arms length" bargaining between pipeline companies and producers does not protect the consumers for the pipeline has no real incentive to pay low prices. It finds it necessary, and in some cases convenient, to pay all the traffic will bear.

We should realize, and I shall submit evidence later on this point, that the transmission lines are very expensive. They cost from forty to one hundred thousand dollars per mile. The major existing transmission systems have investments in those systems ranging from $78 million to $655 million. The smallest sized pipelines now being built have, as I have said, daily capacities of 300 million cubic feet.

Once laid, the lines cannot be moved at will, even if new sources of supply become available. They must deal with the big producers who are the only ones with reserves large enough to meet the pipeline's long-term needs. Small producers offer little or no competition because of the nature of the pipeline investments and requirements. The pipelines are tied to the fields and to the big producers by an indissoluble marriage. Divorce is not economically possible.

Because of these plain facts, the production, transmission, and distribution of natural gas is unlike the coal, auto, cheese, milk, or brewing industries to which the big gas producers try to compare the natural-gas industry. In those cases there are alternative producers and distributors whom the consumers can play off against each other and in dealing with whom they can utilize alternative systems of distribution such as railroads, trucks, barges, and so forth, and different competitors within each. But once gas mains and pipelines are laid, and once gas is committed, there is no practical alternative product or seller or means of distribution to which the consumer may turn. The consumer buys his gas from one place, the local gas utility. The utility must buy from a pipeline and the pipeline from price-setting producers. This is the fundamental condition by which this industry differs from the industries to which the big gas producers have falsely compared it.

Mr. NEUBERGER. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. NEUBERGER. I wish to compliment the Senator from Illinois on the great speech he is making on the natural-gas bill. I remind him that I believe I represent, in part, the only region in the Nation which so far has not been served by natural gas. However, even at this moment, as the Senator from Illinois occupies the floor, a pipeline of large dimensions and involving great expense is being extended across the desert and plains and mountains to Oregon and the other areas of the Pacific Northwest.

Within a short time after this great issue is resolved, however it may be resolved, the people of our region will be affected by what is done on the floor of the Senate.

I should like to thank the distinguished Senator from Illinois for the efforts he is putting forth in behalf of the consuming public, the housewives, the business men and industrialists, who will purchase natural gas to use as fuel in the State of Oregon. While I am not so well acquainted with the issues involved as I should be, because, as I said earlier, our region is yet to be served by natural gas, I feel that many persons in our area are indebted to the Senator from Illinois for the courageous and effective way he is discussing the bill.

Mr. DOUGLAS. I thank the Senator from Oregon for his characteristically generous remarks, although I do not feel that I deserve them. I should like to say to the Senator that it is desirable when natural gas reaches the State of Oregon, that the rates charged for it be sufficiently reasonable to permit housewives to use the gas, and it is also desirable that the rates should not absorb so much purchasing power that families will not have money for other things.

(g) To resume the thread of my remarks, competition in the gas field is really between and among buyers seeking adequate supplies. It is a seller's market in which a few big companies dominate the supply. New companies seeking gas supplies, or old companies seeking additional supplies, must blast their way into the market. It is not a free market where there are willing buyers and sellers, neither being under economic compulsion to buy or sell if the price is not right or reasonable.

(h) In addition to the limited supplies and the domination of these supplies by a few producers, which brings about a seller's market and a quasi-monopoly position, supplies are artificially limited for conservation purposes by proration and ratable take regulations imposed by State Conservation Commissions. Allowable production is limited to market demand. Additional gas may be purchased only by bidding for the excess allowables. There is, therefore, intensive bidding for an artificially limited supply of excess allowables. This has the effect of sending prices to an even higher point than the already dominant position of the few large producers brings about.

Thus, the competitive factors ordinarily found in open market trading of commodities is limited even further by ratable take and proration regulations which are made, ostensibly for conservation purposes.

Some would claim that the State conservation commissions have gone beyond their stated objectives and limit production not only for conservation reasons but in an attempt to control prices and limit supply. But whether this is true or not is not at issue in this debate. It is, nonetheless, a fact that production and supply are limited, even if one grants that it is done for purely conservation purposes. In this event it seems somewhat fantastic for the big gas producers to argue, on the one hand, that proration is necessary for conservation purposes, and on the other hand that the market should be completely free and that the principles of free enterprise should be followed. This is, of course, a demonstrably conflicting argument and yet the big companies do argue it both ways, depending on circumstances. Of course there is not a free market when every producer is told what his yearly production must be, although this may be necessary and justified on grounds of conservation. But where the big producers have a whip hand as in sales of natural gas for resale they argue for an unregulated market.

(i) In some States, Oklahoma and Kansas in particular, State conservation commissions have established minimum wellhead prices. These prices, of course, limit competition for they prevent pipeline companies from buying gas at prices below these minimums. In Oklahoma, an 11 cent minimum price per thousand cubic feet was established effective January 1, 1954. This price, of course, was above the average price of 10.1 cents per thousand cubic feet for natural gas in that year, so that in Oklahoma, a price above the average price became the minimum price because of these arrangements.

Following a recent Supreme Court decision, these State minimums no longer apply to sales for resale in interstate commerce for those sales are clearly

under the jurisdiction of the Federal Power Commission. If the Fulbright bill is passed the States could then reestablish these minimums in all probability. As in the past, they would hinder, impede, and limit competition in this industry.

Mr. POTTER. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. POTTER. The distinguished Senator from Illinois, is an eminent economist. When he speaks of free competition, he means free competition for the buyer and also for the seller, does he not?

Mr. DOUGLAS. Exactly so.

Mr. POTTER. In the sale of natural gas, is it not a fact that the consumer does not always buy in a free market?

Mr. DOUGLAS. That is correct.

Mr. POTTER. The point which the distinguished Senator from Illinois is making is that from the seller's end it is not a free market as we generally understand that term.

Mr. DOUGLAS. That is true, because it is dominated by a few sellers; but, also, as the Senator is now hinting, the total output is regulated by rates fixed by the various State commissions. This is done at the instance of the oil and gas companies, although, obviously, if the supply is limited, the price will go upward beyond what it otherwise would be. It is conservation to restrict supply, but it is confiscation, say the oil and gas companies, to fix maximum prices. They do not object to having the Commission fix minimum prices, oh, no; but they say it is confiscation to protect consumers by fixing maximum prices. There is more hocus-pocus and downright hypocrisy in the attitude of the big producers in this matter than in almost any other matter of which I have ever known.

Mr. DANIEL. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. DANIEL. Does the Senator think the hocus-pocus and hypocrisy is all on one side of the question? As one Member of the Senate, I want it to be known that I do not think so.

Mr. DOUGLAS. If the Senator from Texas can point out any hypocrisy in which I am indulging, I shall be very glad to have it pointed out; and if I am being hypocritical, I shall try to mend my ways.

Mr. DANIEL. I certainly intend to try to point it out before the debate is concluded. I resent the charges of hypocrisy, hocus-pocus, gimmicks, and gadgets which are being tossed about.

Mr. DOUGLAS. What does the Senator call it when there is the same group advocating minimum prices in the field, and objecting to maximum prices?

Mr. DANIEL. In the first place, that situation does not prevail.

Mr. DOUGLAS. It prevails in Oklahoma and in Kansas.

Mr. DANIEL. As I understand, the courts have taken care of that. The group that is advocating the bill is not advocating minimum prices.

Mr. DOUGLAS. I think the Senator from the Texas was not on the floor when I analyzed the decision of the Supreme Court and pointed out that there was a very strong chance that if the Harris-Fulbright bill should be passed and Federal control over the price of gas were eliminated, then the States could fix the minimum prices in the field. The Senator from Texas knows perfectly well that gas companies in Oklahoma and Kansas were responsible for the passage of the minimum-price laws in those States. Is it not an established fact that that is true? Yet the same interests are opposed to Federal regulation of maximum prices. The gas and oil interests have been in favor of State limitation upon production. When we limit production we naturally decrease supply, and that tends to make prices higher than they otherwise would be. That is called, as I have said, conservation. But when the Federal Government tries to fix prices it is called confiscation. It all depends on whose ox is gored. If State action will help producers they are for it, but they are against Federal action which is designed to protect consumers.

Mr. DANIEL. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. DANIEL. I wish the RECORD to show that the State of Texas has neither a minimum price nor a ratable take now in effect.

Mr. DOUGLAS. That may be.

Mr. DANIEL. There has not always been a seller's market. When we had free competition, before Federal control was threatened, it was very much a buyer's market. That will be the condition again, if the bill is passed.

Mr. DOUGLAS. But I pointed out very clearly that in the 1930's and possibly in the early 1940's large quantities of gas were being flared, and that a seller's market did not prevail then.

Mr. POTTER. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. POTTER. I believe the Senator stated that two States have minimum-price laws.

Mr. DOUGLAS. Oklahoma and Kansas.

Mr. POTTER. Is there any type of contract of the producing companies which contains a clause providing that if the State of Texas, for example, should in the future establish a minimum-price law fixing a figure which is in excess of the contract price of the producer, he could raise the price to the minimum price in the State of Texas?

It is my understanding of the Senator's opinion, following his vast study in connection with the proposed legislation, that if the bill should be passed it would be possible for the States to change their minimum-price laws.

Mr. DOUGLAS. That, I think, is quite possible. I am not a constitutional lawyer, but as I read the decision that is probable. This would mean a breakdown of interstate commerce in the United States, because, as I have pointed out, the State of Minnesota, whose distinguished Governor I observe on the floor, could then fix the minimum price for iron ore; the States of California, Arizona, Texas, and Florida could fix the minimum price for citrus fruits, and so on; and we would then find the producing areas of the country holding up the rest of the Nation.

Mr. POTTER. The Senator has mentioned the fact that 4 States produce 80 percent of the natural gas.

Mr. DOUGLAS. That is correct.

Mr. POTTER. The other 44 States could be at the mercy of the 4 producing States, if the 4 States could establish minimum-price laws and boost up the price to the other 44 States.

Mr. DOUGLAS. That is true. There would be about 40 States at the mercy of the other 8 States, because there are some other States which export more gas than they import.

Mr. DANIEL. Mr. President, will the Senator from Illinois yield to permit me to ask a question of the Senator from Michigan?

Mr. DOUGLAS. I yield.

Mr. DANIEL. I wonder if the Senator from Michigan does not feel that the people of 47 States are at the mercy of the State of Michigan for the prices of the automobiles which they purchase. Does the Senator think it would be right for Congress to pass a law fixing the prices at which the manufacturers of automobiles may sell their products in interstate commerce to the people of the rest of the country?

Mr. POTTER. The Senator from Texas can buy either a Chevrolet or a Ford or any other make of car he chooses. He has a choice of automobiles from which to buy. My constituents have no choice in selecting the source of the natural gas which they consume.

Mr. DANIEL. The purchasers of the natural gas in the first instance have the choice, and they must make a 20-year contract. They must tie to someone who will supply the gas for them for that length of time. The point being made by the proponents of the bill is that unless it is passed the pipeline companies are not going to find producers who will tie up supplies for 20 years in order to fill the pipelines. If automobile producers were to be regulated by the Federal Government as public utilities, I doubt that it would be possible for the great automobile industry in the State of the Senator from Michigan to remain in existence.

Mr. POTTER. The Senator from Texas has completely missed the point of the argument. On the one hand, we have free competition for a buyer as well as for a seller. In automobile manufacturing, there is competition in the field of selling and in the field of buying. That competition does not exist in the natural-gas business. That is the big difference between the industries affecting the two commodities.

Mr. DANIEL. That is an argument which could be continued for a long, long time. It seems to me there is more competition among the 8,000 producers of natural gas than there is among the 7 big companies in the automobile business, which certainly seem to be getting together on the prices they charge the consumers.

Mr. DOUGLAS. I am just reaching the detailed points of my argument on this matter. I will hand the Senator from Texas a copy of my manuscript on this issue, which clearly demonstrates the limited nature of the competition, and which, if he will read it, since I am certain he is an open-minded man, will convince him that the Senator from Illi-

nois and the Senator from Michigan are correct in this matter.

(j) Finally, the system which limits competition, increases field prices, and thus creates an artificially high price structure in the producing sector of this industry, is crowned by an almost universal inclusion of escalation clauses in contracts between the buyers and sellers of natural gas. Almost all long-term contracts provide for, one, step escalation under which prices increase at stated intervals; two, for renegotiation at specific time periods; and/or for, three, second- or third-party most-favored-nation clauses whereby contract prices automatically rise to the highest price paid by the given pipeline buyer to any of its customers, or to the highest price paid by any buyer in a field or area. We have been analyzing some 2,100 contracts, and we find the renegotiation provisions to be equally as vicious as the most-favored-nation provisions, which are universally vicious.

Therefore, competition in the field is limited by the domination of supply and reserves by a very few companies; by the tremendous costs of pipelines and pipeline systems; by the need pipelines have for huge long-term supplies which only the dominant producers can provide; by the seller's market, and effective competition only between and among buyers; by the fact that pipeline buyers can pass high prices on to the consumer and, in some cases, own production companies which profit from higher prices; by the limit on supply imposed by "retable take" and "pro-ration" regulations and the intense bidding which is then brought about for the limited supply of excess allowables; and by State minimum wellhead prices.

But not only do these factors increase prices and limit supply but the system of escalation clauses, renegotiation clauses, and most-favored-nation clauses, makes these artificially high prices the new dominant or average prices. Thus, escalation clauses create a constant spiralling of prices in which the previous high price becames the new dominant price. To put it another way, the marginal or most recent and highest price becomes the average price.

For all these reasons, Mr. President, competition in the purchase and sale of gas in the field is really no protection for the consumer. There is in fact, little competition in the field except between buyers who bid up the price of gas. As the consumer is the captive customer of the industry, he will get it in the neck if the Federal Power Commission is denied jurisdiction over the sales for resale of natural gas in interstate commerce.

Mr. President, I should like to continue by developing each of these points more explicitly, by giving facts and figures of how they work, and by supporting these generalizations with examples and statistical proof.

MAJOR OIL COMPANIES DOMINATE INTERSTATE SALES MARKETS

Throughout these hearings and in the copious advertising, pamphlets, news articles, letters, speeches, resolutions, and other publicity material of the oil and gas industry, many statements have been made concerning the vigorous competition between thousands of producers to market their gas. I believe Dr. Boatwright of Standard Oil Company of Indiana has used a figure in excess of 8,000 as the number of producers selling gas. This claim that competition among producers is adequate to protect consumers against unfair prices is in my opinion untenable. It is one of the key issues before the Senate.

The latest available figures compiled by the Federal Power Commission at my request show, as I have stated, that in the year 1954 a total of 5,557 nontransporting producers sold to companies reporting to the Federal Power Commission just under 4,685,933,511 thousand cubic feet of natural gas. This number of producers, I understand, is subject to some small adjustment as the reports of natural gas companies to the Commission from which this information was extracted do not in all cases disclose the respective interests of all vendors where joint sales are made. But I believe this figure represents the most accurate information we have available at this time.

The sales volumes and number of producers, by size intervals, are shown in table IV–1, which I ask unanimous consent to have printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE IV–1.—*Sales of natural gas by independent producers to natural-gas companies reporting to the Federal Power Commission, year 1954*

Size interval (thousand cubic feet of natural gas)	Producers			Sales			Average sales volume per producer
	Number in interval	Cumulative		Volume in interval	Cumulative		
		Number	Percent		Volume	Percent	
				Thousand cubic feet	*Thousand cubic feet*		*Thousand cubic feet*
Over 100,000,000	8	8	0.14	1,675,195,321	1,675,195,321	35.75	209,399,415
50,000,000 to 100,000,000	15	23	.41	976,988,682	2,652,184,003	56.60	65,132,579
25,000,000 to 50,000,000	15	38	.68	524,707,042	3,176,891,045	67.80	34,980,469
10,000,000 to 25,000,000	25	63	1.13	412,667,258	3,589,558,303	76.60	16,506,690
5,000,000 to 10,000,000	45	108	1.94	314,952,062	3,904,510,365	83.32	6,998,935
2,000,000 to 5,000,000	89	197	3.55	290,523,574	4,195,033,939	89.52	3,264,310
1,000,000 to 2,000,000	128	325	5.85	181,299,692	4,376,333,631	93.39	1,416,404

100,000 to 500,000	446	932	16.77	110,216,682	4,600,080,100	98.17	247,123
Under 100,000	4,625	5,557	100.00	85,853,411	4,685,933,511	100.00	18,563
Total	5,557			4,685,933,511			

Source: Federal Power Commission study.

Mr. DOUGLAS. Mr. President, it will be noted from the table that 4,625 producers, or 83.23 percent of the total number sold only 1.83 percent or less than 2 percent of the total gas produced by the interstate pipeline companies, while the remaining 932 producers furnished 98.17 percent of the total volume purchased. This table reveals the great concentration of natural-gas production and gas reserves in the hands of a comparatively few producers. As a matter of fact, only 23 producers account for 56.60 percent of the gas purchased in the field by pipeline companies, and 35 producers about whom I shall speak later sell over 70 percent of the gas sold in interstate commerce.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD, table IV–2.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE IV–2.—*Sales of natural gas made by independent producers in 1954 to natural gas pipeline companies classified by States and regions*

	Number of producers	Volume	Percent
		Thousand cubic feet	
Southwest:			
Arkansas	28	6,399,382	0.14
Kansas	264	318,385,833	6.79
Louisiana	284	919,199,724	19.62
Mississippi	27	131,139,767	2.80
New Mexico	338	265,220,242	5.66
Oklahoma	249	261,626,286	5.58
Texas	983	2,561,265,593	54.66
Total	2,183	4,463,236,827	95.25
Rocky Mountain:			
Colorado	34	16,753,439	.36
Montana	62	5,231,319	.11
Wyoming	18	39,429,488	.84
Total	114	61,414,246	1.31
Appalachian:			
Kentucky	440	23,858,975	.51
Maryland	14	1,040,302	.02
New York	11	477,900	.01
Ohio	849	9,436,699	.20
Pennsylvania	947	58,867,223	1.26
Virginia	1	1,227,917	.03
West Virginia	1,431	60,082,269	1.28
Total	3,693	154,991,285	3.31
Other States	64	6,291,153	.13
Grand total	[1] 6,054	4,685,933,511	100.00

[1] Includes 497 duplications of producers who operate in more than 1 State, principally in the Southwest and Rocky Mountain regions.

Source: Federal Power Commission study.

Mr. DOUGLAS. Mr. President, table No. IV–2 shows the sales of natural gas made in 1954 by producers to pipeline companies classified by States and regions. More than 95 percent of the total volume of gas purchased by pipeline companies in the field comes from the 7 Southwest States. Texas provided 54.66 percent of the total supply from independent producers in 1954. Three States in the Rocky Mountain region supplied 1.31 percent, and 7 States in the Appalachian area, 3.31 percent.

The Southwest region is shown by the table to have 2,183 vendors; however, as a substantial number of producers make sales in more than 1 State, the figure of

2,183 contains many duplications—possibly as many as 425. It can be seen from this table that in the Appalachian area, which accounts for only 3.31 percent of the total volume purchased, there are located about two-thirds of the total producers selling to companies which report to the Federal Power Commission.

The identity of the 35 major producers who made the greatest sales to interstate pipeline companies in 1954 is shown by table No. IV–3, which I ask unanimous consent to have printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE IV–3.—*List of 35 nontransporting producers who sold natural gas to interstate pipeline companies in 1954*

No.	Name of producer [1]	Sales (M. c. f.)	Percent of total sales	
			Percent	Cumulative
1	Phillips Petroleum Co	510,241,292	10.89	10.89
2	Standard Oil Co. (Indiana)	280,679,921	5.99	16.88
3	Standard Oil Co. (New Jersey)	225,741,667	4.82	21.70
4	Shell Oil Co	173,872,949	3.71	25.41
5	Socony-Mobil Oil Co	146,476,188	3.13	28.54
6	The Chicago Corp	143,164,436	3.05	31.59
7	Gulf Oil Co	134,609,295	2.87	34.46
8	Cities Service Oil Co	116,687,499	2.49	36.95
9	The Atlantic Refining Co	115,589,076	2.47	39.42
10	The Texas Co	102,645,248	2.19	41.61
11	The Shamrock Oil & Gas Corp	92,112,450	1.97	43.58
12	Sun Oil Co	79,439,904	1.69	45.27
13	Skelly Oil Co	77,963,528	1.66	46.93
14	The Pure Oil Co	70,202,494	1.50	48.43
15	Sunray-Mid Continent Oil Co	63,502,086	1.35	49.78
16	Carthage Corp	60,695,079	1.29	51.07

20	Tide Water Associated Oil Co	59,054,393	1.26	56.16
21	Ohio Oil Co	58,441,293	1.25	57.41
22	Oil & Gas Property Management Co	56,532,952	1.21	58.62
23	Standard Oil Co. (California)	54,998,906	1.17	59.79
24	Southern Production Co	50,724,965	1.08	60.87
25	La Gloria Corp	48,380,531	1.03	61.90
26	Union Oil Company of California	47,203,429	1.01	62.91
27	H. L. Hunt	44,781,061	.96	63.87
28	Sinclair Oil & Gas Co	43,920,304	.94	64.81
29	Southwest Gas Producing Co	42,119,410	.90	65.71
30	Columbian Carbon Co	41,717,130	.89	66.60
31	Warren Petroleum Corp	41,689,710	.89	67.49
32	Union Oil & Gas Corporation of Louisiana	34,941,089	.75	68.24
33	Delhi-Taylor Oil Co	33,904,710	.72	68.96
34	Texas Natural Gasoline Corp	33,768,690	.72	69.68
35	Continental Oil Co	33,519,128	.71	70.39
	Subtotal (35 producers)	3,298,575,021	70.39	70.39
	All others (5,522)	1,387,358,490	29.61	100.00
	Grand total	4,685,933,511	100.00	

[1] Includes subsidiaries.

NOTE.—The volumes reported for many of the producers include minor amounts of gas sold jointly with other producers, including those listed above.

Source: Federal Power Commission study.

Mr. DOUGLAS. Mr. President, these 35 companies supplied more than 70 percent of the total volume of natural gas purchased in the field by interstate pipeline companies in 1954. Twenty-two of the 35 companies are major oil companies. They are the "who's who" of the oil industry in America.

The Phillips Petroleum Co. heads the list with 10.89 percent of the total sales; 2 Standard Oil companies follow with a total of 10.81 percent; the Shell Oil Co. follows with 3.71 percent. Another Standard company, Socony-Mobil Oil Co., is next with 3.13 percent. These 5 companies make 28.54 percent of the total sales.

THE BIG PRODUCERS RANK HIGH AMONG AMERICA'S INDUSTRIAL GIANTS

Mr. President, I should like to point out that the big gas producers rank high among America's industrial giants. Let us compare the dominant companies in this industry with other industrial corporation by sales, assets, and net profits in dollar terms, and see whether they are weak and poor, as the economist for Standard Oil suggests.

I have before me, and I now submit for the RECORD, a supplement to the July 1955 issue of Fortune magazine. It is called the Fortune Directory of the 500 Largest United States Industrial Corporations. It contains the names, ranked in order of total sales, of the 500 biggest industrial corporations in the United States. The sales are for the year 1954. Therefore, the time period in Fortune's listing and in the list, which I have just submitted, of the 35 largest producers of natural gas, is the same. The figures in Fortune's list were compiled from the Census Bureau's figures.

Mr. President, let us compare this Fortune list with the 35 so-called independent producers of natural gas who sold 70 percent of the natural gas to natural gas pipeline companies in 1954.

I now request unanimous consent to have inserted at this point in the RECORD a list of the 35 independent producers of natural gas, ranked according to their sales to pipelines in the year 1954, as well as their rank according to dollar values of sales, assets, and net profits as calculated by Fortune in its list of America's 500 largest industrial corporations.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE IV–4.—*List of 35 largest nontransporting producers ranked according to sales of natural gas to interstate pipeline companies in 1954 compared with their rank in Fortune's list of 500 largest industrial corporations*

Name and rank in sales of natural gas	Rank in Fortune's 500 largest industrial corporations according to—		
	Total sales	Assets	Net profits
1. Phillips Petroleum Co	30	15	17
2. Standard Oil Co. (Indiana)	12	6	12
3. Standard Oil Co. (New Jersey)	2	1	2
4. Shell Oil Co	16	18	11
5. Socony-Mobil Oil Co	9	5	8
6. The Chicago Corp	(1)		
7. Gulf Oil Co	8	7	9
8. Cities Service Oil Co	29	17	27
9. The Atlantic Refining Co	47	31	42
10. The Texas Co	14	8	4
11. The Shamrock Oil & Gas Co	(1)		
12. Sun Oil Co	38	44	36
13. Skelly Oil Co	153	80	56
14. The Pure Oil Co	80	58	52
15. SunRay-Mid Continent Oil Co.[2]	106	47	43
16. Carthage Corp	(1)		
17. The Superior Oil Co	358	154	150
18. Republic Natural Gas	(1)		
19. United Carbon Co	(1)		
20. Tide Water Associated Oil Co	63	60	48
21. Ohio Oil Co	121	73	39
22. Oil & Gas Property Management Co	(1)		
23. Standard Oil Co. (California)	18	10	6
24. Southern Production Co	(1)		
25. La Gloria Corp	(1)		
26. Union Oil Company of California	84	39	46
27. H. L. Hunt	(1)		
28. Sinclair Oil & Gas Co	21	14	13
29. Southwest Gas Producing Co	(1)		
30. Columbian Carbon Co	478	276	279
31. Warren Petroleum Corp	266	156	169
32. Union Oil & Gas Corporation of Louisiana	(1)		
33. Delhi-Taylor Oil Co	(1)		
34. Texas Natural Gasoline Corp	(1)		
35. Continental Oil Co	53	47	30

[1] Not listed.

[2] Merged, May 1955. Rank based on consolidated 1954 sales, assets, and net profit figures.

Mr. DOUGLAS. Mr. President, from this list, what do we see? Are the big producers in the gas industry small businesses, or are they America's largest corporations? Are those who advocate this bill pushing the cause of the small wildcatter, or are they carrying the torch for Standard Oil, Phillips Petroleum, Shell Oil, Gulf Oil, the Texas Co., and other huge corporations?

Mr. President, these facts should be noted: These 35 companies are very high on the list of America's 500 largest industrial corporations. Six of them are in the first 10 biggest American industrial corporations, if we measure them by their assets. Here we see the name of Standard Oil of New Jersey, the largest American industrial corporation. Here we see Socony-Mobil Oil Co., the fifth largest American industrial corporation. Here we see Standard Oil of Indiana, Gulf Oil Co., the Texas Co., and Standard Oil of California, who rank 6th, 7th, 8th, and 10th, respectively, in the Fortune list of America's largest industrial corporations, when measured by total assets.

Not only are these 6 in the Big Ten, but Sinclair, Phillips, Cities Service, and Shell rank 14th, 15th, 17th, and 18th, re-

spectively. Thus, 10 of these biggest producers of natural gas are in the first 20 largest American corporations. And these 10 account for over 38 percent of the sales of natural gas to interstate pipeline companies.

What about their profits? Are they big but poor, or are they big and rich? Are they impecunious companies who are suffering financial losses or are they among the most profitable big businesses in the world? Five of these companies are listed by Fortune in the first ten most profitable American corporations. They are Standard Oil of New Jersey, with 1954 profits of $584 million; the Texas Co. with 1954 profits of $226 million; Standard Oil Company of California with 1954 profits of $211 million; Socony-Mobil Oil Co. with 1954 profits of $183 million; and Gulf Oil, with profits of $182 million in 1954. Four others, Shell Oil, Standard Oil of Indiana, Sinclair Oil & Gas, and Phillips Petroleum are listed 11th, 12th, 13th, and 17th in terms of their profits. The amounts of their profits were $121 million, $117 million, $91 million, and $76 million, respectively, in 1954.

And, Mr. President, the remaining 25 of the 35 major producers of natural gas are not unduly overshadowed by the big ten.

Of the 35 producers, 22 of them, or 12 more than the big 10, are listed in the first 500 on Fortune's list. To break down these 22 even further, it will be seen that in rank according to sales, 16 of them are among the first 100 largest corporations. Nineteen are in the first 200, 20 in the first 300, and 21 in the first 400. These 22 who make Fortune's list accounted for over 54 percent of the sales of all natural-gas producers to interstate pipelines in 1954.

The net profits of these 22 companies from all their endeavors totaled $2,187,920,000 in 1954. Their total sales of all items in that year amounted to $21,302,878,000. They held assets of $25,392,031,000.

Mr. President, I ask unanimous consent to have these figures, shown in table IV–5, printed in the RECORD at this point as a part of my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE IV–5.—*Dollar values of total sales, assets, and net profits of the 22 largest gas-producing companies in Fortune's list of the 500 largest United States industrial corporations for 1954*

Name of producer [1]	Total sales	Assets	Net profits
Phillips Petroleum	$794,559,000	$1,092,745,000	$76,325,000
Standard Oil (Indiana)	1,660,343,000	2,187,358,000	117,157,000
Standard Oil (New Jersey)	5,661,382,000	6,614,743,000	584,793,000
Shell Oil Co	1,312,060,000	1,041,886,000	121,127,000
Socony-Mobil Oil Co	1,703,575,000	2,256,691,000	183,806,000
Gulf Oil Co	1,705,329,000	1,969,052,000	182,813,000
Cities Service Oil Co	813,174,000	1,053,527,000	43,724,000
Atlantic Refining Co	596,168,000	611,682,000	36,761,000
The Texas Co	1,574,370,000	1,945,509,000	226,141,000
Sun Oil Co	659,532,000	494,870,000	40,344,000
Skelly Oil Co	211,082,000	291,843,000	29,455,000
The Pure Oil Co	388,278,000	410,764,000	31,163,000
Sunray-Mid Continent Oil [2]	289,489,000	486,372,000	36,668,000
The Superior Oil Co	76,137,000	142,435,000	10,360,000
Tide Water Associated Oil	459,030,000	395,869,000	34,547,000
Ohio Oil Co	248,484,000	324,949,000	38,224,000
Standard Oil (California)	1,113,343,000	1,677,849,000	211,872,000
Union Oil of California	349,667,000	511,238,000	35,888,000
Sinclair Oil & Gas	1,021,461,000	1,186,771,000	91,580,000
Columbian Carbon Co	52,884,000	74,154,000	4,559,000
Warren Petroleum Co	112,406,000	141,525,000	8,930,000
Continental Oil Co	500,125,000	480,199,000	41,683,000
Total	21,302,878,000	25,392,031,000	2,187,920,000

[1] Listed in order of sales of natural gas to interstate pipelines. These 22 companies and their subsidiaries sold 54.16 percent of the natural gas sold to interstate pipelines in 1954.
[2] Merged, May 1955.

Mr. DOUGLAS. That these were not poor companies is shown not only by their rank in sales, but also by the fact that their rank according to profits was higher than their rank by sales for 19 of the 22 corporations, lower in only 1 case, and the same for 2 of them. Thus, their profit margins were higher than their rank according to sales and they cannot claim that they are suffering undue hardships.

Thus, while Standard Oil of New Jersey was 2d in net profits and 2d in sales; while Standard of Indiana was 12th in sales and 12th in net profits; and Gulf was 8th in sales but 9th in profits, all the others ranked higher in profits than in sales. Thus, among those in the first 100 largest corporations by sales, Phillips Petroleum ranked 30th in sales but 17th in net profits; Shell Oil was 16th in sales but 11th in net profits; the Texas Co. was 14th in sales but 4th in net profits. Note that, Mr. President. And Sinclair Oil was 21st in sales but 13th in net profits.

Of those companies which failed to make the 1st 100 in sales, a number did make the 1st 100 when ranked by profits. The Ohio Oil Co. was 121st in sales but 39th in net profits; Sunray-Mid Continent was 106th in sales but 43d in net profits, and Skelly Oil was 153d in sales but 56th in net profits.

Even the remaining companies ranked higher when ranked by profits than when ranked by sales. Thus, Superior Oil Co. was 358th in sales and 150th in net profits; the Warren Petroleum Co. was 266th in sales but 169th in net profits, and the Columbian Carbon Co. was 478th in sales but 276th in net profits.

Thus, not only in absolute amounts, but in the ratio of net profits to sales, these companies did very well indeed. They did much better than other types and kinds of American businesses on the average.

It may be said that many of these are composite companies, and that we cannot separate the amounts made from gas from the amounts made on oil, or retail distribution. However, the point is that it is very difficult to get from these companies figures on their gas operations, as distinguished from their other activities. Last week I addressed telegrams on this question to the leading 35 companies. I hold in my hand the replies to these telegrams. I shall be glad to show them to anyone. The general tenor of the replies I have received is that it is impossible for them to separate their gas operations from their other operations.

Mr. MONRONEY. Mr. President, will the Senator yield at that point?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. The Senator knows the high regard I have for his statistical and analytical ability. Certainly no Member of the Senate is more deserving of praise for the effort he devotes to any subject.

Mr. DOUGLAS. So much for the anesthetic. When is the needle coming? [Laughter.]

Mr. MONRONEY. I wonder if the very distinguished Senator from Illinois, in outlining, on the next to the last page, the profits of the Texas Co. at $226 million; Standard Oil Company of California, $211 million; Socony-Mobiloil Co., $183 million; Gulf Oil Co., $182 million; Shell Oil, Sinclair Oil, and others—which he considers as leaders in respect to profits—realizes that those same companies are the ones which are leaders in the importation of oil from the Near East. That is a situation which does considerable damage to the producers of crude petroleum in the State of Illinois, where the wells are badly pinched in. In the State of Oklahoma, we are allowed to produce only a small fraction of our oil, while a great flood of foreign oil, at a tremendous profit, comes in to enlarge the profits of these very corporations.

Having identified some of the quick sources of profits which accrue to the disadvantage of the oil and gas producers of Oklahoma—because oil and gas are produced together in many wells and many fields—let me say that I should be more impressed with the statistical analysis if the Senator had also cited the rather authoritative Chase Manhattan Bank publication, Financial Analysis of the Petroleum Industry for 1954. That study summarizes the 1954 annual reports of the 35 largest oil companies.

Mr. DOUGLAS. Was not my list correct?

Mr. MONRONEY. The companies referred to are the 35 largest. The information to which I invite the Senator's attention is found on page 19 of the bulletin, which I am sure the distinguished Senator knows is a rather factual and analytical publication. I believe it is ranked rather high by economists and statisticians; is that not true?

Mr. DOUGLAS. I do not wish to impugn its reliability. I will say that I

have seldom caught it in an untruth, but I think upon occasion it does not tell all the truth.

Mr. MONRONEY. On page 19 of the analysis for 1954 it is shown that, with respect to the 35 largest companies, natural gas accounted for about 2 percent of the total operating revenues, 98 percent being in other fields.

These companies are outlined in pretty much the same relationship as has been indicated. However, they are shown alphabetically, instead of being listed as the first 10. If it be true that the natural-gas business accounted for 2 percent of the total gross operating revenue of the 35 companies, taking the net income as a percentage of total income, we find that the net income represents 10.2 percent of gross income from all operations, including the foreign oil, on which there is a very high percentage of profit.

Even disregarding this tremendously high percentage of profit on imported oil, and assuming that net profit from gas represented the same percentage of total revenue from their natural-gas sales for the year 1954 of $456 million—and I believe this is the nearest and clearest statistical approach that can be found—the estimated net profit from gas of these 35 companies amounted to $46½ million.

I should like to call the attention of the distinguished Senator from Illinois to the fact that while these 35 major companies, which, he said, had the lion's share of the business, were making $46½ million, the total net profit of gas utilities for gas operations went from $82.6 million in 1941 to $356 million in 1954.

Mr. President, I advance the theory that that is nearly 8 times the profit of these 35 major oil companies from the sale of gas. And these are the producers who the distinguished Senator from Illinois has said are responsible for the great magnitude of the natural gas that moves in interstate commerce. The gas is sold for a profit of $46½ million at the well.

Mr. DOUGLAS. Mr. President, is the Senator from Oklahoma asking a question or making a speech?

Mr. MONRONEY. I am sorry. I shall complete my statement in 30 seconds, because I do not wish to deprive the Senator of furnishing even more statistics which I feel are of little cogency to the real issue before the Senate. I say it is unchallenged that the percentage of gas produced by these companies is only 2 percent of their gross revenues. One cannot overlook the relationship between the cost of the gas shown by the net profits of these companies, of $46½ million, as against $356 million for the companies that distribute the same gas.

Mr. DOUGLAS. I may say to my good friend from Oklahoma that I did not mean to shut him off, and I shall invite him to enter the field again subsequently. However, I cannot quite understand where the Chase Manhattan Co. gets its segregated figures on gas, as distinguished from other operations, because I hold in my hand a great number of telegrams from the 35 companies, and nearly all of them state that they can not segregate their receipts and profits from gas as compared with their receipts and profits from oil.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I shall read from one telegram. It is from the Sinclair Co.

The telegram was sent to me by Mr. Rheinberger, vice president of the Sinclair Oil and Gas Co. I read a part of is as follows:

> This company is primarily engaged in the business of producing both oil and gas, with the major part of its investments and revenues from oil. It has not segregated its business in a manner that will enable us to give answers to your questions which will give you a fair picture of our business with respect to the matters called for, particularly as to costs for investments in nonproducing leases, dry holes, geophysical and explanatory information, and other items in regard to the calculation of profit, its investments, depletion, and depreciation. Furthermore, to attempt to do so would require a tremendous amount of expense, time, and effort.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. It is extraordinary that the Senator from Oklahoma is able to produce figures which purport to show the profit on gas, when the companies themselves say they cannot do so.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield gladly.

Mr. MONRONEY. I have stated repeatedly that that is one of the great difficulties. In fact, it is impossible to segregate the two, and this represents one of the impossibilities of making the Supreme Court's decision effective. It is impossible to divide the cost factors. I have repeatedly stated that it is impossible to do it. The cost factors cannot be divided.

Furthermore, not being an economist, but only a former newspaperman, I must sometimes travel by devious routes in order to wind up at my conclusion. I apologize again for the undue time I am taking.

If I did not believe it was extremely material to the issue, I would sit back and enjoy the distinguished Senator's remarks without interruption. The volume of sales of natural gas is easily ascertainable. It is the easiest thing in the world to ascertain, because it is metered as it goes through the lines, and we know what the sales are.

Mr. DOUGLAS. I believe the Senator from Oklahoma will agree with me that the sales by these 35 leading sellers of gas in 1952 amounted to approximately 3 billion M. c. f.'s, which, at an average price of a little more than 10 cents per M. c. f. in the field, would come to approximately $350 million. That is the figure for sales. We do not know what the profits are. That is the point. The Senator from Oklahoma cannot have it both ways. He cannot, on the one hand, say he knows what the profits are, and, on the other hand, say he cannot allocate the costs and compute the profits.

Mr. MONRONEY. I am surprised that the distinguished Senator from Illinois did not follow me more closely.

Mr. DOUGLAS. I followed the Senator with great closeness.

Mr. MONRONEY. We know what the sales were. The only way we have of computing the profits is to take the percentage of profits for the whole oil and gas operation and apply them against the sales of gas by these companies. In that way we wind up with the estimated figure which I tried to explain, namely, $46½ million.

Mr. DOUGLAS. I am not certain that that is a correct allocation, and without knowing the identities of the firms on your list, I do not know that it is comparable to my list of leading gas producers.

Mr. MONRONEY. If only 2 percent of their gross revenues is from gas, then certainly it is not a complete fallacy, and it would certainly be cogent to this argument, to apply that as a statistical fact. There it is. We have that fact on the authority of the study by Chase Manhattan Bank. That study states that 2 percent of the gross revenues of those companies comes from gas sales.

I know of no other way to approach it. Of course, I will agree with the distinguished Senator from Illinois that no man alive can take an investment in undeveloped leases, whether for oil or gas, and allocate the proper part of it to a well that is producing gas. It cannot be done. That is why the Supreme Court's formula will not work.

That is what I have been trying to say to the Senate. I have been trying these many days to explain to the Senate that it is necessary to use a reasonable market price formula, allowing a return based on the reasonable field price. The reasonable market price is the price set by the competition which has existed historically, and most of the sales are made on the basis of 20-year contracts. A producer must make a contract that he will supply gas for 20 years.

Mr. DOUGLAS. Is the Senator from Oklahoma aware of the fact that in the Phillips case the Commission found that the Phillips Company did keep distinct records on its gas and oil operations, and that the profits from gas were 16 percent? That fact was not allowed to be taken into evidence, because the Commission favored the reasonable market price, and therefore it did not go into the rates of profit. However, the records were printed and the figures were segregated.

Mr. MONRONEY. Could the Senator from Illinois tell me how they could allocate, in any reasonable way, in connection with the acreage they held, the wildcat acreage, which costs a considerable amount of money to maintain? It is unproven acreage. A company does not know whether it will develop gas or oil.

Mr. DOUGLAS. The Phillips Company did have accounts which permitted a division of oil and gas costs. The record shows the profits which they allocated to gas were very considerable—about 16 percent. The Senator from Oklahoma has been making an attack on the floor of the Senate and in the press on the distributing companies.

Mr. MONRONEY. No; it is no attack. I am only trying to establish that their cost factors are about 10 to 1 over the cost factor of the gas at the wells——

Mr. DOUGLAS. Is the Senator aware of the fact that the average rate of return of the distributing companies is from 5½ to 6 percent, and that, so far

as we can tell, the average rate of the composite companies has been slightly more than 14 percent?

Mr. MONRONEY. The figures from the Chase Manhattan Bank bulletin are 10.2 on sales. The capital structure of the gas-distributing company bears little relationship to the proper value of the company. The Senator will agree with that statement, I am sure. It represents, in many cases, capitalization on completely obsolete equipment. It represents capitalization on worthless gas-manufacturing plants, and even real-estate investments, which in the case of the Washington utility, I am afraid the citizens of Washington are being charged for in their rate base. The return on watered stock goes away back to the Insull days. The Senator from Illinois was one of the crusaders against the situation which prevailed at that time. I know he does not wish to return to the days when great profits were made on watered stock. The return should be based on actual value instead of on so much watered stock.

Mr. DOUGLAS. Let me fire a volley at the Senator from Oklahoma. I have figures showing the net income available for common equity of corporations engaged in the production of gas and oil for the year 1954, and I pick out three companies which I think are almost exclusively gas companies: the Chicago Corp., the Hugoton Production Co., and the Republic Natural Gas Co. The two Senators from Oklahoma are on the floor. Am I correct in my impression that these three companies are almost exclusively gas companies?

Mr. MONRONEY. I shall have to yield to my distinguished colleague to answer that question. I am not familiar with those companies. I never heard of them. They are not in the list of those mentioned, are they?

Mr. DOUGLAS. No; they are not in that list.

Mr. KERR. I shall be glad to try to answer any questions the Senator from Illinois wishes to ask me.

Mr. DOUGLAS. I merely wish to inquire if those companies are not almost entirely gas companies.

Mr. KERR. The Chicago Corp. probably has a greater investment in refining facilities than in gas production.

Mr. DOUGLAS. I am speaking of the Hugoton Production Co.

Mr. KERR. I thought the Senator started with the Chicago Corp.

Mr. DOUGLAS. That is correct. The next is the Hugoton Production Co.

Mr. KERR. I am not familiar with that company. I wonder if it is not the Hugoton Plains. If it is, it was engaged almost solely in the production of gas. I think it sold out some years ago.

Mr. DOUGLAS. These are figures for 1954.

Mr. KERR. The other company is what?

Mr. DOUGLAS. The Republic Natural Gas Co.

Mr. KERR. I would say it has more gas than oil.

Mr. DOUGLAS. I pick these out as three companies which I think are primarily gas companies.

Mr. KERR. A number of companies to which the Senator has referred have made tremendous profits. If he will examine the facts he will find that those which have made the highest profits made far more than 50 percent of their profits from imported oil.

Mr. DOUGLAS. I was careful to point out that they are composite companies. The Chicago Corp., in 1954, according to my figures, earned 14.01 percent on its equities.

The Hugoton Co. earned 26.7 percent on its equities.

The Republic Natural Gas Co. earned 16.7 percent on its equities.

The Southern Production Co., which is partly an oil and partly a gas producer, earned 21.4 percent on its equities.

The Louisiana Land & Exploration Co.——

Mr. KERR. I think that is a subsidiary, is it not?

Mr. DOUGLAS. I think that is correct.

Are the Senators from Oklahoma maintaining that the gas industry is unprofitable?

Mr. MONRONEY. No. Some men can make a profit in the gas business or the oil business. I do not happen to have that kind of good judgment. The investments which I have made have turned out to be dusty. At the moment I own a zero amount of natural gas and a zero amount of oil. But what the Senator from Illinois is saying about return on equity capital goes to the crux of the bill. I do not know anything about the Hugoton Co., which the Senator mentioned. Most of the companies buy leases for a dollar an acre as wildcat leases. If they take a big enough wildcat gamble, they may get 20 or 30 thousand acres which may become productive. Companies have leased a large amount of acreage with no gas under it. If gas was discovered, the land became worth $100 or perhaps more than that an acre, if they were lucky enough to hit a big gas field. That is exactly why I quarrel with the Senator's Supreme Court formula, which gives no credit at all in the rate base for the discovery value of gas. If we strip it down to $1 an acre——

Mr. DOUGLAS. My good friend from Oklahoma knows perfectly well that under the tax laws the drilling and exploration costs are deducted. He knows that the cost of the dry hole is deducted. He knows that there is a 27½ percent depletion allowance on gross receipts.

Mr. MONRONEY. But if there is no profit for the year, there is nothing from which to charge it off. If there is no production, the company is in the red.

Mr. DOUGLAS. The taxpayers pay for the red.

Mr. MONRONEY. There are approximately 20 men who lose to 1 who gains in the search for gas.

Mr. DOUGLAS. The Senator from Oklahoma is becoming intoxicated with the exuberance of his language. The figures for 1955 show that producing wells were drilled at the ratio of 1 to 6.

Mr. KERR. May I make an explanation?

Mr. DOUGLAS. Are my facts wrong?

Mr. KERR. They are not wrong if they are applied correctly.

Mr. DOUGLAS. The productive wells amounted to about one-sixth—not one-ninth or one-fortieth, but one-sixth.

Mr. KERR. If the dry wells were 10,000, that was out of about 56,000 wells drilled.

Mr. DOUGLAS. No; these were wildcats.

Mr. KERR. Then I say that the figures stated by the distinguished Senator from Illinois are not correct.

Mr. DOUGLAS. These figures were taken from Oil and Gas Journal, weekly well completions.

Mr. MONRONEY. If the Senator will refer to Gas Facts, 1954, which is taken as an authoritative publication, I believe, by all of us, tables 24 and 25, he will find that the ratio of successful wells to dry wells for all wildcat wells was about 1 in 8; and the ratio in the new field wildcats is about 1 in 9. Those figures are from Gas Facts. I think this reliable statistic should be considered in connection with the 1 to 6 ratio.

Mr. DOUGLAS. I am citing the Oil and Gas Journal, weekly well completions, at the end of 1955, and the figures are for 1955; whereas the figures of the junior Senator from Oklahoma are for 1954.

Mr. MONRONEY. I think it will be found that there were more successful oil completions and fewer successful gas completions, which seems to suggest that even nature seems to be worried about the Supreme Court's edict becoming operative.

Mr. DOUGLAS. That, I should say, was poetic license. I believe literary critics would call it a pathetic fallacy.

Mr. LONG. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. LONG. Has the Senator explained the real reason why the price of gas is high in the northern and eastern cities? The real reason why the price of gas tends to be high in those cities is that the utility companies in those areas have been operating for many years with old gas manufacturing plants. While natural gas has been brought in, so as to reduce greatly the cost of gas to the companies, they have nevertheless loaded their rate base down with all the old, obsolete equipment which they had on hand from the time when they manufactured their own gas. That is the reason why such high prices exist for gas in northern and eastern cities, whereas the prices charged in the southern and southwestern cities are far less.

Mr. DOUGLAS. There may be something to what the Senator from Louisiana says. As a matter of fact, I made a contention similar to his in the case of the Peoples Gas Co. in Chicago in the 1930's. But I think the Senator's attempt to change the subject away from the subject matter of the bill to the consideration of matters upon which only the State utility commissions have jurisdiction is a diversionary tactic. If the Senator wishes to go into that question, I may say that some cities still have mixed gas, and therefore have more than the ordinary high costs of manufactured gas. Furthermore, they are at the end

of longer pipelines, and thus have higher transmission costs. Also they have high costs in connecting residences with gas mains. In many northern cities the people are not yet heating their homes with gas as are the people in other sections of the Nation. So the volume of consumption per house is low, and therefore the carrying charges, the expenses incurred from the gas main into the house itself, are high.

The gas which the consumer uses to boil eggs and fry bacon in the morning is not enough to carry the investment in the connecting lines between the gas main and the house and the cost of installation.

So I think the Senator has been unfair to the northern companies—and the public knows I am not an apologist for them.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. PASTORE. Is it not a further fact that there has been a lack of absolute conversion only because of the instability of the natural-gas market? The chief complaint of the distribution companies has been that because of the varied and spiraling escalation clauses, there has not been a stability in the market whereby they could feel certain from one month to the next of exactly what the price would be. This has led to a certain cautiousness on their part in maintaining supplies of mixed gas or of keeping intact some of their artificial gas manufacturing facilities, because they think the time may come soon when they will have to go back to fabricating gas inasmuch as natural gas may not be available to them.

Mr. LONG. The real reason is that they capitalize their obsolete equipment in their rate base and charge the consumer twice as much as he should be charged. The Senator from Rhode Island has not said a word about that. That is the real reason why gas costs so much for the consumers in the northern cities.

Mr. PASTORE. Where does the Senator from Louisiana get the idea that the distributing companies are using obsolete equipment? Is that not a figment of his imagination? Furthermore, what is there in the bill which will give the distribution companies brandnew equipment? What are we arguing about? We are arguing as though the bill tomorrow would make a brandnew plant out of every distribution company in the country. There is nothing in the bill which would remedy the present situation.

If it be true that there is some abuse on the part of the distributing companies, we shall be adding to that abuse by enabling the producer to gouge the consumer even more than he may be gouged at the hands of the distributing companies. We shall not be giving the distributing companies brandnew equipment. Whatever ills may have existed in the past will not be cured by the bill. If there already be injury to the consumer, the bill will only add insult to that injury.

Mr. MONRONEY. Mr. President, will the Senator from Illinois yield for an escalation question which I should like to address through him to the Senator from Rhode Island?

Mr. DOUGLAS. The bill is so full of escalation clauses that I think the Senator should be permitted to indulge in such a question on the floor.

Mr. MONRONEY. The Senator from Rhode Island asks why we are talking about obsolete equipment. The Washington Gas Light Co. has written off, since its conversion to natural gas, $4,700,000 to take care of obsolete equipment. That writeoff goes on to my Washington gas rate and to that of other Senators. That is because throughout the years when artificial gas was used, the company did not writeoff the proper, acceptable amount of depreciation.

Now the company has found a profitable operation with the use of natural gas, which incidentally costs them 5 cents a thousand cubic feet less than manufactured gas. The local company soon obtained a 12-cent increase in the consumer's rate. With natural gas costing 5 cents a thousand less, that is an increase of 17 cents in the spread.

Mr. DOUGLAS. I may say that the Senator's argument reminds me of the line in the opera of Gilbert and Sullivan:

> The flowers that bloom in the spring, tra la, have nothing to do with the case.

We cannot do a thing about the distribution costs; they are entirely under the control of the State utility commissions. This is purely a diversionary tactic on the part of the Senator from Oklahoma, and is intended to divert attention from the $600 million which his friends in the gas fields will pocket.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. PASTORE. On that very point, does not the logic of the junior Senator from Oklahoma reach this one conclusion: That simply because the distributing companies are whacking the consumers, then let the producers do it, too. That is what the Senator is arguing, that is all it amounts to. If the distributing companies can whack the consumers once, let the producers whack them a second time.

Mr. MONRONEY. I have been intrigued by the $600 million and $800 million figures which it is alleged will be the increased cost to the consumer.

Mr. DOUGLAS. We shall demonstrate that.

Mr. MONRONEY. Household gas is what all the Senators from the northern States have been crying about. They want a cheap price——

Mr. PASTORE. For the housewife.

Mr. MONRONEY. For the housewife. I am so glad the Senator from Rhode Island has mentioned the housewife, because the cost of gas to the housewife in 1954 was a total of $196 million.

Mr. PASTORE. Does the Senator think the bill will bring the price down or up?

Mr. MONRONEY. The price of gas will stand a better chance to remain where it is under this bill than under the law which some Senators are suggesting that the Supreme Court be permitted to write for Congress. To me it is rather fantastic for anyone to suggest that there will be unreasonable increases after all these years of interstate operation, from 1936 until 1956, during which there has been no control over the producer and but little increase in the cost of gas. In 1926 natural gas cost at the well 9½ cents. In 1954 the cost was 10½ cents.

If Senators can show me any unregulated commodity in the whole United States which has not increased in greater proportion than that, I shall be greatly surprised. There has been a one-cent increase since 1926. We grant that during the days of 30-cent wheat, 5-cent cotton, and nickel hogs, the price went down about 4.5 percent. But the Senators do not want to roll us back to the Hoover days, do they?

Mr. DOUGLAS. The Senator from Oklahoma disregards the facts in the case, because the figures I have introduced show that in his region in the Southwest the average price which the producers got from the 17 big pipeline companies in 1946 was 4.3 cents. In 1954 it was 10.36 cents, an increase of 120 percent.

Mr. MONRONEY. Those were the days of 30-cent wheat. From 1940 to 1946, every ounce of steel was pressing into service for war. There were so many sources of supply, and so many gas fields had been discovered as we increased our drilling for oil for war purposes, that enough gas was being flared in west Texas to heat the homes of Chicago and New York for 10 years. But we got the steel. Then the long pipelines were laid, and there was a market for the gas. The Senator still wants to keep gas at prices which prevailed when we had 30-cent wheat.

Mr. PASTORE. Mr. President, will the Senator from Illinois yield to me?

Mr. DOUGLAS. I yield.

Mr. PASTORE. Of course, one thing the Senator from Oklahoma overlooks is that he reverts back to 1938.

Mr. MONRONEY. To 1926, when there was a normal market and 9½-cent gas.

Mr. PASTORE. There was a time when gas was being burned up because there was no available market for it outside of the very States where it was being drilled.

Mr. MONRONEY. In 1926 there was a balanced market. There was a supply seeking a market, but gas was not in such great supply that it was being burned in the air and flared in every well in the country.

Mr. PASTORE. Will the Senator from Illinois yield further?

Mr. DOUGLAS. I yield.

Mr. PASTORE. The real progress and development in the gas industry has taken place in the past 5 years. The important thing is for the Senator to consider the figures of the past 5 years, and then take into account petitions now pending before the Federal Power Commission. There are petitions before the Federal Power Commission for rates of 20 cents, 21 cents, 23 cents, and even up to 30 cents a thousand cubic feet. I say to the distinguished Senator from Oklahoma that there is such a terrific

demand for gas today that if the gas were turned into the open market without some supervision on the part of the Federal Power Commission, the poor consumer would be sunk.

Mr. MONRONEY. The Senator from Rhode Island speaks of 20- and 22-cent gas. Going back to the theory that the Supreme Court has a right to invalidate an existing contract, then the contract no longer exists for the pipeline to supply natural gas to Chicago or Providence, R. I. Therefore, canceling of the contract might be advantageous to the producer, who is trying to find out what the law is. Nobody knows. If such contracts are rendered invalid by the Supreme Court's decision, then the producers are going to ask for 20 cents a thousand cubic feet. What I am trying to say is that unless the pending bill becomes law, consumers are going to pay much more, as a result of scarcity, and the possibility of getting only high-cost gas committed to interstate commerce. If the bill is passed consumers will be under reasonable market prices, which the Federal Power Commission will have a right to regulate to insure that they do not go beyond a certain yardstick.

Mr. PASTORE. What we overlook is that the Natural Gas Act applies to producers and gatherers. As a result, producers cannot cancel contracts, because they are under Government supervision, and every contract consummated since 1938, when the Natural Gas Act was enacted, comes under the authority of the Federal Power Commission. Contracts consummated since 1938 cannot be canceled.

Mr. MONRONEY. We cannot have it both ways. Some of the lawyers argue that if the Commission can rule out a price favorable to the producer, then it can also rule out a price which is unfavorable to the producer. So many producers are asking for a 20-cent price on the theory that the Supreme Court opinion permits such increases.

Mr. DOUGLAS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER (Mr. McNAMARA in the chair). The Senator will state it.

Mr. DOUGLAS. Who has the floor?

The PRESIDING OFFICER. The Senator from Illinois.

Mr. DOUGLAS. I was in some doubt about it.

Now that we have the Senator from Oklahoma present, and he is in such good form, let me say to him I think it was most inappropriate for him to take the highest examples of the highest residential rates in northern cities and suggest that they were typical of the country as a whole.

Mr. MONRONEY. Mr. President——

Mr. DOUGLAS. I shall yield in a moment.

Instead of residential rates of $1.56, $3.01, $3.54, the Senator from Illinois has pointed out that the average residential rate for the country as a whole is only about 80 cents. If the 23-cent and 24-cent industrial rate were considered, the average rate for all purposes would be only 44 cents. So, instead of the producer getting one dime, he is getting one quarter of that amount. If one considers the city-gate prices, they average approximately 25 cents. The distributive costs are only 19 cents a thousand feet, making a total of 44 cents. Why does not the Senator from Oklahoma, with his sense of fairness, bring those facts out?

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I shall yield in a moment, but I should like first to take the offensive against the Senator from Oklahoma. I point out that the Oklahoma City and Tulsa consumers are paying most of their money to the producers.

Mr. MONRONEY. I have tried to point out that in those Oklahoma cities the cost at the burner tip is less than the spread from the city gate to the burner tip in the States of the Senator from Illinois and the Senator from Rhode Island. In every case where we have quoted residential prices and the spread, we have taken the figure most advantageous to the gas distributing companies. Where there was one rate for cooking—which was high, being $3 and some cents in Rhode Island—and one for cooking and heating, which was $1.65, I think the acting chairman of the committee knows that the Senator from Oklahoma took the lower figure. We had the average rate as between cooking and heating in Milwaukee, and we quoted that.

Even taking the most advantageous figure of the gas distributing company, there will be the difference in spread we have quoted. To quote the average rate of distribution based on industrial use, is to defend a system of allowing industrial use to interfere with household consumption. I cannot defend the practice of allowing a prodigal waste of gas for industrial use. The supply of gas is, according to the best Bureau of Mines estimates, only enough for 22 years, compared with a supply of other fuel which is estimated at 10,000 years. I cannot go along with encouraging the prodigal use of this fuel in short supply under boilers when more abundant fuels can be used for that purpose.

Mr. DOUGLAS. I hope I do not offend my friend from Oklahoma, whom I like very much, when I use a quotation from the Book of Job: "He multiplieth words without wisdom." My good friend seems to think it is a terrible thing to use gas for industrial purposes in the North, but I am sure he knows that various chambers of commerce in his area of the country are making appeals to industry to go to the Southwest, where those industries can have cheap gas for industrial use. It seems to be a terrible thing to use gas under industrial boilers in the North, but it is the standard operating procedure in the Southwest.

Furthermore, my good friend will find, if he examines the industrial rate in the Southwest, that most of it goes for the price paid to the producer in the field.

Mr. President, I will tell you what my good friend, the Senator from Oklahoma, is doing: In jacking up the price of gas in the field, he is strangling industry and hitting consumers in his region. There was some testimony to that effect from the Oklahoma distributing companies; they had the courage to say that, even though they operate in oil and gas territory.

Mr. MONRONEY. Mr. President, will the Senator from Illinois yield to me?

Mr. DOUGLAS. I am glad to yield.

Mr. MONRONEY. I should like to say that the increase in the industrial use of gas in my State has occurred in the past 4 or 5 years, largely because of the great uncertainty on the part of the gas producers and their consequent unwillingness to enter into 20-year contracts. I know of instances of a gas producer taking a lower rate for the sale of gas within the State for use as boiler fuel for the generation of electricity. That is a use of natural gas which I deplore; but the producer did not wish to undergo the uncertainty which would arise in connection with his signing himself into servitude for 20 years as a public utility. The number of such instances will increase, rather than decrease, because in the gas-producing States there are industrial markets which can be developed. We have no control over that; but I think the history of economics shows that business will tend to remain where it is least faced with Government regulation, and will be hesitant to enter fields in which there is a tight yoke of Government regulation, particularly a new system of Government regulation on a public-utility basis which never before has existed in this industry, since the first sales of natural gas in Fredonia, N. Y., in 1824.

From 1824 until the Supreme Court's decision in 1954, the natural-gas business was a free-enterprise business. But by a 5-to-3 Supreme Court decision that situation was changed. The entire system of pricing natural gas was changed, because five Justices, sitting in the cloistered Supreme Court building, decided they were compelled to rule in that way.

Mr. DOUGLAS. Mr. President——

Mr. MONRONEY. I yield the floor. [Laughter.]

Mr. DOUGLAS. Mr. President, I did not know the Senator from Oklahoma had legal possession of the floor. I thought perhaps he had squatter's rights to the floor. [Laughter.] However, I am glad that legal possession of the floor has reverted to me.

If my good friend, the Senator from Oklahoma, had been on the floor earlier this afternoon or late Friday afternoon, or if he had read the RECORD for Friday, he would have realized that I made it perfectly clear that the Natural Gas Act has always meant, according to the interpretation of the courts, what the Supreme Court said it meant in 1954 in the Phillips case, namely, that it covered the price at which gas was sold to the pipelines, for transmission in interstate commerce. If the Senator from Oklahoma will read, tomorrow, the CONGRESSIONAL RECORD for today, he will see that that point was made clear on the floor of the Senate during the debate between Senator Connally, Senator Wheeler, and Senator Borah, and that the circuit court three times and the Supreme Court twice made rulings to the same effect.

So, Mr. President, it is utterly nonsensical for the Senator from Oklahoma to claim that the Supreme Court's decision in 1954 was a capricious one.

Now let me deal with the argument the Senator from Oklahoma makes. The Senators on his side of this question have been trying constantly to divert attention from the main issue by calling attention to certain distributive rates in a few selected northeastern and northern cities. They have constantly made an effort to do that. I am sure the Senator from Oklahoma will not take my remarks personally, because I do not refer to him, and I know that he would not attempt to pass off a false argument any more than he would attempt to pass off a false coin. However, I will say that the argument, as advanced by others, reminds me of the favorite trick which is said to be used by a pickpocket who has in his pocket money which does not belong to him. The first thing he does is to yell "Stop, thief" at someone else, so that attention will be diverted away from the actual thief.

In this connection, Mr. President, I make no personal reference to the Senator from Oklahoma; but I say that is the practice to which some persons resort, in an effort to divert attention from their own difficulties.

Mr. LONG. Mr. President, will the Senator from Illinois yield to me?

Mr. DOUGLAS. I shall be glad to yield in a moment.

Mr. President, we cannot do a thing about the retail residential rates in the northeastern area of the country. I could take some time in explaining those rates. I could say that in Manhattan, for example, there is a great rock structure, and expensive tunnels have to be dug through the rock, and a high cost has to be paid in that connection. I could also point out that some cities use manufactured gas, which has a higher cost of production than natural gas, and they do not make extensive use of gas for house heating and thus do not have the benefit of a large volume of gas consumption, which would result in reducing the unit cost, and so forth.

Instead, I merely say that the yield to the distributing companies, under the rulings of the public-utility commissions, is only 5 percent or 6 percent. Perhaps the rate base is too high, but we cannot do anything about that.

However, in the Southwest the Senator from Oklahoma will find that the production rates are largely made up by the production cost in the field, and when the rate is raised, consumers—both industrial and residential—are hurt. So I am sorry that the Senator from Oklahoma seems to have his mind fastened only on the rates in the cities, rather than on the rates in the field.

Mr. President, I have said some harsh things about the arguments the Senator from Oklahoma is advancing, but not about the Senator from Oklahoma himself.

Mr. MONRONEY. Mr. President, I appreciate that, and I feel the same way about my distinguished colleague from Illinois.

However, Mr. President, for the life of me I cannot understand why the concern for the consumer, about which we have heard so much, results in an attempt to place regulation on the producer, who gets only about 10 percent of the consumer's dollar.

Mr. DOUGLAS. About 25 percent.

Mr. MONRONEY. The producer gets about 10 percent of the residential consumer's dollar. I cannot understand why that 10 percent is regarded as being so important, whereas the 90 cents or 90 percent of the consumer's dollar is regarded as so unimportant. Neither can I understand why the spread in connection with city distribution is regarded as so unimportant.

Mr. DOUGLAS. That is not unimportant. But, first, let us get the first figures straight. The average price at which all gas is sold locally is approximately 44 cents per thousand cubic feet.

Mr. MONRONEY. Including industrial sales.

Mr. DOUGLAS. That is correct.

Mr. MONRONEY. I thank my colleague.

Mr. DOUGLAS. The average amount received by the producer in the field is 10.7 cents per thousand cubic feet, or 23 percent of the ultimate consumer's dollar. The average price at the city gate is just under 25 cents per thousand cubic feet, or about 56 percent of the consumer's dollar. The local mark-up is about 19 cents per thousand cubic feet, or about 44 percent of the consumer's dollar.

It may be that those amounts are too great. I certainly hold no brief for the local distributing companies. But I object to having the Senator from Oklahoma and the Senator from Louisiana center all their attention on the distributing companies, about which we can do nothing because they are under State regulation; and I object to having those Senators try to divert attention from the producers, about whom we can do something.

Mr. MONRONEY. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. It seems to me this situation almost resembles the case of a doctor who, upon examination, finds a patient to have cancer, but makes a diagnosis of fits, because he cannot cure cancer, but he can cure fits. A doctor who makes such a diagnosis under those circumstances is a rather poor doctor.

In the same way I object to the diagnosis presented by the opponents of the bill. They are treating the patient for a disease which does not threaten him. When treating him for that disease, they fail to make him aware of the disease—or problem—he actually has. When the opponents of the bill fail to give proper attention to the rates charged in connection with the city distribution lines, they are doing the consumer a great disservice, rather than a service.

Mr. DOUGLAS. Mr. President, let me say that I am willing to give $5 to a local league of utility consumers, to prosecute a case on gas rates before the Public Utilities Commission of the District of Columbia. For that purpose, I now place $5 on the desk of the Senator from Oklahoma.

I am willing to do my duty as a consumer, to see that this subject is gone into. If the Senator from Oklahoma will match my $5, we shall have at least $10 with which to bring suit.

Mr. MONRONEY. Here is my $5. Will the Senator from Illinois join the junior Senator from Oklahoma, the junior Senator from New Mexico [Mr. ANDERSON], the junior Senator from Texas [Mr. DANIEL], and the Senator from Arkansas [Mr. FULBRIGHT] in appearing before the District of Columbia Committee to ask that the Washington Gas Light Co. be required to print three simple facts about the rate on its bills—facts which cannot be ascertained from the goobledygook now on the back of the gas bill? I refer, first, to the cost of the gas at the well for the last conveniently obtainable 12-month period; the cost of the gas to the distributing company at the city gate; and the cost per thousand cubic feet for moving the gas from the city gate to the consumer's burner tip. If we can make clear to the thousands of gas consumers of Washington, D. C., who are paying one of the highest charges in the country for city delivery, that with the consumption of gas increasing, rates should be reduced, the $5 which the Senator from Illinois has donated, and which the Senator from Oklahoma has matched, will be the most effective public regulation which could be brought about.

Mr. DOUGLAS. Will the Senator from Oklahoma add the profits of the producers to the items referred?

Mr. MONRONEY. I should be glad to do so if they could be ascertained. But they cannot be ascertained. How do we know whether they are paying for gas leases or oil leases? If the Fulbright bill is not passed, the ultimate gas consumer will be playing for every dry hole in the country.

Mr. DOUGLAS. The Senator from Illinois will vote for the proposal of the Senator from Oklahoma if he will vote against the Harris-Fulbright bill?

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. PASTORE. If I may make further suggestion in conjunction with this act of donation, perhaps we ought to substitute a resolution for the pending bill, calling upon the governor of every State to have every distribution company given better supervision, and calling for an investigation of the spread. In the meantime we can postpone action on the natural-gas bill until, say, June 30, 1956.

Mr. DOUGLAS. I think that is an admirable suggestion.

Mr. President, I believe Oliver Wendell Holmes began his book The Autocrat of the Breakfast Table by saying: "As I was saying when I was interrupted." So I shall resume the discussion which I began some minutes ago.

Mr. LONG. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. LONG. I assure the Senator from Illinois that so far as the junior Senator from Louisiana is concerned—and I believe so far as all his colleagues are concerned—we are all satisfied that the Sen-

ator from Illinois is acting in complete good faith and good conscience in the fight he is making, although some of us do not agree with him.

Mr. DOUGLAS. I accord to my opponents the same measure of good faith and good conscience.

Mr. LONG. I do not believe it helps matters to impugn the motives of those who disagree with us.

Mr. DOUGLAS. I am criticizing only the logic of the proponents of the bill.

Mr. LONG. The Senator has made reference to the motives of certain individuals. He has made much of the argument that producers would like to get better prices for their gas. Of course, they would, inasmuch as they are selling gas.

But did it ever occur to the Senator that some of the coal-producing interests might want this bill defeated because some of them are of the conviction that gas will simply not be sold in interstate commerce in greater quantities in competition with coal unless this bill should pass, feeling that the gas producers will not make gas available in interstate commerce, and will not be willing to sell it under the kind of regulation which the Senator is proposing?

Mr. DOUGLAS. The Senator from Louisiana may have inside knowledge, which the Senator from Illinois does not possess, as to what is going on in the corridors. If the coal industry is in favor of the bill, it may be because it is felt that under it the price of gas will go up, and the coal industry will sell more coal, believing that new families starting life will use coal rather than gas to heat their houses, and that industrial companies will turn to coal rather than gas.

Mr. LONG. Of course a coal producer would like to see coal sell on a competitive basis with natural gas, because under the type of regulation the Senator from Illinois would like to have the result might be that certain individuals who would prefer to buy natural gas if they could get it would buy coal. But I submit to the Senator that there are some people interested in coal who would like to have the bill defeated, feeling that natural gas will not be sold in interstate commerce unless the gas producer considers that he is safe from the kind of regulation the Senator is here advocating.

Mr. DOUGLAS. That may be. I have never heard such an argument. The Senator from Louisiana cannot have it both ways. He cannot have the coal industry favoring the bill, and at the same time have the coal industry opposing it.

From what I have understood about the forces at work away from the floor of the Senate, the coal industry is for the Harris-Fulbright bill, because it is felt that the increase in the price of gas would be so great that the housewife in the newly formed family would stoke the furnace with coal rather than turn on the gas.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. PASTORE. Does not the argument of the proponents of the bill rest on this logic: That if the Federal Power Commission were to regulate the producers, perforce the Federal Power Commission would put the producers out of business? Does the Senator from Illinois have any such fear?

Mr. DOUGLAS. I have not.

Mr. PASTORE. Does the Senator from Illinois fear that the Federal Power Commission is going to confiscate the property of the producers and not give them a fair profit on their investment and their labor? Whoever heard of such a thing as the Federal Power Commission, which is a governmental agency, an arm of Congress, dedicating itself to putting a great industry like the gas producing and gathering industry out of business? I do not follow such logic.

Mr. LONG. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. LONG. Let us examine a simple state of facts.

Who would say that it is fair to inform a gas producer that he has a right to sell gas in interstate commerce—as the Federal Power Commission did—without Federal control of the price, and to allow him to sign contracts, but, after the contracts have been signed at a price of 15 cents for the gas, which is more than the average price at the moment, to say to the same producer that he must deliver the gas, but he cannot be permitted to charge the price which it was intended he should receive, and which was stipulated in the contract; and furthermore, that after the 20-year period, after the expiration of the life of the contract, he must continue to sell gas? Does that seem to the Senator to be just and fair?

Mr. DOUGLAS. The Federal Power Commission would fix a fair and just price.

Mr. LONG Just a moment. That is what we are talking about. Is it fair to a gas producer who signed a contract to sell his commodity at a given price to tell him, first, that he must sell it for a price below that for which he agreed to sell it, and secondly, to tell him that when the contract is due to expire, in 20 years, he must continue to deliver his product after the period of 20 years has expired?

Mr. DOUGLAS. The Senator is speaking as though it is the terms in the 20-year contract which govern the price at which gas is being sold. The Senator knows perfectly well that what is affecting the price of gas in the field is the so-called escalation clauses, under which prices will be increased much above the price provided in the original 20-year contract.

It is the escalation clauses, plus the forced renegotiation of original contracts in order to get additional allotments of gas, which are raising hob, and which will send up the price of gas in the field unless there is some regulation.

Mr. LONG. A few days ago the Senator stood here and informed us that he had no particular objection to these escalation clauses, if I correctly recall, because at that time he said he could understand why a man who did not want to sell his gas over a long period of time, but was compelled to do so in order to find a market for it, should be entitled, over a period of time, to receive a price more in line with the going market price as time went on.

Mr. DOUGLAS. To which Senator is the Senator from Louisiana referring?

Mr. LONG. I am referring to the Senator from Illinois.

Mr. DOUGLAS. Oh, no. I said that the second party favored-nations clause was terrible, and that the third party favored-nations clause was outrageous.

Mr. LONG. I assume we are talking about an escalation clause under which a producer sells gas for 5 cents during the first 5 years, 10 cents during the next 5 years, and 15 cents during the following 5 years.

Mr. DOUGLAS. I do not object so much to that, but I do object to second and third party favored-nations clauses. The Senator from Louisiana knows that frequently a producer, let us say, sells 100 million thousand cubic feet of gas to a pipeline, at a given price of, let us say, 10 cents, and then the pipeline wants another 15 million thousand cubic feet. Under such circumstances, a producer will frequently say, "I will sell you the additional 15 million at 20 cents, provided you agree to renegotiate the original contract and rewrite up the original price to 20 cents." Therefore on renegotiation conditions are found which are very similar to those under the most-favored-nations clauses.

Mr. LONG. The Senator from Illinois perhaps is placing an unfair interpretation upon what may well be a sensible business relation. Let me explain to him what I have in mind. A gas producer with a product to sell would very much prefer to sell his product in the same way the producer of coal, or the producer of oil, or the producer of almost any other product, sells his product. Producers other than gas producers sell their product on a going day-to-day market price. The situation in the gas business is due to the fact that the trend has been for gas prices to rise. In order to sell his gas the producer must sell it to a pipeline company, which must make a major investment in order to get the gas to the market. The result is that the pipeline company insists on tying reserves up over a long period of time so that the pipeline company can obtain a return and amortize its capital investment.

Mr. DOUGLAS. That is usually for a period of 15 or 20 years.

Mr. LONG. The producer undertakes to obtain an agreement with the pipeline company that he will sell his gas at a stipulated price, but that, in any event, if the market should become more favorable to the producer, the producer will receive the benefit of the higher market price at which the product is being sold.

There is nothing evil about a farmer selling his product at a going price. There is nothing wrong with General Motors selling its automobiles at the going price. That is how almost every industry in the world does its business.

Mr. DOUGLAS. What the Senator from Illinois persists in doing is to say that the sale of natural gas is like the sale of eggs or butter or of cordwood, or of any other product. The Senator from Rhode Island [Mr. PASTORE], the Senator

from Michigan [Mr. POTTER], and the Senator from Illinois have been contending, throughout the debate, that the sale of natural gas is different from the sale of other products. That is so because once gas mains, pipelines, and gathering lines have been laid, the industry is organically tied together in all its parts. The pipeline cannot separate itself from the producer or the gatherer. It is tied to the producer and gatherer. The Senator from Louisiana, I thought, made a very interesting point the other day when he said that the small producer was tied to the pipeline. That may be true. However, the pipeline is tied to the big producer. That is the point.

Mr. LONG. The point is, however, that the producer does not get more for his gas because of the difficulty of getting it to market; on the contrary, he gets less. If we take the value of gas in terms of heat units, as against coal or oil, the value of a thousand B. t. u.'s of gas is much less than a thousand B. t. u.'s of oil or coal, so far as a comparison of the sales price for the three products is concerned.

The reason is that the other producers can transport their commodities to market by different forms of transportation. The gas producer, on the other hand, is limited to one or two pipelines, which make large invesments in order to get the product to market. That is why the gas producer has been getting less and will continue to get less for his product. I am not complaining about the fact that he will continue to get less, but I do say he is entitled to sell his fuel competitively, in the same way other producers are entitled to sell their products competitively.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. PASTORE. The Senator from Louisiana has put his finger on the nub of the whole problem. The proponents of the bill have been reluctant to accept the suggestion made by the Senator from Illinois to exempt the small producer. The pending bill is not a bill that favors the small producer. The bill, S. 1853, is a bill for the big gatherer. Anyone who reads the provisions of the bill will find that the whole purpose of the bill is to help the large gatherer. We realize that the small producer has his problems and we are willing to exempt him. Why do the proponents of the bill resist such an exemption?

Mr. LONG. Mr. President, will the Senator yield?

Mr. DOUGLAS. I am glad to yield, and I will be very much interested in the Senator's answer.

Mr. LONG. It would be an improvement to do what the Senator suggests, in terms of exempting the small producer. That would be an improvement over what the Senator is recommending for the large producers.

Mr. DOUGLAS. Why does not the Senator want such an exemption provided?

Mr. LONG. One moment, please. I cannot see why the Senator would object to letting the large concerns sell the gas competitively, as he would permit the small ones to do. Why not?

Mr. PASTORE. Because the large producers control the market.

Mr. DOUGLAS. Because they control the market. One hundred and ninety-seven producers sell 90 percent of the gas. Thirty-five producers sell 70 percent of the gas.

Mr. LONG. Will the Senator compare the gas industry with the oil industry?

Mr. DOUGLAS. If we control the dog, we control the tail. However, if we control the tail, we do not control the dog.

Mr. LONG. There is competition in the gas industry; in fact, there is more competition in the gas industry than almost any other industry in the country. If we compare the gas industry with the automobile industry, we find that in the automobile industry five of the largest producers produce all the automobiles. By comparison, the Senator is making much of the fact that perhaps 35 gas producers produce 70 percent of the gas. However, there are thousands of small producers who are also competing with the large producers from day to day trying to find gas, and, if they find it, to sell it.

Mr. DOUGLAS. If the Senator from Louisiana will listen with patience as I unfold my argument—and I have only begun to do so—he will see the strategic importance of the large producers.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. PASTORE. I believe there is another point the Senator from Louisiana has missed. It is true that 4 or 5 large automobile companies produce all the automobiles. However, in the automobile industry there is not the situation of a captive consumer. That is something that is being continuously overlooked in the debate.

Mr. DOUGLAS. It is being overlooked by the proponents of the bill.

Mr. PASTORE. The consumer who turns on his jet at home in order to cook with natural gas, actually is in captivity. Consumers, in other words, have no other place to go. Their distribution company is tied to the pipeline company, the pipeline company is tied to the gathering company, and the gathering company collects from all the small producers. Does not the Senator see that it is one continuous chain right down the line?

All the Supreme Court has said—it has not said that the FPC shall control the well—is that when the producer sells his gas for resale in interstate commerce, then and only then is the public interest involved, because of the consumer interest, and for that reason the operation should be under governmental control. It is as simple as that. The whole argument revolves around the captive consumer. The minute we forget that fact, we can take the whole Natural Gas Act and throw it in the Potomac River.

Mr. LONG. Let us go back a minute to see whether the consumer is a complete captive. If a pipeline wishes to terminate its relationship with any individual producer, all the pipeline company needs to do is to turn off the spigot. It can do that very easily.

Mr. PASTORE. What about the gathering lines?

Mr. LONG. The gathering line can buy gas from someone else. It, too, can turn off the spigot and buy from someone else. The idea that either is limited to one source is not correct.

Mr. DOUGLAS. I will show my good friend from Louisiana that in the field the competition is far more limited than in the country as a whole. Dr. Boatwright, inadvertently, I think, gave the game away in the table on page 184 of the hearings, which shows that the first 4 producers—I do not know whether he meant the gatherers or producers—the first 4 producers in 9 of the 13 cases which he cited furnished more than 50 percent of the gas which the pipelines obtained.

The Senator from Rhode Island has the figures before him. I believe we have put them into the RECORD. They bear me out. In the famous Phillips case, the Phillips Co. was the sole gatherer and seller to the Michigan & Wisconsin Pipeline Co. It was the only line. It sold 100 percent of the gas.

Mr. LONG. My understanding is that the Senator is in error. I believe that they were four different companies in each case.

Mr. DOUGLAS. That may be.

Mr. LONG. The situation was that there was a different group of four companies in each case.

Mr. DOUGLAS. That is all right. The point is that any one pipeline is tied to a relatively small number of producers who hold the upper hand. There are not 8,000 producers trying to sell gas to it. Four or five companies hold the upper hand; and in the case of the Michigan-Wisconsin Co., one gatherer, Phillips, supplies the entire amount.

Mr. LONG. Is the Senator from Illinois prepared to agree that natural gas is in competition for customers with the coal industry and the fuel-oil industry?

Mr. DOUGLAS. That is correct.

Mr. LONG. If they are in competition for customers, why should they not be able to compete in the price just as other producers do?

Mr. DOUGLAS. We get back to the fundamental question whether the producer of natural gas should be allowed to obtain the full amount the traffic will bear, or whether he should obtain only a just and reasonable return.

Mr. LONG. Wait a moment. When the Senator says "what the traffic will bear" he is referring to a competitive price for the product, is he not?

Mr. DOUGLAS. Not nesessarily. Natural gas, as the Senator from Louisiana is well aware when he visits places in the North, has a great advantage as a fuel aside from its cost. As a matter of fact, in a great many of the northern cities natural gas is not cheaper than coal, but is much cleaner than coal, and there is less work involved in its use. So there cannot be a comparison in pure cost per B. t. u. That is the case with industrial fuel, but not in the case of residential fuel.

Mr. LONG. The Senator is referring to the residential price and to the 98-cent rate of markup which the utility

company in Washington charges the public. But the Senator says that the average markup was about 19 cents. If the 19-cent figure were used for residential distribution, then, of course, the cost of gas would be far, far less to the consumer than the cost of heating with coal or fuel oil would be.

Mr. DOUGLAS. Is the Senator arguing that the distributing cost should be reduced?

Mr. LONG. It seems to me it should be less.

Mr. DOUGLAS. If the Senator wants to join and contribute $5 to the Consumers League I shall be very glad to take it.

Mr. LONG. A fair return, generally speaking, should relate to the value of the commodity being sold. Gas is selling at the well for only a fraction of the price of others fuels per B. t. u. Can the Senator tell me whether anything is particularly wrong about letting gas producers sell their product competitively?

Mr. DOUGLAS. The real point, as I said the other day, and it was not accurately given in the CONGRESSIONAL RECORD, is that the average costs should be compared at the point of consumption, not at the point of production. Who is to get the great benefits of the gas resources of the Nation which are to be distributed? The Senator from Louisiana would say that the people who own the gas rights should get the entire benefit. I am saying that these great riches given to us by God and by the beneficent processes of nature should yield a fair return on investment to those who own the rights, but that beyond that the people as a whole should get the benefit. I suppose we have reached a very fundamental difference.

Mr. LONG. Here is our fundamental difference in point of view: It is my feeling that as the production of a particular item becomes very profitable, more people wish to get into the business.

In the case of gas I anticipate that as the business grows more profitable, a greater number of people will go into it and produce more of it, and that will bring down the price. We have had great success in using that system. With more people going into a profitable industry, and with greater production, down comes the cost of the product. That is what has built this great Nation, not the utility concept, the kind of thing for which the Senator is arguing. What was the result of the policy of France? The French would not take off rent controls. They did not want the landlords to make any large profits by raising rents. They still have housing shortages. If they had decontrolled when we did, they probably would have had more housing.

If we impose the utility type of regulation on the gas producers they will not want to produce for the interstate market, which will mean that the people will get less gas, and will pay a higher rather than a lower rate for what they do get. The producers will do the same thing the large city distributors are doing. They will pad their rate base, their costs, and everything else, so that they can get a larger rate base, and then will take the high-cost gas and put it into interstate commerce and keep the low-cost gas for the intrastate market. Far from helping the consumer, I fear the Senator will wind up hurting the consumer, although I concede that the Senator is 100 percent sincere in what he is trying to do.

Mr. DOUGLAS. If the producers are going to benefit by the continuation of the present act, why is it they are bending heaven and earth to amend the present act?

Mr. LONG. I do not say the big producers would benefit from a continuation of the present act. I stated what would happen if the present act should be continued in force. In pursuance of that suggestion, if we apply the type of regulation which the Senator is proposing, the producer will pad his rate base with unnecessary items, just as is being done in Washington and in other cities by the distributing companies, and in the course of time the price of gas will be raised. The high-cost gas would go into interstate commerce and the low-cost gas would be used in the intrastate market where it is not subject to regulation. It would also mean that pipelines might be built from the Southwest to Canada, passing right by northern cities which should have service.

Mr. DOUGLAS. What the Senator is saying is that the regulation of utility rates in general and gas rates in particular is always due to break down.

Mr. LONG. What the Senator is proposing is a sort of Federal OPA for gas, but in administering it we could not properly control the consumption of gas, because the intrastate market would not be subject to regulation any way.

Mr. DOUGLAS. Two-thirds of the retail sales of gas are interstate.

Mr. LONG. The Senator from Illinois has said the gas product is in great demand. If it is in great demand, the consumers are bidding for the product. They want it. But the Senator wants to put price control on only one-third of the gas used. No one would care to sell gas under the Senator's type of control. The producer would prefer to sell it to those who are not in the interstate market, because they could then sell it at whatever price they wished.

Suppose the Senator were manufacturing soap, and could sell it to whatever group or source wanted it. Then suppose the Rexall chain had price control imposed upon it. If the public wanted the Senator's product, and he could sell it through many different outlets, if the Walgreen chain had no price control, he would sell his product through Walgreen.

If price control is placed on the interstate market, it will mean that the gas producers will not want to commit their gas to that market; they will want to keep it within the State.

The Senator knows that a pipeline passed by the city of Detroit and went into Canada, leaving the American customers without gas, simply because that gas would have to come under the Senator's type of regulation, or at least it was feared that it would.

On the other hand, the Canadians built a pipeline to the United States in order to supply gas from Canada.

The American producers will tend to keep their gas within the States where it is found, in an effort to avoid the control which will be imposed by the Federal Power Commission.

Mr. DOUGLAS. Nevertheless, I say that two-thirds of the gas which is sold is sold interstate.

Mr. LONG. I was under the impression that the gas was sold in a ratio of about 50–50—half within the State and half outside.

Mr. DOUGLAS. If we consider the gas which is sold by utilities, two-thirds of it is sold interstate, and only one-third intrastate.

Mr. LONG. Apparently a considerable amount of gas is also being sold in foreign commerce, which of course is also not subject, and could not be, to the type of regulation the Senator is here advocating.

Mr. DOUGLAS. I take it that what the Senator has been fundamentally contending for——

Mr. LONG. Is the free enterprise system, frankly.

Mr. DOUGLAS. That gas should sell at its thermal equivalent as compared with oil and coal.

Mr. LONG. No; I did not say that.

Mr. DOUGLAS. I thought the Senator was saying that. He asked if it were not fair that gas should sell for the same amount being paid for competitive fuels.

Mr. LONG. What I said was that the gas should sell at a competitive price.

Mr. DOUGLAS. In terms of other fuels.

Mr. LONG. At a price competitive with other fuels; yes.

Mr. DOUGLAS. Does the Senator know what that price would be?

Mr. LONG. I do not know. I should say, at the moment, that a 12½-percent figure would be a competitive price, because it was reached by virtue of competition. Of course, the Senator wants to impose some other type of competition.

Mr. DOUGLAS. I will tell the Senator what the Sun Oil Co., in a case, said would be the price at which it would be necessary to sell gas. They said the amount which would have to be received for gas to be equivalent to the price of oil at $2.97 a barrel, would be 53½ cents per 1,000 cubic feet, which is about 5 times the present rate.

So if it were put on a heating equivalent basis, that would mean quintupling the price of gas in the field. I think that it what the gas and oil industry is shooting at—they do not necessarily expect to get it, but that is their goal.

I am simply taking the testimony of a witness of the Sun Oil Co. I wish to make the record clear that in that case they were not asking for 53½ cents; they were asking for 17 cents. But the argument they advanced was that in order to get the same price for the equivalent number of B. t. u. as would be obtained for fuel oil at $2.97 a barrel, it would be necessary to receive 53½ cents per 1,000 cubic feet of gas.

Mr. LONG. The Senator knows that the competitive price is not the price one would ask for the product. It is the price upon which the buyer and seller are willing to agree. What the Senator

said a moment ago, referring to the equivalent value of oil as against gas or coal, brings out a point I have been urging. The fact that a gas producer has to send his gas through a pipeline makes him a captive, because he has to sign a contract, sometimes for the life of his entire reserve, in order to make a sale of his gas at all. He is at that disadvantage, not being able to deal with many customers. Even though he is compelled to sell at a lesser price, it is nevertheless a competitive price, and the gas should sell competitively.

Mr. DOUGLAS. The producer may be tied to a pipeline company, but the pipeline company is tied to the producer. The distributing company is tied to the pipeline. The consumer or householder, because of his investment, is tied to the distributor. They are all tied to one another. Under those conditions, how is it possible to fix prices? We say that that is not a competitive condition, a natural situation; that it is necessary to call in a neutral. The neutral is the Federal Government.

I have never noticed that Texas, Louisiana, or Oklahoma was devoid of influence in the National Government. In fact, I should say they have more influence, per inhabitant, 10 times as much influence—as have the States of Illinois, New York, Connecticut, or any of the other captured and captive provinces, which are enchained in the Senate and in the Federal Government, and are ruled by the small States.

Mr. LONG. The Senator is giving undue credit to some of the Members of Congress who represent those States during a Republican administration.

Mr. LEHMAN. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. LEHMAN. It is a fact that the price of coal is subject to seasonal variations. Coal can be purchased in the summer time very much more cheaply than in the winter, and the purchasers can accumulate their coal in the summer. The large industrial companies, knowing this, and taking advantage of that situation—a perfectly legitimate advantage, of course—are able to use coal, and it is economically profitable; and, on the other hand, they use gas when it is economically profitable.

But the house owner, having an installation which is costly, and which, of course, is not susceptible of removal, is not in that position. He is hooked, and hooked forever. He is bound to pay the price the public utilities charge. I understand that if the Fulbright-Harris bill should pass, the price which the public utility companies must pay, because of the increase in the cost of the gas at the well, could be added to the price which they charge their consumers.

Mr. DOUGLAS. Certainly.

Mr. LEHMAN. Therefore, is it not a fact that it is the household consumer who is the real captive?

Mr. DOUGLAS. Oh, yes. I shall show that the probable increase in the field will be 10 cents a thousand cubic feet. In the past year, 6 billion thousand cubic feet were sold. An increase of 1 cent on 6 billion thousand cubic feet would amount to $60 million a year. An increase of 10 cents would amount to $600 million a year. The major portion of the increase would have to be borne by the householders. They would make the payments, and the major portion of the receipts would go to the 35 big companies, most of which are among the industrial giants of the Nation.

So this is not a share-the-wealth movement; it is a movement to concentrate wealth still further.

Mr. LONG. The Senator realizes, does he not, that those companies will pay taxes, will drill more wells, will produce more gas, and that the general public willl benefit even more greatly as time goes by?

Mr. DOUGLAS. I never expected to hear the junior Senator from Louisiana, with all his human sympathies, with all his background, standing in the Senate and defending the taking of money away from the little fellow in order to give it to the big companies. I feel certain that on mature reflection the junior Senator from Louisiana will not want to do that, because it is contrary to everything that he was taught as a boy, and is contrary to all the standards by which he has lived.

Mr. LONG. If my friend from Illinois gained the impression from anything I have said that it is possible to have capitalism without capital, and private industry without profits, I am afraid he gained an erroneous impression of my views, because it seems to me that over a period of time all industries must make a profit in order to stay in business.

Mr. DOUGLAS. Certainly. Does the Senator from Louisiana believe that the Senator from Illinois denies that? We want them to make a profit, and a liberal profit. We simply say that because the consumers are captives of the producers, the producers should not make unconscionable profits.

Mr. LONG. Permit me to say that the natural gas industry comprises approximately 8,000 producers of gas.

Mr. DOUGLAS. But only 35 amount to anything.

Mr. LONG. If the Senator says 35——

Mr. DOUGLAS. The figures show that 35 companies sell 70 percent of the gas which enters interstate commerce.

Mr. LONG. That is correct. I was under the impression that the Studebaker Co. and the Kaiser Co. and the Willys Co. were fairly large automobile companies; I believe they account for only about 5 percent of the automobiles manufactured. If one looks at the three companies which comprise 5 percent of the automobile industry, and then considers the thousands of small producers who account for 30 percent of the gas production, I ask the Senator if he is not heartened to see an industry where 8,000 producers can compete with each other.

Mr. DOUGLAS. There was once a popular song, the title of which was "The Music Goes Round and Round." The discussion with the Senator from Louisana well conforms to that title. The argument goes round and round. The Senator from Louisana constantly brings up the concentration of industry in automobiles, in beer, in cheese, in steel, and other fields, and says, "Why, there are more producers in the field of gas than there are in those industries. Therefore, what are you kicking about?"

What I am trying to say is that, in terms of a given pipeline, there is far more concentration. The figures of Dr. Boatwright indicate that in 9 of the 13 great pipeline systems over half of the gas is furnished by 4 producers. The Senator from Louisiana should consider that total, which appears on page 184 of the hearings. In the case of one of those pipelines, the Michigan-Wisconsin Pipe Line Co., one gatherer, the Phillips Co., sells all the gas. There exists high concentration along a given pipeline. That is the point. The pipelines are tied to the producers. The distributors are tied to the pipelines. The consumers are tied to the distributors. Therefore, ultimately, the consumers are tied to the big producers. If the price is upped, the consumer pays the piper.

Mr. LONG. May I correct what appears to be an error in the Senator's statement?

Mr. DOUGLAS. If there is an error.

Mr. LONG. A pipeline will not make a contract with a producer of gas until he has a contract for the production of gas. A pipeline is not wedded or tied to any particular producer. If the Senator wanted to go into the pipeline business he would look in an area where there was gas.

Mr. DOUGLAS. The concentration of reserves is approximately the same. To get gas, the pipelines have to go to the big producer, who controls the reserves. In order to get the reserves committed, the pipelines must pay the price which the producers demand, because of the unsatisfied demand for natural gas which comes from the housewives, the glass industry, and so forth.

Mr. LONG. Let me state what seems to me to be the logic of the situation. If the price of natural gas shall rise, the business will become more profitable. More people will go into it, and more gas will be produced. Therefore, a greater supply will be available for use in the interstate market, as well as in the intrastate market. The increase in supply will hold the price down. I think that if the Senator were successful in securing the type of control he seeks, and wanted to keep the business from being profitable, fewer people would go into it; there would be less drilling, less gas would be available, and the consumers, in the long run, would have to pay a higher price.

Mr. DOUGLAS. Is the Senator from Louisiana saying we have a limited reserve of gas or a limitless reserve? Does the Senator say there is gas everywhere?

Mr. LONG. My judgment is that if money is available to develop and explore reserves, we will be in no danger of running out of gas in our lifetime.

Mr. DOUGLAS. We know that the proved reserves are approximately 21 times the present annual flow; but is the Senator saying that if the price were raised to 20 cents a thousand cubic feet in the field, that would result in enor-

mous additional reserves coming to the market?

Mr. LONG. It seems to me, whatever the price, that if we tend to hold prices down to the point where a given business is not profitable, production will be reduced. If a particular industry becomes profitable, more people will get into it, there will be more drilling, and more gas will be found. Does not that make sense?

Mr. DOUGLAS. The Senator from Illinois has noticed that in a region which is showing rapid expansion, optimism soars to almost unlimited heights. People believe there is no end to the expansion. I remember being on the Pacific coast, in the lumber camps of the Northwest, a good many years ago. The timber owners at that time were talking in terms of the forests of the Northwest lasting forever. I think that because of the tremendous growth and development which have occurred along the Gulf of Mexico, from Louisiana through Texas, and up into Oklahoma, the Senator has been swept off his feet by the fortunes which have been made and by the optimism of the area, and that he should not be so optimistic as he seems to be. I ask him to throw a little salt on the future.

Mr. LONG. I am not at all that optimistic; but when people say that we will run out of fuel in this country, that does not make sense.

Mr. DOUGLAS. We will not run out of coal.

Mr. LONG. We have more than a thousand years' reserve of coal.

Mr. DOUGLAS. In the case of coal; yes.

Mr. LONG. It seems to me that one of these days people are going to find a way of gassifying coal at the mouth of mines and making it available as natural gas. If so, there will be much more competiton than there is now.

Mr. DOUGLAS. We hope to develop such a process in Illinois.

Mr. LEHMAN. Mr. President, will the Senator from Illinois yield to me?

Mr. DOUGLAS. I yield to the Senator from New York.

Mr. LEHMAN. The Senator from Louisiana has stated that we could not hope or expect that any industry would prosper or survive unless it could make substantial or reasonable profits, but I wonder whether the Senator from Illinois will not agree with me that it would certainly be a very surprising statement—surprising not only to me, but to the American people, and to every economist in the world—if the claim were made that the large companies, the 35 which produce 70 percent of the natural gas, were not prosperous companies. I am willing to make the statement that of those 35 great companies, virtually all have been making vastly greater profits over the past 2 or 3 years than they made previously. I believe it will be shown, when the statements are published, that the profits for 1955 are at a record height, and that the companies are making unusually large profits. A very considerable part of those profits, of course, is due to what I believe to be inequitable tax loopholes, against which the Senator from Illinois has been fighting for some years.

Mr. DOUGLAS. But without much success.

Mr. LEHMAN. Without much success. I refer, of course, to the 27-percent depletion allowance.

Mr. DOUGLAS. The Senator from New York has made a very interesting point. Earlier, I placed into the RECORD a table relating to that subject, but I did not read it. I should like to read the figures of the net profits of some of the companies, and I now read the figures to the closest million:

Phillips Petroleum in 1954 made $76 million net profits.

Standard Oil of Indiana, $117 million.

Mr. LONG. Will the Senator yield so that I may ask if these profits are from gas production?

Mr. DOUGLAS. No; they are not.

Standard Oil of New Jersey, $585 million.

Shell Oil Co., $121 million.

Socony-Mobil Oil Co., $184 million.

Gulf Oil Co., $183 million.

Cities Service Oil Co., $44 million.

Atlantic Refining Co., $37 million.

The Texas Co., $226 million.

Sun Oil Co., $40 million.

Skelly Oil Co., $29 million.

The Pure Oil Co., $31,163,000.

Sunray-Mid Continent Oil., $36,668,000.

The Superior Oil Co., $10,360,000.

Tide Water Associated Oil, $34,547,000.

Ohio Oil Co., $38,224,000.

Standard Oil Company of California, $211,872,000.

Union Oil of California, $35,888,000.

Sinclair Oil & Gas Co., $91,580,000.

Columbian Carbon Co., $4,559,000.

Warren Petroleum Co., $8,930,000.

Continental Oil Co., $41,683,000.

Or a total of $2,187,920,000.

And let me point out that that occurred during the recession.

Mr. LONG. Are those figures before or after taxes?

Mr. DOUGLAS. They are after taxes. Later I shall have something to say on the tax question.

Mr. LONG. Did it ever occur to the Senator from Illinois that the total of all those profits is less than the profits reported by General Motors Corp., alone?

Mr. DOUGLAS. At this time I shall not discuss General Motors Corp.; but later in these remarks I shall discuss the tax question.

As I pointed out, those figures were for the recession year of 1954.

Mr. LEHMAN. What about the figures for 1955?

Mr. DOUGLAS. For 1955, the profits after taxes would be still greater.

Mr. LEHMAN. Mr. President, will the Senator from Illinois yield for a question?

The PRESIDING OFFICER (Mr. ALLOTT in the chair). Does the Senator from Illinois yield to the Senator from New York?

Mr. DOUGLAS. Yes; but, Mr. President, first let me say that the figures to which I have referred are obtained from Fortune magazine, from the so-called Fortune Directory of the 500 largest United States corporations.

Now I yield to the Senator from New York.

Mr. LEHMAN. Does the list include the profit figure for the Standard Oil Company of New Jersey for 1954?

Mr. DOUGLAS. Yes; it is $584,793,000.

Mr. LEHMAN. Does the list include the profit figure for the Standard Oil Company of California?

Mr. DOUGLAS. Yes, and it is $211,872,000.

Mr. LEHMAN. Does the list include the profit figure for the Texas Oil Co.?

Mr. DOUGLAS. Yes. The Texas Co. has been doing amazingly well; its net-profit figure for 1954 is $226,141,000.

Mr. LEHMAN. Those are the 1954 figures, are they not?

Mr. DOUGLAS. Yes. Let the record now show that these are the figures for profits after taxes. I made an error; in order to be safe, and not exaggerate, I said they were the figures for profits before taxes. But Fortune magazine has, in its article, two columns, one being "pretaxes," and the other being "net profit." We took the "net profit" column.

Mr. LEHMAN. For what year are those figures?

Mr. DOUGLAS. 1954.

Mr. LEHMAN. The Senator from Illinois has not submitted the figures for 1955, I believe.

Mr. DOUGLAS. No; I have not. The figures for 1955 would show much greater net earnings for these companies.

Mr. LONG. Mr. President, the Senator from Illinois realizes that the greater portion of those profits come from the production of oil, does he not?

Mr. DOUGLAS. That is correct.

Mr. LONG. The Senator from Illinois does not know what proportion of those profits is represented by the production of gas, does he?

Mr. DOUGLAS. No. That is because these companies either cannot or will not show the figures for their profits from gas alone. But then some Senators complain when we introduce composite profit figures for gas and oil. If the Senator from Louisiana can produce the profit figures for gas alone, I wish he would do so.

Mr. LONG. Mr. President, will the Senator from Illinois yield to me?

Mr. DOUGLAS. I yield.

Mr. LONG. The point I had in mind was that I do not see that it makes much difference what the profits for any given company may be. It is fine for the big companies to make large profits, and I have no objection to that. My objection is that so many small companies are not making money and many persons are not sharing the same type of prosperity the large companies are enjoying. I have particularly in mind, among others, the farmers.

Mr. DOUGLAS. Of course the farmers deserve our careful attention. But I say that we are not dealing with emaciated producers who are starving because of the gas rates. They are not suffering from economic malnutrition. Quite to the contrary, they are doing extremely well. But the Senator from Louisiana would puff them up to enormous size.

Mr. LONG. How would the Senator from Illinois know that?

Mr. DOUGLAS. Because if the Senator from Louisiana would have those companies given $76 million more profits, 70 percent of it would go to the large companies, and they would be simply bulging; they would be like the fat boy in Dickens' Pickwick Papers.

Mr. LONG. That statement is based on the assumption the Senator from Illinois cares to make, namely, that the price of gas would immediately rise 10 cents or some other large amount.

Mr. DOUGLAS. I will prove it.

Mr. LONG. No doubt the Senator from Illinois would prove it to his own satisfaction.

Mr. DOUGLAS. I will prove it to the satisfaction of the American people.

Mr. LEHMAN. Mr. President, will the Senator from Illinois yield to me?

Mr. DOUGLAS. I yield.

Mr. LEHMAN. The Senator from Illinois has pointed out that the profits he has cited came largely from the oil business.

Mr. DOUGLAS. That is true.

Mr. LEHMAN. Is it not a fact that in the case of a large part of the sales, the profits from the sale of gas cannot be divided from the profits derived from the sale of oil?

Mr. DOUGLAS. That is generally true; but frequently—in fact, usually—the companies drill for oil, not gas. If they do not find oil, they are happy to find gas.

Mr. LEHMAN. Yes; if they do not find oil, they continue to drill until they tap gas.

Mr. DOUGLAS. No doubt.

Mr. LEHMAN. Mr. President, will the Senator from Illinois yield for a further question?

Mr. DOUGLAS. I yield.

Mr. LEHMAN. I wonder whether the Senator from Illinois will permit the junior Senator from New York to join the distinguished and select group of Senators who are putting up $5 each in order to aid in the prosecution of a case to help cut the rate on gas?

Mr. DOUGLAS. Yes. Does the Senator from New York have $5? [Laughter.]

Mr. LEHMAN. Yes; I have.

Mr. DOUGLAS. Does the Senator from New York wish to produce $5?

Mr. LEHMAN. I hope I have that much with me.

Mr. DOUGLAS. Mr. President, the Senator from New York, being a capitalist, has presented me with $20. I shall return $15 change to him. I hope the Presiding Officer will not regard this matter as a violation of proper parliamentary procedure; but we are taking up a collection to aid the consumers' movement in the District of Columbia, to enable them to get lower gas rates. So we can discharge our personal obligation in this way.

I now return the $15 to the Senator from New York.

Mr. LEHMAN. Is this a dividend?

Mr. DOUGLAS. No; it is change from the Senator's $20 bill.

The PRESIDING OFFICER. Let the Chair inquire as to the disposition of the fund.

Mr. DOUGLAS. The Parliamentarian is in charge of it.

Mr. President, we can make our contributions, as citizens within States and within the District of Columbia, to reduce the gas rates there; but, as Senators, we must deal with the price of natural gas in the field, and only that.

Mr. President, 2 hours ago I started to read the next sentence in my prepared remarks, and then there were interruptions. Now I shall continue with my prepared remarks.

What we have here are a small number of huge corporations who produce and sell 70 percent of the natural gas sold to interstate pipelines. They are trying to gain exemption from Federal regulation for that portion of their business—sales for resale in interstate commerce—which is affected with a public interest. And all this is being done in the name of the small producer and the risk-taking wildcatter.

Let us not deceive ourselves, Mr. President, about the meaning of these figures—namely, the figures for the enormous profits of the leading 35 companies—and who will gain the windfalls if this bill is passed. It is now a matter of public record who produces the giant share of natural gas and who will take the profits if the sales for resale of natural gas in interstate commerce by these giant corporations are freed from effective public regulation. Pennies from 21 million consumers will swell the exchequers of these huge companies. Let us lay to rest, once and for all, the absurd notion that this bill would benefit the little fellow and that it would protect the consumer. This bill would take vast sums from the pockets of 80 million individual consumers and from the workingman's weekly pay check. These sums would go into the treasuries of America's largest and most profitable corporations. It is not the small wildcatter who would reap the profits from this bill, and it is not the average man and woman who clip the coupons of Standard Oil.

Price increases totalling at least $600 million to $900 million a year will be loaded on the consumer if this bill is passed; and the big companies stand to gain, not only that, but from $12.5 billion to $30 billion a year in pure windfall profits because of the increased value of their gas reserves.

The issue before us, then, is whether the interests of wealth and power are to run our Government, or whether our Government is to be run in the interest of the public.

Mr. President, as tiny rivulets feed the rivers which ultimately flow into and form the immensity of the ocean, so would the tribute to be levied by this bill on 21 million American homes go into the profits of the economic giants which already largely dominate this country. If these drops of purchasing power, great in their totality, are kept in places where they now fall, then the needs of the people for a more abundant life may be in large measure satisfied. Since my party has historically always believed in and fought for building up purchasing power from the bottom, rather than allowing it to concentrate at the top, I pray that in this hour we may be faithful to our historic principles.

Mr. President, the same proponents of the bill have said, "Why should you object? This is only a few pennies a day from every family." I remind the Senate and the country that a few pennies a day—say 8 pennies a day—from each of the 21 million families goes to make up the figure of $30 per family, or $600 million a year in the aggregate. In their totality these sums are large, but since individually they are small, it is not to the interest of any consumer to come to Washington and make a plea. That is why the diffuse consumer interest, powerful as it is in its totality, is relatively weak and unrepresented. That is why we do not find many lobbyists for consumers in the corridors of the Capitol. They cannot afford to come here to save $30.

Mr. FULBRIGHT. Mr. President, will the Senator yield to me in order that I may insert in the RECORD at this point the editorial which I mentioned, from the great Sun-Times of Chicago?

Mr. DOUGLAS. I would prefer to have it printed at the conclusion of my remarks. I shall be glad to yield for that purpose.

Mr. FULBRIGHT. I shall be glad to place it at the conclusion of the Senator's remarks. However, inasmuch as he is discussing consumers, I thought it would be appropriate to insert it at this point.

Mr. DOUGLAS. I think it would be fine to insert it at the conclusion of my remarks.

I lament the fact that the Senator from Arkansas has fallen below his usual level by supporting the bill. I lament the fact that the Sun-Times has fallen below its usual level. I must admit that it showed a pretty good sense of values during the last election campaign when it supported the senior Senator from Illinois. But even the best of people slip sometimes, and even the best of newspapers slip. In this instance there is an aberration, both on the part of the Sun-Times and on the part of the Senator from Arkansas. I hope that in a few months he will be restored to his natural state of mental health, and that we may then resume intellectual discussions, and that we shall continue to have the most kindly feelings toward each other.

I feel the same way toward the Sun-Times. It is an erring brother who has strayed from the fold.

> But while the lamp remains to burn,
> The vilest sinner may return.

Mr. FULBRIGHT. With the Senator's permission, I ask unanimous consent to insert the editorial referred to in the RECORD at the conclusion of the Senator's remarks today. Is that agreeable to the Senator?

Mr. DOUGLAS. That is quite agreeable.

Mr. FULBRIGHT. I thank the Senator for his generosity.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Arkansas? The Chair hears none, and the editorial may be printed in the RECORD as requested.

(See exhibit 1.)

Mr. DOUGLAS. I was remarking that it is curious how some spokesmen for the

bill will say, "You will never miss it if we take a few pennies from you. It is only a few cents a day."

Mr. FULBRIGHT. Who said that?

Mr. DOUGLAS. I have heard that argument. We shall document it.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. DOUGLAS. It is going to amount to $600 million a year, paid primarily by housewives and families who are having a hard time getting along. It will go to corporations which are already making enormous profits. That is what will happen.

I now yield to the Senator from Arkansas.

Mr. FULBRIGHT. Do I correctly understand the Senator to say that he will document the statement, showing who made the argument about a few cents a day not mattering?

Mr. DOUGLAS. I have seen it in the press.

Mr. FULBRIGHT. The Senator has not heard it on this floor from any of the proponents of the pending legislation.

Mr. DOUGLAS. No. The Senator from Arkansas is too wise to make such an argument, as are other Senators. But it has been in the oil press, and it has had an influence on public opinion. If I were associated with 1 of the 35 big companies I would be ashamed to go around asking for a few pennies a day from housewives.

Mr. FULBRIGHT. Mr. President, I do not know whether the Senator intends to leave the impression that the press, except for a few unusually bright newspapers which have gone into the subject, as has the Sun-Times, is not supporting the Senator from Arkansas. I think all the other newspapers—at least the local newspapers—are supporting the view of the Senator from Arkansas.

Mr. DOUGLAS. I said the arguments are being made in statements in the press. Since we have a relatively free press, the press has reprinted the arguments of the nonsenatorial proponents of the bill.

Mr. President, I now wish to deal with the point as to whether present incentives for producers are adequate.

THE PRESENT INCENTIVES FOR PRODUCERS ARE CERTAINLY ADEQUATE

I now wish to submit for the RECORD further evidence that there are ample incentives and ample rewards in the gas industry so that no claim can be made by the big companies that the Fulbright bill is needed to increase them. That is a patently false argument, and it will not stand examination for the big companies and for the vast majority of medium sized companies.

A very important point, in discussing the incentives for the producers is that the drilling for gas is largely incidental to drilling for oil. Very few people drill for gas alone. Only where gas is well known does very much drilling for it take place. At this point, let me call, as many others have done, on the testimony of Gen. Ernest O. Thompson, chairman of the Texas Railway Commission who, I think, those on the other side of this matter will most readily admit is a very knowledgeable man, indeed, concerning the oil and gas industry.

When General Thompson testified before the Senate Interstate and Foreign Commerce Committee on the bill before us, he had this to say:

> Much of the gas that is used in this country has been found as an incident to the search for oil, and also large quantities of the gas that go into pipelines were produced with and as an incident to the production of oil (hearings, p. 52).

And on page 54 of the hearings, he is quoted as saying:

> I was talking about finding new oil. I say later in here that gas comes from the oil from some wells. A large part of the gas comes incident to oil production.

And on the same page he says:

> But as far as drilling for gas is concerned, hardly anybody drills for gas. They get gas accidentally when they are looking for oil.

And later on page 62 he repeats these statements:

> I have not seen anybody going out and looking for gas on purpose.

And—

> As I said in the beginning, nearly all of the gas has been discovered looking for oil. About the only place I know of where they actually drill for gas is up in Pennsylvania, where they got it.

Mr. President, I do not believe that anyone denies General Thompson's statements on this matter. I certainly do not deny that the finding of gas is merely incidental to the search for oil.

The point becomes, then, Are there adequate incentives in existing circumstances for people to drill for oil? From the figures we have for recent years it is clear that the number of wells drilled and the amounts expended in the search for oil, have certainly not diminished.

Mr. FULBRIGHT. Mr. President, will the Senator yield for a clarification?

Mr. DOUGLAS. I yield.

Mr. FULBRIGHT. I believe it is admitted that in wildcatting operations, except in some restricted areas, the incentive—at least formerly—was in drilling for oil, because the outlet for gas was so restricted, and the price was such that there was no incentive to drill for gas alone.

Mr. DOUGLAS. General Thompson made this statement last spring.

Mr. FULBRIGHT. The point is that once gas is discovered, there must be continued development of a field. The discovery of one well is not sufficient to develop a field. After the field has been developed, the incentive is the gas, and not the oil. Also, only about a third of the gas occurs in connection with oil. Is not that correct?

Mr. DOUGLAS. I think that is approximately true. However, I point out that of the developmental gas wells, approximately 27 percent more developmental wells were drilled in 1955 than in 1950.

Admittedly, there are risks in the business. But from the assets, sales, and profits of the big oil companies, it is clear that they do not need any further incentives to take risks in this business. They are in a better position than any other single industry in America. The big oil producers are also the big gas producers, and 10 of the biggest ones are among the first 20 biggest American corporations.

An additional incentive to drill for oil, incidentally for gas, is the big depletion allowance which drilling companies receive. It is now 27.5 percent of gross income, or not to exceed one-half of net income, for the property, or it can be figured on a cost-depletion basis if that gives a higher figure.

I do not propose to argue at this time the merits of the depletion allowance. It is not at issue in this debate. It is not unfair to point out, however, that the effect of the depletion allowance is to compensate oil producers in a very handsome way for the risks involved in drilling for oil, and incidentally, for gas.

In addition to the depletion allowance, the depreciation of other assets, and "intangible drilling and development costs" are legitimate expenses which may be deducted before taxes. Of course, interest payments are a deductible cost for oil and gas producers as they are for other companies.

Therefore, I think it is fair to say that these companies already have tremendous inducements and incentives to drill for gas and oil. They do not need any additional incentive, such as this bill would give. They do not need increased income of from $600 to $900 million a year by way of increased prices at the well head, and they most certainly do not deserve from $12.5 billion to $30 billion in windfall profits for the increased value of their reserves which would follow if this bill is passed.

In order that the special benefits which accrue to the oil and gas producers may be made clear, I am going to submit for the RECORD, figures which I have taken from Standard & Poor's Corporation Records which show the amount of income taxes and the percent of income taxes paid by 27 gas-producing companies.

I make it clear that these 27 companies are not the huge composite companies like Standard Oil, Shell Oil, the Texas Co., and the other giants about whom I have just spoken and who have production, refining, and distributive sections in their companies. The companies which I shall cite are, by and large, producing companies and not composite companies. They indicate what happens at the producing level in terms of tax liability and they give us a good idea, also, of what happens at the producing end of the huge composite corporations.

I do not wish to do anything on the floor of the Senate which might be termed unfair to individuals. For this reason I shall call these companies by letter names—company A, company B, and so forth. As all of these companies are listed in Standard & Poor's Corporation Records their net income and taxes are a matter of public record. Therefore, I see no reason why they should not be used in this debate. I shall, however, not name the companies on the floor of the Senate but I do offer to any Senator who desires them, the

actual names of the companies which I shall call by a letter name. If they wish they may check my figures against those given in Standard & Poor's Corporation Records. I am not trying to hide the names of the companies from any Senator who wishes them, but since I am striking at the evil but not at any person, as such, I shall not make the names public.

I have here the code, and any Senator can check it. However, I would request Senators not to publish the names of the companies, because I do not wish to be unfair to anyone.

When I was a young man I was taught that one should attack the sin, never the sinner. I have tried to observe that teaching in debate on the floor of the Senate. In other words, one can attack abuses, but not individuals. I do not wish to single out any company for public attack. Perhaps I am unduly concerned, because it may be that in these days, according to the code of the times, no sin has actually been committed. What has happened is that the companies have taken advantage of the great tax favors which have been given them. I do not charge them with doing anything illegal. I wish the RECORD to show, however, what the situation is with respect to these companies. Then all can see how these companies have fared.

Now, as everyone knows the Federal corporation income tax is now 52 percent of net income as it has been since 1952. From 1946 to 1949, the Federal corporation income tax was 38 percent on amounts above $50,000. In 1950, it was increased to 42 percent, that was with the advent of the Korean war, in 1951 it went to 50¾ percent, and, also, in the years 1950, 1951, 1952, and 1953, there was an excess profits tax. So, in the ordinary course of events, companies would pay Federal taxes at these rates. However, because of depletion allowances and the allowances for intangible drilling and development costs, oil and gas companies, however, pay at a very much lower rate.

Because of these special tax benefits great amounts of capital have been attracted into the industry. The growth of the oil companies in the past 30 years has been a phenomenal one. The oil companies have displaced, as America's largest corporations, those industries such as steel, tobacco, matches, sugar, meatpacking, and other companies who in the earlier days were America's biggest corporations.

Not all that capital has come from the South. It has also been attracted from the North and from the East. We should not dress these companies in Confederate uniforms, and say that they represent Southerners, and that it is the Yankees who are trying to oppress these poor Southern companies.

I never knew that John D. Rockefeller pulled the lanyard of the cannon that fired the first shot on Fort Sumter, on the command of General Beauregard. I never knew that H. L. Doheny served under Joe Johnston. I never knew that Andrew W. Mellon was in the Army of Stonewall Jackson. I never knew that these northern oil magnates were in Pickett's Division as it charged across the wheat field at Gettysburg from Seminary Ridge to Cemetery Ridge. I never knew that the big oil men were with Robert E. Lee and held the bridle of Traveler as Lee moved through the slosh and mud to stillness and defeat at Appomattox.

It is northern and eastern and Wall Street capital that is in the Southwest. To try to dress up those corporations in overalls and make them a part of the chorus of the musical comedy "Oklahoma!" or to try to dress them up in Confederate uniforms is to misunderstand the real nature of what is happening.

I hope the Senator from Arkansas [Mr. FULBRIGHT] will not leave us now.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. FULBRIGHT. If the Senator will discuss the bill, I shall stay in the Chamber. I see no point in staying to hear the Senator discuss Confederate history. I see no relevancy of the Senator's remarks to the pending bill.

Mr. DOUGLAS. I have carefully refrained hitherto from saying it, and have not said that is was the Senator from Arkansas who said the Yankees were trying to oppress the South. But these companies are owned by Wall Street capital. We cannot dress them up in oil-soaked overalls or in Confederate uniforms.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. DOUGLAS. I am delighted to yield.

Mr. FULBRIGHT. The Senator knows that the chief royalty owners, who certainly are primarily local people in the various States, own more of the reserves than any single big company, no matter how big it may be. They own at least one-eighth of the reserves. I do not know why the Senator is trying to deny it.

Mr. DOUGLAS. I have placed that information in the RECORD.

Mr. FULBRIGHT. The other ownership of the corporation he speaks of is widely dispersed. However, regardless——

Mr. DOUGLAS. The Senator has maintained exactly the opposite on the floor of the Senate.

Mr. FULBRIGHT. I do not understand what the ownership has to do with the bill.

Mr. DOUGLAS. What I am saying is that the companies are already making so much money they do not need additional incentives.

Mr. FULBRIGHT. I am sure the Senator is not opposing the bill because some companies may be making a profit.

Mr. DOUGLAS. Not some companies. Nearly all the companies are making very large profits.

Mr. FULBRIGHT. Do any of them make as much profit as General Motors, for example?

Mr. DOUGLAS. No; I do not believe they do.

Mr. FULBRIGHT. Do any of them make as much profit as Du Pont or a number of other large corporations? Even so, what would that have to do with the bill?

Mr. DOUGLAS. Standard Oil Company of New Jersey is the No. 2 company in net profits in the United States. Standard Oil Company of California, Standard Oil Company of New York, Standard Oil of Indiana, and the Texas Co. are huge companies, and ranked 6th, 8th, 12th, and 4th in net profits in the country in 1954. What I am trying to demonstrate is that the attempt to show that the producers are starving, and that they therefore need this bonus is baseless.

Mr. FULBRIGHT. Not one of us has ever said that.

Mr. DOUGLAS. That has been the implication.

Mr. FULBRIGHT. I do not recall that any proponent of the bill has said any such thing. What the profits of the companies have been is quite irrelevant to the question before the Senate. It is irrelevant to the question of whether the bill will protect the consumer interest. The situation under the Supreme Court decision would be wholly unrealistic and would result in cutting off the supply of gas.

Mr. DOUGLAS. I believe it was Dr. Boatwright who said that the bill may cost the housewife 20 cents a month—or perhaps it was 25 cents a week—but, then, he said, what are a few pennies. That argument has been used. It has been said that we should help the 8,000 producers in the field.

Mr. FULBRIGHT. Will the Senator point out where Mr. Boatwright made any such statement? I made no such statement, certainly.

Mr. DOUGLAS. We will search for it. If Dr. Boatwright did not make that statement, or if the statement was not made by the proponents, we will, of course, withdraw it. In fact, I do withdraw it. It was Gen. Ernest O. Thompson, chairman of the Texas Railway Commission, and a proponent of this bill who was reported by the Oil and Gas Journal to have told the Independent Natural Gas Association in September 1953:

> A fair estimate of the going price for gas reserves is probably 12 to 15 cents per thousand cubic feet and this ought to rise by another 5 cents per thousand. Such an increase—

The general said—

> should amount to about 25 cents a month, or less than 1 cent a day to the household consumer.

Mr. FULBRIGHT. Has the Senator ever answered the question I asked this morning about the diversion of the gas from interstate commerce in case the cost-plus formula is imposed upon the companies?

Mr. DOUGLAS. I think the Senator will find that the gas sold in interstate commerce brings a higher price than gas sold in intrastate commerce. Therefore, they do not divert gas from a more profitable use.

Mr. FULBRIGHT. Why is there such a shortage of gas in the Chicago area?

Mr. DOUGLAS. In the Chicago area, roughly, 71 percent of the gas is used for industrial purposes. While I do not wish to get into an argument with the Peoples Gas Co.—I have had many arguments with them in the past—if they would divert some of the gas now used for industrial purposes to residential purposes, there would be an adequate supply for those who at present do not get gas.

Mr. FULBRIGHT. Then the Senator does not think there is an adequate supply?

Mr. DOUGLAS. I say, if it were diverted from industrial use.

Mr. FULBRIGHT. Why is it not diverted, since the price would far higher, if that is the feasible thing to do?

Mr. DOUGLAS. I have been making the point over and over again——

Mr. FULBRIGHT. Why is it not so diverted?

Mr. DOUGLAS. The Senator can ask the Peoples Gas Co. I have asked that question. Of course, the Peoples Gas Co. in Chicago is unique among distributors in that it is supporting the bill of the Senator from Arkansas. I have against me in my own city all the newspapers and the local gas distributing company, whereas in a good many localities that is not the case. But that does not make the Senator from Arkansas correct.

Mr. FULBRIGHT. The Senator certainly does not want the RECORD to show that the Peoples Gas Co. is the only distributing company that is in favor of this bill. Does he not know that less than 3 percent are supporting the Senator's position and that the others are supporting the bill? It is certainly not a unique company.

Mr. DOUGLAS. If the Senator will count noses he will find there are more gas distributors against the bill than there are in favor of it.

Mr. FULBRIGHT. What proof does the Senator have of that? There is the group gathered together in the lobbying organization downtown. There are over a thousand distributors, and only 65 are identified as opposing the bill.

Mr. DOUGLAS. I am not interested in the strength of the lobby on either side. I am interested in the ethics of the situation. When we come to the Chicago situation the Senator from Arkansas is fully aware of the fact that the local gas company controls their own pipelines. While I do not wish to impute improper motives to them, it is natural that they should be thinking in terms of their pipelines and the producing end rather than in terms of the distributing end. That is really the explanation.

Mr. FULBRIGHT. If the Senator will permit me, I do not follow his explanation at all. Most of them can make more money on the distributing end than on the production end, as has been demonstrated. Why do they not take the higher priced gas if they have such an alternative?

Mr. DOUGLAS. The Senator is speaking of the distributing end. I have been speaking of the producing end, and I have been trying to make it clear that, under the bill, a pipeline company which owns its own resources will pay a high price to so-called independent producers, because as it pays higher prices to the independent producers it can charge higher prices into its cost for the gas which it produces. Therefore, the pipeline companies which are also producers are naturally very much in favor of this bill, and I suppose the corporations which are largely controlled by the People's Gas Co. have the same desire. I do not wish to indict the People's Gas Co., but I think it is perhaps thinking of itself as a producer rather than as distributor.

Mr. President, it is now commonplace that the one area and the one place in our business life where a man may both make and keep a million dollars is in the oil industry. I believe the figures of how little taxes are paid by some of the major gas producing companies will show just how well off they already are.

I have figures for these 27 companies by year from 1945 to 1954 in almost every case. I shall give in each case the net income of these companies before Federal taxes, the Federal corporation income taxes they paid, the net income after taxes, and the percent of Federal corporation income taxes they paid to their net income. This latter percent, in recent years, may be compared with the general Federal corporation tax rate of 52 percent. In addition, I shall cite both the highest and lowest percent of income taxes to income before taxes paid by these companies over the last 10 years.

I ask unanimous consent, Mr. President, that the figure for these 27 companies may be included in the RECORD in order as I present them, but that my interpretative remarks about each may be included after I present each table so that my remarks are placed near the table to which they refer. Also, Mr. President, when I talk about taxes, and the rate of taxes, or taxes paid, I am referring only to the Federal corporation income tax.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOUGLAS. Mr. President, the first is company A:

Company A

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$21,029,648	$1,252,000	$19,777,648	5.95
1953	18,812,590	367,000	18,445,590	1.95
1952	16,550,361	654,000	15,896,361	3.95
1951	17,369,652	1,073,000	16,296,652	6.17
1950	18,467,607	3,068,000	15,399,607	16.61
1949	14,759,193	375,000	14,384,193	2.54
1948	27,367,252	4,725,000	22,642,252	17.27
1947	17,749,626	2,830,000	14,919,626	15.94
1946	10,130,975	1,275,000	8,855,975	12.59
1945	5,611,770	215,000	5,396,770	3.83

In 1954 company A paid taxes at only 5.95 percent of net income before taxes. In the last 10 years, the highest percent it paid was 17.27 in 1948. The lowest year was 1953 when it paid taxes at only 1.95 percent.

Next is company B:

Company B

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$3,291,733	$38,172	$3,253,561	1.16
1953	5,594,074	1,552,500	4,441,574	27.75
1952	4,436,030	669,500	3,766,530	15.09
1951	5,561,770	714,880	4,846,890	12.85
1950	5,709,537	1,023,900	4,685,637	17.93
1949	3,259,928	163,040	3,096,888	5.00
1948	6,295,858	898,900	5,396,958	14.28
1947	4,011,073	1,023,126	2,987,947	25.51
1946	2,089,932	417,000	1,672,932	19.95
1945	2,321,605	205,908	2,115,697	8.87

In 1954 company B paid taxes at the extraordinary low rate of 1.16 percent, which was also the lowest rate it paid taxes in the period. In 1953 it paid Federal corporation taxes at the rate of 27.75 percent, the highest in the 10-year period.

Mr. MONRONEY. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. As I understand, the Senator does not wish to identify the companies by their proper names, but I am certain that in the splendid relationship which is existing between the distinguished Senator and those on the other side we might privately discuss the companies so that we can identify them.

Mr. DOUGLAS. I have prepared a code. I have used Standard and Poore's Corporation Record.

Mr. FULBRIGHT. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. FULBRIGHT. Is it not a fact that if the cost-plus formula of so-called just and reasonable rates were applied to producers of gas, it would have the effect of completely nullifying the depletion allowances for the producers of gas; and that while the Senator may think that is a desirable objective, nevertheless, it is a rather indirect way to approach it.

Mr. DOUGLAS. I am sure that is not correct.

Mr. FULBRIGHT. What is not correct? I said, if we should apply the traditional utility formula of cost-plus, the Senator certainly would not deny that such a formula would have the effect of completely nullifying the depletion allowance?

Mr. DOUGLAS. I may say that the depletion allowance is not a part of the investment. It is an accounting procedure by which investment is treated.

Mr. FULBRIGHT. But the effect of applying it would simply nullify completely any benefit to the producer. All the benefit would accrue to the consumer in such a case. Is not that clear?

Mr. DOUGLAS. No; it is not clear. But I shall deal with it later. I should like to proceed with the 27 companies to which I have referred.

Mr. FULBRIGHT. I apologize for detaining the Senator. I shall not detain him any further.

Mr. MONRONEY. Mr. President, will the Senator yield for an inquiry?

Mr. DOUGLAS. Yes.

Mr. MONRONEY. Does the percentage to which the Senator is now referring relate to the gross sales?

Mr. DOUGLAS. No; it is the percentage of income taxes paid on income before taxes. It does not relate to gross sales.

I may say that we are not dealing with small companies. Company A had net income before taxes of $6 million in 1945, but rose to $21 million in 1954.

Company B had earnings of $2,300,000 in 1945, rising to $5,600,000, roughly, in 1953, and declining to $3,300,000 in the recession of 1954.

Next is company C:

Company C

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$4,625,759	$336,889	$4,288,870	7.28
1953	4,391,404	179,114	4,212,290	4.08
1952	3,588,107	91,660	3,496,447	2.55
1951	3,934,107	399,397	3,534,710	10.15
1950	3,696,584	847,072	2,849,512	22.91
1949	3,373,448	679,553	2,693,895	20.14
1948	4,542,842	982,540	3,560,302	21.63
1947	2,284,109	529,781	1,754,328	23.19
1946	161,816	212	161,604	.13
1945	33,895	256	33,639	.76

In 1954 company C paid taxes at the rate of 7.28 percent. In 1947, the highest year, they were 23.19 percent. In 1945 and 1946 it paid taxes at a rate of less than 1 percent. In 1952 and 1953 the percents were 2.55 and 4.08. Thus, in 5 of the last 10 years its taxes have been only 8 percent or less.

Company D is next:

Company D

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$309,405	----------	$309,405	----------
1953	303,453	$11,332	292,121	3.73
1952	159,084	25,686	133,398	16.15
1951	415,948	8,234	407,714	1.98
1950	277,514	1,500	276,014	.54
1949	177,187	1,000	176,187	.56
1948	526,061	35,000	491,061	6.65
1947	399,643	52,000	347,643	13.01
1946	139,923	1,000	138,923	.71
1945	140,101	1,500	138,601	1.07

In 1954 company D paid no Federal income taxes whatsoever. Its highest year was in 1952, when it paid 16.15 percent. Except for that year and in 1947, it never paid more than 7 percent in Federal corporation income taxes. In the 6 remaining years it paid at the amazingly low rates of 3.73 percent, 1.98 percent, 0.54 of 1 percent, 0.56 of 1 percent, 0.71 of 1 percent, and 1.07 percent. It paid Federal income taxes for the entire 10-year period at the rate of 4.8 percent.

Mr. President, it is very difficult for me to understand how the representatives of these and other companies now have the nerve to come here and tell us they need to be freed from regulation of their gas sales for resale in interstate commerce because they lack incentives. In fact, they are treated better than any other type of business in America. Some of them pay almost no Federal income taxes of any kind. This particular case is not unusual, nor is it the worst I shall present. I am certain that other industries in America would be overjoyed if they paid Federal income taxes at such low rates.

Company E is next:

Company E

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$5,320,750	----------	$5,320,750	----------
1953	6,420,968	$1,048,000	5,372,968	16.32
1952	5,601,723	1,400,000	4,201,723	24.50
1951	5,866,052	2,000,000	3,866,052	34.09
1950	4,951,476	1,500,000	3,451,476	30.29
1949	4,928,459	1,020,000	3,908,459	20.70
1948	5,766,543	960,000	4,806,543	16.65
1947	3,650,374	600,000	3,050,374	16.44
1946	3,248,813	200,000	3,048,813	6.16

Company E paid no taxes at all in 1954, although it had a net income of $5.3 million. In 1951 it paid taxes at a rate of 34.09 percent, its high year, and its second low year was 6.16 percent in 1946. Just incidentally, the president of this company is a supporter of the Fulbright bill and has been writing to his friends in the gas-distributing end of the natural-gas business complaining that they did not understand the difficulties in the gas-producing business.

Producers like these are among those who have been attacking the gas distributors for excessive profits and rates. I believe if one had a choice, one would enter the production end rather than the distribution end of the business when one looks at taxes paid and profits made. In fact, I would welcome the offer made by the distributors to open their books but at the same time we should ask the producing companies to come forward and open their books. Then we would have some real basis to determine who is making exorbitant profits. For my part, I am willing to let the chips fall where they may. I am not impressed, however, by the producers' argument that since the distributors are making high profits—which may or may not be true—the producers, too, should be allowed to charge excessive prices. That is the logic of their position, and I believe it is one to which we should not give credence. I do not believe they need $600 million more a year.

Company F is next. This is a company having very high earnings:

Company F

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$50,383,000	$8,700,000	$41,683,000	17.27
1953	55,775,000	14,900,000	40,875,000	26.71
1952	52,488,000	14,400,000	38,088,000	27.43
1951	58,593,000	17,300,000	41,293,000	29.53
1950	57,407,000	15,000,000	42,407,000	26.13
1949	46,487,000	10,390,000	36,097,000	22.35
1948	74,080,000	19,863,000	54,217,000	26.81
1947	40,655,000	9,298,000	31,357,000	22.87
1946	22,599,000	3,585,000	19,014,000	15.86
1945	16,371,000	1,228,000	15,143,000	7.50

In 1954 company F paid Federal income taxes of 17.27 percent. Their high year was 1951, when they paid at a rate of 29.53 percent, and their low year was 1945, when their rate was 7.5 percent. By standards in the oil and gas producing industry, company F paid very high taxes, indeed, but by the 52 percent rate paid by most other industries, their taxes average below half the rate ordinarily paid.

Now we come to company G:

Company G

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$785,624	----------	$785,624	----------
1953	730,699	----------	730,699	----------
1952	968,287	$69,022	899,265	7.13
1951	935,134	137,220	797,914	14.67
1950	892,552	147,275	745,277	16.50
1949	969,991	204,860	765,131	21.12
1948	872,719	150,367	722,352	17.23
1947	654,922	160,452	494,470	24.45
1946	471,923	135,664	336,259	28.75
1945	461,448	180,808	280,640	39.18

They paid no Federal income taxes in 1953 and 1954. Their high year was 1945, when they paid at a rate of 39.18 percent. Since then the rate of their taxes has declined steadily, except for 1949, when it rose somewhat. They, too, have had it very good.

Company H is next:

Company H

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$2,276,415	$238,329	$2,038,086	10.47
1953	1,899,343	156,039	1,743,304	8.22
1952	1,998,758	370,291	1,628,467	18.53
1951	1,992,234	411,166	1,581,068	20.64
1950	1,270,271	72,843	1,197,428	5.73

Records for this company are available only for the last 5 years. Its high year was 1951, when it paid Federal corporation income taxes at a 20.64 rate, and its low year was 1950 when the rate was 5.73 percent. Note that it, like so many others, has had a sizable growth in net income over the period for which we have data.

I emphasize that in all these cases the ordinary rate of taxation in the last years, since 1952, has been 52 percent. That is the standard of comparison.

Next we come to company I:

Company I

Year [1]	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$6,769,145	$196,335	$6,572,810	2.90
1953	5,414,053	26,156	5,387,897	.48
1952	5,067,243	410,539	4,656,704	8.10
1951	4,477,673	404	4,477,269	.01
1950	3,456,001	202,087	3,253,914	5.85
1949	2,949,585	72,628	2,876,957	2.46
1948	2,774,079	201,176	2,572,903	7.25
1947	3,172,001	504,487	2,667,514	15.90
1946	755,220	258,488	496,732	34.23
1945	102,860	65,966	368,946	64.13

[1] 12 months ended June 30.

Here is a company which has shown a steady growth in net income before taxes. It has risen from $102,860 in 1945 to $6.7 million in 1954. The percent of Federal income taxes it has paid declined sharply from the 64.13 percent it paid in 1945 to the 0.01 of 1 percent it paid in 1951. In that year, incidentally, it paid income taxes in the amount of $404 on a net income of $4.4 million. That, Mr. President, is a tax bill which is lower than the taxes paid by a married couple having 3 dependents with an adjusted gross income of $5,600 before deductions and exemptions. Such a couple would pay $408 in income taxes at the present time. A married couple with 2 children, at the present rate, would pay $404 in Federal income taxes with an adjusted gross income of $4,911. A married couple with no dependents would pay that much with an adjusted gross income of $3,578, and a single person would pay $404 in taxes on an adjusted gross income of $2,911. Yet this company, with an income before taxes in 1951 or $4,477,673—or net income 800 times that of the married couple with 3 dependents—paid only $404 in taxes in 1951. If an oil and gas company may keep all but $404 of a net income of $4.4 million and yet insists that it needs more to provide incentive, what must have happened to the incentive of some poor schoolteacher or white-collar worker who earned from $2,911 to $5,600 per year and who yet paid taxes equal to this big company? It seems to me ridiculous to argue that further incentives are needed for these companies in the name of risk taking and incentive.

Company J is next:

Company J

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$3,570,162	$360,000	$3,210,162	10.08
1953	3,363,964	500,000	2,863,964	14.86
1952	2,561,162	267,461	2,293,701	10.44
1951	3,971,370	965,230	3,006,140	24.30
1950	2,302,729	519,263	1,783,466	22.55
1949	1,551,586	104,000	1,447,586	6.70
1948	1,344,021	150,000	1,194,021	11.16
1947	1,230,364	50,000	730,364	4.06
1946	409,171	----------	409,171	----------
1945	328,260	----------	328,260	----------

Here is a company which paid Federal income taxes at a rate of 22.55 percent in 1950, no Federal income taxes in 1945 and 1946, and paid at a rate of 10 percent in 1954. Notice its steady growth from a company with net income of $328,260 in 1945 to one with a net income of $3.5 million in 1954. It, too, seems to need little additional incentive.

Next is company K:

Company K

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$11,541,464	$1,278,154	$10,263,310	10.01
1953	11,762,519	1,590,080	10,172,439	13.52
1952	9,218,224	1,875,000	7,343,224	20.34
1951	10,327,002	2,400,000	7,927,002	23.24
1950	8,723,484	2,000,000	6,723,484	22.93
1949	8,716,231	1,800,000	6,916,231	20.65
1948	17,245,547	4,000,000	13,245,547	23.19

Company K—Continued

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1947	$9,301,386	$2,300,000	$7,001,386	24.73
1946	5,321,560	1,010,000	4,311,560	18.98
1945	4,235,097	257,000	3,978,097	6.07

The low year for this company was in 1945, when the rate at which it paid Federal income taxes was 6.07 percent. Its high year was 1947, with a rate of 24.73 percent. In 1954, it paid at a rate of 10.01 percent. It, too, appears not to be in financial difficulties.

Company L is next:

Company L

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$7,762,785	$1,275,000	$6,487,785	16.42
1953	8,494,844	1,785,000	6,709,844	21.01
1952	7,844,057	1,500,000	6,344,057	19.12
1951	8,553,640	1,500,000	7,053,640	17.54
1950	8,086,702	1,983,000	6,103,702	24.52
1949	7,805,345	1,900,000	5,905,345	24.34
1948	7,512,733	1,726,006	5,786,727	22.97
1947	7,667,536	1,575,000	6,092,536	20.54
1946	5,146,094	1,100,000	4,046,094	21.38
1945	3,209,359	831,500	2,377,859	25.91
1944	3,519,208	1,068,760	2,450,448	30.37

Here is a most unusual oil and gas company. While other oil and gas companies paid Federal taxes at rates as low as 1 percent or no taxes at all in this period, its taxes never fell below 16 percent—in 1954—and were, in 1944, at a wartime rate of 30.37 percent. By oil and gas company standards, it seems to have paid Federal corporation income taxes at an unusually high rate, even though its average is only about half that of most American corporations. In comparison with the rest of the industry, I wish to praise this company and congratulate it; but I remind the Senate that its average Federal tax rate is only about half that of most American corporations.

Company M is next. This is truly a gigantic company:

Company M

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$174,803,000	$28,500,000	$146,303,000	16.30
1953	207,757,854	43,500,000	164,257,854	20.94
1952	175,792,000	30,500,000	145,292,000	14.68
1951	220,981,000	51,500,000	169,481,000	23.30
1950	161,360,000	32,000,000	129,360,000	19.83
1949	138,480,000	18,000,000	120,480,000	13.00
1948	240,069,000	54,000,000	186,069,000	22.49
1947	153,207,000	29,100,000	124,107,000	18.99
1946	79,332,000	7,500,000	71,832,000	9.45
1945	80,395,000	9,500,000	70,895,000	11.82

In 1954, this company paid Federal income taxes at a rate of 16.30 percent. Its high year was in 1951, when it paid at a rate of 23.3 percent. Its low year was 1946, when the rate was 9.45 percent. It appears to be a high Federal income-taxpaying company by the oil and gas industry standards.

My colleagues will notice that where a company is shown as having paid high taxes in comparison with the rest of the industry, I single it out for praise. Even so, I remind my colleagues the rate is less than half of that for other companies.

The next company is company N.

Company N

Year [1]	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$2,384,380	$23,923	$2,360,457	1.00
1953	3,077,447	4,724	3,072,723	.15
1952	2,334,532	99,844	2,234,688	4.28
1951	1,209,045	31,250	1,177,795	2.58
1950	282,202	49,750	232,452	17.63
1949	1,225,576	6,949	1,218,627	.57
1948	1,395,517	29,053	1,366,464	2.08
1947	359,903	15,000	344,903	4.17
1946	(106,098)	200	(106,298)	----------
1945	1,537,551	406,500	1,131,051	26.44

[1] 12 months ended June 30.

NOTE.—Parentheses indicate deficit.

The high year for company N was in 1945, when it paid taxes at 26.44 percent. Of course, this was a wartime year. In fairness to company N, it lost money in 1946. Since then, while carrying sizable profits, its taxes have been below 5 percent in every year except 1950. In most other years, even though highly profitable ones, it paid very few taxes. The rate the company paid was only 1 percent in 1954; .15 of 1 percent in 1953; 4.28 percent in 1952; 2.58 percent in 1951; .57 of 1 percent in 1949; 2.08 percent in 1948; and 4.17 percent in 1947. Curiously enough, it seemed to pay at a higher rate in its poor years than in its lucrative years. Thus, in 1953, when net income was $3 million, it paid only $4,724 in taxes, or but .15 of 1 percent. Yet, in 1950, when it made only $282,202 it paid $49,750, or Federal income taxes at a rate of 17.63 percent.

I wish to say that I am not condemning any company.

Company O is next:

Company O

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$2,205,837	$42,130	$2,163,707	1.91
1953	2,600,271	50,000	2,550,271	1.92
1952	2,202,835	40,000	2,162,835	1.81
1951	2,623,191	30,000	2,593,191	1.14
1950	3,744,852	40,000	3,704,852	1.01
1949	4,158,672	42,322	4,116,350	1.00
1948	4,353,435	348,900	4,004,535	8.01
1947	1,517,480	48,919	1,468,561	3.22
1946	689,609	10,241	679,368	1.51
1945	664,526	4,103	660,423	.62

Company O has an amazing record. Except for 1947 and 1948, it never paid Federal income taxes at a higher rate than 1.92 percent of its net income, which was the 1953 figure. Yet in the period from 1945 to 1954 its net income has more than tripled. Its net income was at a high of $4.3 million in 1948, when it paid a rate of 8 percent. But in the next year, with net income at $4.1 million, it paid at a rate of 1 percent. It is an amazing example of low rates, 1 to 2 percent for the most part, instead of

the 38 to 52 percent which most corporations paid.

Company P is next:

Company P

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$6,209,385	$470,000	$5,739,385	7.57
1953	6,761,834	515,000	6,246,834	7.62
1952	7,023,582	540,000	6,483,582	7.69
1951	7,008,444	535,000	6,473,444	7.63
1950	6,616,103	415,000	6,201,103	6.27
1949	4,940,029	270,000	4,670,029	5.47
1948	5,679,055	333,000	5,346,055	5.86
1947	2,827,824	159,000	2,668,824	5.62
1946	2,532,718	151,000	2,381,718	5.96
1945	2,522,301	157,075	2,365,226	6.23

Company P's net income before taxes has ranged from $2.5 million to $7 million in the years 1945–54. Yet, its rate of Federal income taxes has varied from 5.47 percent, the low, in 1949 to 7.69 percent, the high, in 1952. It paid taxes at a very steady, but a very low rate, even during years when its income almost tripled.

Company Q is next:

Company Q

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$14,484,813	$1,967,000	$12,517,813	13.58
1953	12,815,586	1,143,000	11,672,586	8.92
1952	9,570,934	602,000	8,968,934	6.29
1951	8,190,680	385,000	7,805,680	4.70
1950	6,263,638	400,000	5,863,638	6.39
1949	5,183,830	210,000	4,973,830	4.05
1948	7,713,057	407,623	7,305,434	5.28
1947	3,895,936	85,000	3,811,936	2.02
1946	1,614,888	65,000	1,549,888	4.02
1945	997,075	40,000	957,075	4.01

Company Q is one whose net income has grown tremendously since 1945, when it was below $1 million, to 1954, when it was $14.4 million. In 1954 the rate at which it paid taxes was 13.58 percent, the high, and its low year was 1947, when its taxes were at a 2.02 percent rate. One sees no lack of incentive here, or lack of funds by which to expand operations.

Mr. President, I may say, in this connection, that I have given the identifying code to the Members of the Senate with the understanding they will not publish the names of the companies, although they can use the names to check and verify my figures.

I ask the Senator from Oklahoma if that is understood.

Mr. MONRONEY. Yes.

Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. It would be more helpful to us, since the Senator has the annual reports from which these figures were taken——

Mr. DOUGLAS. The Senator can get the annual reports.

Mr. MONRONEY. I knew, because of the Senator's attention to detail and accuracy, that he would have them before him. The important consideration, which comes back to the basic question, is what percentage of the gross revenue of these companies comes from oil and what percentage comes from gas.

Mr. DOUGLAS. We cannot separate them.

Mr. MONRONEY. The cost of operations and leases cannot be separated, but in most of the annual reports will be shown gas revenues, which can be deducted from gross revenue. The amount that comes from other gross revenues can be separated. Therefore, we can find how much bearing the tax savings the Senator from Illinois is discussing have to this case. I believe it will be quite important for the RECORD to have the complete figures stated because otherwise the implication would be—although I know the Senator from Illinois does not wish to have such an implication made—that the figures are generally for gas production. That implication might easily occur, inasmuch as we are dealing with the natural-gas bill.

However, I know that in the case of some of the companies, their oil operations, in connection with drilling, sometimes involve expenditures of $2 million for the drilling of only 1 well in the offshore lands; and the companies are making extremely large capital investments for new production. Those expenditures have long been allowed in arriving at the tax structure.

Mr. DOUGLAS. But let me say to my good friend, the Senator from Oklahoma, that he cannot have it both ways.

Mr. MONRONEY. I am not asking for it both ways.

Mr. DOUGLAS. I sent to the 35 large gas-producing companies a telegram requesting detailed figures regarding costs, profits, investments, and so forth, I have received the telegrams they sent in reply, and I shall make them a part of the RECORD.

Mr. MONRONEY. The Senator from Illinois earlier read several of them.

Mr. DOUGLAS. Yes. They said they either could not or would not provide us with profit figures for the sale of gas. So we cannot obtain the figures from the companies. Yet the Senator from Oklahoma complains when we introduce the only figures we have, namely, composite figures for both oil profits and gas profits. Obviously, those who complain cannot have it both ways. And in view of the fact that gas drilling and exploration is incidental to oil—as these telegrams state—I believe it not an unfair picture to give profit figures which include both gas and oil.

Mr. MONRONEY. But I understood the Senator from Illinois to say, in reading a telegram, that the figures for the cost of operation could not be separated, so as to show the figures for oil and the figures for gas. He stated that the accounting methods the companies use in keeping their books do not permit the stating of separate figures for oil profits and gas profits.

Mr. DOUGLAS. That is what the companies said.

Mr. MONRONEY. Yes. I am saying that the Senator from Illinois can arrive at a reasonable estimate of their profits from gas by taking the gross receipts from the sales of gas—which are easily ascertainable from annual reports or other records of the companies—and applying them to their total sales. Thus he can arrive at the percentage. Then the Senator from Illinois will obtain a more nearly proportionate allocation of profits from the sale of gas alone. That is not a direct method of arriving at the information, because no one can break down the exploration costs in the case of a dry hole. In that case one does not know whether oil or gas or only dust will be produced. That is one of the problems which makes the Supreme Court's plan so unworkable.

Mr. DOUGLAS. But there is an indissoluble marriage between gas and oil.

Mr. MONRONEY. Nature made it that way, and the Supreme Court cannot change it.

Mr. DOUGLAS. Then the Senator from Oklahoma should not complain if I introduce figures for both gas and oil.

Mr. MONRONEY. I am not complaining. But I request additional information, which should be readily ascertainable from the papers the Senator from Illinois has.

Mr. DOUGLAS. Then I refer the Senator from Oklahoma to my sources of information. The Senator from Oklahoma has more abundant resources than I have; he can obtain the figures from Standard and from Poor.

Mr. MONRONEY. Let me say that I have one staff member at work on this; and I am keeping him rather busy now, in checking the statistics the Senator from Illinois has been submitting. He submits such an abundance of them—which we are delighted to have—that it makes quite a chore for this young man to check them.

Let me say that the members of the staff of the Senator from Illinois have been most courteous, cooperative, and helpful in sharing laborsaving devices between the two staffs; and we appreciate that.

Mr. DOUGLAS. We are glad to do so. But the Senator from Oklahoma is not stripped of allies in this matter. Although he does not wear anyone else's collar, nevertheless he has affiliated with him 6 of the 10 largest organizations in the country, with enormous resources; and I am quite certain that some of their men are now in the hotels downtown. Although the Senator from Oklahoma does not wear the collars of any of these companies, yet I am sure they will be willing to give him some assistance.

Mr. MONRONEY. The Senator from Oklahoma does not "wear" their assistance, either; and we are very careful to check on any material we use. For that reason, a very heavy burden is imposed on our staff.

Mr. DOUGLAS. Let me say that there is no more honorable Member of the Senate than the Senator from Oklahoma, who conducts himself in a very gentlemanly and upright manner. We attempt to do the same.

Mr. President, if we have made any error in the submission of these figures, we shall be glad to correct it. We have gone quite thoroughly into these details.

Mr. President——

The PRESIDING OFFICER (Mr. DANIEL in the chair). The Senator from Illinois has the floor.

Mr. DOUGLAS. Mr. President, next we come to company R:

Company R

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$8,395,561	$1,636,500	$6,759,061	19.49
1953	11,536,428	3,477,350	8,059,078	30.14
1952	13,532,095	3,884,000	9,648,095	28.70
1951	14,940,795	4,645,000	10,295,795	30.11
1950	10,850,226	2,351,801	8,498,425	21.68
1949	6,470,610	299,023	6,171,587	4.62
1948	8,229,656	1,635,000	6,594,656	19.87
1947	4,773,864	576,444	4,197,420	12.07
1946	2,475,239	370,000	2,105,239	14.95
1945	1,983,259	252,500	1,730,759	10.27

The high year for this company was 1953 when it paid Federal corporation income taxes at a rate of 30.14 percent. Its low year was in 1949 when it paid at a rate of 4.62 percent. Even at these low rates, its taxes seem somewhat above the average for these 27 companies.

Company S is next:

Company S

Year [1]	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1955	$4,284,521	$220,000	$4,064,521	5.13
1954	5,241,179	43,000	5,198,179	.82
1953	5,525,948	583,000	4,942,948	10.55
1952	5,618,762	1,425,000	4,193,762	25.36
1951	5,280,578	964,000	4,316,578	18.26
1950	2,944,322	191,000	2,753,322	6.49
1949	4,736,153	342,000	4,394,153	7.22
1948	4,213,001	266,000	3,947,001	6.31
1947	3,200,034	160,000	3,040,034	4.99
1946	1,809,404	30,000	1,779,404	1.66

[1] 12 months ended June 30.

I am informed that this company is almost entirely a gas-producing company. I will say for the benefit of my friend, the Senator from Oklahoma, that, as I understand, this company has very few oil profits. The Senator from Oklahoma can identify this company on the chart.

Company S paid taxes at the rate of 25.36 percent in 1952, its high year, and at a rate of 0.82 of 1 percent in 1954, its low year. It, too, has done very well, paid very few taxes, and has shown a good record of earnings throughout the period. One doubts that its incentive has been ruined or that it needs even more privileges, tax benefits, or higher prices for its natural gas in order to make profits and to keep its head above water.

Next, we come to company T. We have a record for only 6 years for this company:

Company T

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$542,208	$2,500	$539,708	0.46
1953	408,107	----------	408,107	----------
1952	431,569	----------	431,569	----------
1951	273,473	----------	273,473	----------
1950	183,116	5,000	178,116	2.73
1949	(6,000)	----------	(6,000)	----------

NOTE.—Parentheses indicate deficit.

Mr. President, it is to be noted that the company paid income taxes for only 2 years in that period, namely, for 1950 and 1954.

Here is a company with a steady growth in the amount of its net income. It is a company which has paid no taxes whatsoever in 4 of the last 6 years. Even in the 2 years for which it did pay taxes, they were at nominal rates of .46 percent and 2.73 percent. In fairness, it paid no taxes in 1949, because it lost money in that year. Surely it has been treated better than most small companies in similar circumstances, but outside the gas and oil industry.

Company U is next:

Company U

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$7,805,307	$335,000	$7,470,307	4.29
1953	7,140,132	600,000	6,540,132	8.40
1952	7,715,591	1,000,000	6,715,591	12.96
1951	10,239,600	2,900,000	7,396,000	28.32
1950	7,659,000	1,200,000	6,459,000	15.67
1949	6,656,347	875,000	5,781,347	13.15
1948	9,030,713	2,250,000	6,780,713	24.91
1947	7,191,002	1,250,000	5,941,002	17.38
1946	3,400,586	400,000	3,000,586	11.76

The income and taxes of company U seem to have fluctuated less than many others in this list. Their lowest was in 1954 when it paid taxes at a rate of 4.29 percent on a net income of $7.8 million. Their high year was in 1951 when they paid taxes at a rate of 28.32 percent.

Next we come to company V:

Company V

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$4,173,767	----------	$4,173,767	----------
1953	3,951,367	$350,000	3,601,367	8.86
1952	4,414,623	660,000	3,754,623	14.95
1951	3,112,871	----------	3,112,871	----------
1950	1,904,836	526,000	1,378,836	27.61
1949	[1] 592,448	7,500	584,948	1.26
1948	461,640	2,400	459,240	.52
1947	416,506	4,100	512,406	.98
1946	328,052	11,282	316,770	3.44
1946 [2]	176,841	5,250	171,591	2.97
1945 [2]	293,539	6,127	287,412	2.00

[1] Before $653,408 loss on wells abandoned.
[2] 12 months ended Apr. 30. In 1946, the company changed to a calendar-year basis so 1946 taxes are shown both ways.

This company paid taxes at a high rate in 1950—by oil and gas producing company standards—when it paid taxes at a rate of 27.61 percent. In most other years it has paid almost no taxes whatsoever. In 1954 and 1951, it paid nothing. In 1947 and 1948 its taxes were below 1 percent. In 1949 it paid taxes of 1.26 percent. In 1945 and 1946 its taxes were 2 percent and 3.44 percent. This is an amazing thing.

Next is company W:

Company W

Year [1]	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$10,260,388	($100,000)	$10,360,388	[2]
1953	12,500,382	(500,000)	12,000,382	[2]

[1] 12 months ended Aug. 31.
[2] Credit taxes.

Company W—Continued

Year [1]	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1952	$12,100,165	$200,000	$11,900,165	1.65
1951	15,195,639	1,900,000	13,295,639	12.03
1950	7,128,542	200,000	6,928,542	2.81
1949	7,483,443	200,000	7,283,443	2.67
1948	17,917,474	3,000,000	14,917,474	16.74
1947	5,266,897	400,000	4,866,897	7.59
1946	1,844,156	----------	1,844,156	----------
1945	5,422,254	450,000	4,972,254	8.29

NOTE.—Parentheses indicate credit.

This is a truly interesting situation. Here is a company which in 1954 and 1953 had net incomes in excess of $10 million and $12.5 million respectively, but which not only did not pay any taxes in those years but which had net tax credits of $100,000 and $500,000 respectively. In 1946 it paid no taxes. In 1949 and 1950 its taxes were below 3 percent. In 1952 they were 1.65 percent. What other kind of company in America can have a net income of $10 to $12 million per year and receive a tax credit from the Federal Government? Is their incentive being ruined? Are they afraid to take risks? If they have no incentive when the Government gives them tax credits, what has to be done to give them an incentive? The American people should weep for such companies. The men and women who earn their money by the sweat of their brows, and who at this time of the year are scraping together enough to pay their Federal income tax, must feel a great compassion for these poor companies, devoid of incentive, who with millions of dollars in net income yet pay no taxes. How demanding can these companies become? If I were in their place I would be ashamed to show my face in the halls of Congress, yet apparently the more they get the more they want. And as they get more they use their influence and power to get still more. So privilege feeds on privilege. They are never satisfied. They never have enough.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. Has the Senator concluded his list of cases?

Mr. DOUGLAS. I was discussing company W.

Mr. MONRONEY. I have a question to ask, which might well be asked at this time, because it bears on the entire list.

In computing the net income, is the cost of drilling dry holes taken into consideration before or after that figure is arrived at?

Mr. DOUGLAS. I believe it is before, but I will check the record to make sure. I think the cost of drilling dry holes is computed as an operating expense, but I will check it.

Mr. MONRONEY. I think the Senator is correct with respect to depletion coming after net income, and perhaps with respect to developmental wells, both of which items are related to actual income. I think it would clarify the record to determine where the dry holes come in.

Mr. DOUGLAS. I think they are taken into consideration before net income.

Mr. MONRONEY. Apparently, from what the Senator from Illinois has said, all these companies are companies engaged in exploration and search for oil. Today approximately a quarter of a million dollars is sunk in every dry hole encountered in the search for oil. If there are 10 dry holes, it is not long before the producer has $2,500,000 chargeable to dry holes. Perhaps that has already been charged against net income. I hardly know how to compute my own personal income tax, which I assure the distinguished Senator from Illinois is not so complicated as corporation bookkeeping. However, I think the record would be much clearer if it were made absolutely definite and certain when the dry holes are charged off.

Mr. DOUGLAS. It is my impression that they have been treated as operating costs. In fact, I have now checked this question, and dry holes are deducted as operating expenses before the figure of net income before taxes—profits—is arrived at.

Now we come to company X:

Company X

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$5,245,527	----------	$5,245,527	----------
1953	4,470,659	$240,000	4,230,659	5.37
1952	3,635,498	450,000	3,185,498	12.38
1951	3,702,765	550,000	3,152,765	14.85
1950	3,770,706	696,200	3,047,506	18.46
1949	4,022,266	640,907	3,381,359	15.93
1948	4,731,952	901,906	3,830,046	19.06
1947	2,940,750	597,621	2,343,129	20.32
1946	1,394,512	163,973	1,230,539	11.75
1945	666,557	----------	666,557	----------

This company paid taxes at a rate of 20.32 percent in 1947, its high year, and no taxes at all in both 1945 and 1954. Yet, in 1954 when it paid no taxes it had a net income before taxes of $5.2 million. I believe that in this case as in the others, the facts speak for themselves. I ask any Member of the Senate who has not yet made up his mind on this issue, to study these figures and ask himself, seriously, if these companies are without incentive.

Company Y is next.

Company Y

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$8,256,034	$400,000	$7,856,034	4.85
1953	8,874,068	1,275,000	7,599,068	14.37
1952	8,101,335	1,255,000	6,846,335	15.49
1951	8,009,124	1,185,000	6,824,124	14.79
1950	7,047,367	1,050,000	5,997,367	14.89
1949	7,048,753	710,000	6,338,753	10.07
1948	9,186,038	1,725,000	7,461,038	18.78
1947	4,883,907	760,000	4,123,907	15.56
1946	2,428,249	315,000	2,113,249	12.97
1945	1,934,850	175,000	1,759,850	9.04

Like most of the others, the net income of company Y has shown a steady growth in this 10-year period. It has risen from $1.9 million to over $8 million. Yet it paid taxes last year at the rate of 4.85 percent. In other years the rate was between 10 and 20 percent, except for 1945, when it was 9.04 percent.

We now come to company Z:

Company Z

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$1,382,897	----------	$1,382,897	----------
1953	3,292,988	----------	3,292,988	----------
1952	1,547,048	----------	1,547,048	----------
1951	703,747	----------	703,747	----------
1950	151,488	----------	151,488	----------
1949	154,707	----------	154,707	----------
1948	134,881	----------	134,881	----------

This is really an extraordinary record. Here is a company which in 7 years has paid absolutely no taxes of any kind. Yet, in those 7 years its income varied between $134,000 and $3.2 million a year.

What further incentive is needed here? What more could a benevolent Government do for an individual or a company than to forgive all of its taxes? This company paid zero percent taxes while individuals in this country were burdened with heavy income taxes, and other corporations with heavy corporate taxes.

Finally, Mr. President, I come to company A–Z.

I have run out of the alphabet. I must start over now with company A–Z:

Company A–Z

Year	Net income before income taxes	Income taxes	Net income after income taxes	Percent of income taxes to income before taxes
1954	$647,516	----------	$647,516	----------
1953	1,008,416	$80,000	928,416	7.93
1952	768,664	----------	768,664	----------
1951	1,143,004	283,000	860,004	24.76
1950	969,156	264,774	704,382	27.32
1949	394,227	----------	394,227	----------
1948	874,306	173,000	701,306	19.79
1947	655,289	73,000	582,289	11.14
1946	227,789	----------	227,789	----------
1945	322,232	----------	322,232	----------

In 5 of the last 10 years this company paid no Federal income taxes. In the 5 other years, it paid Federal income taxes at rates which varied from 7.93 percent in 1953 to 27.32 percent in 1950. It has earned good money—not as much as some others. It certainly has had a helping hand. It must have drilled a great many wells to have tax write-offs in the magnitudes which would put it outside the reach of the income tax in 5 of these years. I believe the argument that more is needed for these companies as an incentive to drill for "gas" is an argument which does not stand the test of factual material.

We must recall again that very few people drill for gas as such, except in well known gas areas and gas fields. Primarily they drill for oil. For the risks involved, they receive very heavy tax benefits. There is no justification for more and especially is there no justification for loading on the consumers increased costs of gas which would cost them between $600 million and $900 million per year, and which would eventually cost them from $21.5 to $30 billion.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. I have the confidential list before me, and I will not divulge it. However, in checking through it I find listed very few of the companies which the Senator found to be so important in the early part of his speech. I wonder why the distinguished Senator from Illinois did not also give us the figures affecting the other companies.

Mr. DOUGLAS. We are doing both. We covered the 35 big companies. I believe it is true that the 27 companies are exclusive of the 35, with 4 exceptions. Therefore, we have covered 58 companies. However, the Senator from Illinois is very much limited in his resources; he does not have behind him the enormous powers which the junior Senator from Oklahoma has behind him. The Senator from Illinois must content himself with a detailed analysis of the 27 companies and with general figures on the 35 companies, although we have both for 4 companies. If the distinguished junior Senator from Oklahoma wishes to go into the 31 companies—not 35—I shall be very glad to have him do so. Then I will check his figures, as I hope he will check my figures on the 27 companies. I am perfectly willing to say that I have identified the source for him, and I am certain that the Library of Congress will segregate the figures for him.

Mr. MONRONEY. The junior Senator from Oklahoma did not understand the distinguished senior Senator from Illinois to deal with the tax matter at the time he discussed the 35 giant corporations.

Mr. DOUGLAS. That is correct.

Mr. MONRONEY. Most of the companies are among the big ones. They are engaged in importing oil from the Near East. If the Senator from Illinois had included those companies in the tax picture, would the case have been as favorable or less favorable? Why were those 27 companies chosen? Was it because out of thousands of companies operating in the country those were the worst examples?

Mr. DOUGLAS. Oh, no.

Mr. MONRONEY. Or middle examples?

Mr. DOUGLAS. Oh, no.

Mr. MONRONEY. Or the best examples?

Mr. DOUGLAS. No. We do not wish to make whipping boys of these companies. If the Senator from Oklahoma wishes to take the 31 big ones, which we did not take, he can do so.

Mr. MONRONEY. I hold no brief for any of them.

Mr. DOUGLAS. These are, roughly, run-of-the-mine companies. That is roughly what they are. I have presented figures on 58 companies.

Mr. MONRONEY. But no tax figures such as the Senator presented on the 27 companies.

Mr. DOUGLAS. I will let the Senator from Oklahoma get the tax figures on the 31 companies. The Senator from Illinois did not willfully disregard those companies.

Mr. MONRONEY. I am sure he did not. However, the Senator from Okla-

homa showed that, on a roughly corresponding list of 35 of the leading oil producers, the gas production was but 2 percent of the total revenue of the companies. Perhaps in these 27 cases the percentage may also be of some significance. I am wondering why the 35 giants were omitted from the usual very careful analysis of the distinguished senior Senator from Illinois.

Mr. DOUGLAS. I say to my good friend that he will find these companies to be middle companies, and only 4 exceptions appear on our list of the 35 biggest gas producers.

They are not so widespread in their activities as the 35 companies which I previously mentioned. They have more refineries, but they do not have as large a refinery business as the big 35; nor do they have in general the widespread distributing system the big giants have.

We were trying to use companies whose activities, in the main, are confined to the oil and gas fields. There are 2 or 3 companies which are exclusively gas companies. What I did first was to show the sales and profits of the big composite companies who sell 70 percent of the natural gas in interstate commerce. Then I went on to give another 27 examples of middle-size operating companies. This giving us an idea of the way the operating ends of the big composite companies work. That was the reason for giving first the 35 big companies and then these 27 other examples, of which 4 are duplications.

Again I wish to say that the list I furnished is confidential. I do not wish to crucify anyone. If the list does get into the hands of the press and it is published, the press will be violating a confidence.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. These figures are all available, are they not?

Mr. DOUGLAS. That is correct.

Mr. MONRONEY. They are not an inside look at Treasury Department records, as I understand.

Mr. DOUGLAS. No; they are not figures from the Treasury Department.

Mr. MONRONEY. However, the Senator from Illinois does not wish to be the source of the information, as I understand.

Mr. DOUGLAS. That is correct.

Mr. MONRONEY. That is very considerate of him. Of course, most companies realize that all this is an open matter and no one is trying to conceal what they paid or did not pay.

Mr. DOUGLAS. That is correct. I wish to make my case on principle, rather than make some companies whipping boys.

MAJOR OIL COMPANIES OWN BULK OF NATION'S NATURAL GAS RESERVES

If we turn from sales to the ownership of gas reserves, we find that the information which is available with respect to the ownership of the Nation's gas reserves, although admittedly incomplete, shows that such reserves are owned mostly by the major oil companies of the Nation. From published sources, including reports made to the Federal Power Commission by pipeline companies and financial manuals, it is possible to secure a substantial amount of data as to the ownership of gas reserves.

In the hearings before the House Interstate and Foreign Commerce Committee, the Federal Power Commission submitted data showing the ownership of gas reserves by nontransporting producers and by pipeline companies and affiliates—House hearings, page 23. From studies which I have had prepared, I have been able to supplement these reserve estimates to some extent and to account for the ownership of 135.779 trillion—those figures are almost astronomical—cubic feet of natural gas, which is 64.14 percent of the Nation's estimated proven gas reserves according to the gas reserves committee of the American Gas Association. Of these 135.779 trillion cubic feet, nontransporting producers owned 106.503 trillion cubic feet or 78.44 percent of the total, and utility companies owned 29.276 trillion or 21.56 percent of the total reserves. Table IV–5 lists 30 nontransporting producers and 16 utility companies which together own 129.464 trillion cubic feet or approximately 61 percent of the Nation's total gas reserves.

The reserve ownership in both categories is understated to some extent even for the companies listed, by reason of the fact that some utility companies which made reports to the Federal Power Commission, although owning reserves, did not report the volume owned. Likewise, for certain affiliated producing companies the volume of reserves owned was not available from public sources. The reserve data for a number of nontransporting producers is not up to date, since all these corporations do not always supply information to the statistical organizations of their current reserve ownerships. Some of the figures which are included in the table with respect to the reserves of nontransporting producers are dated several years earlier than 1954.

In addition to the 46 companies listed on table IV–5 which have reported reserve ownership, and the additional 49 companies for which consolidated figures are shown on the table, there are a number of other important natural-gas producers which do not publicly disclose the extent of their ownership of gas reserves. Among such producers are such large corporations as Cities Service Oil Co., Gulf Oil Corp., and Shell Oil Co., which are 3 of the largest producers selling gas in interstate commerce, their rank being 8th, 7th, and 4th, respectively. In addition, there are a number of other large producers owning substantial reserves, including Amerada Petroleum Corp., Carter Oil Co., which is a subsidiary of Standard Oil Company of New Jersey, the H. L. Hunt interests, Republic Natural Gas Co., Southwest Gas Producing Co., Superior Oil Co., and United Carbon Co. Based on 1954 production figures, it is estimated that these 10 companies, for which data are not available, own reserves aggregating from 20 to 30 trillion cubic feet. I want to emphasize that these estimates of natural-gas-reserve ownerships by major oil companies are on the low side.

Natural-gas companies reporting to the Federal Power Commission are required to report the volume of reserves which they have under contract with producers in addition to the reserves which they own. It appears that they have under contract with the nonaffiliated producers 109.353 trillion cubic feet. If we add to that the reserves owned and under contract to utilities which are not subject to the jurisdiction of the Federal Power Commission we find that such utilities report reserves available to them of approximately 140 trillion cubic feet.

Thus the total reserves of natural gas which are known to be committed to utility markets, and admittedly this is on the low side, make up about two-thirds of the Nation's total proven gas reserves, which are estimated at 211.7 trillion cubic feet. The utility markets received about two-thirds of the 1954 production. Tremendous quantities of natural gas are used by the producers in their field operations and in the refineries, and large volumes are sold directly by the producers to industries as fuel for electric generation plants and for use in cement, carbon black, chemical, and other plants. In 1954 field use alone amounted to 1.578 trillion cubic feet. Thus it appears reasonable to conclude that most of the natural gas reserves of the country are dedicated to markets of one type or another and that there are not available to buyers many trillion cubic feet of the gas which have been discovered and which have not yet been committed to a market. There are, of course, some reserves which are uncommitted. Certainly there is somewhat of a lag between discovery and the sale of the gas reserves, although there have been many instances where the reserves were sold shortly after the discovery well was completed and some reasonable estimate of the reserves in the field could be made.

But the important consideration which I wish to emphasize with respect to the ownership of the Nation's gas reserves is the fact, as shown by the table which I have presented, that 30 nontransporting producers and 16 utility companies together own 61 percent of the Nation's estimated proven gas reserves. And this percentage is actually higher because, as I have already pointed out, a number of the large transporting producers have not published their current reserve ownership figures, and if such information were available, the figure of 61 percent would be increased to 70 or 75 percent.

With the ownership of this tremendous portion of the Nation's gas reserves within their control and with a scarcity of gas in sight in the future, it is no wonder that we find the large oil and gas producers bending every effort to promote this legislation.

DOMINATING POSITION OF MAJOR PRODUCERS IN PANHANDLE-HUGOTON FIELDS

The dominating position of the major gas producers in the Panhandle-Hugoton fields is clear from an examination of the data showing that 10 pipeline companies and 20 major nontransporting producers account for 90 percent of the production of gas in these two fields. This is of substantial significance, since these two fields are outstanding in size and together

contain 20 percent of the Nation's gas reserves. The Hugoton field is considered to be the largest gas field in the world with a total reserve today of about 25 trillion cubic feet. The second largest gas field is the Panhandle field with a total reserve of approximately 17 trillion cubic feet. These two fields, which adjoin across the 3-State area of Kansas, Oklahoma, and Texas, cover an area of about 5 million acres. From these reserves 7 major pipeline companies receive the preponderance, and, in some instances, their entire supply of natural gas. One would normally expect to find a large number of individual producers taking part in the exploitation of such a tremendous gas reserve, but the facts show otherwise. According to information furnished by the Texas Railroad Commission, the Oklahoma Corporation Commission, and the Kansas Corporation Commission, which bodies are in charge of the regulation of oil and gas production in their respective States, there are only 180 producers in these two fields, including pipeline companies owning reserves.

Mr. MONRONEY. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. Since it is my own State which the Senator is discussing, and I am familiar with it, I should like to say that the section to which reference has been made is what used to be the Dust Bowl. The farmers owned large tracts of land. Most of their neighbors of faint heart moved away, and the "Okies" abandoned their lands in the Grapes of Wrath days. The fact that there are 180 producers is not strange, because their land was opened up as merely wildcat territory. Companies try to get what is known as a big-lease spread, so that if they do make a discovery they will have under their control a large amount of acreage.

Mr. DOUGLAS. Is the Senator saying that a larger number of farmers will receive royalties?

Mr. MONRONEY. No; I am not saying that. They do get one-eighth of all gas produced, which perhaps makes them the largest beneficiaries, whether stockholder, or anyone else interested in these companies.

Mr. DOUGLAS. I mentioned that fact in the first page of my speech.

Mr. MONRONEY. I know the Senator recognizes that. The gas crop is a pretty big crop on Oklahoma farms.

Mr. DOUGLAS. I wish to say that Lazarus received a few crumbs which fell from the table of Dives.

Mr. MONRONEY. A gas lease on a farm is not "crummy" in Oklahoma. It may be in Illinois.

Mr. DOUGLAS. In Oklahoma actual millionaires are on every hand.

Mr. MONRONEY. The farmers are not the rich ones.

Mr. DOUGLAS. That is what I hope the Senator will always remember.

Mr. MONRONEY. I am a Democrat, and we recognize better than anyone else that the common folks are in the Democratic Party.

Mr. DOUGLAS. I had the feeling that the oil and gas boys worked both sides of the street.

Mr. MONRONEY. They usually support Republican candidates, I may add. I have had considerable difficulty in that field in times past on certain questions, having joined with the distinguished Senator from Illinois on the tidelands issue, but I have the satisfaction of knowing we were right in that case. I thought they were wrong on that issue. I believe they are right on this one.

But the point I am making is that 180 producers in a 5-million-acre field, the greatest in the Nation, is not an unusual situation when we consider the condition of the land, the larger ownership of the farms, and the conservation methods being used to produce the field and make it last longer. I know the distinguished Senator from Illinois does not misunderstand me, but others who may hear might think it was a monopoly condition, when, as a matter of fact, it is one of the conditions of discovery and development, and it is not as diversified an ownership as exists in many of our gas fields.

Incidentally, the reserves are going to be tremendously increased. The statistics are inadvertently not complete. An entirely new horizon of gas production has been found in the below-sea-level part of the Hugoton field. So the figures should show a greater reserve.

Mr. DOUGLAS. Mr. President, I am delighted the Senator has said that, because last week on the floor of the Senate he and the Senator from New Mexico [Mr. ANDERSON] were lamenting the fact that the gas reserves had not gone up in the year 1954. Now it is found that in 1955 and the beginning days of 1956 there are tremendous reserves. If that is so, then the Phillips decision could not have had a very adverse effect upon discovery, exploration, and development.

Mr. MONRONEY. It is not too difficult a matter for an intelligent oil or gas man to understand that where gas is found in one stratum by drilling, there may be other producing strata.

During the remarks of the distinguished Senator from Illinois last Friday, I was momentarily absent from the floor to discuss a matter with the editor of the Guymon, Okla., daily newspaper—incidentally, my former managing editor, who was visiting Washington—who informed me of this great new bonanza which had developed. It is only as to 1 or 2 wells now, but some of those 200,000 people in Illinois, and especially Chicago, who are waiting for gas, may find a great, new, abundant field coming in.

Mr. DOUGLAS. That would be fine.

Mr. MONRONEY. The bad years may be behind us. But even these discoveries do not necessarily mean that the new gas will be committed in interstate commerce. If the producers feel there will be an unregulated market, which might pay them even less per thousand cubic feet than a regulated market, they will choose the unregulated market.

Mr. DOUGLAS. I am very glad to have the junior Senator from Oklahoma play an obligato, from time to time, to the tune I am attempting to bring forth.

Mr. President, I ask unanimous consent that the table which I have prepared on the reported ownership of natural reserves by certain corporations may be printed at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE IV–5.—*Reported ownership of natural gas reserves by certain corporations*

	Trillion cubic feet
Nontransporting producers:	
Humble Oil & Refining Co	16.000
Phillips Petroleum Co	13.200
Standard Oil Co. (Ind.)	11.380
The Texas Co	11.100
Socony-Mobil Oil Co	8.000
Standard Oil Company of California	4.500
Sun Oil Co	3.900
Pure Oil Co	3.700
Delhi-Taylor Oil Corp	3.000
Atlantic Refining Co	2.210
Continental Oil Co	2.200
Tidewater-Associated Oil Co	2.180
Ohio Oil Co	2.000
Sunray-Mid Continent Oil Co	1.948
Union Oil Company of California	1.864
Shamrock Oil & Gas Corp	1.700
Sinclair Oil & Gas Co	1.700
Columbian Carbon Co	1.552
The Chicago Corp	1.520
Three States Natural Gas Co	1.516
Union Oil & Gas Corporation of Louisiana	1.474
Western Natural Gas Co	1.446
Southern Production Co	1.166
Skelly Oil Co	1.053
Kerr-McGee Oil Industries	.883
Standard Oil Co. (Ohio)	.717
Texas National Petroleum Co	.700
Lion Oil Co	.405
Pubco Development, Inc	.361
Aztec Oil & Gas Co	.359
Subtotal	103.734
Other companies reporting reserve ownership	2.769
Total reported	106.503
Utility companies:	
El Paso Natural Gas Co	4.585
United Gas Pipeline Co	4.044
Colorado Interstate Gas Co	3.021
Panhandle Eastern Pipe Line Co	3.015
Columbia Gas System, Inc	2.028
Cities Service Gas Co	2.000
Natural Gas Pipeline Company of America	1.639
Northern Natural Gas Co	1.500
Arkansas Louisiana Gas Co	.923
Lone Star Gas Co	.700
Mountain Fuel Supply Co	.697
Kentucky West Virginia Gas Co	.693
Southern Natural Gas Co	.574
Montana Power Co	.528
Consolidated Natural Gas Co	.413
National Fuel Gas Co	.370
Subtotal	26.730
Other companies reporting reserve ownership	2.546
Total reported	29.276
Grand total reported	135.779

Mr. DOUGLAS. Mr. President, table IV–6, which I present, lists the 10 pipeline companies and the 20 major independent producers which, together, account for 90 percent of the total production in these two fields, based upon the allowables for the month of November 1954. An examination of the identity of these producers reveals that approximately the same concentration of ownership by the large oil companies exists in these two fields as exists in the national statistics of sales to interstate pipeline companies to which I referred earlier.

I ask unanimous consent that table IV–6 be printed at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE IV–6.—*Principal producers and allowable production for the Panhandle and Hugoton gas fields*

	November 1954 allowable production (thousand cubic feet)			Percent of total allowables	Cumulative percentage
	Panhandle	Hugoton	Total		
PIPELINE COMPANIES					
Colorado Interstate Gas Co	11,955,273		11,955,273	9.23	9.23
Panhandle Eastern Pipe Line Co	2,734,577	4,635,082	7,369,659	5.69	14.92
Cities Service Gas Co	4,665,092	1,908,623	6,573,715	5.08	20.00
Natural Gas Pipeline Company of America	6,217,504		6,217,504	4.80	24.80
Hugoton Production Co		3,189,811	3,189,811	2.46	27.26
Northern Natural Gas Co	596,596	2,589,194	3,185,790	2.46	29.72
Other pipeline companies (4)	873,904	1,978,039	2,851,943	2.01	31.73
Total, 10 pipeline companies	27,042,946	14,050,749	41,093,695	31.73	
MAJOR INDEPENDENT PRODUCERS					
Phillips Petroleum Co	12,517,794	7,773,457	20,291,251	15.67	15.67
Stanolind Oil & Gas Co	16,847	8,134,056	8,150,903	6.29	21.96
Cities Service Oil Co. and subsidiary	62,832	7,333,642	7,396,465	5.71	27.67
Shamrock Oil & Gas Corp	5,044,211	2,132,244	7,176,455	5.54	33.21
Republic Natural Gas Co		5,577,378	5,577,378	4.31	37.52
Dorchester Corp	1,809,136	1,923,837	3,732,973	2.88	40.40
Kerr-McGee Oil Industries and affiliate	1,307,321	2,072,828	3,380,149	2.61	43.01
Magnolia Petroleum Co	728,852	2,379,588	3,108,440	2.40	45.41
Hugoton Plains Oil & Gas Co		2,496,509	2,496,509	1.93	47.34
Huber, J. M., Corp	1,987,375	96,474	2,083,849	1.61	48.95
Skelly Oil Co	509,751	1,537,313	2,049,064	1.58	50.53
United Producing Co		1,926,507	1,926,507	1.49	52.02
Deerfield Gas Producing Co. and Kearney Gas Producing Co		1,471,141	1,471,141	1.14	53.16
Cabot Carbon Co	566,363	715,271	1,281,634	.99	54.15
Hawley, J. B	8,925	1,257,938	1,266,863	.98	55.13
Columbia Fuel Corp		1,140,748	1,140,748	.88	56.01
White Eagle Oil Co		908,453	908,453	.70	56.71

Source: Proration orders of Texas Railroad Commission, Oklahoma State Corporation Commission, Kansas State Corporation Commission.

Mr. DOUGLAS. Mr. President, it is evident that the ownership of reserves by pipeline companies and their producing affiliates in these two fields is a much greater percentage of the total than is found in other gas-producing areas of the Southwest.

The reserves in the Panhandle-Hugoton fields are for all practical purposes entirely committed to existing markets. There is very little undrilled acreage remaining.

EFFECTIVE COMPETITION IMPOSSIBLE BECAUSE TRANSPORTATION LIMITED TO LARGE FIXED INVESTMENT IN PIPELINES

In the hearings before the House and Senate committees, Dr. Boatwright, the Standard Oil economist who appeared for the producers, presented testimony and statistics which showed that the concentration ratios in the production phase of the natural-gas industry are much less than in other extractive industries except bituminous coal, and are considerably less than in most manufacturing industries. In other words, the statistics which Dr. Boatwright presented showed, for example, that the 8 largest producers of copper account for 91 percent of the total domestic production, while the first 8 gas producers account for only 28 percent of the total natural gas produced in the country. The intent of such testimony and statistics was to demonstrate that domination of the supply of natural gas by a few producers does not exist to the extent that domination situations exist in other extractive and in manufacturing industries. It is claimed that there is plenty of room for newcomers in the producing segment of the gas industry and that there are enough producers in that industry to provide sufficient competition to prevent monopolistic price-fixing practices.

While these statistical facts as to the concentration ratios in the various industries may be correct, nevertheless, as I have twice pointed out, they do not provide the answer to the question of monopoly in the sale of natural gas for resale in interstate commerce. In this country we have several hundred electric utilities, several hundred gas-distribution utilities, and over a hundred natural-gas pipeline companies. I am sure that if concentration ratios on a national basis were computed for the electric or gas utility industries, they would show, based upon the theory advanced by Dr. Boatwright, that competition was rampant in the utility industry, and far more so than in the extractive industries. Yet the Federal Government and the State governments have found that regulation of utilities is necessary in the public good.

We must look at more than the concentration ratios: We must look at the marketing relationships, the geographical relationships, the time factors, and the cost factors in order to judge whether regulation of the sales of natural gas in interstate commerce by producers and gatherers is required.

An examination of these relationships with respect to the sale of natural gas in interstate commerce, on the one hand, and the producing or manufacturing of the commodities referred to by Dr. Boatwright on the other, will show that such relationships are as different as night is from day.

Let us proceed to examine into these relationships. To get into the natural gas pipeline company business, the promoters of the project must first secure contracts from producers for the purchase of natural gas reserves sufficient to meet the market requirements of the project for a period of from 15 to 20 years in the future.

This point has been fairly well developed in the colloquy with the junior Senator from Louisiana [Mr. LONG] earlier today. This is a legal prerequisite of the Federal Power Commission if the company is to secure a certificate of public convenience and necessity. Practically, it is also a prerequisite of the bankers who are going to put up the money.

If a project is to be one involving a big transcontinental pipeline bringing gas from the Southwest, it must move large volumes of gas daily to make the project economically feasible. If there is to be a pipeline with an initial daily capacity of 300 million cubic feet, which is about the minimum size now built, the promoter must have in hand, at the time he files his application with the Federal Power Commission for a certificate of public convenience and necessity, purchase contracts for at least 100 billion cubic feet a year and covering about 2 trillion cubic feet of dedicated reserves. Where can a promoter secure 2 trillion cubic feet of natural gas in a hurry?—and promoters are always in a hurry to close their deal and reap their profits. The answer is simple: Only by going to the major oil companies who control most of the gas reserves in the Southwest. No other companies have such reserves. They are nonexistent elsewhere.

These gas reserves must be secured in large blocks in order to obtain economical transportation costs. Generally they must be blocks of more than 2 trillion feet.

In order to secure these reserves from the oil companies, the pipeline promoter has got to pay a premium over and above the prevailing contract rates for gas in the producing areas. The gas producers know the promoter needs reserves for his pipeline. The big oil companies operate in most of the producing States of the Southwest. They have the big blocks of reserves, whether they be located in Texas, Louisiana, Kansas, or Oklahoma. The pipeline promoter cannot afford to depend upon securing his minimum 2 trillion feet by buying small blocks of reserves from the smaller independent producers scattered hither and yon. If gas were to be secured in this fashion, the pipeline project would be uneconomical because of the tremendous investment

required in the lateral supply lines. Thus the promoter must deal with the big boys—with the producers who are listed in the blue book of the American oil industry. He has no other practical choice.

When the major portion of the gas reserves are secured and the location of them is known, the line itself is located so as to tie into these reserves by the most economical route.

After the certificate is secured and the transmission lines are in the ground, the pipeline company is committed to a general area along the pipeline. Pipelines are expensive. The large diameter 24- to 36-inch lines which are in common use by the big pipeline companies cost from $40,000 to $110,000 a mile, depending upon the diameter of the pipe, the terrain covered, the amount of rock excavation, the number of river crossings, the number of compressor stations, and other factors. Of the major pipeline companies running from the Southwest to the North and Northeast, investments in transmission facilities run all the way from $80 million to $650 million.

Because of the large fixed investment in pipeline and compression facilities, these lines cannot be moved from place to place to secure cheaper gas even if the contracts with producers would permit the pipeline company to displace the committed reserves. Of course the contracts with producers do not so permit. The producers and the pipeline companies are tied together by long-term contracts. Once these contracts are entered into and the pipeline located, there can be no further bargaining except when the pipeline company wants additional reserves or when renegotiation and redetermination time is at hand under the provisions of the contract. As I shall point out later in more detail, the prices cannot be reduced in these renegotiations, but can only go up. These pipeline systems cannot be moved around like a garden hose. Small producers who have reserves in the general area of the line cannot offer any real competition—supply or pricewise—to the major oil companies who control the large blocks of reserves. Generally they add their small volume of reserves to the project and obtain the same price as did the major producers who set the price in the first place.

A large number of pipeline companies purchase gas from producers at the wellhead. Thus in addition to their investment in transmission lines, they have large investments in gathering facilities, purification facilities, and field compressor stations. These facilities also are immobile and serve to minimize the bargaining power of the pipeline buyer. In addition, the pipeline can pass on these increased prices and has little incentive to bargain over them. From the time the pipeline is committed to a general area, it is limited in its bargaining power. I think I should grant initially that in making a choice as to whether a company will go, for example, to Kansas or Louisiana, there may well be a choice of areas, and that the pipeline company will tend to go into the particular area where the price is low. But my point is, once it chooses the general area, then it is committed.

When the demand for gas increases, the company is faced with the problem of securing the reserves to meet that demand. It has the choice of dealing with the producers along the route of its pipeline or building a multimillion dollar line to a new area. The producers know this, and are in a position to take advantage of it. Even though the pipeline company's market is not expanding, there is the compulsion of good business practice to buy additional reserves to replace the reserves which are consumed each year.

The competitive forces which operate to assure reasonable prices for commodities such as copper, coal, oil, and lumber, and which do away with the need for Federal regulation, are not present in the natural gas industry. The promoters of this legislation persist in ignoring the unique and distinctive considerations connected with pipelines and mains which are inherent in the marketing of natural gas and which do not apply to the marketing practices with respect to other commodities. This is the hard fact by which the claim of effective competition among producers of gas is refuted. If a producer of coal or fuel oil raises his price, the buyer can haul his fuel supplies from another producer, who charges a lower price. And there are numerous alternative means of transportation, like railroads, barges, and trucks, which do not exist in the gas industry. Also there are no long-term contracts with escalator clauses, most favored nation clauses, and renegotiation provisions. But if a gas producer raises his price, the expense of tearing up a pipeline and laying a new one to a lower-cost reserve supplier prevents the pipeline company from shopping around for a lower price. All segments of the gas industry—producers and gatherers, pipeline and distribution companies, and the ultimate consumers—are bound and tied together, organically and irretrievably, by the pipeline and distribution mains. Normal competitive forces cannot and do not operate to keep producers' prices at reasonable levels under these conditions.

I should like to place in the RECORD at this point, Mr. President, some statistical evidence concerning the cost of pipelines which, because of their very high costs, on the one hand, and the tremendous investments of consumers in gas appliances on the other hand, make for very limited competition in the natural gas industry.

In 1946, or 10 years ago, the Federal Power Commission published figures of the average book costs of natural gas transmission lines completed prior to that year. These costs were as follows:

Diameter of pipe (inches)	Cost per mile of line	Cost per inch of diameter per mile of line
4	$3,400	$850
8	7,100	900
12	12,000	1,000
16	17,700	1,100
20	24,000	1,200
24	30,600	1,300

Source: FPC, Natural Gas Company Cost Units (FPC S-54), p. 2.

The costs were published in 1946 but were based on costs prior to 1946.

At the same time the FPC estimated that the construction costs of pipelines for which certificates of public convenience and necessity were granted during 1945 and 1946 would be substantially increased. These estimates for these years were as follows, and were from one-third to 50 percent more than those listed above:

Diameter of pipe (inches)	Cost per mile of line	Cost per inch of diameter per mile o. line
4	$6,000	$1,500
8	12,000	1,500
12	18,500	1,550
16	25,500	1,600
20	33,000	1,650
24	41,000	1,700

Source: FPC, Natural Gas Company Cost Units (FPC S-54), p. 3.

I have requested more up-to-date data from the Federal Power Commission, but they inform me that they have not kept comparable figures on pipeline construction costs for later years. They have said, however, that they estimate current pipeline construction costs at $2,500 to $3,000 per inch of diameter per mile. Using this FPC estimate, I have estimated current construction costs as follows:

Diameter of pipe (inches)	Cost per mile of line	Cost per inch of diameter per mile of line
4	$10,000	$2,500
8	20,000	2,500
12	31,200	2,600
16	43,200	2,700
20	56,000	2,800
24	69,600	2,900
30	90,000	3,000
36	108,000	3,000

These figures of costs per mile tell only a part of the story. High as they are, they give only a partial view of the costs of pipeline systems which are involved in the transmission business.

I now ask unanimous consent to have inserted in the RECORD at this point the gross investment of 14 major pipeline and transmission companies in their field systems and transmission systems. We have been able to segregate the assessment of the major interstate pipelines from their field system and their transmission system.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Gross investment of major interstate pipeline companies in gathering, field compression, dehydration, and purification facilities, and in transmission facilities

	Field system	Transmission system	Transmission line cost per mile [1]
Cities Service Co	$24,500,000	$118,000,000	$27,120
El Paso Natural Gas Co	164,000,000	332,000,000	53,103
Michigan Wisconsin	----------	111,000,000	69,723
Natural Gas Pipe Line Co	6,500,000	107,000,000	48,350
Northern Natural Gas Co	28,000,000	264,000,000	41,970

[1] Includes compressor station cost.

Gross investment of major interstate pipeline companies in gathering, field compression, dehydration, and purification facilities, and in transmission facilities—Continued

	Field system	Transmission system	Transmission line cost per mile [1]
Panhandle Eastern Pipe Line Co.	$18,000,000	$209,000,000	$43,442
Southern Natural Gas Co.	5,200,000	174,000,000	44,833
Tennessee Gas Transmission Co.	7,500,000	655,000,000	82,350
Texas Eastern Transmission Co.	----------	353,000,000	76,556
Texas Gas Transmission	----------	147,000,000	49,949
Texas Illinois Natural Gas Pipe Line Co.	----------	165,984,000	110,361
Transcontinental Gas Pipe Line Corp.	3,000,000	266,819,000	110,847
Trunkline Gas Supply Co.	3,700,000	78,000,000	64,250
United Gas Pipeline Co.	40,500,000	305,000,000	37,330
Total	300,900,000	3,285,803,000	----------

That the figures which I previously submitted are fair, or on the conservative side, is shown from this table. The costs per mile vary, of course, depending on the size of the system, its original cost, and the size of the pipeline. Nonetheless, these figures give one an idea of the tremendous sums of money needed by companies if they are to engage in the transmission of natural gas. With outlays for transmission systems ranging from $78 million to $655 million, it is clear that committed reserves of gas are absolutely essential before such sums are expended. Thus, the cost of the pipeline systems and the huge reserves needed to keep them full for long periods of time very severely limit competitive influences in the industry. I may say that we worked out the transmission system cost per mile. It varies from approximately $27,000 a mile for the Cities Service Co., up to a little more than $110,000 a mile for the Texas-Illinois Natural Gas Pipe Line Co., and almost $111,000 a mile for the Transcontinental Pipe Line Co. There are a variety of intermediate figures, for various of the other companies. For instance, the figures for Northern Natural Gas Co., Panhandle Eastern Pipe Line Co., and Southern Natural Gas Co. are $41,970, $43,442, and $44,833, respectively. These figures are for both their field systems and their transmission systems.

CONCENTRATION OF PIPELINE PURCHASES AMONG VENDORS

I have made the point, Mr. President, that once pipelines have been laid, it is impractical and, because of the huge expenses involved, almost impossible for the lines to be picked up and moved about at will to tap new and competitive sources of supply. Like the gas mains, once the pipelines and transmission systems are in the ground, at costs of many millions of dollars per system and many tens of thousands of dollars per mile, a point of no return is reached. Because of the huge high fixed costs involved, because of the requirements of the FPC that before a certificate of convenience and necessity for a pipeline company is given, the company must prove that it has a 20-year supply of gas; and because bankers and investment firms do not give pipeline companies huge loans without such assurances, competition is limited by the nature of the business and the nature of the fixed investments. I believe that that point has been made, and that there is no alternative argument against it.

Further proof that pipelines are limited by the nature of these high fixed costs was introduced into the hearings before the Senate Interstate and Foreign Commerce Committee by Dr. Boatwright, the Standard Oil economist. On page 184 of the hearings, he introduced his table XVI, which showed the concentration of pipeline purchases among vendors for certain pipeline companies. This is a very interesting table, and I ask unanimous consent that it be printed in the RECORD at this point in my remarks.

The PRESIDING OFFICER (Mr. LONG in the chair). Is there objection?

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE XVI.—*Concentration of pipeline purchases among vendors*

	Percentage purchased from—			
	1st 4 vendors	1st 8 vendors	1st 20 vendors	1st 50 vendors
United Gas Pipeline Co.	40.6	53.2	71.4	87.9
Northern Natural Gas Co.	67.2	87.8	97.3	100.0
Texas Eastern Transmission Corp.	35.2	55.0	83.6	98.5
Tennessee Gas Transmission Co.	40.4	58.8	81.4	95.6
Cities Service Gas Co.	61.4	80.7	98.3	100.0
Panhandle Eastern Pipeline Co. and Trunk Line Gas Co.	58.7	77.9	90.1	98.9
Colorado Interstate Gas Co.	53.4	79.4	97.5	100.0
Michigan-Wisconsin Pipe Line Co.	100.0	------	------	------
Texas-Illinois Natural Gas Pipeline Co. and Natural Gas Pipeline Company of America	55.3	84.9	99.3	100.0
Southern Natural Gas Co.	75.2	90.6	99.4	100.0
El Paso Natural Gas Co.	46.2	60.3	81.3	94.2
Texas Gas Transmission Corp.	86.3	97.0	100.0	------
Transcontinental Gas Pipe Line Corp.	50.8	72.4	97.6	100.0

Source: Senate hearings, p. 184.

Mr. DOUGLAS. Mr. President, earlier in the afternoon we had a colloquy regarding the table. I pointed out that in 9 of the 13 companies which Dr. Boatwright listed, over half of the purchases of the individual pipelines were made from 4 or fewer vendors—independent producers—of natural gas. In one case, that of the Michigan-Wisconsin Pipe Line Co., 100 percent of its purchases were made from 4 or fewer vendors of natural gas. The Texas Gas Transmission Co. purchased 86.3 percent of its supply from the first 4 vendors. In the case of Southern Natural Gas Co., the percentage purchased from the first 4 vendors was 75.2 percent. In the case of Northern Natural Gas Co. and Cities Service Gas Co., 67.2 and 61.4 percent, respectively, of their supply was purchased from 4 or fewer vendors. Panhandle Eastern Pipeline Co. and Trunk Line Gas Co.; Texas-Illinois Natural Gas Pipeline Co., and Natural Gas Pipeline Company of America; Colorado Interstate Co.; and Transcontinental Gas Pipe Line Corp., all purchased from 50 to 60 percent of their supply from 4 or fewer vendors of natural gas.

When broken down according to sales from the first 8 vendors, we find that all 13 companies purchased half or more of their supplies from the first 8 vendors, and 8 of the 13 companies purchased over 75 percent of their natural gas from 8 or fewer companies.

If we look at column three of Dr. Boatwright's table, we note that 9 of these pipeline companies purchased 90 percent or more of their gas from fewer than 20 vendors.

Where is the great competition which supposedly exists in the field? Why is it that the pipelines buy the greatest share of their gas from such a small number of vendors. What happened to the 8,000 or more little producers whom the big producing companies invoke when they insist that competition is rampant among producers? Instead of having 8,000 individual small producers jumping over and around each other to gain the business of individual pipeline companies, we see that for all practical purposes the number of suppliers is greatly limited, and that the pipelines each buy from very few producers.

Because of this fact, competition is limited to the situation in which the pipelines fall over each other to get an adequate supply of gas for the 20-year period which the FPC and the investment houses demand they have before they can go into or extend their business. And the only place they can get such reserves and such supplies is from the few big producers in the field. That, Mr. President, accounts for the fact that these pipelines have such limited sources of supply; and Mr. President, that is why the consumer and the 21 million American families who use gas are the captive customers of the few gigantic producers in this industry.

Dr. Boatwright has hoisted himself on his own petard. Far from proving that competition is rampant among producers, his own table shows us just how scarce the competition really is, and how dependent the pipelines are on a very few producers for the tremendous supplies which they need to keep their pipes full and flowing.

Mr. CLEMENTS. Mr. President, will the Senator from Illinois yield for a question?

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Kentucky?

Mr. DOUGLAS. I yield for a question.

Mr. CLEMENTS. After consultation with the Senator from Illinois, the Senator from Kentucky wishes to state that it is the desire of the acting majority leader—and he assures the Senator from Illinois that this suggestion does not have the disapproval of the minority leader that when the Senate concludes its session today, it be with the understanding that on tomorrow, following the morning hour, the Senator from Illinois will have the floor.

Mr. DOUGLAS. I appreciate that very much.

Mr. CLEMENTS. I should like to inquire of the Senator from Illinois whether it will be agreeable to him, on tomorrow, early in the afternoon, after he takes the floor, to yield to the Senator from Kansas [Mr. CARLSON], for remarks which may take 30 minutes or longer.

Mr. DOUGLAS. Yes. The Senator from Kansas spoke to me this afternoon about this matter. I said I would be very happy to do that, if it is understood that I shall not lose my right to the floor.

Mr. CLEMENTS. Mr. President, I ask unanimous consent that when the Senator from Illinois relinquishes the floor this afternoon, he may do so with the understanding that on tomorrow, after the morning hour, he will have the floor; and with the further understanding that at some time in the early part of tomorrow afternoon he will yield to the Senator from Kansas [Mr. CARLSON], so that the Senator from Kansas may address the Senate on the subject of the natural gas bill.

Mr. DOUGLAS. And with the further understanding that in doing so, I shall not thereby lose the floor.

Mr. CLEMENTS. Yes, with the further understanding that at the conclusion of the remarks of the Senator from Kansas, the Senator from Illinois will have the floor.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

EXHIBIT 1

[From the Chicago Daily Sun-Times of January 23, 1956]

FACTS ABOUT GAS

Chicago householders who heat their homes with gas and the 125,000 families on the waiting list for such service should have a special interest in the gas debate now going on in the United States Senate.

The debate centers on the Harris-Fulbright bill. It would exempt producers of natural gas—the owners of gas wells—from Federal regulation as public utilities. It would restore a condition that existed prior to June 1954, when a Supreme Court decision forced the Government to take over regulation of the wells.

Opponents of the bill, who want the Government to set strict price controls on gas at the wellhead, argue that if the Harris-Fulbright bill passes, the price of gas to homeowners will be raised unconscionably. Supporters of the bill deny this and point out that from 1938 to 1953, during a period when there was no Federal control, prices rose only 7 percent while the cost of living generally went up 90 percent. Today gas is the best heating buy on the market—and that's why there's such a waiting list for gas service. Only 10 percent of the consumer's bill goes to the gas well owner. The rest goes to pipelines and local gas companies.

A careful examination of the issues has convinced us that the best interests of producers and consumers will be served if the Senate approves the bill and the President signs it. The House has already passed it.

Public utility-price controls over gas producers are, in our opinion, both unfair and unworkable. This Nation never has put such controls on natural gas until the Supreme Court decision of 1954.

It must be understood the Supreme Court did not pass judgment on the arguments for or against Federal control. It simply decided that the wording of a 1938 act of Congress showed Congress intended that there should be such control. In 1950, Congress passed a bill saying it intended no such thing, but President Truman vetoed it. The issue is up again this week.

One of the arguments for controls goes like this: The consumer's furnace actually is connected with the gas well. The price the consumer pays the gas company is regulated (because the gas company is a monopoly); the price the company pays the pipeline is regulated by the Federal Power Commission, so the price the pipeline pays the producer should be regulated.

Your electric lights are tied to a coal mine, too, but no one is advocating putting coal under Federal price control because it is hauled by a regulated railroad to a regulated electric company to be burned to produce electricity for your lights.

The rates charged by the electric, gas, and telephone companies are set by State commissions because they are monopolies. They are granted monopolies because it would be nonsensical to have several competing companies tearing up the streets. The rate generally set is cost plus 6 percent profit. Telephone rates are regulated too. But no one (except an outright Socialist) would argue that copper prices should be regulated because telephone wires are made of copper.

Gas producers—like coal and copper producers—are in a different category. They are entrepreneurs. They invest their money in searching for gas wells. One such entrepreneur might spend $2 million on 20 wells before hitting a producer. Another might sink one well and strike gas. The well might produce both gas and oil. How could the cost-plus-6-percent formula be set fairly in these cases?

The Harris-Fulbright bill does protect the consumer by retaining a degree of Federal control over the price paid to the producer. It requires the Power Commission to place a ceiling of a reasonable market price on the amount pipelines may pay. This will prevent unconscionable gouging.

This is a concession and a compromise to those who fear gas producers might try to raise their prices to the point where they would get as much for their product as coal operators get for theirs. The reasonable price compromise would allow contracts that were frozen by the Supreme Court order in 1954 to go back into effect.

To insure continued supplies to homeowners who have invested in gas heating equipment, gas line companies must, by law, have 20-year contracts with gas producers. Some of these contracts contain an escalator clause to protect the producer against increases in costs, just as many union labor contracts protect workers against cost-of-living changes.

In some cases, gas producers, to meet competition and begin cashing in quickly on their investments, set their prices very low for the first few years of the contract. The Supreme Court freeze has forced them to continue these prices and prevented them from getting the fair overall return they had bargained for.

Rather than operate under such conditions many of the producers have decided to restrict their sales to gas users within their own States. Such sales have no price regulations. As a consequence, gas that normally might be flowing to Chicago householders now is being used in factories or in electric-power plants in Oklahoma.

John E. Swearington, Standard Oil Co. (Ind.) vice chairman, last week revealed that controls have caused the cancellation of many new pipeline projects. One, he said, would have brought to Chicago 150 million cubic feet of gas a day, enough to take care of the 125,000 Chicagoans on the waiting list.

Government price-fixing, therefore, already is making Chicago more gas-starved than it ought to be. Increasing use and volume sales have kept prices in line. If such expansion does not continue it is likely the cost of gas to the consumer will go up despite Government controls.

If the controls are lifted by passage of the Harris-Fulbright bill, how much would costs go up under the working of the free enterprise system? One opponent of the bill estimated producers would raise their prices 5 cents per 1,000 cubic feet. That would amount to $11.65 a year for the average home heated with gas. This is only slightly more than the new city tax on gas recently voted by the city council.

So, we might have to pay a little more for gas if the bill passes. But if it doesn't we will have to pay a good deal more—in Government principles as well as dollars.

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial, published a few days ago in the Chattanooga (Tenn.) Times in opposition to the bill now before the Senate. The editorial analyzes the proposal as set forth in the bill, and reaches the sound and logical conclusion that the bill is not in the public interest, and that there is no justification for its passage.

The editorial also commends and compliments the distinguished senior Senator from Illinois [Mr. DOUGLAS] for the courageous and untiring fight he has made in opposition to the proposed legislation, and for his efforts to present the facts, which to my mind are unanswerable, for the protection of the public interest.

I wish personally to join the writer of the editorial in expressing gratitude to the Senator from Illinois for the time, effort, and great amount of thought he has put into his opposition to the bill, and for the fight he is leading against its passage. In my opinion the Senator from Illinois is rendering a great public service, which, as time passes, will be more and more appreciated by the great mass of the people of the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AGAINST PUBLIC INTEREST

The Democrats in the Senate will undergo a test when the vote comes on the natural gas bill.

The Fulbright bill, a companion measure to the Harris bill which passed the House last year by a 6-vote margin (209 to 203), would end Federal regulation of prices of natural gas as supplied by producers to distributors for resale in interstate commerce. House Democrats were 136 to 86 against it. The House Republicans were 123 to 67 in favor of the measure.

Proponents of the bill in the Senate claim to have enough votes to pass it. If they do and if the House concurs in any changes made by the Senate, it is believed that President Eisenhower would sign the measure.

The Democrats, who expect to make much of the charge that the Eisenhower administration has followed a "giveaway" course, will blunt that issue if they permit the passage of the natural gas bill.

Senator DOUGLAS, Democrat, Illinois, began a speech yesterday against the measure, which he says will last 3 or 4 days. He says it is not a filibuster. Apparently he has made a thorough study of the bill. He claims that it would cost consumers of gas between $600 million and $900 million.

Democrats from the States which produce natural gas, principally Texas, Arkansas, Louisiana, and Oklahoma, are sponsoring the measure in the Senate.

Senator DOUGLAS pointed out yesterday that when a consumer is hooked up to pipeline he must keep on with it. When the rates go up he must pay them. If the producers raise their prices to the pipelines the consumers must stand the raise. Senator DOUGLAS said that 21 million families have $11 billion invested in appliances that burn natural gas. Naturally they do not want to lose that investment.

Tennessee uses natural gas but does not produce any. The defeat of the Fulbright bill would certain be to the interest of Tennessee consumers. In the vote in the House last year, only one Tennessee Congressman, PERCY PRIEST, surprisingly enough, voted in favor of the bill. The Kentucky delegation voted solidly against it and only one member of the Virginia delegation supported it. Every Representative from New York City voted against it.

It seems to us that Senator DOUGLAS is on sound ground when he says that because the gas industry is noncompetitive, regulation is necessary to protect the public interest.

The Fulbright-Harris bill does not entirely abolish Federal supervision but says something about a reasonable market price, and this standard was described in a minority House report as "a disguised backdoor surrender of regulatory control to the producers themselves."

Senator DOUGLAS has done a monumental job, we understand, in gathering the facts for the public. This able Senator may succeed in turning the tide against a measure which ought not to be enacted.

The bill may at least be amended in the Senate, in which case it would have to go before the House again. We feel certain that the House, which in spite of pressure by Speaker SAM RAYBURN only passed the bill by a narrow margin last year, would this time reject it.

ATTENDANCE BY SENATOR SMITH OF MAINE DURING DEBATE ON THE NATURAL GAS BILL

Mr. MONRONEY. Mr. President, will the Senator from Illinois yield to me for a few brief remarks?

Mr. DOUGLAS. I yield, with the understanding that I shall not lose my right to the floor.

Mr. MONRONEY. Mr. President, on last Saturday evening a nationwide radio commentator stated that the distinguished Senator from Maine [Mrs. SMITH] had not been present during the course of the debate on the Fulbright-Harris bill.

I should like to say that this is in error, because I distinctly remember, during the course of two of my discussions on the bill, that the distinguished Senator from Maine was present, at least for a portion of the time; and I have seen her in the Chamber at other times while the debate has been in progress.

As is her custom, I am sure she is informing herself as to both sides of the debate. As one of the proponents of the bill, I do not have the slightest idea how the distinguished senior Senator from Maine will vote, and I am sure the distinguished Senator from Illinois, knowing that she makes up her mind in due course, has no idea how she will vote. I am certain that she has been following the debates during the time when she could be present in the Chamber, and following them otherwise from the RECORD as they have continued over quite a number of hours.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. PASTORE. I wish to verify everything the distinguished Senator from Oklahoma has said with reference to the distinguished senior Senator from Maine.

ORDER FOR RECESS TO TOMORROW

Mr. CLEMENTS. Mr. President, I ask unanimous consent that when the Senate completes its work today, it stand in recess until tomorrow, at 12 o'clock noon.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF THE BANKRUPTCY ACT

Mr. SMATHERS. Mr. President, will the Senator from Illinois yield to me, to permit me to introduce a bill and to make appropriate remarks thereon?

Mr. DOUGLAS. I shall be very glad to do so, provided it is understood that in yielding for that purpose, I shall not lose my right to the floor.

Mr. SMATHERS. Of course.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. SMATHERS. I thank the Senator from Illinois.

Mr. President, I introduce, for appropriate reference, a bill to amend paragraph (2) of subdivision (c) of section 77 of the Bankruptcy Act. The intent of the bill is to make trustees of a railroad seeking reorganization subject to the lawful orders of State regulatory bodies to the same extent that such a railroad would be subject to such orders if a petition for reorganization had not been filed.

In the bill there are safeguards which I believe will properly protect all persons involved.

My State is faced with a situation in which the Florida East Coast Railroad has been unable to complete its reorganization, although it has been in the process of reorganizing since August 31, 1931, a period of almost 25 years.

During this period, several proposed plans of reorganization have been through our courts and the Interstate Commerce Commission. The Supreme Court has had this case before it three times. The Interstate Commerce Commission has issued innumerable reports, and now has the matter before it once more, and I presume will issue a fifth plan of reorganization. I am afraid that whatever plan is decided upon by the Commission will follow the tortuous path of the previous plans through the district court, the court of appeals, and up to our Supreme Court, and possibly back to the Commission, to start all over again.

In the meanwhile, this railroad is using facilities in Miami, for example, that are so outmoded and inadequate, that one must see them to realize how terrible the situation is. And they are dangerous. Trains block street crossings by the hour, and this is in the heart of the city. These trains move through, and disrupt, the midtown heavy traffic.

We had, in Miami, not too long ago, a very distinguished visitor from a friendly foreign country who was speaking before a banquet audience. He was describing his memories of his first trip to Miami 30 years ago, and, in so doing, mentioned getting off the train at a little, old, run-down wooden station. I presume he was about to compare the city of those bygone years with its present appearance. I do not know—he never got that far—because the audience was laughing so hard he could not continue. The speaker was somewhat taken back. He could not imagine what it was he had said that was so funny. You see—he had arrived by air this time—he did not know that the ramshackle, run-down wooden station of 30 years ago was still doing business at the same old place.

Our State regulatory body has ordered the Florida East Coast Railroad to remove the station and the tracks from the heart of Miami. Under a normal situation, this would have been done long ago, but here the railroad is trying, and has been trying for years, to reorganize. The trustees are under direct control of the United States district court, and the State cannot interfere.

So while this case goes up and down from the Commission, through our courts and back again, like a yo-yo up and down a string, a great city's traffic is brought to a halt several times each day, and death lurks at every crossing.

This should not be. Under proper safeguards a State or a city should not be frustrated and blocked from doing what it must do to protect its citizens as they go their daily rounds. My bill, I am convinced, would accomplish that purpose.

This is not, by any stretch of the imagination, a bill aimed solely at Florida. It is of general application, although my remarks might tend to indicate otherwise.

But let me briefly describe existing law and my bill.

Section 77 of the Bankruptcy Act, as amended—title 11, United States Code, section 205—provides a procedure whereby an insolvent railroad can file a petition seeking its reorganization. Such petition may be filed in a court within whose territorial jurisdiction it operates, and a copy must be filed with the Interstate Commerce Commission. Subdivision (b) of that section prescribes statutory requirements of any such plan of reorganization intended for the protection of the creditors and shareholders of the insolvent railroad.

Subdivision (c) prescribes proceedings to be taken after the approval of the petition by the court. It provides, one, for the appointment of trustees of the debtor's property; and second that such trustees shall have the power to operate the business of the debtor subject to control by the court and subject to the jurisdiction of the Interstate Commerce Commission.

My bill would amend paragraph (2) of subdivision (c) by inserting new matter which would require that the trustees, in operating the business of the debtor, shall also be subject to lawful orders of State regulatory bodies to the same extent that the railroad would be subject to the orders of such bodies if a petition for reorganization had not been filed.

The exercise of such regulatory powers by State agencies is qualified by express provisions which would require approval by the Interstate Commerce Commission of orders requiring the expenditure of money from the debtor's estate, or the incurring of obligations for the expenditure of funds from such estate. It would also provide that the new matter so added by the bill shall not be deemed to authorize any action to be taken which would not comply with any applicable provision of the Interstate Commerce Act.

I think this amendment is sound, and one badly needed. Many local situations do not seem so pressing to a court or Commission miles away from the trouble spot. They can be brought sharply into focus by a State body, and most clearly to the Interstate Commerce Commission where the final authority would be under my bill.

That is where the authority should be. The Commission is our body of transportation experts. We created it, and we should help it.

I intend to do all in my power to speed the enactment of this proposed legislation.

The PRESIDING OFFICER (Mr. DANIEL in the chair). The bill will be received and appropriately referred.

The bill (S. 3025) to amend paragraph (2) of subdivision (c) of section 77 of the Bankruptcy Act, as amended, introduced by Mr. SMATHERS, was received, read twice by its title, and referred to the Committee on the Judiciary.

FREEDOM OF INFORMATION—ADDRESS BY SENATOR DANIEL

Mr. DANIEL. Mr. President, for several years I have been concerned about too much secrecy in matters concerning the public's business. As a public official and a former newspaperman, I have witnessed the dangers and the adverse results of such practice.

I have always thought that the people's business should be transacted out in the light of day—not under the censorship of official secrecy.

The surest way to eliminate graft, corruption, and neglect is to let the people know what is going on. Just as germs cannot live in the glare of sunlight, neither can corruption exist when the spotlight of publicity is placed on any office.

With these views in mind, one of my earliest speeches on the floor of the Senate urged that the President revoke Executive Order 10290, under which secrecy and censorship in Federal agencies had become firmly entrenched. This order has been changed, but there is still too much censorship of non-military information through the failure of Federal, State, and local officials to make available to the press and the public the information about their offices and their official duties.

On January 21 I spoke to the annual midwinter meeting of the Texas Press Association on this subject, and I ask unanimous consent that my remarks be printed in the body of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INFORMATION ABOUT THE PEOPLE'S BUSINESS

Much has been said and much has been written about what we, in this country, call freedom of the press. But—for all the talk and all the writing—this particular freedom is not fully appreciated, nor is it fully understood.

In a real sense, the freedom which the authors of the Bill of Rights had in mind when they wrote this protection into our basic law was quite different from the freedom which it connotes to our minds.

One hundred and eighty years ago, the daily journal was both unknown and, because of mechanical limitations, inconceivable. The processes of printing were tedious and laborious.

The problem which confronted our Founding Fathers was a problem unknown to our times. For centuries, governments of Western Europe and the British Isles had recognized that Gutenberg's invention, the printing press, presented a direct and powerful challenge to the vested interests of the status quo. A ruling sovereign could deal easily with armed revolt or insurrection. The palace walls and the palace guard were far stronger than the force of any temporary army of the people.

To the climate of that day, the printing press became virtually an enemy of the state. Here was an instrument, a machine—a weapon, in fact—which could arouse the people far more successfully than any momentary leader. The printing press could do what a battering-ram could not do; it could demolish castle walls, lay bare the secrets of ruling despots, and expose to public scrutiny the abuses of power by unworthy tyrannies. This was, indeed, an awesome power for the sovereigns of the Middle Ages to face.

In consequence, then, the governments reacted to the printing press as modern governments have reacted to atomic energy. The policy was instituted of licensing printing presses, so that whatever use was made of such machines would have to conform to the policies of the licensing government and not be against their interests. In effect, printers became servants of the state—the same picture we see in Russia today—the same in any tyranny.

Our constitutional guaranty of freedom of the press, therefore, was a guaranty of an individual's right to own and to control a printing press without subservience to the Government. That guaranty was monumental, because it established the fact that a free government of free men did not need to live in fear of the thoughts and words of its free citizens. For a government so conceived, the licensing and control of printing presses was as intolerable as castle walls and palace guards.

As years have passed, our popular thinking on this subject has expanded broadly. The term "press" has itself acquired a new meaning, applying more to those who seek information to be published on the presses than to the machines themselves—applying now to all who disseminate news and opinions, whether by press, radio, or television. Unhappily, though, the nature of governments has not undergone so great a change. Governments are still secretive, by instinct and by habit; they continue to be reluctant to take the people into confidence except at those times and in those ways which the controlling clique may decide to be best for their own interests.

As a result, in our own times, we seldom hear suggestions made that printing presses be in any way controlled or licensed, but we hear—more and more—suggestions made that the information about governmental activities be licensed, limited, or controlled. This, in many respects, is a more insidious use of governmental power than direct control.

In any situation, uninformed opinion is dangerous opinion. The value of free speech, free thought, free expression becomes meaningless if, at the foundation, there is missing full and free access to complete, accurate, and honest information. When any government, on any level, controls the basis for men's opinion, then it is controlling the people and their decisions, rather than being controlled by them.

On September 24, 1951, as you all will remember, former President Truman issued Executive Order 10290 directing that the agencies of the executive branch of the Federal Government designate an officer whose duty it would be to determine whether information released by that agency would be consistent with the national interest.

There was no quarrel with the proposition that military information be subjected to such review, but the Executive order in question went much beyond that. It encompassed virtually every significant agency of Government, and its net effect was to provide that every item of information released by such agencies would first be subject to review and censorship. The order did not pertain to a determination of whether the information was accurate; it created, instead, a situation in which accurate information, truthful information, could be withheld for the reason that the truth might be embarrassing or harmful to the departments concerned or the officers of such departments.

When I presented my candidacy for the United States Senate to the people of Texas 4 years ago tonight, I said:

"To govern themselves, the people must have access to the truth without the censorship of nonmilitary information now imposed by Presidential order."

"I pledge myself to work to make sure that the people's business is transacted at all times out in the light of day—not under the censorship of official secrecy."

After I went to the Senate, I wrote to President Eisenhower on April 15, 1953, calling attention to the fact that this Executive Order was still in force. I said in my letter:

"The order is not limited to military security, and its existence serves to foster an attitude of concealment and to inhibit the full and free disclosure of information by civilian agencies. If allowed to stand permanently, such an order can only serve to make secrecy a habit. I know you agree that free men cannot prudently tolerate such an addiction.

"To the extent that the people are informed, to that extent we are strong, because our real security lies in the wise decisions of a fully informed public. This is the enduring genius of representative governments of free men.

"Since you have already demonstrated that you do not approve of such limitations on information concerning the people's business, it is my hope that you will give careful consideration to revoking Executive Order 10290."

I am happy to say that, shortly thereafter, President Eisenhower took action on this subject.

I do not say that the changing of this one Executive order has, in any way, resolved the problem involved. There is still the idea in the minds of many Federal officials that they should have the right to decide and control what the people know about the operation of their own Government. The matter of secrecy and closed door sessions in both the executive and legislative branches in Washington is so serious that a special congressional committee is investigating this subject for appropriate affirmative legislation.

It must be said and emphasized, too, that the problem is not simply a Washington problem. What is done there is, of course, of lasting consequence to all our lives, but

we must be mindful of the fact that the Federal Government is a government of delegated powers. Ours is a Union of States, in which certain functions and responsibilities are delegated to the central Government. For all the importance of knowing the truth about the central Government, we cannot justly maintain a double standard exempting the State government from equal scrutiny.

If we are to say and to believe that government is best which is closest to the people, then it follows logically and irrevocably that the people should know more about the government closest to them. Secrets are intolerable on the Federal level and indefensible on the State level.

It was a pleasure to be associated with your organization in the drafting and support of laws requiring notices of official actions to be published in the public press. It was here on the State level that I learned as a newspaper man and a public official the great dangers of public servants keeping their actions secret from the public by making them unavailable to the press.

Lest these remarks and the subject thereof be interpreted as having been chosen to apply to very recent happenings here in Austin, let me hasten to say that Vern Sanford and I agreed on this subject over a month ago. Unless he is a seer or a prophet, neither of us knew that it might have particular applicability at this time. My thoughts on this subject were entertained and written long before recent occurrences to which they may in part apply, and I shall not change these thoughts or one word of my remarks on this account.

On the State and local level, fully as much as on the national level, those who demand the freedom to write and publish without control must exercise the responsibility of searching tirelessly for the truth without accepting controls over their search, whether self-imposed or imposed by governmental practice.

Here on the State and local level we need more affirmative legislation requiring the public's business to be transacted in the light of day—and forbidding it under the censorship of official secrecy. It is necessary not only for the detection and riddance of the few who have violated their public trust, but for protection of the great majority of our public officials and employees who are honest and loyal in their public and private actions.

Every man and woman who believes in our American theory of the people governing themselves through elected representatives must defend the right of the people to know the truth about both their Government and their elected representatives.

The one sure way to do away with graft, corruption and neglect is to let the people know what is going on. Just as germs cannot live in the glare of sunlight, neither can corruption exist when the spotlight of publicity is placed on any office.

Making available full information about the people's business is a duty and responsibility of public officials. Digging it out and reporting it to the people is the duty and responsibility of the public press.

The public and public officials have a great respect for the working press. The awareness that a newspaperman is interested in a decision being made—that he knows the decision is taking shape and will be on hand to ask questions about it—undeniably influences the official in trying to reach a fair and just decision. Where reporters are rarely seen, abuses of public trust occur more frequently.

Our State government, like our Federal Government, has grown and grown rapidly in recent years. It is attaining annually new importance to the lives of all Texans. In turn, Texas is earning a new place of influence in national affairs. How the State government of Texas is run matters a great deal in what the people of this Nation think of the institution of State government throughout the land. Of this, we must be ever mindful.

Accordingly, this carries with it an obligation, as I see it, to place State government in Texas—and in each State—under more diligent scrutiny. Give the people of Texas the true facts and they can be depended upon to reach the right decisions in this process of governing themselves.

We have seen, within the past few months, how a diligent, inquiring reporter, Kenneth Towery, of Cuero, rendered an outstanding service to the State in bringing to light one of the most serious abuses of public trust in Texas history. He has been, properly, highly honored in his profession for what he did.

The seeking out of misdeeds and malfeasance is only a part of the newspaper's obligation. It is the first, but not the last of the press' responsibility.

The press is obliged, quite as much, to help the public participate in the shaping of important decisions about the State's policies and the administration of those policies. All that government does, on any level, is done in the public's name and for the public good. No area of governmental activity is, therefore, immune to public interest, and no area should be immune to the attentions of the press.

The press—and the public—must seek always after the truth. Only from information, good, accurate, and thorough information, can we make the decisions which must be made for good government. Those who stand in the way of the search, stand, also, in the way of good government. Those who neglect the search, neglect, also, good government.

I believe that full reporting is the foundation of freedom and we cannot settle for less, whatever the price may be. The people's business, whether in Washington or in Austin or at the courthouse or the city hall, must be transacted in public, and when we compromise this principle, we compromise our integrity and jeopardize our liberty.

RECESS

Mr. DANIEL. I move that the Senate stand in recess until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 6 o'clock and 27 minutes p. m.) the Senate took a recess, the recess being under the order previously entered, until tomorrow, Tuesday, January 24, 1956, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES

MONDAY, JANUARY 23, 1956

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D. D., offered the following prayer:

Almighty God, whose divine grace is inexhaustible in its fullness and invincible in its strength, may we leave behind all feelings of fret and fear, of doubt and discouragement as we enter upon the duties of this new week.

We humbly confess that we cannot meet the desperate needs of our time unless our minds and hearts are conscious of Thy nearness and power.

Grant that in all our efforts to solve our difficult problems we may have as our motive to bring glory to Thy great and holy name.

Hear us for the sake of the Captain of Our Salvation. Amen.

The Journal of the proceedings of Thursday, January 19, 1956, was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Miller, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Carrell, one of its clerks, announced that the Senate had passed, with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H. R. 7871. An act to amend the Small Business Act of 1953.

The message also announced that the Senate agrees to the amendments of the House to a joint resolution of the Senate of the following title:

S. J. Res. 12. Joint resolution to request the Secretary of State to arrange for the International Joint Commission, United States and Canada, to conduct a survey of the proposed Passamaquoddy tidal power project, and for other purposes.

The message also announced that the Vice President has appointed Mr. JOHNSTON of South Carolina and Mr. CARLSON members of the joint select committee on the part of the Senate, as provided for in the act of August 5, 1939, entitled "An act to provide for the disposition of certain records of the United States Government," for the disposition of executive papers referred to in the report of the Archivist of the United States numbered 56–5.

The message also announced that the Vice President appointed the Senator from Missouri, Mr. HENNINGS, a member of the Migratory Bird Conservation Commission in lieu of the Senator from Virginia, Mr. ROBERTSON, resigned.

THE LATE HONORABLE J. LEROY ADAIR

The SPEAKER. The Chair recognizes the gentleman from Illinois [Mr. SIMPSON].

Mr. SIMPSON of Illinois. Mr. Speaker, a former Member of the House of Representatives, Judge J. Leroy Adair, passed away last Thursday at his home in Quincy, Ill.

At the time of his death he was serving as a Federal judge in the southern Illinois district. Judge Adair was appointed to the Federal bench by the late President Roosevelt in 1937. Prior to that he had served as a House Member from what at that time was known as the 15th Illinois District. His House service consisted from 1933 to 1937. His committee assignments were Coinage, Weights and Measures, and the Judiciary.

In 1914 Judge Adair served as city attorney of Quincy. He next served as State's attorney of Adams County, Ill.

In 1928 he was elected to serve as a member of the Illinois State Senate. He served in this capacity for 4 years.

Judge Adair leaves Mrs. Adair, the former Miss Maude E. Grueber, whom he married in Clayton, Ill., in 1911, to mourn his passing. He is also survived by a brother, Ray Adair of Clayton, Ill., and four nieces.

Mr. Speaker, it was not my good fortune to know Judge Adair intimately. It was my privilege to know that he was held in the highest esteem. As the editor of the Quincy Herald-Whig, Mr. A. R. Higgins, has stated, he was known as a "lawyer's judge," one of the highest compliments to be paid a judge by members of the legal profession.

He lived his life as a typical, fine American in its best tradition. From a beginning in a rural community through elected offices, step by step, and then appointed for life to the highest tribunal in America. An example for everyone with all the understanding possible for a man to have in an allotted short time on this earth.

Mr. Speaker, another of the more than 9,000 who have served in this body has answered the last rollcall. Judge Adair, as a public servant, will take his place as was intended before the Judge of us all. Judge Adair's friends had faith in him. His final resting place was near where he entered this life. While on earth, to what more should any of us desire.

Mr. Speaker, I ask unanimous consent to include at this point in the RECORD the account of Judge Adair's passing from the Quincy (Ill.) Herald-Whig.

The SPEAKER. Is there objection?

There was no objection.

(The matter referred to follows:)

[From the Quincy (Ill.) Herald-Whig of January 20, 1956]

UNITED STATES JUDGE ADAIR'S DEATH IS SUDDEN—SUCCUMBS IN HOME—WIDELY KNOWN JURIST AND FORMER CONGRESSMAN HAD BEEN ON FEDERAL BENCH SINCE 1937

Federal Judge J. Leroy Adair, 68, died suddenly in his home, 2101 Grove Avenue, Thursday afternoon at 5:30 following a brief illness. Although he had been ill several weeks with a heavy cold, Judge Adair's death came unexpectedly and was a great shock to his many friends.

Judge Adair contracted a cold shortly before Christmas but continued his court duties until the holiday season. Recently, he underwent a physical checkup in Chicago and returned home to recuperate from his cold. About 2 weeks ago he went to Peoria to preside at a naturalization ceremony. He was scheduled to return to Peoria this week to preside at several jury trials but the session was postponed because of his illness.

SEEMED TO BE IMPROVING

Although confined to his home by a cold and a cough, Judge Adair was not confined to bed. He was visited by his physician Thursday and seemed to be improving Thursday afternoon, Miss Olivia Higgins, his secretary, conversed with Mrs. Adair by telephone with Judge Adair relaying information through Mrs. Adair. About 5:30 Judge Adair was seized with a choking attack and went to a bathroom, where he gave a few gasps and died before medical aid could be summoned.

Judge Adair had presided on the Federal bench since 1937. Although he spent most of his time in court in Peoria, he still maintained his home court here. He also presided in Springfield occasionally. Judge Adair was one of the most respected jurists on the Federal bench. He was known as a lawyer's judge, one of the highest compliments to be paid a judge by members of the legal profession. His warm personality won him a host of friends and his keen knowledge of law was recognized by other judges on the Federal bench.

WENT OUTSIDE DISTRICT

Judge Adair had been called upon frequently to preside in important cases outside his district. In recent years he had presided in New York City, Washington, D. C., Logansport, Ind., and Madison, Wis., and was one of the most energetic jurists in the Federal judicial system. He seldom took a vacation, putting in long months, hearing scores of cases each year. Despite his pressing court duties, Judge Adair was never to busy to confer with attorneys and other visitors to his chambers. He often gave encouraging advice to young attorneys appearing before his bench for the first time. He tempered justice with wisdom and human qualities at all times, and once he had handed down a decision, it seldom was overruled by a higher court.

Judge Adair had a long and illustrious career in the legal profession. He was born Feb. 23, 1887, in Coatsburg, a son of Henry L. and Sarah E. Pevehouse Adair. His family came to Brown County from Kentucky in 1818 and moved to Adams County in 1830. He was graduated from Clayton High school in 1903 and later taught school for a year. He was later engaged in the grocery business for 2 years and then attended Illinois College at Jacksonville for 2 years before entering law school at the University of Michigan from which he was graduated as valedictorian in 1911. He received the Algers' medal, highest honor in debating, while attending the university.

IN OKLAHOMA 2 YEARS

Judge Adair first located in Muskogee, Okla., where he practiced law for 2 years. He returned to Adams County in 1913 and established his law practice here.

In 1914, he was named city attorney by Mayor William K. Abbott, and in 1916 was elected State's attorney of Adams County. He also was elected State's attorney in 1924, and in 1928 was elected State senator.

He served as a Member of the United States Congress from the old 15th Congressional District, comprised of Adams, Schuyler, Fulton, and Knox Counties, from 1932 to 1936, defeating the veteran Republican incumbent, B. M. Chiperfield of Canton. Judge Adair declined to be a candidate for reelection to Congress at the conclusion of his first term and shortly afterwards was appointed judge of the Southern Division of the Southern Federal District of Illinois by President Franklin D. Roosevelt upon recommendation of United States Senator William Dieterich, of Beardstown, a friend of long standing.

WIDOW AND BROTHER SURVIVE

Judge Adair was widely known as an authority on the Constitution of the United States and often was asked to speak on that subject. In his naturalization ceremonies in the Peoria court, Judge Adair always impressed upon those receiving their citizenship the assurance of personal liberty provided for by the Constitution.

Judge Adair was a member of First Union Congregational Church, Bodley Lodge, No. 1, A. F. & A. M., Quincy Consistory, Mohammed Shrine of Peoria, the Quincy Shrine Club, Ghazzeh Grotto, Quincy Country Club, and Country Club of Peoria. He also was a member of Quincy Turners, Creve Coeur Club of Peoria, Benevolent and Protective Order of Elks, Fraternal Order of Eagles, American Bar Association, Illinois Bar Association, Adams County Bar Association, Peoria County Bar Association, and the American Judiciary Society of Ann Arbor, Mich. He was married to Maude E. Gruber April 15, 1911, in Clayton.

Surviving are the widow and a brother, Ray Adair, of Clayton, and four nieces.

Funeral services will be held Sunday afternoon at 2:30 in First Union Congregational Church with burial in South Side Cemetery in Clayton.

Mr. SIMPSON of Illinois. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the life, character, and public service of the late Judge Jackson Leroy Adair.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. PRICE. Mr. Speaker, I am shocked and grieved to hear the announcement by the gentleman from Illinois [Mr. SIMPSON] of the death of the Honorable J. Leroy Adair, judge of the Federal District Court for the Southern District of Illinois, and a former Member of the House of Representatives.

My personal acquaintance with Judge Adair goes back 22 years to March 1, 1933, the day of my first arrival in Washington as secretary to the late Honorable Edwin M. Scheafer. My contacts with him were frequent thereafter, through his years of service in the House and later as a member of the Federal bench.

As a legislator in the general assembly at Springfield, then in Congress, Roy Adair brought honor and distinction to himself and to the constituency which he served so ably. There are many remaining here who served with him and observed his great ability and his loyality and devotion to his legislative work.

On the bench he established an outstanding reputation and his judicial decisions were recognized for their clarity and wisdom in interpretation of law. He grew rapidly in stature as a statesman and as a jurist and has forever left his mark as a great son of Illinois.

Mr. O'BRIEN of Illinois. Mr. Speaker, it was with deep sorrow that I learned of the passing of the Honorable Jackson Leroy Adair. He and I came together as freshmen to the 73d Congress. We served together in the 74th Congress. He was not a candidate for renomination to the 75th Congress, accepting in early 1937 the appointment by President Roosevelt as United States district judge for the southern district of Illinois.

Before coming to the Congress Judge Adair had served as city attorney of Quincy, prosecuting attorney of Adams County, and as a member of the State senate of Illinois. His activities while most distinguished had been in the southern section of Illinois, hence he was not as well known in Chicago and Cook County as would have been the case had his residence been close to us.

In the Congress, I came to know him intimately and well. His keen intellect, his stout integrity, his full measurement to all the tests of manhood and statesmanship I quickly came to realize and value. So when his appointment to the high position of judge of the United States district court was under consideration, and I by chance learned of it, I at once conveyed to the Honorable Patrick Nash, the great leader of the democracy of Cook County, expression

of my great esteem of my colleague. At the time Mr. Nash did not know Mr. Adair personally, but he accepted my appraisement of my colleague's worth and gave his endorsement for the appointment that quickly followed.

Judge Adair made an enviable record on the bench as he had made in the Congress of the United States. He was respected and beloved by his fellow jurists, the members of the bar and by the people generally. His honor was above reproach, his knowledge of the law and the brilliance of his intellect unsurpassed, and his heart was of gold. His passing has taken from the Federal bench one of its richest adornments and saddened the hearts of an unnumbered host of dear friends. I extend my deepest sympathy to the members of his family.

FORTY-FIRST ANNUAL REPORT OF THE COMMITTEE ON AERONAUTICS—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (S. DOC. 90)

The SPEAKER laid before the House the following message from the President of the United States, which was read, and, together with the accompanying papers, referred to the Committee on Armed Services and the Committee on Interstate and Foreign Commerce:

To the Congress of the United States:

In compliance with the provisions of the act of March 3, 1915, as amended, establishing the National Advisory Committee for Aeronautics, I transmit herewith the 41st annual report of the Committee covering the fiscal year 1955.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *January 23, 1956.*

CALENDAR WEDNESDAY

Mr. COOPER. Mr. Speaker, I ask unanimous consent that business in order on Calendar Wednesday this week be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

DISTRICT OF COLUMBIA BUSINESS MADE IN ORDER ON THURSDAY, JANUARY 26

Mr. COOPER. Mr. Speaker, I ask unanimous consent that business in order on District day may be in order on Thursday of this week.

I might state, Mr. Speaker, that I am advised by the chairman of the District Committee that probably the most important bill to be considered on that day is S. 1289, to establish a domestic relations branch in the municipal court of the District of Columbia, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

MR. DULLES SHOULD WRITE ANOTHER ARTICLE FOR LIFE

Mr. REUSS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin.

There was no objection.

Mr. REUSS. Mr. Speaker, Mr. Henry Luce, of Life magazine, over the weekend, blames much of the deplorable effect of the Secretary of State's "brink of war" article on critics of the article who "put prejudice and personal advantage above the best interests of the United States." If I were to join Mr. Luce in impugning motives, I would be compelled to find his phrase marvelously apt for describing the original article.

But I would prefer to leave motives aside. Mr. Luce says that Life is interested "in helping its readers achieve a clear view of the world crisis." What better help could Life give its millions of readers to "achieve a clear view of the world crisis" than for it to give Mr. Dulles another opportunity soon to set forth in Life his constructive proposals for 1956? How does Mr. Dulles propose to deal with the problems that threaten to tear the world apart, not in 1953, 1954, or 1955, but today? To name three:

First. What can the United States do to make our national resolution to defend Taiwan against aggression a morally righteous position? Mr. Dulles in April 1954, wanted to send American ground troops into Indochina in defense of French colonialism and the corrupt absentee regime of Bao Dai. Fortunately the President and the American people refused to enter such a continental war for such a morally dubious cause. The American people stand ready to face the brink of war in defense of Formosa, but they demand that our cause be morally justified—justified by great efforts, that have not yet been made, to obtain the shield of the U. N. approval for resisting Red aggression against Taiwan, and by great efforts, that have not yet been made, to convince the Formosan people that we do not mean to deny them their democratic voice in their own destiny.

Second. What is our Government doing in the Middle East to declare ourselves against aggression by either side, and to link such a declaration to a long-term solution to the refugee problem and to the problem of economic backwardness which is a root cause of the troubles?

Third. What, indeed, are we doing about the whole dangerous and disastrous issue of colonialism generally? Mr. Dulles has not hesitated to threaten the French with agonizing reappraisal when German rearmament under the European defense community was at stake; or to charge the British in the pages of Life with having broken faith over Indochina. Could he not be as firm—though I hope a good deal more diplomatic—in a better cause? Could he not use his forcefulness to ease Britain's rigid colonialism in Cyprus before its value to NATO and the rights of its Turkish minority go down the drain, along with colonialism? Why not exert his influence with the French where it might be useful, as in the present chaos of shortsighted colonialism in north Africa? Why not, even, anticipate crisis for once and turn his penchant for blunt diplomacy on the Portuguese to bring about a constructive solution to the Goa problem?

The true test of a successful foreign policy, it seems to me, is not how often it brings us to the brink of war, but how successfully it keeps us from the brink, by grappling with the problems which might, if neglected, explode into warfare. It is long-range thinking, not short-range bluff, which is important.

I sincerely hope that Life—and Mr. Dulles—will give us an article addressed to questions like these. If they do, criticism of a specious effort to turn the errors of the past into virtues will speedily give way to praise for an honest discussion of current issues. The American people desperately want and need such a discussion.

THE SOIL BANK PLAN

Mr. SPRINGER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include a telegram.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. SPRINGER. Mr. Speaker, all of us realize the urgent necessity for early consideration of farm legislation in this session.

Every responsible farm organization in America that I know of is backing the soil-bank plan and other closely related legislation to help the farmer this year. To do this the Committee on Agriculture of the House is going to have to work early and late to get this legislation out of the committee in time to be enacted before the growing season starts. Any person or any committee or any part of it which tries to hinder this legislation by delay or otherwise will certainly have down on their heads the disapproval of farmers generally.

I sincerely hope that during this session the farm problem will not be a partisan one and that we can come forward with constructive legislation at an early date so that the farmer may know where he is going this year and what he may anticipate in legislation from the Government.

I have received this morning a telegram from Otto Steffey, president of the Illinois Agricultural Association, which is the largest single State farm organization in the country. The telegram is as follows and indicates the urgency of getting legislation out of committee and on to the floor for consideration by this body:

CHICAGO, ILL., *January 18, 1956.*

Hon. WILLIAM L. SPRINGER,
House Office Building, Washington, D. C.:

Early enactment of soil bank and related legislation is necessary if to be effective and help in 1956. Farmers are now making plans and ordering seed and supplies. Seeding small grain will start in March. We urge that the basic program upon which

there is substantial agreement be enacted immediately leaving details and controversial matters for later consideration.

BOARD OF DIRECTORS, ILLINOIS AGRICULTURAL ASSOCIATION.
OTTO STEFFEY, *President.*

PERMIT FARMERS TO GROW WHAT THEY NEED

Mr. McGREGOR. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. McGREGOR. Mr. Speaker, I find a great deal of hardship is prevailing among my farm group because of certain portions of an agricultural program which was passed several years ago and is now in effect. Many of my farmers find themselves in a position of not being able to grow enough grain to feed even their livestock and to give them an adequate supply of straw.

I have introduced a bill which will exempt from marketing quotas farmers who raise grain entirely for their own use on their farms either as feed or seed. I feel this legislation will give freedom from a program to that group of farmers who now do not derive benefit. Certainly in this great Republic responsible farmers should have the right to grow the crops that are necessary to sustain their own farms without Federal control or interference.

PERMIT ALL FARMERS TO VOTE ON WHEAT REFERENDUM

Mr. McGREGOR. Mr. Speaker, I think we have become a great Nation because of the many freedoms it is our privilege to enjoy. That freedom has been protected at the ballot box by an expression of the views of the majority. With this thought in mind, I have introduced a bill to permit wheat farmers, including those who plant less than 15 acres of wheat, to vote in any wheat marketing referendum conducted by the Secretary of Agriculture.

The records will show that in Ohio only 57,000 of nearly 152,000 wheat producers have the right to vote. This certainly is unfair. If this bill is passed, Mr. Speaker, I am sure that we will be carrying on the majority views of the people and that is what we want. Regardless of the pros and cons of a marketing program, the majority of the people should determine whether it should be in effect or not in effect.

THE CREDIT SITUATION OF THE FARMERS

Mr. H. CARL ANDERSEN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. H. CARL ANDERSEN. Mr. Speaker, the credit situation of the farmers throughout this country is becoming more difficult day after day. We speak of the cost-price squeeze on our farm economy, but actually it is more than that. It is a credit-cost-price squeeze. As our farmers see the market go down and down on the commodities they sell, the cost of farm machinery and other items of production go up and up, the vise they are caught in is given an added twist by the tightening of their credit.

Today, many farmers, like most businessmen, operate on credit. This may be in the form of short-term notes at the bank or places of business, crop loans, long-term financed heavy equipment, or farm mortgages. I am told that in American business, lack of adequate credit or capital is responsible for more business failures than any thing else except inadequate or improper management. The same is probably true of agriculture.

Farm indebtedness is on the rise. Farm mortgage debt has risen about one-half billion a year since 1950, after having been fairly stable from 1943 to 1950. Short term debt is climbing too—up about one-third billion in the past year.

My primary concern is for the farmers caught in this squeeze, but I am also concerned with the effects on rural business communities. By liberalizing farm credit we accomplish two important things. First, we help individual farmers keep their heads above the economic waters by extending their credit. Second, we help the merchant and the banker in the farm communities by loosening up a tight credit situation.

The two bills I am introducing today will, if enacted, do much to improve this situation. They have to do with the lending authority of the Farmers' Home Administration.

One of these bills will extend the terms of payments on production and subsistence loans to a total of 10 years rather than the existing 7-year limitation. At the present time, the Farmers' Home Administration can make such loans for a 5-year period, and may extend them to a total of 7 years. My bill will simply allow further extensions to a total of 10 years.

The second bill would give the Farmers' Home Administration authority to "make or insure loans to eligible farmers and stockmen for the purposes of refinancing, consolidating, renewing, or extending all or part of the existing debts of the applicant, whether unsecured or secured by real or personal property, and for farm operating and subsistence expenses." The new title V which would be added to the Bankhead-Jones Farm Tenant Act makes no material changes in the credit tests the Farmers' Home Administration applies to other loan applications. The applicant for one of these loans must show that he has a reasonable chance to pay it off, and it must also be determined that this is the only source for such credit on reasonable terms.

Today the Farmers' Home Administration is unable to negotiate or insure loans of this nature. As a result, many farmers, particularly the GI's who have gone into their own farming operations in recent years, find themselves unable to make payments on mortgages which seemed entirely feasible just a few years ago. They need refinancing if they are to remain in agriculture, and this bill would make that possible to the extent of $50 million each fiscal year.

This credit assistance will be available only to the family-type farm, as it is these folks who need the credit assistance the most. They are the ones hit the hardest by falling farm commodity prices, and although I do not have the statistics on it my impression is that they are burdened with a disproportionate share of existing farm debt.

I hope we can have early action on these bills as the need is most urgent. Liberalized credit will not by itself solve our farm problems. We must have 90 percent of parity price supports on the basic storables and a good soil-bank program along with other necessary measures to reverse the downward trend in farm prices. But, in the meantime, we have to have additional credit for many of our farmers if they are to stay in business until the Congress can act on the overall farm problem.

It may take as long to get the farm price level back up as it took it to come down. It usually does in such situations at best. That is why it is so imperative that we liberalize credit now to keep many good farm people from being forced out while their income is at such a low ebb.

A group of us are now working together on the development of a program of direct action to raise the prices farmers are receiving for their hogs and cattle. We feel that something of this nature must be done and done soon to save many of our farmers from great losses on livestock production. Credit extension, as provided for in these bills, is of equal importance, especially to the young GI who has not had a chance to become firmly established in agriculture, and I hope this effort to liberalize credit will have equal support.

Mr. DIXON. Mr. Speaker, I arise in support of two measures which my colleague, Representative H. CARL ANDERSEN, of Minnesota, is introducing today, the first of which will liberalize the repayment period for Farmers Home Administration production and livestock loans by extending the repayment period from the present level of 7 years to 10 years; and the second which authorizes the Farmers Home Administration to refinance general indebtedness, public as well as private, incurred by farmers who have the possibility of working out of a temporary period of distress.

Both of these measures give concrete expression to the recommendation of President Eisenhower in his special farm message calling for a liberalization of the credit policies of the FHA and hold out immediate hope to many farmers threatened with insolvency, as illustrated by the following communications:

Mr. Lewis S. Wight, chairman of the Box Elder County Commissioners, writes:

The livestock men of Grouse Creek in Box Elder County are in need of immediate assistance. Continued appeals to Washington through our State department of agricul-

ture, have failed to bring results. Conditions are so serious that most of the livestock men are unable to participate on the Federal grain program for drought relief.

State Representative Kleon Kerr, of Box Elder County, writes:

We have ranchers as you know that have been hurt not only by reduced price for livestock, but drought conditions have made operation almost impossible. There does now appear to be improved outlook for moisture. If injured ranchers can secure reasonable credit, they will be able to continue if the hoped for improved farm economy materializes.

Gov. J. Bracken Lee writes:

Have just finished meeting with Box Elder County Commission relative to serious economic situation in western Box Elder County which has been brought on by 3 years drought. Immediate personal needs of residents there are being met by State welfare department, but ranchers and farmers in that area stand to lose everything they own unless supplemental feed can be obtained for livestock.

UKRAINIAN INDEPENDENCE DAY

Mr. KEATING. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. KEATING. Mr. Speaker, yesterday, all the Ukrainian-American communities throughout the country held simultaneous observances. Because I feel that Ukraine is outstanding in its claims to national freedom and independence and should be regarded as an important keystone in the building of the hoped-for free world of tomorrow, I have asked for this time to commemorate this event.

The centuries-old struggle for freedom and independence on the part of the Ukrainian nation constitutes an impressive chapter in the annals of human history. This indomitable will for national freedom clearly crystallized itself in the old Ukrainian Kievan state from the 9th to the 14th century, in the Ukrainian Kozak state from 1648 to 1783, and more recently in the Ukrainian National Republic from 1917 to 1920. As one of the first victims of Soviet imperialism, Ukraine, since the very inception of alien Bolshevik tyranny, has proved to be the Achilles heel of the Soviet Union. The destruction of its national churches, the horrible man-made famine of 1932 to 1933, the mass murder at Vinnitsia in 1937 to 1939, and the vast purges and deportations decreed by Moscow have failed to exterminate the spiritual and moral resources for national freedom in Ukraine. The historic capital of Kiev, with centuries of rich tradition and culture conserved in its vaults, still symbolizes today the indestructible hope and passion of a nation destined to be sovereign, free and independent.

During the Second World War millions of Ukrainian patriots seized the short-lived opportunity of the German invasion to realize once again this hope, only to be frustrated in their valiant efforts by the scourge of another imperialism. But this unbending will continues to be strong and powerful in the epic struggle of the Ukrainian Insurgent Army—UPA—against the evil forces of Soviet imperialism, and in the resistance of the Ukrainian people.

As a nation of over 40 million people—the largest non-Russian nation behind the European Iron Curtain—Ukraine stands as one of our most important and natural allies in the eventual defeat of Soviet imperialism. Its historic claim to national freedom and independence cannot be ignored. Its place as a sovereign and equal partner in the mutual construction of the free Europe of tomorrow must be assured, if the foundation of permanent peace among freedom-loving nations is to be impregnable.

FARM SURPLUS

Mr. HOFFMAN of Michigan. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. HOFFMAN of Michigan. Mr. Speaker, it is a pleasure to advise my Republican colleagues—and I wish you would pay attention—that our Democratic friends are trying to help get rid of the farm surpluses. Or perhaps those of just wheat and corn. They are doing that this way: The way the law stands now, the wheat farmer, the corn farmer, if he gets a little too much wheat or corn and feeds it to his stock or poultry, they prosecute him and he pays a fine or goes to jail. There are several prosecutions pending in the Federal court, Western District of Michigan, Southern Division. So, you see, if they can get those farmers in jail or fix it so that they cannot operate next year, there will be less surplus. The way they are helping is to block all those bills introduced by Republican Representatives which would amend that law to correct that situation. One such bill is by the gentleman from North Carolina [Mr. JONAS]. Now, my proposition is this: If they will not permit amendment of the law, let us reciprocate. Let us cut off, some of their gravy, so that the farmer or individual who produces tobacco cannot chew it and the fellow who grows peanuts cannot eat them.

Fair, is it not?

REREFERENCE OF BILL

Mr. BLATNIK. Mr. Speaker, I ask unanimous consent that S. 890, the water pollution control bill, be recommitted to the House Committee on Public Works for further consideration.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

FARM SURPLUS

Mr. HAYS of Ohio. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. HAYS of Ohio. Mr. Speaker, I would just like to point out to my good friend from Michigan that I am happy to see him get concerned about the farm problem. I am sure he will be interested to know that back in the days of Secretary of Agriculture Wallace, they called his program "plowing wheat under," but Mr. Benson has now come up with a program and the Republicans call it "incorporating the wheat into the ground."

CIVIL RIGHTS IN MISSISSIPPI

Mr. WILLIAMS of Mississippi. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and include an editorial.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. WILLIAMS of Mississippi. Mr. Speaker, no State in the history of this Nation has suffered such unwarranted, libelous, and slanderous attacks as has the State of Mississippi. The latest shot to be fired in this libel campaign is a filthy little document put out by the NAACP called "M is for Mississippi and Murder." The Governor of our State in his inaugural message last week put the lie to these accusations of violence in the State of Mississippi when he made public the record of murder and homicide in Mississippi for the last year that we have statistics available, 1954.

In Mississippi, in 1954, 6 Negroes were killed by white persons; 8 white persons were killed by Negroes, and 182 Negroes were killed by members of their own race. I would suggest to the NAACP and their fellow traveling friends that they try to clean up the mess that they have in their own back yards of Chicago, New York, and yes, Washington, D. C., before they try to tell the peace-loving citizens of the State of Mississippi how to run their affairs.

Mr. Speaker, the following editorial from the Jackson, Mississippi Daily News, January 18th issue, is pertinent, and I commend it to the attention of the House:

HERE ARE THE FACTS

One piece of information in Governor Coleman's inaugural address that should be placed before all Members of Congress, newspaper editors, and the public generally, is set forth in the following paragraph:

"Despite all the propaganda which has been fired at us, the country can be assured that the white people of Mississippi are not a race of Negro killers. Official statistics for the State of Mississippi for 1954 show that in that year, the last for which we have figures available, 8 white people were killed by Negroes and only 6 Negroes were killed by whites, while 182 Negroes were killed by members of their own race. In other words, there were 30 times as many Negroes killed by members of their own race as by members of the white race."

These figures are authentic, but it is not likely they will cause the NAACP and other riffraff and ragtag of the human race to

quit drawing horrid pictures seeking to show that a reign of terror exists in Mississippi, that Negroes are being slain without the slightest provocation and that no Negro can feel his life is safe in Mississippi.

The campaign of hatred, slander and misrepresentation will continue, and that is why we have citizens councils being formed to refute it.

DEPARTMENT OF THE ARMY

Mr. SIEMINSKI. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. SIEMINSKI. Mr. Speaker, I rise at this time to commend the Department of the Army and its congressional liaison representative, Brig. Gen. C. J. Houck, Jr., for the recent consideration shown an 18-year-old boy, son of a constituent father of mine, whose career could have been stigmatized for life had the Army not shown him simple and strong faith, generous and sympathetic, wise and understanding treatment that a boy of this sort needed. They could have given him the back of their hand and ruined him. They did not do it. I thank them very much. Enclosed is a copy of a letter I sent to the President on the matter the other day:

JANUARY 18, 1956.

The Honorable DWIGHT D. EISENHOWER,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: Last week a constituent father called me and I learned of his distressing problem. His young son (18 years of age) was having a hard time. It was a serious situation. This young man could have been stigmatized for life and his whole career could have been eclipsed by action that was then pending. I assured the father that the Department of the Army would act in the interest of the boy.

I write to you because I want you to know of the understanding that your legislative liaison chief has with Members of Congress who have problems such as these. I cannot speak too highly of the manner in which Brig. Gen. C. J. Hauck, Jr., assisted, advised, and endeavored to help in this particular situation. At times the hours were an inconvenience to the general, but it never bothered him. The anxiety of all concerned, of course, was great and the general's patience was indeed a wonderful reflection on the Army.

It is hard to educate the civilian population to the ways of the military, and it does take an unusually talented man to assure civilians that the military is interested and will not forget anyone. General Hauck was all of this.

This boy's whole future is brighter. There will be no stigma. The parents are overjoyed. As a Member of Congress, it is refreshing to know that the Army has a heart after all.

Assurances of my high esteem.

Cordially,

ALFRED D. SIEMINSKI,
Member of Congress.

WHY THE DELAY ON THE AIR RESERVE TECHNICIAN PLAN?

Mr. EDMONSON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. EDMONDSON. Mr. Speaker, one of the questions in Washington today for which no one seems to have an answer is this one: "Why the delay on the Air Reserve technician plan?"

Because Oklahoma's Second District is the site for an Air Reserve squadron, which thus far has made fine progress, I will confess to a special interest in this question. If a plan is known to exist which is almost certain to provide a more efficient Air Reserve, while at the same time freeing needed service technicians for the Regular Air Force wing—and doing all this at a substantial saving in American tax dollars—why should there be a day's delay in putting such a plan into effect?

So far as I can determine, everyone who has studied the Air Reserve technician plan—which is similar to the very successful plan now in operation in the Air National Guard—has given the plan enthusiastic approval.

If there are bugs in it, no one has pointed out where they are, or what they are.

On the other side of the picture, the Continental Air Command has made a finding that the ART proposal would "provide for maximum combat readiness and effectiveness of the Air Force Reserve in the event of mobilization." This is certainly a desirable objective—not present under existing Air Reserve conditions—although there have been tremendous strides toward an effective Air Force Reserve within the operating limitations now present.

The Continental Air Command summary of benefits under the ART plan also includes increased wing manning, increased employment of civilians in Air Reserve flying center areas and the promotion of better esprit de corps in Reserve wings. These, too, are most desirable objectives recognized by all. Increased local interest in the Air Reserves and greater local participation are also confidently predicted, based upon Air National Guard experience.

Another compelling argument for the plan, as pointed out by Continental Air Command, is the fact that it would make available 8,283 military men, of whom 893 are officers, for use in expanding to the 137-wing program. The ART program, carried forward with full use of Air Reserve technicians, would require less than one-fifth the total military personnel now drawn from Regular forces to man the Air Reserve organizations.

If we are to achieve the 137 wings which most authorities agree are the minimum Air Force for our national security, let us have the Air Reserve technician plan now, as an important step toward that security.

Or let us have an authoritative answer, from someone in the administration, to the question: "Why the delay on the Air Reserve technician plan?"

CARE

Mr. MARTIN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. MARTIN. Mr. Speaker, I rise to read a statement which is endorsed by Speaker SAM RAYBURN and myself. It supports one of our great humanitarian efforts.

The whole world salutes CARE on its 10th birthday. In 10 brief years it has become an outstanding crusade to help suffering human beings. Its noble work is not truly measured in bushels, tons, and bales—but in hope restored in millions of homes, in lives renewed in every quarter of the globe, in food, clothing, shelter for whole nations torn and broken by war.

Governments have made great contributions to put the world back on the road to peace and progress. But Government alone cannot supply the inspiration of charitable purpose and compassionate devotion now so effectively organized the world around by the millions of contributors who have provided the sinews of CARE.

This great work demonstrates anew that every man is his brother's keeper. So long as such motives guide the free world, mankind is on the mend. Through such work we promote the cause of peace.

May CARE continue to mobilize the same rich and generous support in the years ahead.

PERMISSION TO STATE OF LOUISIANA TO PURCHASE CERTAIN PROPERTY

Mr. LONG. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H. R. 7927) to extend the time within which the State of Louisiana may make initial payment on the purchase of certain property from the United States.

This is an amendment to a bill which gives the State of Louisiana the right to purchase certain properties, but we ran into a snag because the legislature had not appropriated sufficient money. As we cannot obligate a future legislature of the State, we are asking time for the legislature to meet and to appropriate the balance of the money. This is merely an amendment to a bill which has already passed the Senate and the House and the present bill has been reported favorably by the Committee on Banking and Currency.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

Mr. MARTIN. Reserving the right to object, Mr. Speaker, and I shall not object because I understand this is merely extending the time the State of Louisiana through its legislature may comply with a request of the Federal Government.

Mr. LONG. The gentleman is correct.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That section 2 of the act entitled "An act to provide for the conveyance of certain property under the juris-

diction of the Housing and Home Finance Administrator to the State of Louisiana," approved August 4, 1955 (Public Law 235, 84th Congress), is amended by striking out "6 months" and inserting in lieu thereof "1 year."

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DEFENSE APPROPRIATIONS

The SPEAKER. Under previous order of the House, the gentleman from Kansas [Mr. SCRIVNER] is recognized for 60 minutes.

Mr. SCRIVNER. Mr. Speaker, you have read and will read much about General Ridgway in succeeding days.

Mr. Speaker, I seldom impose myself upon the House. This is the first time in more than 10 years I have taken a special order. I do this so that other Members of the House of Representatives can be saved the time necessary to read the hearings held by the Military Subcommittee on Appropriations on the budget for the fiscal years 1955 and 1956, as well as the CONGRESSIONAL RECORD as they relate to General Ridgway's statements heretofore and hereafter made. It has, of course, been a tedious task to do all the required reading. I trust that what I have done here will, as I said earlier, save the Members of the House a great deal of time and trouble.

So that there may be no misunderstanding due to misinformation, let us go to the record for facts relating to General Ridgway and his series of articles.

General Ridgway made his first appearance before the Military Subcommittee on Appropriations Monday, February 8, 1954, presenting his views on the 1955 budget requests. With him was his civilian counterpart, Secretary of the Army Stevens.

In the Department of the Army printed volume of the hearings on page 51, Representative WIGGLESWORTH, the then committee chairman stated:

Mr. WIGGLESWORTH. I understand, General, from the testimony of Secretary Wilson and Admiral Radford, that this overall military program, of which the Army program now before us is a part, is a result of the New Look and has the unanimous endorsement of the President, of the National Security Council, and of the Joint Chiefs of Staff. That is correct, is it not?

General RIDGWAY. Yes, sir. So far as the Joint Chiefs of Staff are concerned it was on stated assumptions and limitations.

The reference to the Secretary and Admiral Radford relates to the hearings of the week before, when on February 3, as shown on page 119, Department of Defense hearings, Admiral Radford replied to a question by Mr. WIGGLESWORTH:

Mr. WIGGLESWORTH. The program, as I understand it, has the full endorsement of yourself, as Chairman of the Joint Chiefs of Staff, and of the Joint Chiefs of Staff as a whole?

Admiral RADFORD. Yes.

Prior to Admiral Radford's statement, Secretary Wilson and Mr. WIGGLESWORTH had had this to say:

Mr. WIGGLESWORTH. It takes into consideration, as I understand it, all the factors in the world picture, such as the buildup of the NATO powers and the termination of fighting in Korea, the strength of possible opponents, and it represents the unanimous opinion of the members of the Joint Chiefs of Staff, the National Security Council, and the President of the United States; is that correct?

Secretary WILSON. That is right.

Later, as shown on page 101, Mr. SIKES expressed to Secretary Wilson his concern about the reduction:

Mr. SIKES. Mr. Secretary, I have been disturbed about the real meaning of the "new look" in defense policy. To me it means a weakening of our overall military strength at a time of continuing danger from communism. I am quite seriously disturbed about the proposed manpower reductions, particularly in the Army.

Mr. MAHON—see page 138, Department of Defense hearings—asked Admiral Radford about the military budget. Here is the record:

Mr. MAHON. Does the military budget which is before this committee meet with your unqualified approval?

Admiral RADFORD. Yes.

This was followed by a requested statement furnished later by Admiral Radford:

Since the Joint Chiefs of Staff make recommendations only on what are called above-the-line forces, that is, major forces such as the numbers of divisions, warships, and wings, I would certainly not consider myself the expert to answer a question involving specific amounts of money. However, I would like to say that I do agree on the above-the-line forces which this budget will support and on which it is largely based. If this reduction in money correspondingly involved a reduction in the above-the-line forces for which it now provides, then my answer would be "No."

Prior to Mr. WIGGLESWORTH's inquiry of General Ridgway, the General in a prepared statement had said:

As Chief of Staff of the Army, I am directly responsible to the Secretary of the Army for the efficiency of the Army, its state of preparation for military operations, and plans therefor. As Chief of Staff of the Army, I am also a member of the Joint Chiefs of Staff, who are by law the principal military advisers to the President, the National Security Council, and the Secretary of Defense. However, the statutory responsibilities as a member of the Joint Chiefs of Staff are additional and in no way lessen my responsibilities as Chief of Staff of the Army, the role in which I appear here today.

The Army has been guided in the preparation of this budget by basic economic and strategic decisions which have been made at a higher level.

In order to have a yardstick, a finite factor with which to measure our Army's strength and needs for the safety of the Nation, I must speak in terms of divisions. There is no magic in numbers of divisions. With them must go morale, leadership, and such things as support of the people at home.

All the way through there were references indicating his disagreement with the budget, such as those when talking about the national defense plans.

These are of particular concern since we are steadily reducing Army forces—a reduction through which our capabilities will be lessened while our responsibilities for meeting the continuing enemy threat remain unchanged. In the long-range view it is contemplated that the execution of these missions may be modified by compelmentary means being developed within the Military Establishment. In the development of these new means we must not lose sight of the Army's missions and commitments of today which must properly be met if our military posture is to be maintained.

After making his statement, and answering the query of Mr. WIGGLESWORTH, as a matter of courtesy, Mr. WIGGLESWORTH turned the general over to Mr. SIKES, Democrat, Florida, since he—Mr. SIKES—had an engagement to meet. Mr. SIKES was, and is, a member of the Army panel of five members, and his questions ranged over a variety of subjects, all showing his concern about the proposed reduction, and where it was to take place. General Ridgway—page 58—showed the reduction would come in noncombat positions. Although Mr. SIKES offered many openings, General Ridgway did not protest to any great extent or express any element of surprise.

Later, in response to one of my questions, General Ridgway furnished a statement—page 67—comparing World War II divisions and today's—with 15 percent more men and 84 percent greater firepower without atomic weapons, which the General said later in the Department of the Army hearing for 1956, page 81:

We could beef up the firepower on a percentage basis of our divisions 500 percent, or maybe 10,000 percent, by putting a few of these atomic weapons in the division.

They are not in the division today, as you know, sir.

On page 68, General Ridgway said:

For the size of the Army, it is the best Army in the world.

And—

It will be a lot better than a lot of the armies bigger numerically.

No pessimism there.

Then this colloquy took place—page 69:

Mr. SCRIVNER. Just to make the picture complete, I would quote again from page 2 of your statement where you say: "The Army has been guided in the preparation of this budget by basic economic and strategy decisions which have been made at a higher level."

To whom or to what bodies, do you refer when you say "at a higher level"?

General RIDGWAY. The Department of Defense and higher.

Mr. SCRIVNER. What is higher than the Department of Defense?

General RIDGWAY. The National Security Council.

Mr. SCRIVNER. And what is higher than the National Security Council?

General RIDGWAY. The Commander in Chief.

Mr. SCRIVNER. From what I have been reading in recent days, weeks, and months, and even years, the Commander in Chief has a reputation of being a pretty good military man.

General RIDGWAY. Indeed he has.

Secretary STEVENS. That is for sure.

Mr. SCRIVNER. I wanted to be sure we all understood because it does make a difference.

We all have the highest regard for him and his experience and his decisions and opinions. I do not think that we have to worry

about him selling us and the country, and the Army—since he is an old Army man—very short, do you?

General RIDGWAY. No, sir.

No dispute or discussion indicated there.

As a matter of fact, his words indicate some idea that mere numbers was not the answer—page 69:

Mr. SCRIVNER. Here is a statement on page 3 of your statement that I could not quite understand:

"It is contemplated that the execution of these missions may be modified by complementary means being developed within the Military Establishment."

What do you mean by that?

General RIDGWAY. Well, sir, I will say our nuclear capabilities, of course, are the major one.

(Discussion off the record.)

Mr. SCRIVNER. All of that enables a smaller number of men to do a much bigger job.

General RIDGWAY. I would rather put it the other way; we are so overshadowed numerically anyway if we had to go up against this fellow. What it means is, within a certain number which the Federal Government decides it will approve, we can do a whole lot better job than we could have done before.

General Ridgway clearly expressed his attitude and approach—pushing the matter of cost to one side, as shown by the Department of Army hearings, page 80—when Representative HRUSKA, now Senator, of Nebraska, said:

Mr. HRUSKA. Is that not where we get into the field of policy? Incorporated in this, called the New Look, there are certain things which we are willing to go along on on the basis of a calculated risk, or a basic assumption, if you want to call it that, and it is upon that that we are proceeding in cutting back to 17 divisions; is that not true?

General RIDGWAY. Well, certainly, that is the prerogative of the civilian authorities, yes, but it must be done in the light of the professional opinion of the military advisers. I think that is a sacred duty on their part; to say what they think the consequences are going to be from a military point of view. It is not our function to estimate whether the Federal Government can afford it or not.

Had he then felt as he now appears to feel, he had ample opportunity, to say so in the following passage, again on page 80:

General RIDGWAY. Within the present budget there probably is not any better solution. We said within the limitations imposed we think the general order of magnitude of these forces is about as shown.

Mr. HRUSKA. As presently planned?

General RIDGWAY. As presently planned; within the limitations imposed.

And that portion which immediately follows shows that General Ridgway did recognize the place for decisions—although he might not have agreed—and here again he had an opportunity to state his objections:

Mr. HRUSKA. In your statement on page 12 you say: "In any attempt to look to the future and to prepare for tests of the future, the need for a strong Army and the importance of ground warfare remain as great as they ever were." That is looking at it for a long pull, is it not, and that would include the probability of hostilities breaking out? However, there are times, are there not, when the probabilities of hostilities appear less than at other times?

General RIDGWAY. Yes; you are right.

Mr. HRUSKA. Is that not again the foundation for this so-called New Look; that we feel as a matter of national policy and the determination is being made by higher levels referred to here yesterday, namely, the Joint Chiefs of Staff, the National Security Council, and the President as Commander in Chief, that they have determined this is probably a valley insofar as the probability of hostilities breaking out is concerned, and therefore in order to be able to live with our military commitments and our Military Establishment we will deemphasize certain aspects of it and we will emphasize other aspects of it; is that the basis of it?

General RIDGWAY. I think so, sir. It is a decision of the constituted authorities of our Government.

Following Representative HRUSKA, Mr. MAHON, Democrat, Texas, took up the questioning of General Ridgway.

And on page 85, Mr. MAHON opened the door wide for any criticism or comment the general desired to make:

Mr. MAHON. I was struck with this statement, from page 3 of the statement you made yesterday: "Lastly, the growth in Soviet nuclear capabilities has come to form the basis for an increasing threat to the United States."

I observe particularly the words "increasing threat." In view of that statement can you reconcile a reduction over a period of months of 300,000 men in the Army, on grounds other than economic?

General RIDGWAY. No, sir; although there were other factors, notably the increase in air power."

On page 89 and 90, the following questions and answers appear:

Mr. SCRIVNER. General, I have listened with a great deal of interest to some of the questions asked you and some of the answers you have given. Maybe I do not understand the military approach, or maybe I do not understand your responses, but I seem to get the implication that as a military man as Chief of Staff of the Army, it is not within your province at all to care about the financial condition of the country. You say we have to have so many men, and whether we have the dollars or not makes no difference. Am I to assume that?

General RIDGWAY. Not at all, sir. That could not be farther from it.

Mr. SCRIVNER. I did not think that was right. Surely you in the position you occupy in the places you have been can understand as well as others, perhaps, that one of the major necessities for the survival of this country, which is a capitalistic country, is financial solvency; is it not?

General RIDGWAY. I fully agree, sir.

Mr. SCRIVNER. In other words, we can fall from within due to the consumption by the fires of inflation just as rapidly, if not more so, than we could fall from an attack from without, can we not?

General RIDGWAY. That is right, sir.

Mr. SCRIVNER. So that there is not anything wrong for anybody—whether it is the President of the United States, your Commander in Chief, or the National Security Council, or the Joint Chiefs of Staff—to take into consideration some of the financial conditions of this country.

General RIDGWAY. We are always aware of those, sir. The point I was trying to convey was merely this, sir: When a certain set of missions is given to us and we compute the requirements for the accomplishments of those missions and submit them with all the supporting reasons, it is not within our competence nor within our sphere of responsibility to say whether that is the proper overall answer.

Mr. SCRIVNER. No, but it is within the sphere of responsibility of the National Security Council and your commander in chief; and he considered all of these things you presented, did he not?

General RIDGWAY. I have never questioned that, sir.

* * * * *

Mr. SCRIVNER. * * * When we go beyond that we are imperiling the economic stability of the Nation.

General RIDGWAY. That is beyond by province.

Mr. SCRIVNER. Would it not stand true for us as well as for France or Italy or Germany or somebody else?

General RIDGWAY. It would, in the discretion of the proper authority.

Although other statements indicated otherwise, General Ridgway did concede that one must learn about the enemy of country—pages 89 and 90.

During all this hearing General Ridgway expressed no surprise at anyone's statement that this was a unanimous recommendation.

When these hearings were over—the committee recommended funds, which included the Army reduction. This was affirmed by the full committee of 50 and the bill was reported to the House of Representatives.

During the debate, members of the committee and others called direct attention to General Ridgway's opposition to the proposed reductions.

The debate was full and complete, with Mr. WIGGLESWORTH, Republican, Massachusetts, the subcommittee chairman, in charge of debate, which opened April 28, 1954—page 5665, CONGRESSIONAL RECORD. Mr. WIGGLESWORTH pointed out that this had a unanimous endorsement. Mr. MCCORMACK raised a question or inference that it was not—as far as the Army was concerned—page 5666, CONGRESSIONAL RECORD.

Mr. MAHON, senior Democrat on the subcommittee followed Mr. WIGGLESWORTH and—on page 5671—Mr. MAHON said:

The Army has been most unhappy about the budget estimate this year. Secretary Stevens, in testifying before our committee earlier in the year * * * showed a great deal of concern about the reductions in the Army budget. General Ridgway expressed a similar concern. * * *

* * * * *

* * * I, for one, have great confidence in President Eisenhower, especially in this field. * * *

* * * * *

* * * I have faith in our President and in the Joint Chiefs of Staff and in the civilian leaders in the Pentagon, in this: That they are doing the best they honestly can to provide a program that is for the best interests of this country.

And Mr. MAHON expressed his view of the budget as follows—page 5672, CONGRESSIONAL RECORD, April 28, 1954:

That the budget is large enough to do the things that I have suggested—and yet small enough to be met by the taxpayer over a fairly long haul without the economic collapse of this country.

Later on Mr. BROOKS, Democrat, of Louisiana, a member of the Armed Services Legislative Committee, queried Mr. MAHON about the reduced size of the Army. Mr. MAHON in response told Mr. BROOKS, the House of Representatives, and the public—page 5673, CONGRESSIONAL RECORD, April 28, 1954:

Mr. MAHON. As I said, of course, General Ridgway evidenced in many ways his concern

over the reduction, but, of course, he went along with it as a good soldier.

Further on Mr. SIKES, Democrat, of Florida, a member of the Army panel, took the floor and stated that he was "not enthusiastic about the budget picture and particularly does that apply to the Army portion of the bill."

Mr. SIKES referred frequently to General Ridgway, the cut, and on page 5685 quoted General Ridgway:

I state this without equivocation, the Army will lose combat effectiveness under this measure. Because of the New Look it will lose combat effectiveness at a time when it may be very dangerous to do so. And again I quote General Ridgway, who said this:

"I should like now to review the missions and commitments with which the Army has been charged under our national-defense plans. These are of great concern, since we are steadily reducing ground forces, a reduction through which our capabilities will be lessened while our responsibilities for meeting the attacks of the enemy would remain unchanged."

Mr. CANNON, Democrat, of Missouri, then ranking Democrat—now chairman—of the Appropriations Committee, who had listened to part of the testimony, on April 29 told the House:

On this bill, Mr. Chairman, I go along with the President of the United States who possibly is better qualified to pass on military matters than anyone else in the Nation today.

Toward the end of the debate, Mr. PRICE, Democrat, of Illinois, a member of the Armed Services Legislative Committee, in a prepared speech, quoted at length from General Ridgway's testimony before our committee—page 5748, CONGRESSIONAL RECORD, April 29, 1954—most of which has been heretofore referred to, and directed attention to the effect on the Army.

There was no amendment offered to increase the Army funds or restore the proposed cut. And late the evening of the 29th of April 1954, the bill was passed, as recommended by the committee, without amendments, 378 to 0.

Following this, the Senate conducted hearings making few if any changes and, although General Ridgway again gave his views before the committees of that body, the Military Appropriations Act of 1955 became law.

About a year later, after an election, hearings on the 1956 military budget began. The chairman was Mr. MAHON, Democrat of Texas, with Mr. WIGGLESWORTH the senior Republican. The Military Subcommittee then consisted of 9 Democrats and 6 Republicans.

During the intervening 12 months many comments were made by many persons about the strength of the Army and some forthcoming proposed reductions. The Democrats quite naturally, would not overlook any opportunity to needle the Republican administration and leadership.

Hearings on the military budget began January 31, 1955, with Secretary Wilson, as usual, the first witness.

At the outset, Secretary Wilson introduced into the hearings a letter to him from President Eisenhower setting out the philosophy behind the proposed military budget—pages 4 and 5, Department of Defense hearings, 1956:

Our first objective must therefore be to maintain the capability to deter an enemy from attack and to blunt that attack if it comes—by a combination of effective retaliatory power and a continental defense system of steadily increasing effectiveness. These two tasks logically demand priority in all planning. Thus we will assure that our industrial capacity can continue throughout a war to produce the gigantic amounts of equipment and supplies required.

We can never be defeated so long as our relative superiority in productive capacity is sustained.

* * * * *

It is, of course, obvious that defensive forces in America are maintained to defend a way of life. They must be adequate for this purpose but must not become such an intolerable burden as to occasion loss of civilian morale or the individual initiative on which, in a free country, depends the dynamic industrial effort which is the continuing foundation of our Nation's security.

It is at this point that professional military competence and political statesmanship must join to form judgments as to the minimum defensive structure that should be supported by the Nation. To do less than the minimum would expose the Nation to the predatory purposes of potential enemies. On the other hand, to build excessively under the impulse of fear could, in the long run, defeat our purposes by damaging the growth of our economy and eventually forcing it into regimented controls.

It is for the reasons so briefly touched upon above that I have decided to present to the Congress, on behalf of the administration, a program which has been under development during the past 2 years. That program contemplates an active personnel strength of the Armed Forces at June 30, 1955, of approximately 3 million, within which the Air Force will be increased to about 975,000.

The underlying long pull is the key—an abandonment of a hypothetically fixed M-day, or day when we might be called upon to mobilize.

Mr. SIKES, chairman of the Army panel, questioned Mr. Wilson about the cut for the Army in the 1956 budget—asserting the Army was surprised by it—page 25. Mr. Wilson asserted they had been consulted right along. Mr. SIKES repeatedly raised the question of how important a factor budget balancing was—and suggested that General Ridgway was unhappy as shown by this excerpt:

Mr. SIKES. Mr. Secretary, the man who presently is charged with the responsibility for properly carrying out Army policies, its Chief of Staff, has not indicated that he is in complete accord with the desirability from the defense standpoint of these cuts. He is quoted in today's press as saying that "in these days of military mobility and modern weapons there are conditions in which more rather than fewer men probably would be needed."

CONSIDERATION GIVEN TO ARMY'S RECOMMENDATIONS

To what extent were the recommendations of the Chief of Staff and the other Army leaders weighed in this matter? Was the balancing of the budget the primary consideration in this cut?

Secretary WILSON. No, sir.

Mr. SIKES. Then to what extent was it considered?

Secretary WILSON. The points of view of all the Chiefs and the meetings of the Chiefs were all cleared through the Security Council, discussed and considered by the President.

On February 2, Mr. SIKES, seeking to find who was responsible for the proposed Army cut asked Mr. Wilson the following questions and received the following answers:

Mr. SIKES. I have been attempting to establish the actual responsibility for the proposed reduction in Army strength. It has been brought out that this is not a reduction that was proposed by the Army. As a matter of fact, the Army apparently knew nothing of this until December and received the news of the reduction with some consternation, because it required a complete revision of their program and budget estimates.

It has been brought out it did not have the concurrence of the Chief of Staff of the Army, and apparently did not have the support or at least the unanimous support, of the Joint Chiefs of Staff.

I would like to ask for a direct statement, Mr. Secretary, on the responsibility for this cut in the Army's strength. Is it your responsibility and your decision, or is it the responsibility of President Eisenhower, or if not, whose responsibility is it?

Secretary WILSON. I can answer that in part right now by saying, of course, it is the final responsibility of the President. There is no question about that. I am an adviser to the President and what is finally done, he has to take the responsibility for. He gets the information and listens to all of us.

Mr. SIKES. Then whose proposal was it originally?

Secretary WILSON. Perhaps I can answer it better than by answering it out of my mind now. The determination of the strength of the Army, as well as of the Air Force, Navy and Marine Corps, represents a decision reached after long study within the Department of Defense and the National Security Council and was finally approved by the President. It was not based upon the proposal of any particular individual.

Mr. WIGGLESWORTH discussed some matters with Mr. Wilson before all the other Democrats had questioned him—and the record discloses:

Mr. WIGGLESWORTH. Now, this recommendation, I take it for granted, is made in the light of world conditions, the strength of our allies, the strength of the Communist power, the improved use of manpower, the tremendous improvement in firepower, the fact that several divisions have been withdrawn from the Far East, and all other available information at this time?

Secretary WILSON. That is correct. All of those things have been taken into account.

Mr. WIGGLESWORTH. And it is believed that the forces recommended are sufficient to take care of the initial stages of any conflict that we got into, whether minor or major?

Secretary WILSON. That is also correct.

Mr. WIGGLESWORTH. And this recommendation, after hearing the views of the various Chiefs of Staff, is the recommendation of yourself as Secretary of Defense, of the National Security Council, and of the President?

Secretary WILSON. That is correct.

Mr. DEANE, Democrat, of North Carolina, pointed out—page 65—that the preceding day—January 31—the Armed Services Committee had opened hearings on the proposed strength cut of the Army and pointed out that General Ridgway was dissatisfied with the proposed cut. Mr. Wilson then inserted a statement showing how the decision had been

reached. In it he did not claim unanimity. That statement follows:

In arriving at the conclusions set forth above, the Joint Chiefs of Staff, and all the military services, have been consulted at frequent intervals. Their views, while not in all cases unanimous, have been considered by the National Security Council and the President. The total personnel strength of the active forces, and the target end strength for each service for June 30, 1956, have resulted from these reviews. I believe that it is fair to add that the Air Force feels that our defense program is a good one. The Navy and the Marine Corps have some minor reservations and would perhaps like a few additional personnel. The Army, from its point of view, would still recommend some higher strengths for the active forces of the Army. In my opinion, the program we have adopted is a sound one.

After Mr. DEANE had concluded, Representative FLOOD, Democrat, Pennsylvania, took out after the Secretary voicing his alarm about the cut.

Mr. Wilson, in response to questions, pointed out the added use of civilians, especially overseas—and the growth of the National Guard and Reserves, together with higher mobility, and so forth, as some of the reasons justifying a reduction, along with increased scientific progress, as pointed out in President Eisenhower's letter—page 97.

Before Secretary Wilson was excused as a witness, Mr. MAHON again raised the question of the reduction in the Army—and asked Mr. Wilson to again state the impelling reason.

This Mr. Wilson did—page 127:

I would like to refer again to my statement:

"At all times we have kept in mind the necessity for providing forces which are adequate for our Nation's security and have attemped to the best of our ability to determine the size of these forces in the light of:

"(1) The need to maintain these forces in a qualitatively improved state of readiness.

"(2) The importance of assisting our allies in their own military-security programs.

"(3) The necessity for an adequate defense of the continental United States within our integrated military programs.

"(4) The best utilization of the qualified manpower that can be made available.

"(5) The need for sustaining an adequate and stable military program over an indefinite number of years, and as a consequence the feasible annual expenditures and new appropriations that can be made available for military programs within the framework of a growing economy."

And Mr. MAHON and others pointed out that there was division of opinion among the Joint Chiefs of Staff. Mr. MAHON said:

Mr. MAHON. * * * Now, I would like to have at this point just what the facts are with respect to the consultation between you and the Army, its Secretary, General Ridgway and his staff members, with respect to this decision.

In response, he was informed:

There has been full consultation between me and the members of my staff and the Secretary of the Army and the Chief of Staff of the Army as regards the size of the Army in the present program. The views of the Joint Chiefs of Staff have been fully considered and the views of all interested parties have been made fully known to the President and the members of the National Security Council.

Admiral Radford, Chairman of the Joint Chiefs of Staff, was the next witness.

In response to a question by Mr. MAHON, Admiral Radford stated—page 150—that he was unqualifiedly supporting the budget and the program it provided.

A little later Mr. SIKES took over the questioning and suggested there had been some sudden change to cut. This Admiral Radford denied, and stated it was under constant review until finally submitted to Congress.

Then Mr. SIKES asked Admiral Radford—page 153:

Mr. SIKES. Whose decision was it to make this cut? Was it the decision of the President, of the Secretary of Defense, or the Joint Chiefs of Staff?

To which Admiral Radford replied—page 153:

Admiral RADFORD. I read that the President said yesterday that he made the decision.

Mr. SIKES. Do you stand by that?

Admiral RADFORD. That is my understanding.

Mr. SIKES. Was the consideration primarily a budget consideration, a matter of saving money?

Admiral RADFORD. No. I think the President took into account, as he said, all the advice he had from various sources, including that from the Joint Chiefs of Staff.

Mr. SIKES. But apparently not that of the Army leaders?

Admiral RADFORD. No; I am quite sure the Army did not like it.

Radford also stated that a difference of two divisions did not make the difference of losing or winning a war, and that our capabilities would be practically as great despite the cut.

Mr. SIKES kept on with his comments and then Admiral Radford stated—page 154:

However, I will say this: The Armed Forces of the United States which will be in being during fiscal year 1955 if this present budget is approved, or the program is in general approved by the Congress, will be very strong. They will be stronger in air power. They will be very strong in naval power. And there is some reduction in Army forces.

And a little later, he added the comment that "our position is much better right today."

In response to a question by Mr. FLOOD, also a member of the Army panel, Admiral Radford asserted—page 157:

I feel that if world conditions do not materially deteriorate then the strength represented by those total figures will provide adequate security for the United States.

In response to a later question by Mr. WIGGLESWORTH, Admiral Radford pursued the present philosophy further by saying—page 160:

Admiral RADFORD. As I stated earlier, I unqualifiedly support the overall Defense Department program, which the 1956 budget now before this committee will make possible. Some of the reasons why I support the program I have already mentioned. However, I shall try to summarize them here.

My overriding reason for supporting this program is that in my opinion it will provide force levels that are adequate for the security of the United States. This program is a complete rejection of our historical but dangerous policy of fluctuating between the peaks and valleys of military preparedness. * * * Our long-range program can provide a stability within the services which they have never before been able to attain. It calls for the maintenance in an improved state of readiness of the largest forces that this country has ever attempted to retain on active duty for an indefinite period of time. * * * This stability will result in greatly improved efficiency and combat readiness of our forces. * * * It calls for the integration of atomic weapons into our strategy and tactics as rapidly as possible. It places maximum emphasis on the latest scientific developments and minimizes the requirements for sheet numbers of men.

This program will permit us to be prepared for all the essential tasks to be performed in the initial phases of a global war. * * *

The objective of our long-range program is to deter an enemy from attack if possible but to insure victory should an attack come.

Several weeks later, after detailed hearings before the three panels had concluded, to learn what if any new situations had occurred that might call for last minute changes, Admiral Radford was recalled on April 19, 1955.

On that occasion, Admiral Radford, in response to a query from Mr. MAHON said:

We have today the strongest military forces we have ever maintained in peacetime, and from a purely military standpoint I feel that we are ready to take care of these foreseeable actions which might come short of a general emergency, and we are very well prepared to take care of the initial stages of a general emergency.

Mr. MAHON. In your judgment the committee and the Congress should approve in broad outline the program which was laid out by the Secretary of Defense and by the President and by others and presented to the committee?

Admiral RADFORD. I feel that you should; yes, sir.

February 7, and following, our committee had heard Secretary Stevens and General Ridgway. Prior thereto, the Armed Services Committee had called in General Ridgway to conduct their investigation into what had been termed an interdepartmental squabble over the Army strength.

On February 6, 1955, Mr. VINSON had announced, and his statement was carried in the local papers—page 87, Department of Army—that after hearing public and secret statements of General Ridgway and others, he was backing President Eisenhower's long-pull reduced forces.

Going back to our hearings, General Ridgway in his prepared statement to our subcommittee, said:

In view of the magnitude and scope of the missions which are being performed by the Army, and in spite of the reductions in strength which are being effected, the Army continues to take every possible measure to maintain the maximum combat potential with the forces available.

In response to questions by Mr. SIKES, General Ridgway told of having requested funds for 1,173,000 which was 73,000 more than allowed—page 25—and—page 29—asserted, we would not be able to assist the free world as much as we would be had his request been granted. The General concurred—page 26—in a statement by Mr. SIKES that the change in strength came with little warning, and

that he thought the figures represented an arbitrary limit.

Repeated questions were asked seeking to get the General to express his views. He told Mr. FLOOD and the committee, page 44:

General RIDGWAY. I am not here, sir, and gentlemen, to in any way oppose the decision of the properly constituted authority. I have consistently adhered to one position, and that was I conceived it to be my duty to give my honest, forthright opinion as to what was required to meet a given set of circumstances under a given international situation. And, further, if what was provided was substantially less than what I regarded was the minimum, to give an equally forthright statement of what I conceived to be the military consequences of such substantial shortage. That I have done, sir. That is what I am doing here.

When going over the budget with Mr. WIGGLESWORTH, General Ridgway made his now famous "directed verdict" charge—page 78:

Now, sir, I should like to make clear that that figure in the first place resulted from what I call a directed verdict. There is not the slightest criticism implied in this, for proper authorities did it, but it was the result of fixed manpower and dollar ceiling being given the Joint Chiefs of Staff to start with. They were told to come up with recommendations within these manpower and dollar ceilings. In addition to that there were certain stated assumptions: That the international situation would not deteriorate, and certain other conditions which I do not recall at the moment.

And a short time later in response to a query of mine, General Ridgway gave this reply—page 81:

We could beef up the firepower—on a percentage basis—of our divisions 500 percent or maybe 10,000 percent, by putting a few of these atomic weapons in the division. They are not in the division today, as you know, sir.

Near the conclusion of General Ridgway's appearance, I said, in part—page 87:

General Ridgway, in the past few days—and I am sure not upon your invitation—you have been the subject of many headlines, the subject of many radio and television comments, some of which seem to try to put you in the field of battle against your Commander in Chief, which I am sure is not the proper picture.

There are three men amongst all the hundreds of high-ranking military men that I know now, and have had the pleasure of knowing, who stand very high in my regard. You are one of the three. Admiral Radford is another one, and President Eisenhower is the third one, so I find myself in a position of having to make a choice between the views presented by those three men that I admire so much.

After considering everything, the statement you have made here and what has been printed in the papers, plus many things that have not been printed, I have no hesitancy in taking my position and standing behind the decision that has been made by the Commander in Chief and the chairman of the Joint Chiefs of Staff, without any reflection whatsoever on my part with regard to you and your ability as a military man.

Apparently, some of that view to which I have just alluded is shared by the chairman of the Armed Forces Legislative Committee, and Mr. Chairman, at this point I would like to insert in the RECORD a news story from the Washington Post and Times Herald of February 6, entitled "VINSON Backs Ike's Figures on Military."

Then, a few minutes later, I made this observation—page 88:

Mr. SCRIVNER. Knowing you as I do, I cannot help but think back to the statements that you made to us last year. You were uneasy about the situation last year. I think that I can understand your feelings because throughout all the years that you have been in the military service you have seen what has been referred to as the periods of "feast and famine" when at one time our Army goes up and then all of a sudden it goes down to the lowest possible number, and it rises again, and you know, and we know, that this is not good.

I may have been wrong, but I seemed to sense in some of your statements last year, and again reflected this year, not so much the uneasiness about the particular figure given now as a goal, but a fear—and I do not like to say "fear," because men like you do not express fear, an uneasiness, or hesitation, some misgiving, but certainly not fear—that if it keeps on we will see the Army whittled and whittled and whittled to where we will see it again down to the nethermost depths.

Do I understand or interpret the situation correctly or not?

General RIDGWAY. In part, sir, yes.

General Ridgway—page 89—asserted that—contrary to some suggestions that he had not been consulted—such was not a true statement. Then I reviewed the procedure generally followed:

Mr. SCRIVNER. As I recall the procedure, you, as Chief of Staff of the Army, were called upon to present your position, your views. Admiral Carney was called upon to present his views as Chief of Naval Operations, and General Twining was called upon to present his views on the Air Force. Those views go up through the Chairman of the Joint Chiefs of Staff, and then go up to the National Security Council, and then to the Commander in Chief, and finally, after looking over all these views, someone—and it is not within your province—has to make a decision, and that decision was made this year as it was last.

I recall that we talked about this a little bit last year and you said then, as I am sure you would repeat today, that whatever decision is made, you, as Chief of Staff of the Army, will give this country the best Army of its size that the Nation has ever had. Is that not correct?

General RIDGWAY. That is correct, sir.

While General Ridgway complained that the Army was in the process of preparing their views when the final figure was announced, Secretary Stevens asserted that General Ridgway's views were expressed from time to time and that "the National Security Council and the President, too, knew pretty well the Army's point of view"—page 111. To this General Ridgway added the comment that his views as Chief of Staff were known before and after the final figure was settled upon—page 111, February 25, 1955.

Under a Democrat subcommittee chairman, with a Democrat majority, on the Military Subcommittee, and a 30 to 20 Democrat majority on the Appropriations Committee, the 1956 military budget was considered. It was reported out practically without change, despite efforts to restore Army—and some other—cuts, pretty much as had happened the prior year when the Republicans were in the majority.

From the foregoing, it can be seen that General Ridgway, not only could, but did express his views, before the committees of Congress, the Representatives of the people and when these hearings were printed they told his story to the public. In fact, they were highlighted and emphasized on the floor of the House of Representatives when, on May 11, 1955, Chairman MAHON brought out the bill—H. R. 6042—for military appropriations.

When the bill was debated, Mr. SIKES presented his views, voiced his alarm, and called General Ridgway's views to the attention of the House.

Mr. FLOOD focused attention on the general's statements before our committee and predicted erroneously—page 6220, CONGRESSIONAL RECORD, May 12, 1955—that General Ridgway "is going to be fired from his job," no doubt, for his expressed opposition to the cuts.

Representative PRICE, as in the previous year's debate, again quoted from General Ridgway's testimony.

Before the debate concluded—page 6231—Mr. VINSON, Democrat, of Georgia, chairman of the Armed Services Legislative Committee, took the floor. He related that his committee had had General Ridgway before it along with the remainder of the Chiefs of Staff and the Secretaries. He stated:

We had a long hearing. I had some conferences with them in executive session. After the testimony it was concluded that a reduction to an end strength of 1,027,000, as carried in this bill, did not imperil the security of the Nation.

After lengthy debate, an amendment offered by Mr. FLOOD to increase the funds for the Army was rejected.

Late in the evening, May 12, 1955, after exhaustive debate, the House of Representatives voted 382 to 0 to pass the bill with the Army figures just as they were originally presented.

Here then, although quite lengthy, is the story of General Ridgway's so-called fight with the administration. It was no fight. There were differences of opinions. The President did not agree with General Ridgway. Neither did the National Security Council or the majority of the Joint Chiefs of Staff. The Military Subcommittee did not agree. The House Appropriations Committee did not agree. The House of Representatives did not agree.

GI EDUCATIONAL BENEFITS

Mr. KEATING. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. KEATING. Mr. Speaker, today I have introduced a bill to amend the Veterans' Readjustment Assistance Act of 1952 to make GI educational benefits available to all veterans whether or not they serve during a period of war or of armed hostilities.

We must keep faith with the young people who are giving at least 2 and oftentimes more of particularly vital years of their lives to the service of their country. Most of them donate the years between the ages of 18 and 23, years when normally they would be carrying

on their education or beginning to shape careers for themselves. Yet the security of the country gives us no choice. We must have these young people and we must have them at that age.

We cannot repay them merely by monetary payments, by veterans' preference arrangements, and so-called GI loans. We must do more. To me it seems that the finest and fairest way our great Nation can reward these young people for interrupting their lives is to give them our thanks in the form of extended education opportunities.

The fabulous success of the original GI bill is a matter of public record. For example, in the 10-year period between its inception in 1944 until 1954, more than 7,800,000—over half of all personnel who served in the war—trained under the bill. In addition, 1,270,000 veterans took advantage of the Korean GI bill, which succeeded the original law.

The effects of this expanded educational opportunity on the educational level of this country has been appreciable. According to a Bureau of the Census study in 1954, the average male veteran had completed 12 years of school as compared with 9 years for the nonveteran male. The Bureau credited the GI bill for at least partially bringing about this advance in educational achievement.

The income level of the Nation has also felt repercussions from the veterans education program. In a 5-year period spanning 1947 to 1952, for example, the median income of veterans between the ages of 25 and 34 shot up 50 percent.

The median income of nonveterans in the same group for that period increased only 10 percent. Once again, the Census Bureau credited the higher level of education achieved by veterans over nonveterans as a strongly contributing cause.

On the basis of figures such as these, it is possible to say that, attributing only a portion of the greater earnings of veterans to the GI bill, those who have availed themselves of this training will be paying approximately one billion dollars more each year in Federal income tax. Within the next 12 years these users of the original GI bill alone will pay off the entire cost of the program. The same result is possible, I believe, under the program as I propose to extend it.

There are other important factors to be considered in any discussion of extending the educational benefits to veterans. We must think nowadays more and more of the security of the Nation. Here is a field in which an extended GI bill can make a definite contribution.

In trying times as these, it is especially important that we do all we can to encourage our youth to complete a college education. To a greater extent than ever before, the very safety of the country depends on the quality and quantity of education at the higher levels. This is the day of the trained technician and skilled expert. Such men are primarily recruited from the ranks of the college graduates. Without them the Nation's future is hopeless, and even shortages can be dangerous.

We hear every day of shortages of trained personnel in this or that field, and propsects for the future are not bright. The experts tell us that in the field of engineering the United States is not even graduating enough trained personnel to continue its present rate of technical expansion beyond 1970. If we are to maintain our present standards of living in the face of a rapidly expanding population, industry 10 years from now must produce 40 percent more than it does today. The technological advance essential to bring about this increased productivity has as its keystone the availability of more and more trained researchers.

It is a well known fact that Russia has passed us in the annual number of engineering graduates. We are still ahead in terms of total number but at our present rate the future looks dismaying. The United States today has about 800,000 engineers. Soviet Russia has 650,000. If the present trends continue, Russia will have graduated 1,200,000 engineers in the period ending in 1960 . Our number for the same time will be only 900,000.

Something must be done and it must be done fast. One solution lies in extending educational benefits to veterans of our Armed Forces. This provides only a partial answer to the problem, I admit, but I feel that past experience indicates that it is a step in the right direction.

Educational benefits for veterans are not only our way of repaying these young people for the years they have given to their country; they are a way in which we can increase our number of trained personnel and thus make the security of the Nation that much stronger.

I hope early and favorable action will be taken on this bill.

AN IMPORTANT CONTRADICTION

Mr. HOLIFIELD. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. HOLIFIELD. Mr. Speaker, on May 19, last year, I made some remarks before the House in which I asked the administration a question of vital importance.

My question was this:

How can the administration, on the one hand, call for a decrease in farm acreage allotments, and, on the other hand ask the Congress to approve the building of two extremely costly desert reclamation projects which would produce more farm products to be supported by the Nation's taxpayers?

No answer to this question has come from the administration.

Now, Mr. Speaker, we have before us the President's plan for solving the terrible headache of surplus crops. On January 9 Mr. Eisenhower proposed that millions of acres of our best farmland be taken out of production and placed in a soil bank.

But, Mr. Speaker, it was only on January 5 that Mr. Eisenhower, in his state of the Union message, called upon Congress to approve the multi-billion-dollar Upper Colorado River project and its satellite, the Fryingpan-Arkansas project.

Let me quote the President:

I strongly recommend that action be taken at this session on such wholly Federal projects as the Colorado River storage project and the Fryingpan-Arkansas project.

Together these two projects would provide irrigation water for approximately a million acres of land. The cost of bringing water to these arid lands would run as high as $5,000 an acre, and the subsidy which the taxpayers of the United States would be forced to provide for these 2 projects alone would be at least $4.5 billion, and possibly much more.

Almost in the same breath that he asked Congress to approve these 2 unnecessary projects, the President asked Congress to support his program to take at least 40 million acres of farmland out of production.

Now, it is apparent that although Mr. Eisenhower and his Secretary of Agriculture, Mr. Benson, agree that we should have a gigantic soil bank and a soil conservation reserve, they do not agree on the policy of bringing more land into production through such projects as the Upper Colorado and the Fryingpan-Arkansas.

On October 11, 1955, Secretary Benson said in Kansas City—and I quote from the Kansas City Star of that date:

This is not the time to place a big new block of land in production.

I admit that I cannot understand how the administration can reconcile these two programs.

A soil bank is like any other bank. It must make sound investments or it will fail and the depositors and stockholders will lose money.

The administration's soil bank cannot afford to invest in such unsound and unjustified projects as the Upper Colorado and the Fryingpan-Arkansas.

Latest figures of the Commodity Credit Corporation show that the taxpayers of this country have invested about $8 billion in the crop-support program. It is costing us about $1 million a day to store our surplus farm products.

In the fearful struggle to alleviate this terrible burden, Mr. Eisenhower asks that the farmers of this country drastically decrease acreages now producing, and that at least 25 million of these acres be placed in a conservation reserve and planted to forage and woodlands.

Then, while this is being done, the administration plan, as voiced by the President, calls for the development, at enormous cost, of a million more acres in two fantastic irrigation schemes.

Obviously, no bank could operate efficiently or profitably under such a plan.

In this case, while the Nation's farmers were depositing their acres in the front of the bank, the bank's officials would be making bad investments in the back room.

I cannot bring myself to believe that Congress will permit itself to be drawn into such an untenable position.

Now, Mr. Speaker, the supporters of the Upper Colorado project and the Fryingpan-Arkansas project will tell you that they are long-range plans, that it will take 15 years to build them and put them into operation. They attempt to argue that in another 15 years we will

need more food in this country, because of our population increase.

Well, certainly Mr. Eisenhower is not proposing any short-range program in his soil-bank plan. He is not asking that 25 million acres of cultivated land be transposed into pastures and trees just for the next year or two. Nor is he asking that another 15 million acres of the best farm land lie idle only for 1956 or 1957.

Mr. Eisenhower believes that we do not need at least 40 million acres of land now producing crops in our farms. If and when we do need more land to produce food, we would have millions of acres in the soil bank, and we could draw on this reserve. That is Mr. Eisenhower's plan.

The rate of per acre production in this country is steadily increasing. One of the most aggravating angles of the surplus crop dilemma is the fact that although a farmer cuts the number of producing acres in his farm, by the use of more fertilizer and insecticides he still increases the quantity of his production on other acres. So the surpluses continue to mount.

If and when we need more food, the production on our present acreage can be increased many fold. The Census Bureau estimates that our population by 1975 will exceed 200 million, and it is generally agreed by authorities that to meet the food demands of this larger population we will need an increase in production of food and fiber of about 40 percent over the present production.

How are we to get that 40 percent increase?

Probably the most authoritative and definitive report on the subject yet published is that of the President's Materials Policy Commission, the Paley report, which informed President Truman:

> Most of the desired 40-percent increase in agricultural production can come from wider application of technology to increase crop and livestock yields per acre.
>
> The rest of the gain in production can come from shifting the use of land already in farms so as further to increase the productivity of present agricultural acreage.
>
> As an additional safety factor, there are well over 100 million acres of grass and woodland not now in farms which could be used in crop rotations.
>
> It seems unlikely that the Nation will need to expand to any large extent the total acreage now in farms.

Of the 25 million acres Mr. Eisenhower wants placed in a conservation reserve, he says:

> Today the Nation does not need these acres in harvested crops.

Mr. Speaker, let us take a moment to strike a balance for the proposed soil bank.

First. At least 40 million acres would be taken out of production under the proposed plan.

Second. Mr. Eisenhower suggests that, with regard to the conservation phase of his program, about $350 million would be spent in 1956, and about $1 billion in the next 3 years.

Third. More hundreds of millions will be spent each year in paying farmers for the acreage they are keeping from production.

Now, on the other side of our balance sheet, we have the President's proposal that the Upper Colorado and Fryingpan-Arkansas projects be approved by Congress. This would bring into production about a million acres of land and ultimately cost the taxpayers of the Nation more than $4 billion.

If this is sound banking I cannot understand it. And I wonder if Mr. Eisenhower has been fully informed on the matter.

As I have said, the significant question I asked the administration last May remains unanswered. In asking it again now, I need to change my previous remarks little. I shall repeat only a part of what I said, so that my colleagues may have the information before them.

Here are two brief tables based on Bureau of Reclamation reports on the Upper Colorado and the Fryingpan-Arkansas projects:

Upper Colorado River storage project

Estimated initial construction cost	$1,600,000,000
Hidden subsidy cost to taxpayers	4,000,000,000
Subsidy cost per acre	5,000
Subsidy cost per 150-acre farm	750,000
Number of 150-acre farms	5,066
Number of acres to receive water	760,0000

Fryingpan-Arkansas project

Estimated initial construction cost	[1] $156,541,000
Hidden subsidy cost to taxpayers	500,000,000
Subsidy cost per acre	1,600
Subsidy cost per 160-acre farm	256,000
Number of 160-acre farms	1,900
Number of acres to receive water	309,000

[1] The Reclamation Bureau's construction estimates on this project have been revised several times; repayment periods have been changed; power rates have been changed. The above construction estimate is entirely unrealistic. One item alone will illustrate this: Involved are several score miles of open canals at an altitude of 7,000 to 10,000 feet. Engineers have testified that these canals will have to be covered, to prevent them from freezing and to operate them efficiently, and the Bureau of Reclamation has admitted that to cover the canals and make conduits out of them would cost an additional $64 million. That very thing had to be done on the Colorado-Big Thompson project, greatly increasing construction costs, and Congress was obliged to appropriate additional money. Adding $64 million for the covered conduits would increase the estimated construction cost of the Fryingpan project to more than $200 million. In such case, repayment periods would have to be lengthened, and subsidy costs would greatly increase.

The Bureau has this to say about the kind of crops that would be grown on the Fryingpan-Arkansas project—House Document No. 187, 83d Congress, 1st session, July 1953:

> The principal irrigated crops are alfalfa, corn, grain, sorghum, sugar beets, barley, wheat, truck crops, and dry beans. Dairying and poultry raising are enterprises near market outlets.

Of the principal crops which the Bureau says the Fryingpan project would grow, corn, grain, sorghum, barley, wheat, and dry beans are now supported. Sugar beets are under the restriction program of the Sugar Act of 1951, and the price is held up to a desired level. What are called proportionate shares are established by the Secretary of Agriculture. Thus, if more sugar-beet land is brought into production, shares of all others must be decreased accordingly.

From Reclamation Bureau reports, I have compiled a table showing the types of crops which would be grown on each of the irrigation projects proposed in the overall Upper Colorado River project, and I show whether or not they are supported crops.

The table follows:

Name of project	Acres to be irrigated	Crops to be grown	Crops supported
La Barge	7,970	Hay	
		Small grains	Yes.
		Pasture	
		Dairy cows	Yes.
		Sheep	Yes.
Seedskadee	60,720	Dairy cows	Yes.
		Sheep	Yes.
		Hay	
		Pasture	
		Small grains	Yes.
Lyman	40,600	Hay	
		Pasture	
		Small grains	Yes.
		Dairy cows	Yes.
		Beef cattle	
Silt	7,300	Alfalfa	
		Small grains	Yes.
		Sugar beets	Yes.
		Potatoes	
		Dairy cows	Yes.
		Beef cattle	
		Sheep	Yes.
Smith Fork	10,430	Hay	
		Small grains	Yes.
		Pasture	
		Dairy cows	Yes.
		Beef cattle	
Paonia	17,040	Grain	Yes.
		Fruit	
		Dairy cows	Yes.
		Beef cattle	
Florida	18,950	Dairy cows	Yes.
		Beef cattle	
		Small grains	Yes.
		Alfalfa	
Pine River	15,150	Dairy cows	Yes.
		Beef cattle	
		Hay	
		Small grains	Yes.
Emery County	24,080	Alfalfa	
		Grains	Yes.
		Beef cattle	
		Dairy cows	Yes.
		Fruit	
		Sheep	Yes.
Central Utah	60,380	Alfalfa	
		Grain	Yes.
		Fruit	
		Sugar beets	Yes.
		Dairy cows	Yes.
		Beef cattle	
		Sheep	Yes.
Hammond	3,670	Alfalfa	
		Grains	Yes.
		Beans	Yes.
		Fruit	
		Dairy cows	Yes.
		Sheep	Yes.
Eden	20,200	Hay	
		Pasture	
		Dairy cows	Yes.
		Sheep	Yes.
		Beef cattle	
Gooseberry	16,400	Alfalfa	
		Pasture	
		Grain	Yes.
		Dairy cows	Yes.
		Beef cattle	
		Sheep	Yes.
Navaho	137,240	Alfalfa	
		Grains	Yes.
		Pasture	
		Fruit	
		Vegetables	
		Dairy cows	Yes.
		Sheep	Yes.
San Juan-Chama	225,000	Alfalfa	
		Grains	Yes.
		Pasture	
		Dairy cows	Yes.
		Sheep	Yes.
Rabbit Ear	19,190	Hay	
		Pasture	
		Small grains	Yes.
		Beef cattle	
		Sheep	Yes.
		Dairy cows	Yes.

Name of project	Acres to be irrigated	Crops to be grown	Crops supported
Troublesome	13,640	Hay	
		Pasture	
		Small grains	Yes.
		Beef cattle	
		Sheep	Yes.
		Dairy cows	Yes.
West Divide	65,610	Alfalfa	
		Small grains	Yes.
		Pasture	
		Beef cattle	
		Sheep	Yes.
		Dairy cows	Yes.
Savery-Pot Hook	31,610	Alfalfa	
		Small grains	Yes.
		Pasture	
		Dairy cows	Yes.
		Sheep	Yes.
Dolores	66,000	Alfalfa	
		Small grains	Yes.
		Pasture	
		Beans	Yes.
		Dairy cows	Yes.
		Beef cattle	
Sublette	84,000	Hay	
		Pasture	
		Small grains	Yes.
		Beef cattle	
		Sheep	Yes.
Fruitgrowers	3,850	Alfalfa	
		Grain	Yes.
		Fruit	
		Dairy cows	Yes.
		Beef cattle	
Bostwick Park	6,870	Hay	
		Pasture	
		Beef cattle	
		Sheep	Yes.
Dallas Creek	21,940	Alfalfa	
		Small grains	Yes.
		Pasture	
		Beef cattle	
		Dairy cows	Yes.
		Sheep	Yes.
East River	2,750	Hay	
		Pasture	
		Beef cattle	
		Dairy cows	Yes.
		Sheep	Yes.
Fruitland Mesa	19,400	Hay	
		Pasture	
		Small grains	Yes.
		Beef cattle	
		Sheep	Yes.
		Dairy cows	Yes.
Grand Mesa	25,300	Alfalfa	
		Small grains	Yes.
		Pasture	
		Fruit	
		Dairy cows	Yes.
		Beef cattle	
		Sheep	Yes.
Ohio Creek	16,910	Hay	
		Pasture	
		Small grains	Yes.
		Beef cattle	
		Sheep	Yes.
Tomichi Creek	27,580	Hay	
		Pasture	
		Small grains	Yes.
		Beef cattle	
		Sheep	Yes.
		Dairy cows	Yes.
Battlement Mesa	6,830	Hay	
		Pasture	
		Small grains	Yes.
		Beef cattle	
		Sheep	Yes.
		Dairy cows	Yes.
Bluestone	10,875	Alfalfa	
		Grain	Yes.
		Vegetables	
		Fruit	
		Sugar beets	Yes.
		Beef cattle	
		Sheep	Yes.
		Dairy cows	Yes.
Eagle Divide	10,875	Hay	
		Pasture	
		Small grains	Yes.
		Beef cattle	
		Sheep	Yes.
		Dairy cows	Yes.
Parshall	27,510	Hay	
		Pasture	
		Small grains	Yes.
		Beef cattle	
		Sheep	Yes.
		Dairy cows	Yes.
Woody Creek	2,965	Hay	
		Pasture	
		Small grains	Yes.
		Beef cattle	
		Sheep	Yes.
		Dairy cows	Yes.

The point is, that the President is asking that the taxpayers of the Nation be forced to cough up this enormous sum for these two unjustified irrigation schemes to bring into production a million acres of arid lands to grow more surplus crops, and if not surplus crops, then more grasslands for cows to graze on and produce more butter, cheese, and milk to add to the towering piles of surpluses.

In the very States where the administration is proposing to build these unneeded irrigation projects, other agricultural acres are to be taken out of production and placed in Mr. Eisenhower's "soil bank."

It is safe to say that large grain acreages would be taken out of production in Utah, Colorado, and Wyoming, if the soil-bank program is put into effect.

How can Mr. Eisenhower justify a plan to take certain acres out of production in a State and put other acres to growing the same kinds of crops in the same State?

I wish Mr. Eisenhower, or someone in the administration, would answer my question. I think it deserves an answer. And I think the people of the United States deserve to know how the Chief Executive reconciles these two conflicting policies.

The farmers certainly are interested. So are the taxpayers, who have to foot the bill.

SPECIAL ORDER VACATED

Mr. HOFFMAN of Michigan. Mr. Speaker, I ask unanimous consent that I may vacate the special order for 15 minutes granted me for today.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. HAYS of Ohio, for 20 minutes today.

Mr. QUIGLEY for 20 minutes on Thursday, January 26.

Mr. SCRIVNER, for 1 hour today and to include excerpts from hearings held by the House Military Appropriation Subcommittee.

Mr. HAYS of Ohio, for 20 minutes on tomorrow.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the RECORD, or to revise and extend remarks, was granted to:

Mr. MASON on the subject An Equitable Excise Tax System.

Mr. SCRIVNER and to include excerpts from Military Appropriations Subcommittee hearings.

Mr. FJARE and to include qualifications of the Honorable Wesley A. D'Ewart as Under Secretary of the Interior.

Mr. DIXON in support of measures to be submitted by Mr. H. CARL ANDERSEN, of Minnesota, regarding liberalization of credit for the farmers and also to include extraneous matter.

Mr. RADWAN (at the request of Mr. MILLER of Nebraska).

Mr. AYRES.

Mr. AUCHINCLOSS and to include extraneous matter.

Mr. MINSHALL and to include an address by Hon. CHARLES A. HALLECK.

Mr. SIEMINSKI and to include extraneous matter.

Mr. COLMER.

Mr. RHODES of Pennsylvania (at the request of Mr. COOPER) and to include an address by Senator OLIN D. JOHNSTON.

Mr. PRIEST (at the request of Mr. COOPER) and to include a letter from the Secretary of Health, Education, and Welfare to the Speaker of the House.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mrs. PFOST (at the request of Mr. METCALF), on account of illness in the family.

Mr. SHELLEY (at the request of Mr. ENGLE), on account of illness, for the first 3 weeks of February.

Mr. DAVIS of Georgia, for tomorrow, on account of official business.

BILLS PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on Thursday, January 19, 1956, present to the President, for his approval, bills of the House of the following titles:

H. R. 938. An act for the relief of Mrs. Elena Apostolescu Bustiuc;

H. R. 1015. An act for the relief of Mr. and Mrs. Derfery William Wright;

H. R. 1022. An act for the relief of Antonio Andrea Chitato;

H. R. 1145. An act for the relief of Ora L. Powers;

H. R. 1146. An act for the relief of the Pacific Music Supply Co.;

H. R. 1183. An act for the relief of Baldomero R. Garcia, Teresa Garcia y Braganza, Francisco Garcia, Teresita Garcia, and Eduardo Garcia;

H. R. 1219. An act for the relief of the estate of Mr. Margaret A. Swift;

H. R. 1447. An act for the relief of Aleksandra Borkowski;

H. R. 1752. An act for the relief of Johanna Juresic Grgurich;

H. R. 1768. An act for the relief of the Jefferson and Plaquemines drainage district and certain persons whose properties abut on the Federal Government's right-of-way for Harvey Canal in Louisiana;

H. R. 1910. An act for the relief of Blanka Goldstein;

H. R. 2273. An act for the relief of Der Chuck Yee and Wu Mei On;

H. R. 2278. An act for the relief of Consuelo Calderon de Villarreal;

H. R. 2296. An act for the relief of Simone Gilliland;

H. R. 2466. An act for the relief of Marino and Giselda Proni;

H. R. 2467. An act for the relief of Ivo and Elia Monari;

H. R. 3027. An act for the relief of Leo E. Verhaeghe;

H. R. 4582. An act to amend the Internal Revenue Code of 1954 with respect to deductions from gross income of amounts contributed to employee trusts;

H. R. 5428. An act to amend the Internal Revenue Code of 1939 with respect to the period of limitation for filing claims by cer-

tain transferees and fiduciaries for credit or refund of income taxes;

H. R. 7036. An act to amend section 37 of the Internal Revenue Code of 1954 with respect to the earned income limitation on retirement income;

H. R. 7282. An act relating to the allowance of the credits for dividends received, for dividends paid, and for a Western Hemisphere trade corporation in computing the alternative tax of a corporation with respect to its capital gains; and

H. R. 7364. An act relating to the application of the documentary stamp tax to transfers of certain obligations paid for in installments.

ADJOURNMENT

Mr. COOPER. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 47 minutes p. m.) the House adjourned until tomorrow, Tuesday, January 24, 1956, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1407. A communication from the President of the United States, transmitting proposed supplemental appropriations for the fiscal year 1957 in the amount of $913,450,000 for the Department of Defense (H. Doc. No. 318); to the Committee on Appropriations and ordered to be printed.

1408. A letter from the Assistant Secretary of Defense transmitting a report on military prime contracts with business firms for work in the United States for the period July 1 through November 30, 1955, pursuant to section 6 of Public Law 268, 84th Congress, which amended section 211 of the Small Business Act of 1953; to the Committee on Banking and Currency.

1409. A letter from the Director, United States Information Agency, transmitting a draft of proposed legislation entitled "A bill to provide for the promotion and strengthening of international relations through cultural and athletic exchanges and participation in international fairs and festivals"; to the Committee on Foreign Affairs.

1410. A letter from the Chairman, Federal Communications Commission, transmitting a report on backlog of pending applications and hearing cases in the Federal Communications Commission as of November 30, 1955, pursuant to section 5 (e) of the Communications Act as amended July 16, 1952 by Public Law 554; to the Committee on Interstate and Foreign Commerce.

1411. A letter from the Chairman, United States Civil Service Commission, transmitting the 34th Annual Report of the Board of Actuaries of the Civil Service Retirement and Disability Fund for the fiscal year ended June 30, 1954, pursuant to section 16 of the Civil Service Retirement Act; to the Committee on Post Office and Civil Service.

1412. A letter from the Attorney General, transmitting a draft of proposed legislation entitled "A bill to amend section 3731 of title 18 of the United States Code relating to appeals by the United States"; to the Committee on the Judiciary.

1413. A letter from the Secretary of State, transmitting the Eighth Annual Report of Tort Claims Paid by the Department of State under part 2 of the Tort Claims Act (28 U. S. C. 2672) during the calendar year 1955, pursuant to section 404 of the Federal Tort Claims Act, as amended, (28 U. S. C. 2673); to the Committee on the Judiciary.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. ENGLE: Committee on Interior and Insular Affairs. S. 926. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Ventura River reclamation project, California; without amendment (Rept. No. 1659). Referred to the Committee of the Whole House on the State of the Union.

Mr. FRAZIER: Committee on the Judiciary. H. R. 5862. A bill to confer jurisdiction upon United States district courts to adjudicate certain claims of Federal employees for the recovery of fees, salaries, or compensation; without amendment (Rept. No. 1660). Referred to the Committee of the Whole House on the State of the Union.

Mr. DURHAM: Committee on Armed Services. S. 1261. An act to authorize the conveyance of certain lands within Caven Point terminal and ammunition loading pier, New Jersey, to the New Jersey Turnpike Authority; without amendment (Rept. No. 1661). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAWSON of Illinois: Committee on Government Operations. Eighth intermediate report of the Committee on Government Operations pertaining to a merger of Naval Supply Activities in the San Pedro-Long Beach area; (Rept. No. 1662). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAWSON of Illinois: Committee on Government Operations. Ninth intermediate report of the Committee on Government Operations pertaining to Foreign Service promotions under the Wriston program; (Rept. No. 1663). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. WOLCOTT:

H. R. 8652. A bill to provide for an experimental national flood indemnity and reinsurance program and for other purposes; to the Committee on Banking and Currency.

By Mr. H. CARL ANDERSEN:

H. R. 8653. A bill to amend the Bankhead-Jones Farm Tenant Act to adjust the loan limitations of title II so as to provide more effective assistance to production and subsistence loan borrowers; to the Committee on Agriculture.

H. R. 8654. A bill to amend the Bankhead-Jones Farm Tenant Act and to authorize the Secretary of Agriculture to make or insure loans to farmers and stockmen for the purpose of refinancing existing debts, and for other purposes; to the Committee on Agriculture.

By Mr. AUGUST H. ANDRESEN:

H. R. 8655. A bill to amend the Bankhead-Jones Farm Tenant Act to adjust the loan limitations of title II so as to provide more effective assistance to production and subsistence loan borrowers; to the Committee on Agriculture.

H. R. 8656. A bill to amend the Bankhead-Jones Farm Tenant Act and to authorize the Secretary of Agriculture to make or insure loans to farmers and stockmen for the purpose of refinancing existing debts, and for other purposes; to the Committee on Agriculture.

H. R. 8657. A bill to amend the act of June 22, 1948 (62 Stat. 568), and for other purposes; to the Committee on Agriculture.

By Mr. GATHINGS:

H. R. 8658. A bill to amend the Agricultural Act of 1949, as amended, and the Agricultural Adjustment Act of 1938, as amended, and for other purposes; to the Committee on Agriculture.

By Mr. ABERNETHY:

H. R. 8659. A bill to amend the Agricultural Act of 1949, as amended, and the Agricultural Adjustment Act of 1938, as amended, and for other purposes; to the Committee on Agriculture.

By Mr. ROONEY:

H. R. 8660. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. ANFUSO:

H. R. 8661. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. BUCKLEY:

H. R. 8662. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. CELLER:

H. R. 8663. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. DAVIDSON:

H. R. 8664. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. DOLLINGER:

H. R. 8665. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. FOGARTY:

H. R. 8666. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. HOLTZMAN:

H. R. 8667. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. KEOGH:

H. R. 8668. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. KLEIN:

H. R. 8669. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. MULTER:

H. R. 8670. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. ZELENKO:

H. R. 8671. A bill to amend the War Risk Insurance Act so as to provide relief for victims of disasters resulting from the forces of nature; to the Committee on Interstate and Foreign Commerce.

By Mr. ANFUSO:

H. R. 8672. A bill to amend the Civil Service Retirement Act of May 29, 1930, to permit the retirement on full annuities, without regard to age, of those officers and employees with 30 years of more of service; to the Committee on Post Office and Civil Service.

By Mr. BURNSIDE:

H. R. 8673. A bill relating to burley tobacco farm acreage allotments under the Agricultural Adjustment Act of 1938; to the Committee on Agriculture.

By Mr. COLMER:

H. R. 8674. A bill to provide for the return of certain property to the city of Biloxi, Miss.; to the Committee on Veterans' Affairs.

By Mr. DURHAM:

H. R. 8675. A bill to promote the national defense by authorizing the construction of aeronautical research facilities by the National Advisory Committee for Aeronautics necessary to the effective prosecution of aeronautical research; to the Committee on Armed Services.

H. R. 8676. A bill to amend the Atomic Energy Act of 1954; to the Joint Committee on Atomic Energy.

By Mr. ENGLE:

H. R. 8677. A bill authorizing a monetary contribution for the flood-control accomplishments of the multiple purpose Oroville Dam proposed to be constructed on the Feather River by the State of California; to the Committee on Public Works.

By Mr. FJARE:

H. R. 8678. A bill for the relief of the town of Medicine Lake, Mont.; to the Committee on the Judiciary.

By Mr. FORD:

H. R. 8679. A bill to amend title II of the Social Security Act to increase the amount of outside income which a widow with minor children may earn without suffering deductions from the benefits to which she is entitled under such title; to the Committee on Ways and Means.

By Mrs. GREEN of Oregon:

H. R. 8680. A bill to extend the provisions of the Veterans' Readjustment Assistance Act of 1952 until such time as existing laws authorizing compulsory military service cease to be effective; and to provide for payment of tuition and fees of veterans receiving educational benefits under such act; to the Committee on Veterans' Affairs.

By Mr. HALE:

H. R. 8681. A bill to establish an effective program to alleviate conditions of excessive unemployment in certain economically depressed areas; to the Committee on Ways and Means.

H. R. 8682. A bill to provide for the conveyance to the State of Maine of certain lands located in such State; to the Committee on Armed Services.

By Mr. HENDERSON:

H. R. 8683. A bill to amend the Internal Revenue Code of 1954 to relieve farmers from the excise tax on gasoline and lubricating oils used exclusively in farm tractors or farm machinery or for other agricultural purposes; to the Committee on Ways and Means.

By Mr. HOEVEN:

H. R. 8684. A bill to amend the Bankhead-Jones Farm Tenant Act and to authorize the Secretary of Agriculture to make or insure loans to farmers and stockmen for the purpose of refinancing existing debts, and for other purposes; to the Committee on Agriculture.

H. R. 8685. A bill to amend the Bankhead-Jones Farm Tenant Act to adjust the loan limitations of title II so as to provide more effective assistance to production and subsistence loan borrowers; to the Committee on Agriculture.

By Mr. HOPE:

H. R. 8686. A bill to amend the Bankhead-Jones Farm Tenant Act and to authorize the Secretary of Agriculture to make or insure loans to farmers and stockmen for the purpose of refinancing existing debts, and for other purposes; to the Committtte on Agriculture.

H. R. 8687. A bill to amend the Agricultural Act of 1954, as amended, by providing for the further acceleration of the brucellosis eradication program; to the Committee on Agriculture.

H. R. 8688. A bill to amend the Bankhead-Jones Farm Tenant Act to adjust the loan limitations of title II so as to provide more effective assistance to production and subsistence loan borrowers; to the Committee on Agriculture.

By Mr. KARSTEN:

H. R. 8689. A bill to provide for the refund of the internal-revenue tax paid on fermented malt liquor lost or rendered unmarketable by reason of the 1951 floods; to the Committee on the Judiciary.

By Mr. KEATING:

H. R. 8690. A bill to amend the Clayton Act, as amended, by requiring prior notification of certain corporate mergers; to the Committee on the Judiciary.

H. R. 8691. A bill to amend the Veterans' Readjustment Assistance Act of 1952 to make the educational benefits provided for therein available to all veterans whether or not they serve during a period of war or of armed hostilities; to the Committee on Veterans' Affairs.

By Mr. KILDAY:

H. R. 8692. A bill to authorize permanent appointments in the Armed Forces of the United States, and for other purposes; to the Committee on Armed Services.

H. R. 8693. A bill to amend the Career Compensation Act of 1949, as amended, in relation to the refund of reenlistment bonuses; to the Committee on Armed Services.

H. R. 8694. A bill to amend certain laws relating to the grade of certain personnel of the Army, Navy, Air Force, and Marine Corps upon retirement; to the Committee on Armed Services.

By Mr. LOVRE:

H. R. 8695. A bill to amend the Bankhead-Jones Farm Tenant Act to adjust the loan limitations of title II so as to provide more effective assistance to production and subsistence loan borrowers; to the Committee on Agriculture.

H. R. 8696. A bill to amend the Bankhead-Jones Farm Tenant Act and to authorize the Secretary of Agriculture to make or insure loans to farmers and stockmen for the purpose of refinancing existing debts, and for other purposes; to the Committee on Agriculture.

By Mr. McGREGOR:

H. R. 8697. A bill to permit all wheat farmers (including those who plant less than 15 acres of wheat) to vote in any wheat marketing quota referendum conducted by the Secretary of Agriculture; to the Committee on Agriculture.

H. R. 8698. A bill to further amend the Agricultural Adjustment Act of 1938, as amended, to exempt certain wheat producers from liability under the act where all the wheat crop is fed or used for seed on the farm, and for other purposes; to the Committee on Agriculture.

By Mr. McINTIRE.:

H. R. 8699. A bill to authorize the Secretary of Agriculture to cooperate with public and private agencies in the development and maintenance of recreational facilities on the national forests and other lands administered in connection therewith, and for other purposes; to the Committee on Agriculture.

By Mr. MAGNUSON:

H. R. 8700. A bill to provide for certain reductions in the reimbursable construction cost of the Kittitas Division of the Yakima reclamation project, Washington; to the Committee on Interior and Insular Affairs.

By Mr. METCALF:

H. R. 8701. A bill to amend wheat marketing quota provisions of the Agricultural Adjustment Act of 1938, as amended; to the Committee on Agriculture.

By Mr. PERKINS:

H. R. 8702. A bill to amend the Railroad Retirement Act of 1937 to provide that an individual with 30 years' service may retire regardless of age, to provide increased annuities, and to increase the amount of outside income which certain individuals may earn without losing the right to receive their annuities; to the Committee on Interstate and Foreign Commerce.

By Mr. POAGE:

H. R. 8703. A bill to protect the income of cotton producers, encourage the expansion of domestic and world cotton markets, and provide an equitable competitive position for the United States cotton textile industry, by establishing the support level of American upland cotton at 75 percent of parity and providing for compliance payments to cooperators, and for other purposes; to the Committee on Agriculture.

By Mr. PRIEST:

H. R. 8704. A bill to extend through June 30, 1957, the duration of the Poliomyelitis Vaccination Assistance Act of 1955; to the Committee on Interstate and Foreign Commerce.

By Mr. RADWAN:

H. R. 8705. A bill to extend the educational benefits of the Veterans' Readjustment Assistance Act of 1952 to all veterans of the Armed Forces who have served therein since June 27, 1950; to the Committee on Veterans' Affairs.

By Mr. ROOSEVELT:

H. R. 8706. A bill to establish a national policy with respect to commercial fisheries; to establish the Office of Assistant Secretary of Commerce for Commercial Fisheries; and define his functions, powers, and responsibilities; to strengthen the commercial fisheries segment of the national economy, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. SHELLEY:

H. R. 8707. A bill to correct an inequity resulting from the setting of the effective date of Public Law 68 of the 84th Congress; to the Committee on Post Office and Civil Service.

By Mr. SIKES:

H. R. 8708. A bill to determine the need for improvement of the Chipola Cut-Off in the Apalachicola River, Fla., via Wewahitchka; to the Committee on Public Works.

By Mr. VINSON:

H. R. 8709. A bill to continue the effectiveness of the act of July 17, 1953 (67 Stat. 177), as amended; to the Committee on Armed Services.

H. R. 8710. A bill to amend the Armed Services Procurement Act of 1947; to the Committee on Armed Services.

By Mr. DURHAM:

H. J. Res. 482. Joint resolution relating to the compensation of the staff director of the Joint Committee on Atomic Energy; to the Joint Committee on Atomic Energy.

By Mr. COLE:

H. J. Res. 483. Joint resolution relating to the compensation of the staff director of the Joint Committee on Atomic Energy; to the Joint Committee on Atomic Energy.

By Mr. THOMPSON of New Jersey:

H. J. Res. 484. Joint resolution to provide for the observance and commemoration of the 50th anniversary of the official founding and launching of the conservation movement for the protection, in the public interest, of the natural resources of the United States; to the Committee on the Judiciary.

By Mr. DAVIS of Wisconsin:

H. Con. Res. 205. Concurrent resolution clarifying the intention of the Congress with

respect to the insurance by the Federal Housing Commissioner of certain loans for the purchase and installation of bulk milk tanks on dairy farms; to the Committee on Banking and Currency.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By the SPEAKER: Memorial of the Legislature of the State of Colorado, memorializing the President and the Congress of the United States to enact legislation approving the apportionment of power credits made by the Upper Colorado River Commission; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Rhode Island, memorializing the President and the Congress of the United States with urgent and earnest request to give the State of Israel the right to buy arms for the purpose of defending her people against aggression; to the Committee on Foreign Affairs.

Also, memorial of the Legislature of the State of South Carolina, memorializing the President and the Congress of the United States to issue a directive to the Secretary of Agriculture requiring him to impose quotas on textile shipments to the United States from Japan and other foreign countries; to the Committee on Agriculture.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BURLESON:

H. R. 8711. A bill for the relief of Guy Aycock; to the Committee on the Judiciary.

By Mr. BURNSIDE:

H. R. 8712. A bill for the relief of Rev. W. P. Hooper; to the Committee on the Judiciary.

Mr. CEDERBERG:

H. R. 8713. A bill for the relief of Louise Reynolds; to the Committee on the Judiciary.

By Mr. CLEVENGER:

H. R. 8714. A bill for the relief of Mary Kremser; to the Committee on the Judiciary.

By Mr. HILLINGS:

H. R. 8715. A bill for the relief of Hiroko Higasa Goss; to the Committee on the Judiciary.

By Mr. SCHENCK:

H. R. 8716. A bill for the relief of Celia Han-fang Wu; to the Committee on the Judiciary.

By Mr. SHELLEY:

H. R. 8717. A bill for the relief of Mariano Soria Cabero; to the Committee on the Judiciary.

By Mr. WINSTEAD:

H. R. 8718. A bill for the relief of John R. Hill; to the Committee on the Judiciary.

By Mr. WOLCOTT:

H. R. 8719. A bill for the relief of Onie Hack; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

446. By Mr. FOGARTY: Petition of the Woman's Christian Temperance Union of Rhode Island, submitted by Mary M. Eldridge, legislative director, and signed by 283 residents of Rhode Island urging the use of the powers of Congress to get alcoholic beverage advertising off the air and out of the channels of interstate commerce and thus protect our people and the rights of States to prevent advertising of commodities which have been declared unlawful by the rights of local option granted them under State law; to the Committee on Interstate and Foreign Commerce.

447. By Mr. HOEVEN: Petition of Unit 65, National Association of Retired and Veteran Railway Employees, Sioux City, Iowa, urging enactment of H. R. 6141, H. R. 6142, or S. 1920; to the Committee on Interstate and Foreign Commerce.

EXTENSIONS OF REMARKS

Congressman Halleck's Salute to Ike

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. MINSHALL. Mr. Speaker, on January 20, 1956, the third anniversary of the inauguration of our beloved President, Dwight D. Eisenhower, Republicans all across our great Nation joined together in 53 gala salute-to-Eisenhower dinners to pay homage to this most distinguished American.

One of the foremost of these salute-to-Eisenhower gatherings was in Cleveland, Ohio, where the number of Republicans who desired to honor our famous President was so tremendous that the dinner was served in two separate auditoriums. On hand as the featured speaker of the occasion was our extremely able colleague the gentleman from Indiana the Honorable CHARLES A. HALLECK.

Congressman HALLECK's remarks in Cleveland during this third anniversary celebration are inspiring not only to all Republicans but to each and every American citizen, and for this reason I wish to include his brilliant comments and thoughts on the conduct of our Nation's Government:

Mr. Chairman, distinguished guests, my honorable colleagues in the Congress, and fellow Republicans, it is always a pleasure to come to Cleveland.

I have enjoyed your hospitality on many occasions in the past, and I hope you will be kind enough to invite me back in the future.

I am particularly happy to appear in the State so ably represented in the Senate by JOHN BRICKER and GEORGE BENDER and in the House by your splendid 17-man delegation: GORDON SCHERER, BILL HESS, PAUL SCHENCK, BILL MCCULLOCH, CLIFF CLEVENGER, CLARENCE BROWN, JACK BETTS, TOM JENKINS, OLLIE BOLTON, JOHN VORYS, DAVE BAUMHART, BILL AYRES, JOHN HENDERSON, FRANK BOW, HARRY MCGREGOR, FRANCES BOLTON, and BILL MINSHALL.

You know, a list of names like that is music to my old Republican ears. It's going to be even longer next year.

From time to time I have come here on fund-raising missions. (For the party, that is—not for me personally.)

I have always found folks around here most generous and loyal in their support of republicanism.

These two wonderful dinners here tonight certainly underscore that support.

Well do I remember the lean years, when many of us wondered whether we would ever again be able to elect a Republican President and a Republican Congress, and give the country guidance under sound Republican leadership.

It sometimes seemed that we would never overcome the illusion of free money out of Washington and the Federal paternalism of the double dealers—new and fair.

I know about those long, difficult years, because I was fighting the battle in the House of Representatives and carrying the story, as best I could, up and down the land.

Let me say "thanks" for the help and encouragement you have given in the past.

And let me say, also, that your time and money were not wasted.

Republicans did triumph.

We did win.

And tonight we meet here in tribute to our Republican President—one of the truly great leaders of American history—in war and in peace—Dwight D. Eisenhower.

Few men, indeed, have been accorded the honor of serving their Nation in both military and civilian positions of highest trust and responsibility.

Dwight D. Eisenhower has met the challenge of both assignments with magnificent success.

We called on him to help us win a war. Under his banner victory was ours.

Now we have called on him to help us win the peace. Under his wise and courageous leadership, we are moving toward that goal.

I scarcely knew Dwight Eisenhower before his election to the Presidency.

It has been my rare privilege since the late days of 1952 to meet with him, to work with him and, I might add, to enjoy some moments of relaxation with him—although for a President of the United States, such moments are all too rare.

As a result of this association, I can say with all the conviction at my command that here is a man completely dedicated to serving all the people of America.

Dwight D. Eisenhower is devoid of any desire for personal glory.

His sole ambition is to do a good job for his country.

But Dwight Eisenhower needs no accolade from me.

The trust and confidence he inspires was reflected in the overwhelming public endorsement he received in 1952.

Today public trust in Dwight Eisenhower is running stronger than ever.

His place is assured in the hearts of his countrymen as one of the most beloved and admired Presidents in history.

For us it is a matter of pride and gratification that he bears the label of our party and is one of us.

Our principles are his principles.

His triumphs are our triumphs.

We share a common pride and satisfaction in the record of Republican stewardship, of unparalleled achievement for America.

No administration has ever done more to keep faith with its pledges to the people.

We promised to strive for peace.

The Korean war—is that grinding, stalemated, treadmill war so soon forgotten?—was

ended as one of the first orders of business for the new administration.

There have been no new wars.

And let me say here and now I'd rather have an administration that saves us from the abyss of war than one that pushes us over the precipice.

So would every right-thinking American.

We promised to strive for solid prosperity.

The Nation today is enjoying the greatest economic abundance ever known to mankind anywhere.

More Americans have jobs today, are making better wages, producing more and better products, buying more and investing more than ever before in the country's history.

Back of those two broad accomplishments are a host of actions that have made America—for all of us—a better place in which to live.

And back of the actions we have taken are the principles for which we, as Republicans, stand.

Our accomplishments speak for the wisdom of Republican policies and principles.

I could not let an opportunity of this nature pass without paying deserved tribute to Senator Robert A. Taft, who played a vital role in the championing of the principles and policies under which we operate today as a political party.

I had the privilege of working with Bob Taft on a special assignment in 1950 to draft a statement of Republican principles and objectives.

He was the chairman of a three-man committee in the Senate and I was chairman of a similar group in the House.

You know, that's about all Republicans had back in those days—principles and objectives—and a never-say-die spirit.

Out of that statement, adopted by Republicans in the Congress and endorsed by the Republican National Committee, grew the Republican platform of 1952.

No one knows better than I of Bob Taft's devotion to the cause of Republicanism.

I say to you here tonight: He, too, would have been proud of the record his party has made in the last 3 years.

He would have been in the forefront of these dinners, speaking somewhere over this broad land in a sincere testimonial to the leadership of Dwight Eisenhower.

Back in 1950, 2 years before the 1952 platform was drafted, Republicans made this pledge:

"We dedicate our efforts to win lasting peace * * *," and "to build a country in which every citizen may make the most of his skill, his initiative, and his enterprise. * * *"

In 1952 we were given the chance to make good.

We have come a long way—farther than a lot of folks thought possible in so short a time.

In foreign affairs, citizens were confused by bumbling, fumbling diplomacy, by inconsistency and indecision.

They were alarmed by disclosures of one-man deals involving the lives and fortuntes of millions and millions of free people.

We took a firm stand against secret commitments. We pledged no more Yaltas or Potsdams.

There haven't been any—and there won't be any as long as a Republican President remains in the White House.

No President has gone further than President Eisenhower to bring Congress into his confidence in the conduct of foreign relations.

The Formosa resolution is exhibit A of that policy.

We expressed our conviction, in 1950, that a strong national defense must be maintained at all cost as long as the threat of Communist aggression remains.

Republican leadership today is giving America more defense for every dollar.

Equally important, we are balancing the needs of the military with the needs of our domestic economy, thereby holding fast to another cardinal principle set down in 1950 that:

"A strong American economy is a vital factor for our security."

Believing what we said, your Republican administration and a Republican Congress brought into play policies that would get the job done.

You know, friends, this has been quite an experience for me.

I spent nearly 20 years of my career in the Congress on the outside looking in, as far as the administration of government was concerned.

When I first went to Washington, I was the only Republican from Indiana. It was convenient. I could hold my Republican caucus in a phone booth.

I've often said I felt like the banty rooster who was turned loose in the barnyard with a herd of Percherons.

The little rooster looked up at the horses and said, "Look here, fellows, let's have an understanding: I won't step on your toes if you don't step on mine."

In any event, folks, it was rough going and, as I say, we began to wonder whether the time would ever come when Republicans would be called upon to take over the reigns of government.

But the day of reckoning did come.

The people of America were sick of war and threats of more wars.

They were alarmed at the accelerating march toward socialism.

They were chafing under controls and regimentation.

Taxpayers were angered by the increasing waste of hard-earned dollars taken from them in ever higher amounts.

Citizens were worried about a spiraling inflation which drained their savings, shrunk the value of annuities and pensions, and cut deeply into living standards.

Our people were rightfully indignant at the growing disclosures of scandal and corruption in high places.

They were startled by disclosures that Communists and their sympathizers were holding positions of trust within the Government itself.

In short, the people of this country were finally wised up, fed up, and burned up at the mess and they called on the Republican Party to clean it up.

Believe me, the job has not been easy.

No one expected it would be.

For instance, we knew Uncle Sam had been taken on a spending spree and that this finances were in bad shape. But we hadn't suspected how bad.

The national debt was a well-advertised fact.

But we discovered the old boy had been put in hock for another $81 billion worth of merchandise and services for which no provision to pay had been made.

This $81 billion represented obligations of the Federal Government—I O U's, promises to pay, or c. o. d. orders—whatever you want to call them.

And consider this: Here were $81 billion worth of bills run up by an administration which had been promising the American people a tax cut.

How irresponsible can you get?

I hardly need mention that for a new administration, one pledged, among other things, to bring the Federal budget into balance at the earliest possible moment, this was something of a shocker. And that's an understatement.

And I hardly need mention, but I'm certainly going to, that tonight, we can list another major accomplishment to the credit of the Eisenhower administration.

We have reached the goal of a balanced budget.

We have halted deficit spending.

We have restored fiscal integrity to the national scene.

And let me pause right here to give due credit to another great citizen of Ohio, an outstanding American, George Humphrey, who has done a distinguished job as Secretary of the Treasury.

For my money, and, I might add, for every taxpayer's money, we've never had a better one.

And that reminds me of another important fact about this Eisenhower-Republican team.

We've got a lot of high-caliber citizens serving America now.

President Eisenhower's genius for finding the right people for the right job has played handsome dividends for the country.

No longer, may I say, is it a condition precedent to service in Washington that you must first have been a failure at everything else you ever tried.

Back in 1950, Republicans spoke out against a planned economy, price and wage controls, socialized medicine, Brannan plans and other radical schemes being put forward in a flood.

One of the first major actions by Republican leadership was to throw controls out the window.

Remember the anguished howls from the opposition?

Remember the dire predictions of what was going to happen to commodity prices, to rents, to the cost of living in general, how everything was going to skyrocket?

It didn't happen, did it?

What did happen was that American enterprise, freed of artificial restrictions and bureaucratic regimentation, rolled up its sleeves and went to work in a new atmosphere of freedom.

Labor and management, working under a fair and impartial administration of the Taft-Hartley law, have moved steadily forward—and with a minimum of time lost from strikes.

You don't hear much about the Taft-Hartley Act being a slave labor law any more, do you?

It never was.

Even labor leaders themselves know that unions have made unprecedented gains in membership.

And their members know that they have made steady progress toward higher wages and more take-home pay.

Their standard of living was never higher.

Can anyone believe this is all an accident?

Any reasonable person knows otherwise.

This better life for all Americans has come about because of sound, far-sighted Republican leadership in government.

It has come about because Republican policies have stimulated the economy.

We have halted inflation.

America today has a dependable dollar.

We promised the American people we would materially reduce Federal spending.

We have cut spending—with a vengeance. Starting with a $14 billion chop in the spending proposals of President Truman, we have continued an unrelenting drive against waste and extravagance in the Federal household.

We had to, because we had also promised a tax cut.

Thanks to Republican thrift and the determination of the Eisenhower administration and a Republican Congress to make good on a pledge, we gave the American people the biggest tax cut in the history of any nation—nearly $7½ billion.

Who benefited the most?

Two out of every three dollars of that tax cut stayed in the pockets of individuals.

Your Republican Congress completed a monumental revision of our Federal tax laws.

By this action, we encouraged wider ownership of business enterprises.

We stimulated plant expansion and the creation of more jobs.

We provided increased deductions for medical expenses.

We corrected inequities, bringing tax relief to working mothers and improving the status for citizens in retirement.

We encouraged soil conservation through more favorable treatment for farmers engaged in these activities.

Let me say something here about the farm situation.

I am amazed at the audacity of Democrat spokesmen who attempt to lay the blame for our farm problems on Republicans. These people are trying to cast themselves as heroes on the basis of their own past mistakes—which is a good trick if they can get away with it—but I don't think they can.

Even the most casual observer of the economic scene a few years back was aware of the growing crisis in agriculture—a crisis spawned by mounting surpluses.

It was a simple case of war-inspired production engulfing an economy based on peacetime needs.

We have tackled the difficulty with courage, refusing to be stampeded into ill-considered, trick panaceas that can do no more than offer an illusion of relief while speeding the day of an even worse reckoning.

No problem we have faced is more complex or more delicate.

Let no American farmer be deluded by promises that there is an easy answer.

Our goal is to restore the farmer's prosperity in the market place through a program which will assure him his fair share of the national income.

We propose to accomplish that purpose without resort to political witchcraft and without demanding that the farmer forfeit his traditional independence.

We will have no part of any scheme to make our farm families the wards of Government, or to threaten the farmer himself with jail if he doesn't comply with Federal edict.

We will reach our goal as we have reached others, mindful that a strong agricultural economy is basic to the welfare of our country.

There were other things good for America we pledged to pursue in that Republican statement of 1950.

We recognized the social responsibility of government.

The record of the past 3 years in this respect is on the books.

Under the Eisenhower-Republican administration, we have established the Department of Health, Education, and Welfare, giving it Cabinet status.

We have broadened and improved the social security program.

Unemployment insurance coverage has been extended to millions of additional workers.

The minimum wage has been increased.

A program of hospital construction for the chronically ill is now in operation.

And we have done these things under traditional American concepts, without anything smacking of socialization.

We said something, too, in that 1950 statement, about loyalty.

The Republican 83d Congress was quick to give the administration new legal weapons in its fight against subversives.

Our internal security program has been completely overhauled, and security risks are under notice that operation "open-up" has replaced "cover-up" as a Federal policy.

We have rooted the risks out of Government wherever they can be found.

And we aren't hiring any new ones.

I could go on and on, with specific examples of Republican accomplishments for a better America.

But I want to speak just briefly, now, about the broad picture.

We have taken a few old-fashioned virtues out of the mothballs and restored them as principles of Government.

They are as good as new.

I speak simply of such virtues as thrift, diligence, self-reliance—yes, the old "do it yourself" spirit, if you please.

What's wrong with that? It made our country great, didn't it?

I speak of initiative, freedom, dignity and integrity.

Republicans, under the leadership of Dwight D. Eisenhower, have brought them all back to the national scene—and we're building a better country than the world has ever known, on those foundations.

And now I want to offer a personal observation on a subject which is currently holding the attention of the whole world.

I wouldn't care to hazard a guess on how many people have asked me for an opinion on the matter—even since arriving in Cleveland this morning.

The question is this: Is President Eisenhower going to run again?

I have said before and will say again that he's going to run.

He's the best man in the country for the job.

Oh, of course, folks on the other side say all Republicans are hoping the President will run again because the party needs him.

Well, we wouldn't expect them to admit it, but they know, deep down, that another 4 years with Dwight D. Eisenhower in the White House would be the best thing that could happen to the country and to the cause of world peace.

The President is alert and active. He is full of bounce and sparkle.

Let me say this: President Eisenhower will make his ultimate decision with one thought in mind: "What is best for America?"

I only hope that his deep humility will not lead him to underestimate the vital importance of his leadership.

We have come far in 3 years toward putting America back on the track.

We have restored that priceless ingredient to the national scene—public confidence in Government.

Evidence of that confidence is everywhere—in consumer spending, private investment and in the vast plans for expansion of business and industry.

We are moving forward with giant strides.

How important is a Republic victory in 1956?

The alternative is a return to what we had, the loss of what we have gained.

We can't let that happen.

The ground we have covered in 3 short years is but the promise of what the future can hold for our beloved country under wise and understanding leadership—Republican leadership of the kind we have enjoyed under Dwight D. Eisenhower.

We must not fail.

Ridgway Reneges

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. SCRIVNER. Mr. Speaker, one would be surprised at my surprise at General Ridgway's recently expressed surprise at President Eisenhower's budget message for 1955, stating that the military budget was unanimously recommended by the Joint Chiefs of Staff.

Early in February 1954 Secretary Wilson had told the Military Subcommittee on Appropriations that this was a unanimous recommendation. Admiral Radford had told the committee the decision was unanimous.

And, as shown in the printed volume of the Department of the Army appropriations hearings on the 1955 budget, on page 51, Representative WIGGLESWORTH, the then committee chairman, stated:

Mr. WIGGLESWORTH. I understand, General, from the testimony of Secretary Wilson and Admiral Radford, that this overall military program, of which the Army program now before us is a part, is a result of the New Look and has the unanimous endorsement of the President, of the National Security Council, and of the Joint Chiefs of Staff. That is correct; is it not?

General RIDGWAY. Yes, sir. So far as the Joint Chiefs of Staff are concerned it was on stated assumptions and limitations.

With this record of unanimity before you, are you not also surprised at General Ridgway's surprise?

Another Mississippian Receives National Recognition—Illustrious Luther A. Smith, 33d Degree, Sovereign Grand Commander

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. COLMER. Mr. Speaker, a few months ago Mr. Boyd A. Campbell, a citizen of Jackson, Miss., and a former college classmate of mine, was signally honored by being selected as president of the United States Chamber of Commerce, a position which he is currently serving with honor and distinction. Now another Mississippian, the Honorable Luther A. Smith, a distinguished jurist and citizen of Hattiesburg, Miss., has more recently been selected as the sovereign grand commander of the supreme council, 33d degree, Ancient and Accepted Scottish Rite of Freemasonry, southern jurisdiction of the United States of America.

Mr. Smith for many years has been an outstanding and consecrated worker in Freemasonry in Mississippi. He has possibly devoted as much time and effort as well as having made as great a contribution to that cause in the whole of the South as any other man. But all of his efforts have not been in behalf of Masonry. He has enjoyed an enviable record as an outstanding citizen and jurist in his native State. It was, therefore, no surprise that he was selected for this high honor by his fellow Masons. He is a man of high demeanor, an outstanding Christian gentleman of substantial character, who enjoys the confidence and respect of all who know him. His appointment to this full-time position required his resignation as judge of the court of chancery for the 10th district

of Mississippi and his removal to Washington.

We predict that this beloved Mississippian will make an outstanding contribution in his new position not only to Masonry, but to his God and country.

The Natural Gas Controversy

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. MASON. Mr. Speaker, should the Federal Government regulate and control the price of natural gas at the wellhead? The House said no when it passed the Harris bill last summer. Briefly, the controversy came about as follows:

In 1938 Congress passed the Natural Gas Act regulating the rates charged by the interstate pipelines for transporting gas. Since these carriers enjoy a monopoly in the field of transportation, it is only proper that their transportation rates—like all other interstate transportation agencies— should be regulated and controlled. However, in the Natural Gas Act of 1938 Congress said "The provisions of this act shall not apply to the production or gathering of natural gas," leaving the price charged for the production of gas to be determined by the operation of a free market.

In 1954 the Supreme Court by a 5 to 3 decision—in spite of the clear prohibition contained in the act—ruled that the Federal Government had the power to regulate and control the price of gas at the wellhead. Since this decision was contrary to the express provisions of the Natural Gas Act of 1938 and violates the specific provision of that act, bills were introduced in Congress by Congressman HARRIS and Senator FULBRIGHT to nullify the Court decision and to place the production of natural gas where it had always been—the price at the wellhead subject only to the control of a free market.

Mr. Speaker, the price of natural gas for heating homes is made up of three factors, namely:

First. The price to the producers at the wellhead.

Second. The price charged by the pipelines for transportation, and

Third. The price received by the local public utility for distribution.

The last two factors are regulated and controlled as public monopolies, yet they get 90 percent of the price charged the consumer. The producer of the gas gets only 10 percent of the price charged.

In other words, if the average Illinois consumer pays $70 per year for heating his home with gas, the producer gets only $7, and the transportation and distributing agencies get $63. This figures out about 60 cents per month or 2 cents per day the consumer pays to the producer for the gas he uses. The balance of his bill goes to the pipeline owner and to the local distributing utility—each one of which has been and now is regulated and controlled by Government.

Mr. Speaker, I include as a part of my remarks the following editorial taken from the Saturday Evening Post of January 21, 1956:

IF GAS PRODUCERS CAN BE REGULATED, SO CAN THE CORNER GROCER

There is a shocking absence of understanding about the potentially destructive results of governmental regulation of individual enterprise. For evidence we refer you in advance to arguments made against the Fulbright bill.

The Fulbright bill is the Senate version of the Harris bill passed by the House last session. Both seek to release producers of natural gas from regulation by the Federal Power Commission. In June 1954, the Supreme Court ruled that FPC should regulate such producers, although the Natural Gas Act of 1938 had specifically stated that it should not.

This is not a remote legalistic controversy. It involves a housewife in a Chicago suburb who learns with dismay that she cannot obtain the inexpensive natural-gas service which she had expected for cooking and heating in her new house. At about the same time an Oklahoma housewife flips a switch in her house and a light glows. These two events are related. The electricity which fired the Oklahoma lamp bulb was generated in a utility plant fueled by the natural gas which had been intended for the Chicago housewife, but which she didn't get.

The reason for the diversion is simple. Oklahoma gas producers had planned to deliver to a pipeline a supply of natural gas which would have served the Chicago housewife and 200,000 other Illinoisans. But when the Supreme Court ruled that sales of gas by producers across State lines were to be regulated—that is, price-fixed—Oklahoma producers abandoned negotiations for the sale. Instead they sold their product within their own State, a transaction that was exempt from FPC control.

So many natural-gas producers were alarmed by regulation that the volume of gas committed to large interstate pipelines in 1954 declined approximately two-thirds from 1953, a loss to prospective consumers of more than 4 trillion cubic feet. And in 1955, drillers completed 12 percent fewer gas wells than in the previous year while at the same time oil-well completions rose.

Those who want regulation speak in the name of consumers who are supposed to believe that Federal regulation of producers is needed to curb monopoly and keep cost at a reasonable level.

Take cost first. The argument is that natural-gas producers, although competing against one another in discovery, production, and sale of gas reserves, are in a position to hike the gas bills of city consumers unless they are controlled. Why, then, during the years 1938 to 1954, when producers were free, did gas costs in the field rise only one-ninth as much as the cost of living? Moreover, the cost of natural gas in the field on the average is only 10 percent of the city consumer's bill. Ninety percent lies in transmission and distribution—two services which are properly under utility-type regulation because they enjoy certain monopolies. Anyway the proposed legislation contains specific protection for the consumer from unwarranted price increases.

But aren't the producers of natural gas a monopoly? There are 8,000 of them, none producing as much as 5 percent of the total. If they constitute a monopoly, then three-quarters of American industries are in exactly the same class, since natural-gas production is less concentrated in number of owners than are most industries.

It is curious that those who most violently predict high cost and monopoly are blind to the fact that regulation of producers will inevitably bring about exactly what they profess to fear. Natural gas has been cheap because it could be bought and distributed in a volume huge enough to distribute the expense of pipelines and city mains among millions of consumers. Cut down that volume and a smaller number of consumers will have to bear the transmission and distribution costs. Household bills will go up, not down, and unwillingness of producers to sell outside their own States could eventually deprive distant consumers of gas altogether.

What, then, becomes of the monopoly charge? A producer cannot gouge a consumer with whom he will not deal. The monopoly will become one of States, not of people, as producing States not only keep their gas at home but as a consequence attract industries from consumer States into their own areas. This is already happening. More than half of all natural gas is now consumed in the States where it is produced.

There is another sinister threat in this controversy. The regulation of producers of natural gas is the first example of regulation of a competitively produced commodity. It would hardly be the last. Natural gas is more often than not intermixed with oil production. Could we regulate the gas and not the oil from the same field? Then why not coal, lumber, iron, and on right into a complete statist straitjacket?

Sometimes we wonder if this is not the goal which the regulation advocates have had their eye on all along.

Address by Hon. Estes Kefauver, of Tennessee, at Naturalization Ceremonies in the United States District Court, Washington, D. C.

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a brief address delivered by me at the United States District Court for the District of Columbia, on January 10, on the occasion of the naturalization ceremony at which about 125 new citizens assumed their citizenship responsibilities.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, I am pleased and honored to be one of the first to welcome you as new citizens and to hail you as fellow Americans.

You have come to the United States from more than 30 countries throughout the world. I find that to be an extraordinary and happy fact. And I see in it a promise of ever-accelerating vitality for this new country of yours.

This great Nation will never become decadent, will never become ingrown and feed upon itself, so long as the strengths, the hopes, the skills, the aspirations and the cultural attainments of new citizens like yourselves continue to enhance its life stream.

You are going through a crucial experience which may not be apparent or entirely comprehensible to the millions of Americans who achieved their citizenship solely through the

accident of birth. I think I have some understanding of how you feel as you raise your hands and swear allegiance to the United States.

Some of you came to us from other free, democratic nations because you felt that this country offered you a promise of greater opportunity for yourselves and for your children.

Others among you fled from poverty, persecution and degradation.

No matter what your national origin, no matter what your previous station in life, no matter what your cultural background, you share this in common:

The United States offered a beacon light of hope, to which your eyes were turned long before you set foot on our shores.

No matter how severe the poverty and persecution some of you are leaving behind, it was an emotional strain for you to cut your ties to your homelands. I wish more of our older citizens could comprehend this fact as easily as they can understand the feeling of exhilaration and hope with which you eagerly accepted your new status as Americans.

American citizenship is not given easily, nor should it ever be accepted lightly.

Citizenship bequeathes privileges. Citizenship also demands responsibility. And the greatest responsibility which has devolved upon you today in accepting the rights and privileges of citizenship is to so exercise them as to become evermore responsible citizens.

The complexity of our times throws a heavier and heavier burden upon every citizen. The citizens' responsibility in our times are no longer merely local and confined to his individual community. They are also national and international.

A great American, Benjamin Franklin, used to say that if a man keeps his business, his business will keep him. Nowadays, if a man should attend solely to his business, he might find himself ultimately with no business to which to attend. This is especially true in international affairs. For, as you know better than most native-born Americans, this country is engaged in a life-and-death struggle with a powerful enemy who is determined to subdue all others to his will.

Hence, the citizen must be profoundly concerned with the advances of this enemy and the counteradvances of his own government to meet them. Keep yourselves informed. For the more informed you are the more likely that you will not only act forehandedly but wisely.

Never forget that your new government is much more than just a group of men here in Washington. Government should be, and will be—if we all, new and old citizens, participate alike—a combination of the desires and the spirit and the willingness of all of us.

So long as this admirable spirit prevails among us, our democracy shall retain its continuing vitality and its ability to grapple successfully with questions of the greatest magnitude and complexity.

Fellow Americans, never forget that this is a nation of immigrants. We have drawn upon the diverse races and cultures of the world. Our prosperity and our preeminent place in the world are as much due to our greatest resource—people—as it is to our vast store of physical assets. Immigrants like you have tapped them and, consequently, this Nation has flourished.

Take, for example, the varying nationalities of men who helped the United States to create the first atomic bomb. Among them were men born in Germany, in Hungary, in Denmark, in Italy, and elsewhere. And without their minds and skills one doubts that we could have achieved atomic fission, and certainly not for many years.

Yet I must admit to you quite frankly that this Nation has, in recent years, piled up great difficulties for people from other nations who hope to make their home here. I am convinced that the period of hysteria on which this shortsighted policy is based will pass—as all periods of hysteria in our national life have passed—if those who truly love America and its great tradition of freedom will only act as freemen.

In conclusion, I want to assure you that there are no second-class American citizens. The rights and responsibilities you have just had conferred upon you make you the equal of all other citizens—no matter how many generations ago their forefathers first came to this land.

Enjoy your privileges and rights. Exercise your responsibilities. And welcome most sincerely, fellow Americans.

Statement of Hon. Herbert H. Lehman, of New York, at United Jewish Appeal Dinner

---

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, January 23, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent that there be printed in the CONGRESSIONAL RECORD the remarks which I made at a dinner sponsored by the United Jewish Appeal at the Waldorf-Astoria Hotel on the evening of January 21, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A POSITIVE POLICY FOR THE MIDDLE EAST AND A LOOK BACKWARD AT PAST MISTAKES

(By Senator HERBERT H. LEHMAN, at dinner sponsored by United Jewish Appeal, Waldorf-Astoria Hotel, January 21, 1956)

I am much moved by the tribute you have paid me this evening. I do not consider the tribute to be directed to me personally. I would be vain, indeed, if I did.

I take your approbation to be for those causes and principles for which I have stood and fought for many years. I am proud and glad of the support you have thus expressed for those causes and principles, and thank you from the bottom of my heart.

I would surely be insensitive if I were not deeply affected by your having singled me out as a symbol of those causes and principles.

But what means even more to me is the fact that this large assemblage has shown with its deeds tonight a true devotion to some of those causes.

I mean the cause of freedom. I mean the cause of humanitarianism. And I mean the cause of democracy.

In a sense Israel symbolizes all of these causes, and more. Israel is also the cause of faith fulfilled, of prophecy come true, and of sacrifice recognized and rewarded.

But in contributing to the United Jewish Appeal, as you have so generously done tonight, you are doing more than contributing to the State of Israel and to the cause for which she stands.

You have contributed to the fight against prejudice and discrimination and oppression. UJA stands for these causes, as well as for the welfare and the upbuilding of the State of Israel.

You have contributed to the hope of a future for hundreds and thousands of Jews in north Africa, in Europe, and Asia, and wherever Jews still live with the mark of fear upon their hearts. You are holding out to them the lifegiving hope of emigrating one day to a land of refuge, freedom, and opportunity, and of escaping finally from either the shadow or the fact of terror and tyranny. This in itself is a noble and essential undertaking.

For these reasons, and just because I enjoy meeting with old and true friends, I am happy to be here tonight and to join with you in acclaiming the work of UJA.

I need not enumerate the full category of all UJA accomplishments, reflected in human souls rescued from every quarter of the globe and resettled in many quarters of the globe. That work is going on today, and, of course, it must continue to go on.

But it is surely worthwhile to reexamine and reassess the fundamental significance of what UJA has up to now accomplished in Israel, and the full scope of the present challenge there. Thus we may be able to see that problem in full perspective.

What has been achieved up to the present?

You have helped to build a state: a fortress of freedom, a haven of refuge, and a bastion of democracy in the Middle East.

You have helped to transform an idea into a fact, a hope into a reality, and a prayer into a realization.

You have helped to provide asylum for 800,000 hard-pressed human souls, the unwanted, the uprooted, the homeless and helpless.

You have helped to write history and to fulfill an ancient promise.

You, with your contributions, have helped to buy that which is beyond price and purchase—a future for an entire people and a place in history for a new democratic nation.

But all of us know that what has been done in the past provides only a measuring stick for that which remains to be done. The present challenge is far greater than any faced heretofore.

We must, however, understand better than we do the nature and magnitude of this challenge. It is not susceptible of simple description or simple solution.

Forces have been unleashed which we did not conceive when the establishment of Israel was first undertaken and pressed to realization. Stupendous dangers have arisen beyond any we foresaw. We must see them clearly now and grapple with them. There is, of course, no turning back now.

On the turnpike of history, there are few entrances, but the exits are equally few and equally difficult to reach. We are supremely confident that whatever the dangers ahead, Israel is on this turnpike to stay.

The forces and dangers rampant today in the Middle East were not brought into being by Israel. They were there all the time. But they were brought into focus by Israel, and today they are directed against Israel.

These forces are not local. They are international, just as the dangers are international. And they are not single, but plural.

First of all, and most apparent, is the force of international communism, aggression and subversion. This force, while worldwide, has only lately loomed as an immediate danger in the Middle East. But in fact, it was potentially there all the time.

Side by side with this ruthless force is another, even more powerful and violent—the revolutionary force of the oppressed and underprivileged peoples of the earth, awakening after centuries of troubled passivity, to demand their share of the 20th century. This force was also there, in the Middle East, all the time. But it was not recognized. Some do not recognize it, and do not reckon with it, even today.

Frequently, these two forces, so utterly different and distinct, are mistaken for one and the same, because they often overlap each other. In this lack of perception on our part there lies a danger to us as great as from communism itself.

The tidal waves of these two tremendous forces, churning the waters of our time, wreaking havoc upon all shores, could easily be expected to spare Israel from their effects. And they have not.

In fact, Israel today lies at the very focus of both these forces, and is receiving the buffets of both of them.

For the Soviet Union, Israel represents an intolerable enclave of freedom and stability in the midst of a seething world, ripe for a Communist-type revolution. For the Arab leaders, Israel represents a convenient diversion for the surging forces of ferment and upheaval within their countries—a ready object for blind feelings of resentment and indignity among the ruled and oppressed peoples of the area.

Israel symbolizes a kind of revolution, too, but an orderly, western-type revolution, the unleashing of the energies of a people for dynamic progress, within the framework of democracy, and by the consent of the governed.

To both the Arab leaders and the Kremlin, then, but for different reasons, Israel is a menace—for the Arab chieftains, a dangerous example; for the men of Moscow, a dangerous center of western influence.

In the face of this situation, what has been the policy of the free nations, and more particularly, the policy of our own Government?

In brief, it has been a shortsighted policy, reflecting little resolution or determination, and no comprehension whatever of the basic forces or factors involved.

Our Government has followed a policy of so-called "impartiality" as if it were a simple question of favoring one or the other of two equal and equally good friends who cannot get along with each other * * * as if the merits were equally distributed on both sides.

Our Government has acted as if the Arab nations were stable powers and stable societies, like England and Norway and Holland and Denmark.

We sought to draw one and then the other of the Arab States into our complex pattern of world politics, as in the Baghdad Pact and the Northern Tier.

In this we have built a fortress out of straw, and set it up on quicksand.

What a folly this has been. What a lack of understanding this has shown.

We have reaped from some of the Arab nations, for all our so-called impartiality, a harvest of hostility and anti-Western agitation. And we set the stage for the direct entry of the Soviet Union into the very center of the scene. Perhaps it was inevitable, but we made it doubly easy for the Communists and doubly hard for ourselves.

Meanwhile our policies have served to give the Israelis a shattering sense of isolation—a feeling of having been abandoned and left to shift for themselves, though surrounded by deadly enemies bent on their destruction.

We should have based our policy on the bedrock facts of the Middle East today: grinding poverty, unrest, and instability in the Arab States; and dynamism, democracy, and stability in Israel. But instead of that, we based our policy on pious phrases about peace, meaningless sentiments about impartiality, and mechanical calculations of naive military strategy.

We undertook to build up a line of defense against the Soviet Union, without reckoning on the power of the Communists to leapfrog the line and come up in our rear.

We have given short shrift to the stable and democratic nation of Israel, whose ideals are the same as ours.

Meanwhile, we have vainly courted the favor of neighboring totalitarian regimes, which sit uncertainly on top of seething volcanoes within their own countries, and which logically look for any expedient to remain in power, even the expedient of alliance with the Soviet Union.

But where do wo go from here?

It is rather easy to criticize, and I would be less than fair if I did not say that the problem is hard and complex, even beyond description.

I do not envy Secretary Dulles his responsibility, although I strongly disagree with the solutions he has put forth up to now. Nor would I begrudge him his mistakes, if they were the result of efforts pointed in the right direction.

But it is not enough to speak of peace as a goal and of impartiality as a principle. The test of words and settlements lies in actual, specific policies and programs.

It seems crystal clear to me that as far as the Arab States are concerned, we must concentrate with all our might on helping them to resolve their basic problems. We must not let them fall prey to Communist-type revolutions or to Communist intrigues.

We must help to raise the status of their people.

We must assist and cooperate in basic economic undertakings, such as the Aswan Dam in Egypt and the Jordan River development plan.

We must offer large-scale assistance for the resettlement of the Arab refugees.

We must encourage progressive and forward-looking policies, such as land reform and the disestablishment of economic feudalism.

We must be generous but firm.

We must make clear that our economic assistance is designed to release the energies of the Arab peoples to enable them to help themselves to peace and prosperity, not to war and hostility against Israel.

Israel must be assured of security and territorial integrity. Her fears of aggression must be quieted, and the saber rattling that now resounds through the area on both sides must be stilled.

A program of progressive disarmament, as soon as peace has been agreed upon, should be and can be in order, so that all energies may be harnessed for the betterment of the peoples concerned:

This, then, must be our answer to the Soviet intrusion into this area:

1. A security pact with Israel, but open to all her neighbors.

2. Arms for Israel, as long as arms are needed to maintain the present precarious balance of forces.

3. Large-scale and long-range economic aid to the Arab States and to Israel.

And then peace and disarmament.

Does this not constitute a positive policy? I think so.

Let us then, as a Nation, without regard to any partisanship whatever, unite on some such policy, with all the collateral programs and conditions which are required. Let us take the lead and convince the other free nations of the desirability of this policy, and solicit their cooperation and participation in it.

Let us, as individuals, advocate and support such a policy. Let us meanwhile continue to support our embattled and endangered coreligionists in Israel and elsewhere with United Jewish Appeal and with bonds. Let us do this with unmeasured devotion and unstinted generosity.

And then let us all, together, work and look forward to the day when the spur to our efforts will not be the threat of war and destruction, but what Henry James called the moral equivalent of war: Heroic dedication to the uplift of humanity and the fulfillment of mankind's dream: Peace on earth, justice to all, and security for all.

This we will surely achieve in a not too distant day, if we have courage, and faith, and humility before God, the one Father of us all.

Political Requirements for Prosperity

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. HUMPHREY. Mr President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an address I delivered before the Congress of American Industry, sponsored by the National Association of Manufacturers, at New York City, on December 7, 1955. The subject matter of the address was the political requirements for an expanding American economy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a privilege to be invited as one of the guest speakers at the 60th Congress of American Industry. You represent in considerable measure the economic lifeline of our dynamic American economy.

Let me at the outset give you a few words about my political and economic philosophy, in order that you may better understand the bill of particulars I intend outlining as essential political requirements for an expanding and prosperous economy.

I have great faith and confidence in the political judgment of the American people, and the economic know-how of American industry.

I believe in free and open competition in the market place of commodities, as well as in the market place of ideas. Political and economic freedom cannot endure long without the free exchange of ideas and material goods.

A balanced and orderly free society, however, requires not only competition, but cooperation, between the individuals and segments of that society. This cooperation must embrace not only private individuals and institutions, but also embrace the institutions of government.

The topic assigned for this discussion clearly indicates the widespread recognition of the importance of government in the American economic structure.

Government—Federal, State, and local—and I include all three levels—can act as a creative force, either through positive action or by negative and restraining influence.

Fortunately for the American people, the Constitution of the United States places a direct responsibility on the Government to promote the general welfare. That general welfare relates to the economic welfare of each and every citizen.

The first obligation of government is to be just—to assure equal opportunity for all. With this moral requirement of justice and equal opportunity, it has been necessary in the past, and it will be necessary in the future, for government to use its powers to curb the private exploitation of our human and natural resources, to regulate commerce in the interests of fair and honorable competition, and to assist the underprivileged and those who are the victims of economic and social injustice.

There are those who term such action by government as interference with free enterprise. I respectfully suggest that they are either unmindful of the constitutional requirements of the government to promote the general welfare, or have willfully and wrongfully in interpreted the rules of free enterprise to be synonymous with the code of the jungle.

Freedom is not license, nor is enterprise exploitation.

Free enterprise is a constructive force. It has a social obligation as well as a profit motive.

A political democracy or a constitutional republic cannot long endure when the social and economic needs of the citizenry are sacrificed or ignored. For that reason, the political requirements for prosperity must, above all, include social justice and equal opportunity.

Before looking ahead, it might be wise to look briefly at the past—to place in perspective where we are today. As in most areas of life, there is little that is new—but much to be learned from the past.

We have found it necessary to regulate utilities in the public interest. We now accept the obligation of government to design and administer programs on behalf of conservation of our great land, water, mineral, and timber resources.

We discovered in the late 1800's that competitive enterprise could develop organic monstrosities in the form of monopolies and trusts. It became necessary for the Government to adopt a body of law, such as the Sherman Act, the Clayton Act, and the Robinson-Patman Act, in order to preserve an orderly and responsible competitive enterprise system.

We have witnessed within the past half century unscrupulous speculation in the stock market which seriously threatened the solvency of our entire financial and industrial structure.

Government had to act, to protect the public interest, by establishing the Securities Exchange Commission.

Likewise, the laws and regulations pertaining to our monetary and credit institutions had to be strengthened and revised in order to protect the public from unwise and, at times, unethical financial manipulation. The Government's response was establishment of a Federal Reserve System to assure an adequate credit for a growing economy, and a banking and monetary code to assure fiscal solvency and the confidence of depositors.

Social needs of the American people were recognized in passage of the Social Security Act, the fair labor standards law, and a wide variety of measures dealing with health, welfare, and education.

These are some of the lessons and experiences of the past.

But these public policies also have served us well in recent days and the present. Rather than stifling private enterprise, they have encouraged wholesome development and expansion.

Legislative policies of the past 25 years have greatly assisted in building a strong base for the American economy.

This is a mass-production economy, and mass production requires mass consumption.

This is a consumer's economy, and it can expand and remain prosperous only so long as it is geared to maximum purchasing power.

Every segment of the economy must be afforded an opportunity to share in prosperity.

Here, in my opinion, are the five major political requirements for that kind of prosperity:

1. We must coordinate programs and policies of Federal, State, and local governments, and private groups, within the framework of a free, private, competitive economic system, to insure maximum employment, production, and purchasing power. This means a continuing, effective concern for balanced economic growth and stability; for increased productivity which relates itself not only in an expanding volume of goods and services but also in a higher living standard and wages.

We have embodied this philosophy into public law—the employment Act of 1946. That act places upon Government a responsibility to assure maximum production, maximum employment, and maximum purchasing power. It calls for keeping our economy in balance. This is no idle gesture. It is but further expression of the constitutional mandate to promote the general welfare.

We need full employment and decent wage standards, not only to provide a rising living standard for workers and their families but also to maintain the output of industry and to provide the major incentive for capital-goods expansion. Our machines are no more profitable in their capacity to turn out goods and services than the economic capacity of our consumers to pay for and use those same goods and services.

Encouragement of responsible collective bargaining under law is an essential link to achieving the balance we seek under the Employment Act of 1946. Collective bargaining is labor's response to corporate business structure. We need both—but both without abuse of privilege or power.

We must expand and modernize such built-in safeguards to the economy as our programs of social security and unemployment compensation. Such programs, in effect, are part of our economic life insurance, for which principal and premiums alike must be constantly adjusted to keep pace with growth of our national production and population.

2. We need a tax structure at Federal, State, and local levels that not only meets the standards of social justice based on the principle of ability to pay, but also contributes toward our goal of economic growth and stability. Our Joint Committee on the Economic Report is right now conducting studies and hearings aimed at this very purpose, and I hope from such hearings will flow recommendations which can be enacted to meet this objective.

Personally, I feel that revision of our tax structure in line with these long-term objectives should include both greater allowances for families, thereby stimulating family purchasing power; and a more equitable structure for middle-income groups, who under present laws find it extremely difficult to accumulate reserve capital.

Independent small business cannot grow and expand on credit alone—even liberal credit. It must have the opportunity to reinvest earnings. I know of no better way to restrain the present trend toward monopoly and mergers—a trend that has been accelerated in the past 3 or 4 years.

Unfortunately, the present tax laws are a mosaic of inequities, loopholes, and favoritism. I remind my friends in business that for every special privilege loophole written into our tax laws, someone else must pay the bill through a heavier burden of taxation. The Government needs a certain amount of money for purposes of national security and Government services. If a few are permitted to evade paying their just and fair share of this national bill, then others are compelled to pick up the check. A just and fair tax policy is more than mere tax reduction. It is tax equity.

3. We must stop at once the sharp recession in American agriculture, and by well-directed and designed Government policies restore agriculture to a position of equality in the economic scene.

We need to attack the farm problem on several fronts, including more adequate and effective income protection for farmers through the most workable combinations of price-supporting crop loans, purchases, and possibly production payments; expansion of both domestic and overseas surplus distribution efforts; use of some form of a conservation acreage reserve land-rental plan as an incentive for production adjustments similar to the aid given wartime industry for conversion to peacetime markets; and improved and modernized credit facilities geared to modern mechanized farming's greater cash operating needs.

We must fully recognize the interdependence of all segments of our economy. There is no such thing as long-term prosperity in business and industry if agriculture continues to suffer from drastic income decline and growing indebtedness.

America's farmers are still one of the great potential markets in the world. I suggest that we spend as much time developing American markets as we do foreign markets. Both are important, but the potentialities of a stronger American market offer much greater opportunities to American industry for the immediate future. It is not trite to say that our problem is underconsumption, not overproduction.

A point 5 program to assist the underprivileged and underdeveloped areas of America will yield every bit as constructive a result as a point 4 program in foreign areas.

4. We need a liberal, long-range credit structure with flexibility to meet short-range needs. We can no longer evaluate credit policies on the basis of standards acceptable a generation ago. The amount of outstanding credit must be related to gross national income, and potential maximum production and employment. I am referring not only to commercial credit, but also to consumer and housing credit. Liberal credit terms for home construction may be justified not only in terms of our rapidly expanding economy, but equally so in terms of our rapidly growing population. There is yet another justification—the social values of home ownership.

Consumer credit is the life-line of consumer goods production. Expanded consumer credit becomes dangerous only when the economy slackens, or irresponsibility creeps into its use. Credit, therefore, must be closely related to our objective of increased investment, maximum employment, and economic balance between industry, labor, and agriculture.

Fifth, we must have a continuing long-range development of our natural resources—and encourage peacetime uses of atomic energy as newest of our resources. It is with natural resources in particular that government must play a paramount role. First of all, government is the only agency that can mobilize the manpower and technological resources of the Nation to control the erosion of land, the protection of forests, the harnessing of the rivers for the purpose of flood control, navigation and irrigation. Likewise, if these costs are to be offset in part, the building of hydroelectric facilities is sound economics. Such electrical energy is a new capital resource made available to the American people and to American enterprise, out of resources already belonging to all the people.

Atomic energy is our greatest untapped source of power and potential wealth. Because it is a Government-developed resource, the Government has a direct responsibility to stimulate its peacetime uses for the benefit of all. The Government must not jealously withhold such a resource, but instead share its great potentialities with private industry, with rural-electric cooperatives, and with municipalities.

These, then, are my basic criteria for political economic policies required for prosperity.

But economic policies alone do not assure a wholesome and healthy environment for an expanding economy.

We still have objectives of social justice to be fulfilled, and social values to consider.

Health, welfare, and education of our American citizens is basic to a dynamic and expanding economy. It would be short-sighted to seek a material prosperity in which such basic human needs were brushed aside.

There are often costs to maintaining full prosperity.

Yet there have been and still will be far higher costs to industry as well as consumers

for failing to maintain reasonably balanced growth in our economy.

The 1953–54 recession, measured realistically by lost production and consumption, is estimated to have cost all Americans about $30 billion. This is a loss which is never recovered. It is a mighty big chip out of the log of prosperity. During the 10 years of the great depression and partial recovery, estimates of our accumulated economic loss, due largely to unemployment and industrial idleness along with agricultural decline, ran as high as $600 billion to $700 billion in 1954 prices.

It is these economic facts about which we need to be concerned in considering whatever political and economic measures are required to assure prosperity.

A Government policy of doing too little, too late, of taking halfway measures when dramatic action is required, is false economy.

The question is not so much how much we spend or what tax adjustments we make to insure prosperity, but rather that we do the right thing early enough, and on a large enough scale, to obtain the results we need for our balanced objectives of maximum employment, maximum production, and maximum purchasing power.

In summary, the key to the success of any of these political requirements for prosperity is a constant alertness, a boldness of vision that refuses to be satisfied with any goals of the past as being satisfactory goals for the future, a determination to act aggressively and quickly on any of these related fronts when action is needed, and a willingness to accept change when change is called for rather than be chained to any dogma of the past.

Overheard

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. SIEMINSKI. Overheard in the Library of Congress the other day was the following:

"They talk about the discrimination of man against man, why don't they talk about the discrimination of nature against man?"

"Like what?"

"We should have 4 seasons on each of the 5 continents."

"How are we going to get it?"

"Adjust the earth on its axis. Archimedes said that with a fulcrum he could move the world."

"So you think a pressure chamber with jet fission, like a sling, could circle the globe and move it?"

"If not, then maybe we'll be able to locate the pituitary gland in the mechanism of the universe that might enable us to adjust the earth to the convenience of man like we adjust the hands on a watch.

"Then maybe with 4 seasons on each continent, or with our ability to adjust the earth's line of spin we'll have fewer wars, fewer depressions and far less havoc wrought by nature's discrimination against man?"

"Yes, that should mean for each of us longer life with less pain; a life lived more creatively with less waste"—

So it went, Mr. Speaker. The conversationalists were evidently trying to make proper use of the modern world and all of its opportunities. Or were they waiting for the man with a butterfly net?

Address by Hon. Clarence J. Brown, of Ohio, at Salute-to-Eisenhower Dinner, Wilmington, Del.

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Monday, January 23, 1956

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an excellent address given by the Honorable CLARENCE J. BROWN, of Ohio, at a salute-to-Eisenhower dinner held in Wilmington, Del., on January 20, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, it was with genuine pleasure that I accepted the invitation of your splendid chairman of this dinner, Barton Feroe, to come to Wilmington tonight to address the Republicans of Delaware, for my appearance here has given me the opportunity to see many old friends. I am always happy to appear on any platform with your great United States Senator, JOHN WILLIAMS, a man whose civic courage is unsurpassed in the Nation. He has contributed much to bring about honesty and decency in the affairs of Government.

It is also pleasing to come to the State which gave to our national life such outstanding legislators and statesmen as my old friends, Dan Hastings and John Townsend. Both gentlemen were, and still are, giants in governmental affairs. Both were outstanding leaders during their service in the United States Senate, and were so recognized far and wide.

Then, too, it is a real pleasure to come to the State of which my longtime friend, and former colleague in the House of Representatives, Caleb Boggs, is the able and distinguished Governor. He has given a splendid account of his stewardship during the time he has occupied the Governor's chair. Under his direction your State has enjoyed good government, great prosperity, and almost fantastic growth. Delaware is today the fastest-growing State east of the Mississippi River, with the possible exception of Florida, where I understand they count the tourists. Delaware ranks fifth in the Nation, but even more important, it ranks first in the United States, in the percentage of its citizens who are gainfully employed, and last or lowest in the percentage of those who are unemployed. It is not difficult for any person who wants to work, to find a job at good pay, here in the State of Delaware. Such a condition springs not only from good government on the State, national, and local levels, but also as the result of forward-looking and enlightened industrial and business leadership within your State. And to add to my pleasure is the opportunity it affords for me to renew my friendship with your efficient State chairman, Ed Duffy, who has given to Delaware an effective Republican organization. There is none better in the land.

So I salute you—the political, civic, and industrial leaders of this great State of Delaware, in your forward march toward the fulfillment of your destiny.

We are here tonight to participate with thousands of other Republicans in the more than 60 salute-to-Eisenhower dinners which, at this very moment, are being held across the width and breadth of this land to pay tribute to one of the greatest Presidents this Republic has ever had—Dwight David Eisenhower. Like the immortal Washington, he was first in war when the forces of cruel dictatorship threatened our continued liberties and, in fact, our very existence. Like Washington, he has been and is first in peace, for no one has waged a more valiant battle for the cause of world peace than has our warrior chieftan of World War II—now the President of the United States—Dwight D. Eisenhower. And may I add, ladies and gentlemen, that like the first President of this Republic, Dwight David Eisenhower today comes first in the hearts of his fellowmen. It is due more to his efforts than to those of any other human being in this world, that the guns are now quiet on every battlefront and military planes no longer drop their cargoes of death and destruction.

Dwight D. Eisenhower, as a candidate for President in 1952, told the war-wearied people of the United States and the world that if he were elected he would go to Korea and do what he could to bring an end to the fighting there. There were those who argued, in the height of the campaign, that Mr. Eisenhower was playing politics—that he did not mean what he said. But he kept that promise—just as he has kept every other promise he has ever made. The guns in Korea were silenced in late July of 1953, less than 6 months after Mr. Eisenhower assumed the Presidency of the United States. Nowhere in the world tonight are American boys fighting and dying. True, they stand on guard tonight in many places in this troubled world to protect the security of their beloved country; but they are not being called upon to kill or be killed. Today, under the leadership of a gallant warrior and great statesman—our beloved President—our national defense is stronger; our people are more secure; and the outlook for world peace is brighter, than at any time since World War I first began.

So in the field of international affairs, Dwight D. Eisenhower has brought peace to the United States and hope to the world. While it is an uneasy peace we enjoy, it is a stronger, more secure one than we have had for many years. Under his leadership the people of a free world have united in a determination that the freedom of their governments, and of their individual citizens, shall be maintained and preserved.

On the home front the President we salute tonight has brought a reformation in our governmental affairs that is almost unbelievable. Above all else he has given us honesty and decency in Government. And only those who have served in Washington under past administrations can understand and appreciate the importance of the fiat statement I have just made. The ever-recurring scandals of former years suddenly came to an end when Dwight D. Einsenhower became President, for he brought to Washington with him men of outstanding character and ability, all as part of a team, to help in the gigantic task of remolding and redirecting the affairs of state.

Not only did Ike bring honesty to Washington, but efficiency and economy, as well. For the first time in many years the budget will be balanced this fiscal year, and again next. Federal expenditures have been reduced during the Eisenhower administration by approximately $10 billion a year. The work of Government is being conducted more efficiently and effectively than ever before, with 175,000 less employees on the public payroll. We have a stronger national defense today—with less manpower—than at any time since World War II ended.

During these first 3 years of the Eisenhower administration the Nation has enjoyed the greatest peacetime prosperity in all human history—a prosperity which has been established upon a sound basis. Business and industry have been freed of costly, worrisome controls, and our national economy has been placed, and maintained, upon a high level. Needs of the workingman have been met, and his rights protected and furthered, without bending the knee to corrupt labor bosses, or the placing of unfair or undue burdens upon his employer.

As President Eisenhower starts the fourth year of his administration today, he is in a position where his opponents dare not attack him personally, or his record. Instead they deal in generalities to make such charges as—and I quote: "The Cabinet is made up of millionaires," and "the Eisenhower administration favors the rich against the little man," and so on, ad nauseum.

Perhaps it may be well to look at the record. For 20 years before Mr. Eisenhower came to office we had one party doing a lot of talking about "the forgotten man," and how much it would do for "the little man." I cannot help but wonder if public memory is as short as some people would like us to believe. I do not believe the average wage earner has forgotten what went on during the Roosevelt and Truman administrations, and especially during the postwar years, under Truman, or the effect such activities actually had on his—the wage earner's pocketbook.
